A Guide to the Study of The Christian Religion

A symposium completely covering modern theological study, by twelve eminent scholars and teachers

Edited by
GERALD BIRNEY SMITH
of the University of Chicago

A book by specialists for general readers

$3.00 net

Handbooks of Ethics and Religion

A new series of monographs for every man who desires a modern and scholarly point of view of the outstanding features of his religion.

The Psychology of Religion
By George A. Coe, of Union Theological Seminary
Just Off the Press

The author's idealistic vision has set a standard in the consideration of his subject—"a rich storehouse of material for thought, investigation and application." **$1.50 net**

The Origin and Growth of the Hebrew Religion
By Henry T. Fowler, of Brown University

In this new book Professor Fowler gives an admirable exposition of the growth of Israel's ideals, even to the wonderful climax in the Major Prophets. **$1.00 net**

The Story of the New Testament
By Edgar J. Goodspeed, of the University of Chicago

It emphasizes clearly to the mind "that Christianity did not spring from the New Testament, but the New Testament from Christianity." The author shows us why the early Christians wrote, when they wrote, and where they wrote. **$1.00 net**

The Ethics of the Old Testament
By Hinckley G. Mitchell, of Boston University

Not a study of the books of the Bible, but rather of the progress of thought which the Old Testament reveals in regard to ethics, which among all nations of the world have been so closely connected with religion. **$2.00 net**

An extensive series of twelve to fifteen titles is in preparation. Ask us for our prospectus covering the content and plan of this new and practical series.

University of Chicago Sermons

Eighteen masterly pulpit messages by as many representative members of the University of Chicago faculties

Edited by
THEODORE GERALD SOARES

"The message of this book has to do not with the old truth, but with the TRUTH which was and is and is to come."

1917 Sunday School Suggestions

THE CONSTRUCTIVE STUDIES

Courses on the life of Christ for every age and grade
Ask to see for examination, with return privilege, any or all of the following:

Walks With Jesus in His Home Country
For children from 6-9.
Teachers' manual **($1.25)**.
Pupils' notebook **(50 cents)**.
The daily life of Jesus as the children's friend.

The Life of Jesus
For children from 10-14.
Teachers' manual **(75c)**.
Pupils' notebook **(65c)**.
From the point of view of Jesus as a hero.

The Life of Christ
For young people from 14-20.
A textbook for every student **($1.25)**.
Designed to interest boys and girls and young people who are beginning to think for themselves in religious matters.

The Life of Christ
A textbook for ministers, teachers and adult Bible classes **($1.25)**.
Definitely a student's book, scholarly without being heavy, critical without exploiting hazardous theories.

The Life of Christ
An outline study of the Four Gospels (paper **50c**).
Designed with the single view of securing a chronological idea of the events in the life of Jesus.

Ask us also for our complete descriptive leaflet on

"The Ideal Sunday School"

A Series of Handbooks on

Principles and Methods of Religious Education

Convenient and inexpensive handbooks by scientific workers under the special editorship of Theodore G. Soares, Professor of Religious Education in the University of Chicago

Handwork in Religious Education
By Addie Grace Wardle, Ph. D. 176 pp., 46 illustrations.

A progressive program of handwork appropriate to each stage of religious and moral growth, not only for young children, but also for growing boys and girls even to adolescent age. **$1.00 net**

Graded Social Service for the Sunday School
By William Norman Hutchins. xii+136 pages, 16mo, cloth.

Every argument which holds for graded instruction holds also for graded social service. It insists that "everybody can do something and finds that something for everybody to do." **$.75 net**

The Sunday School Building and Its Equipment
With forty-two illustrations. By Herbert Francis Evans, Professor of Religious Education in Grinnell College. xvi+116 pages, 16mo, cloth.

This book describes the type of church building needed by the modern Sunday school and gives in forty illustrations the plans of such a building. But the greatest benefit it renders is in the many suggestions and directions for making more serviceable a building already in use. **$.75 net**

The City Institute for Religious Teachers
By Walter S. Athearn, Professor of Religious Education, Boston University.

The churches' need of teachers is the business of the community; it raises educational standards; it gives weak churches equal opportunity with the strong. **$.75 net**

PRESIDENT WILSON'S NOTE

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADORS AT THE CAPITALS OF BELLIGERENT POWERS

Washington, December 18.

The President of the United States has instructed me to suggest to the (here is inserted a designation of the government addrest) a course of action with regard to the present war which he hopes the government will take under consideration as suggested in the most friendly spirit and as coming not only from a friend but also as coming from the representative of a neutral nation whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue.

The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by a desire to play a part in connection with the recent overtures of the Central Powers. It has, in fact, been in no way suggested by them in its origin and the President would have delayed offering it until those overtures had been independently answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

(*In the note to the Entente Allies the words "a desire to play a part in connection with" are omitted in the previous paragraph.*)

The President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them.

He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another, if only the great object he has in mind be attained.

He takes the liberty of calling attention to the fact that the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world.

Each side desires to make the rights and privileges of weak peoples and small states as secure against aggression or denial in the future as the rights and privileges of the great and powerful states now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this and against aggression or selfish interference of any kind.

Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amidst multiplying suspicions, but each is ready to consider the formation of a league of nations to insure peace and justice thruout the world. Before that final step can be taken, however, he deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity and the political and commercial freedom of the nations involved.

In the measures to be taken to secure the future peace of the world the people and government of the United States are as vitally and as directly interested as the governments now at war. Their interest, moreover, in the means to be adopted to relieve the smaller and weaker peoples of the world of the peril of wrong and violence is as quick and ardent as that of any other people or government. They stand ready, and even eager, to coöperate in the accomplishment of these ends, when the war is over, with every influence and resource at their command.

But the war must first be concluded. The terms upon which it is to be concluded they are not at liberty to suggest; but the President does feel that it is his right and his duty to point out their intimate interest in its conclusion, lest it should presently be too late to accomplish the greater things which lie beyond its conclusion, lest the situation of neutral nations now exceedingly hard to endure, be rendered altogether intolerable, and lest, more than all, an injury be done civilization itself which can never be atoned for or repaired.

The President, therefore, feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part.

If the contest must continue to proceed toward undefined ends by slow attrition, if million after million of human lives must continue to be offered up until on one side or the other there are no more to offer; if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle.

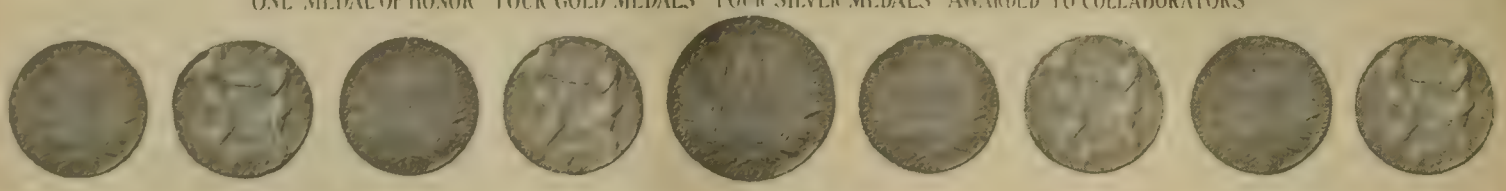
The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitively stated.

The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guarantees, what political or territorial changes or readjustments, what stage of military success even, would bring the war to an end.

It may be that peace is nearer than we know; that the terms upon which the belligerents on the one side and on the other would deem it necessary to insist are not so irreconcilable as some have feared: that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable.

The President is not proposing peace; he is not even offering mediation. He is merely proposing that soundings be taken in order that we may learn, the neutral nations with the belligerent, how near the haven of peace may be for which all mankind longs with an intense and increasing longing. He believes that the spirit in which he speaks and the objects which he seeks will be understood by all concerned, and he confidently hopes for a response which will bring a new light into the affairs of the world.

LANSING.



THE AWARD - TWO GRAND PRIZES - THREE MEDALS OF HONOR
TWELVE GOLD MEDALS - ONE SPECIAL GOLD MEDAL

1 - Sterling Silverware
2 - Architectural Bronze Work and Bronzes
3 - Sterling Silver Hollow and Flat-ware
4 - Sterling Silver and Plated Cutlery
5 - Silver Plated Hollow and Flat-ware
6 - Florentine Silver Service
7 - Martelé Silverware
8 - Ecclesiastical Ware
9 - Bronze Tablets
10 - Engraved Stationery
11 - Leather Suit Cases and Traveling Bags
12 - Gold Hollow-ware, Toilet-ware and Small Ware
13 - Silver Trimmed Writing Desk and Chair, and Silver Desk Set
14 - Leather Pocket Books and Jewel Cases
15 - Handwork Bead Bags
16 - Stained Glass Windows
17 - Gold, Silver and Ivory Mounted Canes and Umbrellas
18 - Special Award for the best, most complete and most attractive installation in the Department of Manufactures and varied Industries

ONE MEDAL OF HONOR - FOUR GOLD MEDALS - FOUR SILVER MEDALS AWARDED TO COLLABORATORS

Gorham Silver, Gold and allied art productions occupy first place in the eyes of discerning people. These awards -the highest in each class- are official confirmation of Gorham excellence which the public has long recognized.

A Journal of Civilization

TO GERMANY

TO you, Germany, belongs the everlasting credit of first proposing peace. You have had the courage and candor to say that war should cease.

England has demanded "complete restitution, full reparation and effectual guarantees." These are stern words, but just.

It is now for you to meet the supreme test. Are you ready, with sincerity and sacrifice, to do your part in bringing about a righteous and abiding peace?

In your reply do not extol your victories. Do not hark back to the war's causes. The Allies have not objected to your proffer, but only to your exultings and disclaimers.

There are three proposals you can make. Make them. They will bring you victories no less renowned than those of war.

1. Offer to leave all questions of territory and indemnities, either to a tribunal of belligerents, or to a tribunal of belligerents and neutrals, or to a tribunal of neutrals.

2. Declare your willingness to enter upon an agreement with other nations for the limitation of armaments.

3. Announce your readiness to join a League to Enforce Peace.

These three proposals will make possible a just "restitution." They will effectuate an honorable "reparation." They will furnish the "guarantees" by which peace can be kept. They will stop the war. They may stop all war.

THE PRESIDENT'S INQUIRY

IMMEDIATELY after the Great War began President Wilson offered mediation to the belligerents. It was refused. Since then he has followed his policy of watchful waiting. Last week, however, he electrified the world by breaking his long silence and issuing a note to all the belligerents asking them to state specifically for what they are fighting. He disclaims any connection with the "overtures of the Central Powers." He says he is not proposing peace. He is "not even offering mediation." But he expresses his willingness "to take the initiative" if it be desired in any movement to effectuate a lasting peace, and avers that the United States is ready to coöperate. He even suggests that a League of Nations be formed "to insure peace and justice thruout the world."

Stripped of all side issues this means that the President of the United States has thrown the entire weight of his high office in favor of peace. That it will have a profound effect, no one can for a moment doubt. In our issue of November 29, 1915, The Independent devoted a long editorial to this question. As far as we are aware it was the first appeal made in the United States to our government to ask the belligerents to state "What Are You Fighting For." A strong and influential group of men and women organized as The American Neutral Conference Committee have also been urging the President,

1. To invite the belligerents to state the basis upon which they would be willing to begin peace negotiations.

2. To mediate by constructive peace proposals which shall safeguard the just claims of the belligerents and the common interests of all nations.

This Committee when it first came into wide public notice a few weeks ago was denounced in many high places both here and abroad, but the President has adopted in toto its first proposal and indirectly its second, and now most of the world acclaims.

The belligerents should accede to the President's friendly request. Every government owes it to its own people, whom it is calling upon to sacrifice their lives, as well as to the neutrals, whose sympathy it desires, that a clear statement be given to the world of what are the objects for which it is putting forth these stupendous efforts.

There is nothing absurd or irrational about such a question. It is permitted by The Hague Conventions. It does not ask "Why did you enter the war?" That is something for the future historian to discover if he can. Nor does it ask "What are your specific peace terms?" That must be answered by negotiation. The question is what do the belligerents hope, desire and believe themselves entitled to. Once that is given to the world, public opinion will act and react until the preposterous claims will be scorned or laughed out of court and the just ones will receive the acclaim of mankind. Then the opportunity for mediation or for direct negotiation will be here and that will be the beginning of the end.

Drawn for The Independent by W. O. Morris

UNCLE SAM: "IF YOU WANT PEACE, PUT DOWN YOUR THINGS, COME IN AND WE'LL TALK IT OVER"

WHAT DOES IT ALL MEAN?

THE Secretary of State has involved in disastrous confusion the proposal of the President to the warring powers that they make known the ends for which they are fighting and the terms on which they would be ready to make peace. When the American note was made public, it was naturally accepted at its face value as a sincere attempt by the chief neutral power to aid in the creation of conditions which would bring the coming of peace nearer. It bore every appearance of disinterestedness.

But the day after it was dispatched, Mr. Lansing, in an authorized statement, declared that neither the President nor himself regarded it as a peace note. He said that "we are drawing nearer to the verge of war ourselves and therefore we are entitled to know exactly what each belligerent seeks in order that we may regulate our conduct in the future." He reiterated that "the sending of this note will indicate the possibility of our being forced into the war."

Mr. Lansing's startling statement seemed to mean that the purpose of the United States in sending the note was not disinterested but selfish. That we were seeking not to clear the eyes of the world in order that the way to peace might be more distinctly seen, but to serve our own private ends of keeping aloof from the horrors that are devastating Europe.

After seeing the President, Mr. Lansing took it all back, declaring that he had no intention of intimating that the Government was considering any change in its policy of neutrality.

This is all very well. But it hardly clears the matter up. The President owes it to the American people to sweep away the confusion that naturally possesses their minds. Did Mr. Lansing, in his first statement, totally misrepresent the President's thought and purpose? Why was the note sent to the belligerent powers? *Was* it a peace note? If not, what was it?

The people must in the last analysis determine thru the expression of their massed opinion what the course of the United States is to be. They can form no serious and considered judgment while their minds are in confusion as to the facts. If the President is endeavoring to aid in the coming of peace the people will have one feeling about his efforts. If he is acting with some other purpose their reaction to the situation may be quite different. They should not be left in the dark.

POSSIBLE PEACE TERMS

AFTER two years and a half of fighting the outcome of the war is as much in doubt as ever. We know that the Allies outnumber the Central Powers nearly six to one, that they are vastly superior in wealth and resources, and that they have the whole outside world to draw on. It would seem, therefore, that the Allies must win in the long run. On the other hand the military strength and economic organization of the Central Powers have given them so far the advantage in the field and seem to be sufficient to enable them to hold out indefinitely. This is about all we know now, and we all knew this much after the first month of war.

Nor has the aim of the war become any clearer in the two years and a half. On the contrary each new belligerent entering the struggle has brought with it new issues, sometimes conflicting with those of its allies, and new purposes have been disclosed tending to distract the sympathies of the people of neutral nations. For instance, some of the Americans who ardently championed the cause of the Allies because of France and Belgium are not at all enthusiastic about the Russian acquisition of Constantinople or the Japanese acquisition of Chinese territory. On the other hand some of those who were disposed to sympathize with Germany at the beginning of the war would dislike to see Turkey retain Armenia, or Bulgaria annex Rumania.

In the absence of such authoritative statements of the claims of the belligerents we must do the best with what material we have, namely, the hints emanating from the embassies, the rumors of the neutral press, the vague utterances of ministers, the guesses of the well informed, the historic policy and known aspirations of the leading powers, and the discussions of peace terms in the papers of the nations involved in the war. From such clues as these we have compiled below what seem to us likely to be chief claims of the two parties and put in the parallel column what we surmize to be the sort of reception these claims would receive if the opposing party were now to consider them. We have not put down the extravagant ambitions voiced by chauvinistic journalists on either side, but only such demands as appear to be regarded as essential in the respective countries. Under the head of "Concessions" we have given what we think they might be willing to grant rather than to continue the fight.

CLAIMS AND COUNTERCLAIMS

Allies' Demands	*German Concessions*
Evacuation of France	Will be conceded
Evacuation of Belgium	Will be conceded
Compensation for destruction of property in France and Belgium	May be conceded
Constantinople to be given to Russia	Will be refused
Serbia to get Bosnia and Herzegovina	Will be refused
Italy to get Trentino, Gorizia, Triest and Albanian coast	Trentino and Gorizia possibly, Triest and Albania refused
Russia to get northern Persia	Will be conceded
England to get southern Persia	Will be conceded
France to get Syria	Will be refused
England to get Mesopotamia.	Will be opposed
Rumania to get Transylvania	Will be refused
Russia to get Armenia	May be conceded
Alsace and Lorraine restored to France	Possibly in part
England to get Egypt and Cyprus	Will be conceded
England to get Helgoland	Will be refused
Disarmament of Germany	Universal disarmament
Germany to be penalized by heavy indemnity for breaking the peace and violations of international law	Will be refused

German Demands	*Allies' Concessions*
Restoration of German East and Southwest Africa	Depends mostly upon the Union of South Africa
Restoration of Kamérun and Togoland	Depends upon France and England
Restoration of German islands in Pacific	Depends upon Japan, Australia and New Zealand
Restoration of Kiao-Chau to China	Promised conditionally by Japan at beginning of war
Rumania divided between Austria and Bulgaria	Might be willing to retrocede the Dobrudja to Bulgaria

Serbia to be divided between Austria and Bulgaria	Might be willing to give Serbian Macedonia to Bulgaria
Compensation for destruction of property in East Prussia and Galicia	?
Evacuation of Galicia by Russians	Will be conceded
Independence of Russian Poland	Autonomy of all Poland
Independence of Lithuania	?
Equal commercial rights	Refused by all the Allies according the Pact of Paris
Freedom of the seas	?
League to Enforce Peace	Agreed

In our last issue we exprest the wish that all parties should restore their conquests to their original owners in order to establish the principle that territorial aggrandizement may never again be made a motive for war. But we have little hope that this will be adopted, for most of the belligerents are frankly determined upon gaining more land, and some of them entered the war for this express purpose. Italy desires Italia Irredenta, the districts of the Austrian frontier inhabited largely by Italians. A large part of this was offered by Austria if Italy would remain neutral, but she insisted upon it all, as well as upon the eastern coast of the Adriatic, where her ambitions conflicted with those of Serbia and Greece. Doubtless Austria would now be willing to cede some territory in the Trentino and along the Isonzo in order to make peace, but since Italy has been a heavy expense and not of great service to England and France, they are not likely to support her extreme demands.

France is determined to recover Alsace and Lorraine and Germany is determined to keep them; but it has been intimated from German quarters that a strip of this debatable land, even wider than that now under French control, might be surrendered to France. There is in Germany a strong annexationist party that demands the retention of the Belgian and French territory now occupied, but the present government does not seem disposed to ask for any territorial gains for Germany. But Germany is likely to insist upon the dismantling of the Belgian forts and a commercial outlet at Antwerp.

The cost of continuing the war is so enormous that the question of indemnities becomes relatively unimportant. When the Allies present their bill for property destroyed in France, Belgium and Serbia, the Germans will file a counter-claim for property destroyed by the Russians in East Prussia, Galicia and perhaps Poland. This bill may be larger than the former, for the area fought over is greater and it has been more completely devastated. Germany could well afford to rebuild every house and factory she has knocked down rather than continue the war, but she would resist a punitive indemnity to the last, for that would involve an admission of being in the wrong. Probably the question of indemnity will be disguised in the territorial changes made in the map of Africa.

It looks as tho England would find it easier to agree on peace terms with Germany than with her allies and dominions. If Germany should insist upon the return of all of her colonies as the condition of evacuating France, Belgium, Russia, Serbia, Montenegro and Rumania, could England persuade Japan to give up Kiao-Chau, Australia to give up Kaiser Wilhelm's Land, New Zealand to give up Samoa, and South Africa to give up German Southwest and East Africa, which they have conquered almost unaided?

It is evident at a glance why Russia resents most vehemently the idea of peace negotiations. The German demands press most heavily upon her. The Russian offer of some sort of self-government to all Poland—if it should be wrested from Germany and Austria—did not arouse as much confidence and enthusiasm among the Poles as the German promise of an independent kingdom for Russian Poland. But the "independence" of a kingdom established under such auspices would be doubtful, so probably some sort of a semi-detached state will be the outcome. The nationalist movement in Lithuania has been by no means so insistent as that of the Poles and is less likely to succeed.

The present conflict has been wittily and truthfully called "the War of the Turkish Succession," for most of its causes and its problems arise from the gradual dissolution of the Ottoman empire. The Balkan states are so intertangled that no satisfactory solution is possible, whoever wins. The best that can be hoped for is a passable and peaceable compromise. Over Constantinople there is apparently a deadlock. The Allies have promised it to Russia, but they have no present prospect of getting it. Germany will hold out to the bitter end for her beloved Berlin-Bagdad railroad, now almost completed, and Constantinople is its middle link. But even here an agreement is possible, for the straits might be put under some kind of international authority that would guarantee a free passage to Russian shipping. Similar guarantees should be given as to the outer doors of Suez and Gibraltar.

After all it is probable that the tug of war will come over the question of trade rights. Germany's commercial future depends upon her getting access again to the markets of the world, and she will fight longest to secure another treaty like that of Frankfort in 1871 which secured for her the same trade privileges in France as "the most favored nation." But the Allies in the Paris Conference bound themselves not to grant such a clause in the peace treaty, so it is hard to see what can be done about it.

Still, taken as a whole, the claims and counter-claims do not look impossible of arrangement. To say that a war must go on until one side is clearly victorious and the causes of the war are settled is absurd. A hundred years ago the United States and England signed a peace treaty that did not mention the causes of the war and each party to this day claims the victory. Many a peace conference that started in with a greater discrepancy of opinion than appears in the parallel columns above has come to a successful conclusion. If peace is wanted it can be had.

BILLY SUNDAY IN BOSTON

BILLY SUNDAY'S campaign in Boston—which unfortunately did not have the expected result of causing Boston to "go dry"—received even more than the usual tribute of printers' ink. His picturesque slang is a matter more of taste than of morals, as long as it does not impair his auditors' sense of reverence. Those who hear him will be less apprehensive on this score than those who read him. A more serious aspect of his work is that he ties up religion with various forms of unreason and traditionalism that look as grotesque these days as unicorns and one-eyed giants. Whoever endeavors to promote what is

true in religion by what is false in theory and erroneous in fact does religion an ill turn.

Mr. Sunday's undoubted success in putting some fresh moral fiber into the communities where he goes is a result obtained in spite of his exegetical moon-calves and hatred of evolution. He only hurts his greater success by classifying the accepted scientific tenets of our time as anti-religious, and denouncing his fellow ministers as a lot of "mutts." The attempt to promote truth by means of untruth is always followed by unfortunate reactions. We appeal from Mr. Sunday ill-informed and intolerant to Mr. Sunday better informed and more generous-minded.

NO WAY TO DO IT

IT is significant that whenever anyone in Congress wants to put a tax upon the dissemination of intelligence by increasing the rate of postage on periodicals the attempt is made by means of a "rider" upon an appropriation bill. A "rider" cannot be voted upon on its merits. The President cannot veto it without obstructing the appropriations for an entire integral part of the national service. The "rider" method of legislation is a hole-and-corner way of putting something thru Congress that would otherwise have little chance of success. It is thoroly mischievous.

This method is being tried once more, and the new proposal is more unjust and indefensible than any of its predecessors. It proposes a zone system of postal rates on periodicals ranging from one cent a pound for distances up to 300 miles to six cents a pound for distances over 1800 miles.

This plan would impose an almost impossible burden upon the publishers of national periodicals. Rather, the burden would fall upon the readers of national periodicals. For, in the last analysis, it is the magazine readers that pay the postage bills. Whether they realize it or not, they pay the postage on the magazines they subscribe for just as truly as if they affixt stamps to the wrappers themselves.

The earlier creators of our postal system realized this fully when they established first the two-cent-a-pound rate and then the cent-a-pound rate for periodicals. They knew that they were not granting a subsidy to publishers, but affording to the people themselves an opportunity to get their periodical literature, their news, discussion, information, entertainment, at the lowest possible price. They believed that to do so was good, for the dissemination of such educational and cultural influences as broadly as possible was conducive to the general welfare.

It is true that conditions have changed. But if it is found necessary to modify the cent-a-pound rate, the zone system for periodicals has nothing to commend it. It discriminates against national periodicals. It discriminates against the parts of the country far from the publishing centers. It is based on an erroneous theory —that the cost of transportation of postal matter shipped in bulk as magazines is proportional to the distance.

Let Congress face the matter openly and fairly. Let it do nothing precipitately and by secret ways. If any increase in the second class postal rate is to be made, it should apply to all magazines and periodicals alike—newspapers are now carried *free* within the county in which they are published—and to all parts of the country alike.

But in any case Congress has no right to impose this tax upon the reading public without full public consideration and untrammeled discussion.

AN ALL-GERMAN LIBRARY

GERMANY does not allow the war to distract her attention from that form of *Kultur* in which she has ever since the days of Gutenberg taken a peculiar pride, that is, book-making. More new books are published in Germany every year than in any other three countries, and if we add to them the German books printed in Austria, Switzerland and other countries, they form a large part of the world's literature.

It is now proposed to bring all books printed in German anywhere into one great reference library at Leipzig, the center of the German book trade, and for that purpose a magnificent building has been planned to hold the million volumes and to provide for the needs of a century to come. The first section of the building, costing about half a million dollars and housing half a million books, was opened in October last.

Practically all of the German publishers have agreed to give a copy of all future books to the Leipzig Library, and 5000 periodicals will be contributed. Daily papers are not included. The library is free to all comers.

In some respects the new Deutsche Bucherei des Börsenvereins der Deutschen Buchhändler —to give its full name— is decidedly ahead of either our Congressional Library or the British Museum.

WHAT THE HIGH COST OF LIVING MEANS TO YOU

The recent rise in the prices of food and almost everything else affects each of us in a different way. What makes one person happy brings embarrassment or ruin to another. The shoe pinches one because of the cost of leather: another finds it difficult to make both ends meet and so has to resort to oxtail soup and beef tongue.

Where does it hit you? Please write and tell us. What difference has it made in your mode of life? We want to hear from as many of our readers as possible within the next month. Don't write a dissertation on the subject. Take one or two items, the most serious of them, and say what you are doing about it—in two hundred words or fewer. We can get statistics from the government; we can get curves from the professors. What we want to know is whether you are glad or sorry and why; what you would like changed and how.

THE STORY OF THE WEEK

Wilson Makes Peace Move

On December 18 President Wilson sent a formal diplomatic communication to all of the nations engaged in the present Great War, inviting them to an exchange of views upon the question of terms of peace. The text of the note is substantially identical in the versions sent to each belligerent, but one sentence, disclaiming any necessary connection between the German peace overtures and the American offer, is worded differently in the notes sent to the Entente Allies and to the Central Powers. President Wilson makes his proposal from the point of view of "the representative of a neutral nation whose interests have been most seriously affected by the war and whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue," and copies of the note have been sent to other neutral powers for their information and perhaps with a view to similar action on their part. We print the entire note on another page.

President Wilson's note is said to have been prepared nearly in its present form several weeks before it was sent, and extraordinary efforts were made to preserve diplomatic secrecy. The administration even permitted the newspapers to spread the report that the United States would transmit the proposals of the Central Powers to the Entente Allies without comment and would refrain from any early step to support the plea of these powers for a conference. The American papers did not secure the text of the note till two days after it had been transmitted to the governments of Europe, altho rumors that some peace move was contemplated forced down the value of war stocks on exchange just before the news was given to the public.

In an important supplementary statement Secretary Lansing, whose name is signed to the note and whose position has never diverged from that of President Wilson, said that "we are drawing nearer the verge of war ourselves, and therefore we are entitled to know exactly what each belligerent seeks in order that we may regulate our conduct in the future." He did not explain to what present emergency he referred nor what action on the part of the United States was foreshadowed by his words, but he denied that the Administration had any intention of abandoning its policy of neutrality. He intimated that the perilous international position of the United States rather than the German peace overtures had impelled the Government to act.

The American Government is very anxious to dispel any suspicion on the part of the Allies that it is "backing" Germany. The communication addrest to the belligerents was, in diplomatic terms, not intervention or even mediation, but simply a tender of good offices. The press and public in the Allied countries, as a whole, resent any such action on the part of a neutral power, but it is possible that the responsible statesmen of the Entente Allies may take advantage of the offer to make a more definite statement of terms. It is needless to say that the German Government will hail with gratitude such an important advance on the road to an early peace.

THE CAR OF THE MEXICAN PRESIDENT

Carranza's army is equipt with several armored motor cars. In the intervals between fighting with Villa one of them came up to our border to have its picture taken

Congress and the Railroads

The hope of many railroad managers and labor union representatives that Congress might be induced to set aside the Adamson eight-hour law, abandon the proposed prohibition of railroad strikes pending the investigation of an industrial dispute, and consent to a private agreement on the eight-hour day as a substitute for legislation, has met little encouragement from Congress. Senator Newlands, chairman of the Senate Interstate Commerce Committee, voiced the opposition to any abandonment of the administration program. "No matter what may be the agreement of the railroad executives and the brotherhoods," he said, "there must be legislation which would prevent such a strike in the event of a disagreement between the roads and their employees. The interest of the public in such a controversy is paramount, greater than that of either the roads or their employees." Representative Adamson, the author of the much discussed railroad bill, asserted that Congress would never consent to a repeal of the law.

The many measures which, with or without the approval of the administration, have been introduced into Congress to meet the railroad situation, are still in the committee stage, and it is probable that final action will be delayed until the decision of the Supreme Court upon the constitutionality of the Adamson law; for if the verdict should be unfavorable it would be necessary to secure the passage of another measure, not open to the same legal objections, which would secure the principle of the eight-hour day. If any essential part of the program of railroad legislation mapped out by President Wilson should be delayed beyond the end of the session, an extra session of the newly elected Congress will probably be ordered.

Carranza Balks

First Chief Carranza has not yet accepted the terms of the protocol recently agreed upon by the representatives of the United States and of Mexico for the settlement of disputes arising from the anarchy of the Mexican border. Carranza has not refused to agree to the proposals of the joint commission, but he has postponed his acceptance until certain changes, which he instructed Alberto Pani to urge upon the other members of the commission, should be made. It is believed that the Mexican government objects less to the actual wording of the protocol than to Secretary Lane's supplementary statement that in case of future necessity American soldiers might be sent across the border to pursue bandit raiders as far into Mexico as would be necessary. The American members of the joint commission sent a reply to Carranza's objections explaining the terms of the

PAPER PROTECTION

Country folks have known for a long time that "there's nothing like a newspaper to keep out the wind." But now the Government has taken the matter up and furnished paper coats to be tested by the army aviators who fly from New York to Philadelphia

protocol and, probably, refusing to make any essential amendments to it. The text of the explanation has not been given to the public. If Carranza remains obstinate the joint commission will resume its meetings after the holidays.

There has been no important change in the internal situation of Mexico since the battle of Chihuahua City. General Felix Diaz and other rebel leaders of the South report small gains and Torreon is again threatened, and perhaps taken, by Villa. But the repulse of Villa from Chihuahua City has, it is said, shaken the confidence of his followers and started factional quarrels within his army. The Mexican de facto government has restored large holdings of land in the country districts and many city lots in Mexico City to their original owners since "the reasons which compelled the government to exercize its power of intervention no longer exist." General Funston has concluded that the border is now sufficiently secure to warrant a reduction in the number of the National Guard on active service. On December 18 he designated 16,000 troops to return to their homes, selecting the units of longest service. At present there are about 75,000 of the National Guard to protect the border, and the number will not be farther decreased until the diplomatic situation clears. Brigadier General Pershing, commander of the American expeditionary forces in Mexico, has been nominated by President Wilson for promotion to the rank of major general.

Army Chiefs Urge Conscription

The Senate Sub-Committee on Military Affairs, which has been considering the Chamberlin bill for universal military training in the United States, has uncovered a surprizing amount of opposition to the present volunteer system among army men and their criticisms are supported by a not inconsiderable section of the press and the public. Wages in private employment are now so high relatively to the pay of the soldier, that on the last day of October, according to the testimony of Adjutant General McCain before the House Military Committee, the enlisted strength of the army was 19,000 less than the authorized number. He hoped that in a few months the army would be completely recruited, but other officers have been less optimistic. Major General Hugh L. Scott and Major General Leonard Wood denounced the existing federalized militia system and demanded its abolition. General Scott raised the specter of an Anglo-Japanese alliance against the United States which, in his opinion, would require an army of 3,000,000 trained soldiers to repel, since the hostile combination would have unquestioned control of the sea. The plan urged by the general staff of the army provides for six months of military training for able-bodied men in the country at the age of eighteen. General Wood, quoting the success of the summer camps at Plattsburg and elsewhere, defended the six months' period of training as adequate to make a good soldier if the training is of a sufficiently intensive character.

Boston Stays Wet

On December 19 the city of Boston voted on the question of licensing liquor dealers. The many prohibition victories in the West at the election in November and the encouraging gains made in local option elections in smaller Massachusetts cities gave promise of a heavy no-license vote in Boston. "Billy" Sunday, the famous revivalist and temperance crusader, devoted a number of his recent sermons in Boston to the liquor question and was supposed to have influenced hundreds of voters. The opponents of prohibition were stirred to unwonted activity by the menacing strength of the anti-liquor forces and launched a business man's campaign which relied upon the sole argument that prohibition would be a financial blow to the city. License fees and taxes amounted to about two million dollars a year, and over a hundred million dollars' worth of real estate was held by liquor interests. To reassure business men, ex-Governor Eugene N. Foss offered to put up a bond of a million dollars to make good any loss of revenue from the discontinuance of liquor licenses if the city of Boston would vote for prohibition and give him one-half the savings the city would make, directly or indirectly, under the no-license system.

The license vote increased from 46,115 in 1915 to 53,459 this year, and the prohibition vote declined from 31,877 to 29,997. For the increase in the license vote an easy explanation may be found in the greater intensity of the campaign and the greater efforts put forth by the liquor interests; but for the decrease in the no-license vote no ready explanation can be offered. Advocates of prohibition point out, however, that in thirty-seven city elections held in Massachusetts this year the dry forces gained six cities and lost none, so that their cause is relatively stronger in the state than ever before.

Protestant Churches Convene

The Protestant Churches of America have passed another mile post. The six days' session of the Federal Council of the Churches of Christ in America at its Third Quadrennial Meeting, at St. Louis, marks the beginning of a new step forward in aggressive American Protestantism. Thirty denominations were represented.

Differentiating doctrines and ecclesiastical distinctions were rigidly held in the background, while thought and will were focussed for fresh activities and constructive measures. The interest of every session centered on duties to be met and work to be done rather than on the records of that which had been accomplished. The reports of the fourteen commissions were brimful of fresh information, as well as records

Paul Thompson

THE CHAMPION OF THE UNDERFED

District Attorney George M. Anderson of Boston heads the government investigation of the increasing cost of food. Conditions in several large cities are to be studied and reports and recommendations brought before the Department of Justice

of work accomplished. The statements, addresses, resolutions and discussions accompanying the reports of Commissions on Evangelism, Social Service, Christian Education, Federated Movements, Peace and Arbitration and Relations with Japan, constituted the high-water points of interest.

The proceedings of the Council with the reports of the commissions will fill seven volumes. Two will be needed for the report of the Commission on Peace and Arbitration. Its concluding section on the "Duty of the Churches of America in the light of National and World Conditions" constitutes a clarion call to the new task of the Church, that namely, of Christianizing international relations. The sections dealing with the "Rejections" and the "Affirmations" of Christianity called forth special commendation.

The Council wisely took action that was unanimous calling for a Federal Commission on Oriental Relations, and for federal legislation for the adequate protection of aliens. It declared "on behalf of its constituency that the United States seeks no advantage or opportunity in the Orient harmful to those lands, nor will it be partner with any nation or any undertaking that seeks selfish advantage regardless of the rights and welfare of their peoples." The account of the negotiations initiated by the Council's Embassy to Japan in 1915, which resulted in the coming to America of Japanese fraternal delegates to the American Federation of Labor, and in the marked changes already secured in the attitude of American organized labor to the entire Japanese question, gave the Council some realization of the significance of that embassy.

The nation-wide campaign of the Federal Council during the past year for relief of war sufferers was heartily endorsed. It is to be hoped that the churches will generously respond to the campaign which the special War Sufferers Relief Commission was instructed to carry on. The Commission on Social Service took a stand for "industrial democracy." The Commission on Evangelism exprest its preference for simultaneous pastoral evangelism. During the entire period of the war the Council has kept in the closest relations with the Protestant Churches of all the belligerent countries and has sent money to aid those in special need.

Prohibition Gains at Washington

Both the nation-wide constitutional amendment and the Sheppard bill prohibiting the manufacture and sale of alcoholic beverages in the District of Columbia have been received in the Senate with unexpected favor. The Underwood amendment to the Sheppard bill providing for a referendum vote of the people of the District of Columbia on the question was defeated on December 19 by a tie vote of 38 to 38. The vote will be taken again on January 9. Senator Smoot's substitute bill, which not only forbade the manufacture and sale of liquor within the District, but even its importation for personal use, was defeated on the previous day by 61 votes to 8.

The Senate Judiciary Committee has favorably reported the proposed federal prohibition amendment by a vote of 13 to 3. Similar action had already been taken in the House of Representatives, and both branches of Congress may have a chance to vote on the question before the session is over. Senator Reed of Missouri is leading the fight against the amendment in the Senate, and it may yet be killed by a fillibuster.

THE GREAT WAR

December 18—President Wilson asks belligerents to disclose terms of peace. German attack at Verdun repulsed.

December 19—Premier Lloyd George replies to German peace proposals. Greek Government protests against Allies' support of Venizelos.

December 20 — Germans bombard Somme lines. British advance upon Kut-el-Amara, Mesopotamia.

December 21—Danish Parliament approves sale of West Indies to the United States. Russians in the Dobrudja are driven back to the Danube.

December 22—British take El Arish, ninety miles east of Suez Canal. British steamer "Itonus" sunk.

The Retreat of the Rumanians

After the loss of Bucharest and the breaking of the Buzeu line beyond it, the Rumanians retired toward the northwest closely pursued by the troops of Mackensen. The Russian troops, altho they had been sent to Rumania too late to protect that country from invasion, were able to rescue the remnants of the Rumanian army by holding their foes in check by a series of rearguard engagements.

Root Newspaper Association

IT'S WARFARE, BUT IS IT FAIR?

A chapel which conceals the entrance to a French trench. The Germans have been bitterly condemned for shelling churches

During the week the German reports announce the capture of about a thousand prisoners daily on the average. The Commander-in-Chief of the Bulgarian army, in a congratulatory order, states that during the campaign more than 120,000 Rumanians had been taken prisoner and 3000 cannon captured. Since the killed and wounded usually amount to several times the number of captives, this would indicate that at least half of the original Rumanian army of some 500,000 had been put *hors de combat.*

The new line behind which the shattered Rumanian forces are being reformed is well calculated for defense. It is only about seventy-five miles long, stretching across Rumania at its narrowest part from the Carpathian Mountains on the west to the swamps of the Danube on the east. In the middle of the line is the fortress of Fokchani and on the eastern end the fortress of Galatz, right at the angle where the Danube turns east to empty into the Black Sea. The defensive works of this line were built as a protection against the Russians, whom the Rumanians formerly regarded as their hereditary foes. The forts may now serve, however, with the aid of the Russians as a protection against the former allies of Rumania, the Austrians.

As the Rumanians retreated northwest on the western side of the Danube, the Russians under General Sakharoff in the Dobrudja on the eastern side of the river were of course obliged to withdraw also toward the north. They are last reported to be close to the Danube delta and those that do not escape over the bridge at Galatz are likely to be caught between the Bulgars and the Black Sea. Once behind the Danube they would be safe, for the pursuing troops would not attempt a crossing of the various channels and the swamps thru which the river makes its way to the sea.

Beyond the Danube lies the Russian province of Bessarabia, which up to 1878 belonged to Rumania and is still largely peopled by Rumanians. The thousands of Rumanians who fled before the invading armies have taken refuge in Bessarabia and other parts of southern Russia already overcrowded with the fugitives from Poland. The relief organizations of Russia, in which some Americans are active, are finding it impossible to care for this flood of destitute refugees in midwinter, and multitudes are suffering from famine and cold.

The War in France

The French are highly elated at the success of the attacks of October 24 and December 15 by which they recovered some of the strongest positions that had been taken by the Germans at Verdun. In a congratulatory order to the troops, General Mangin, who carried out these operations, said:

Admitting themselves unable to beat us on the battlefield, our savage aggressors set a clumsy, premature peace trap for us. To their hypocritical overtures France an-

THE RED CROSS IN RUMANIA

In spite of the rapid German advance and the difficult weather these temporary shelters kept close behind the firing line. They are makeshift hospitals, of course, but fully equipt to give immediate attention to the severely wounded

swered by the voices of your guns and the points of your bayonets. You have been good Ambassadors of the Republic. She thanks you.

The French Socialists, however, take a different view of the German proposals and have passed a resolution calling upon the Allied governments to ascertain the German terms of peace and to state their own. M. Longuet, speaking for the Socialist minority in the Chamber of Deputies, says:

> If the German proposals are, as they may be, unjust and impossible, if it pretends to retain any part of Belgium, France or Serbia, if it is not prepared to suggest some solution of the Alsace-Lorraine problem, if it refuses to give absolute independence to Poland, then it will have to take the responsibility for the continuation of the slaughter, and not we.

It would, he said, be falling into the "German trap" if France should be put into the position of refusing to listen to peace proposals.

We have had many estimates of German losses by their enemies. Now we have a German estimate of the Allied losses. A "competent military authority" of Germany is quoted as saying that up to the end of November the British had lost at least 550,000 men on the Somme and the French 250,000. The total French losses since the beginning of the war are estimated at 3,800,000 and the British at 1,300,000. These figures do not include the colored troops who are employed by the French and British and who, it is alleged, bear the brunt of the heavy attacks. The German losses on the Somme are said to be much less than 500,000, instead of 690,000, as estimated by the Allies. It is claimed that, owing to the excellent medical and surgical care they receive, about 76 per cent of all the German wounded are able to return to the front.

England Recognizes Greek Rebels

The announcement by Lloyd George in his first speech to Parliament as Premier, that the British Government would recognize the agents of Venizelos, confirms the report received from London ten days before that King Constantine would be deposed. Altho ex-Premier Venizelos has not so far declared himself against the monarchy, his action in setting up a rival government at Salonica and organizing an army which has fought pitched battles with the King's troops could hardly bear any other interpretation. The Greeks in America are eager for the establishment of a republic, and the two Venizelist agents who arrived here were received with wild enthusiasm. The French favor a Greek republic, but the monarchical powers of the Allies have opposed such a move as a dangerous precedent, so if a change is made it is likely to be the substitution of another king for Constantine.

The Greek Government has issued a note protesting against the action of the Allies in supporting "this seditious movement." The revolutionists, the note says, have been permitted to go from Salonica to Syra and other islands of the archipelago and overthrow the local governments, arrest the functionaries and terrorize the inhabitants, and in these outrages they have had the aid of British and French warships, while the Greek Government is prevented by the blockade from stopping these depredations.

The Allies, on the contrary, maintain that the people of the islands have voluntarily thrown in their lot with the Provisional Government established by Venizelos at Salonica. Shortly before his retirement as Foreign Secretary, Viscount Grey gave out a statement to the American press explaining the grounds on which the Allies justified their intervention in Greece. The Kingdom of Greece was, he says, established in 1863 as "a monarchical independent constitutional state" by the three powers, Great Britain, France and Russia, which had agreed in 1830 that none of the three powers should land troops without the consent of the other two. Now King Constantine, he argues, by dismissing Premier Venizelos and by refusing to fulfil his treaty obligations by going to the aid of Serbia, had acted unconstitutionally, and so it became the duty of the three protecting powers to intervene, which they did by landing troops at Salonica, with the approval of Premier Venizelos. Viscount Grey omitted to mention that Premier Venizelos later issued a formal protest against the landing of troops and also that when Venizelos was dismissed by the King the people refused by an overwhelming majority to support him at the polls. It is, however, of little use to seek legal justification for the actions of either side. Force rules now in Greece, and not the law.

King Constantine will probably make an effort to save his crown by a complete compliance with the Allied demands for the removal of his troops from Macedonia and the surrender to the Allies of the Greek railroads, telegraphs, etc. The Germans and Bulgars before Monastir seem to be making no further efforts to break thru the Allied lines to join the Greeks, and the peace proposals emanating from Berlin indicate that King Constantine can expect no support from Germany at present.

The War on the Sea

Sir Edward Carson, First Lord of the Admiralty in the new British Cabinet, has announced to Parliament that:

> The Government cannot admit any distinction between the rights of unarmed merchant ships and those armed for defensive purposes. Merchant captains enjoy an immemorial right to defend their vessels against attack, visit or search by any means in their power, but they must not seek out the enemy to attack him, that function being reserved to ships of war. So far as I am aware, all the neutral powers take the same view

It is expected that the British Government will adopt more vigorous measures to combat the German submarines, and among these measures will be the arming of merchant and passenger vessels with heavy guns fore and aft. The German Government holds that such vessels are to be classed as armed auxiliary cruisers and are therefore liable to be attacked without warning. It is, according to the German view, unreasonable to insist, as does the American Government, that a submarine shall approach above the water for the purpose of giving formal warning a vessel armed with guns far outranging those of the submarine and instructed to open fire at sight upon any suspicious submarine. Under Secretary of State Zimmermann says:

Harding in Brooklyn Daily Eagle

THE ANSWER

Kirby in New York World

BUT WHAT'S UNDER THE HELMET?

Rogers in New York Herald

"THE DOOR IS CLOSED!"

BELLIGERENT VIEWS OF PEACE

As the armament of several British ships has been used for attack contrary to the English declaration, and it has, therefore, endangered the lives of crew and passengers, of course armed ships cannot be considered as peaceful trade boats. In contradistinction to England, Germany does not seek to throttle legitimate commerce. We are merely seeking to put an end to contraband shipments to our enemies in self-defense, and I am glad to be in a position to say that our submarines are able to keep up the war and prevent contraband shipments from reaching our enemies, and to do so in a manner irreproachable in the sight of international law. It is perhaps a work of supererogation to point out that neutrals have an effective remedy against further loss of ships in their own hands by simply resisting England's illegal economic pressure and discontinuing the carrying of contraband.

If the British merchant ships are to be more heavily armed and permitted to take the offensive, it will raise the question of whether they can be permitted the use of American harbors. Hitherto the American Government has allowed shipping to mount only small guns and on the understanding that they would be used purely for defensive purposes.

Lloyd George's Speech

After Lloyd George's strenuous efforts in the formation of a new cabinet from various parties he was taken down with a cold and it was two weeks before he could make his first appearance in Parliament. In the meantime the German peace proposals had been transmitted thru the United States so he had to deal with them as well as to explain the policy and organization of the Government. What he said in reply to Germany we have quoted almost entire on another page but the rest of the speech is of scarcely less importance.

For one thing the new cabinet differs widely from anything hitherto known in England in three respects: first, in that the executive power is concentrated in a war council of five men; second, men of business and administrative capacity have been placed at the head of many departments instead of politicians; and third, no government has ever included so many representatives of labor organizations. As the Premier put it in his usual graphic style:

The kind of craft which you have for river or canal traffic is not exactly the kind of vessel you would construct for the high seas. The old cabinets were better adapted to navigate the parliamentary river with its shoals and shifting sands and perhaps to cruise in home waters. A cabinet of twenty-three, however, is rather top-heavy in a gale.

It is true that in the multitude of counselors there is wisdom, but that was written for Oriental countries in peace times. You cannot run a war with a Sanhedrin.

The new Minister of Labor, he said, was not intended merely to settle disputes but to mobilize labor reserves and to render labor conditions less repellant and more healthful. The Society of Friends, who have conscientious objections to war, are volunteering for such welfare work.

The British Government is to take complete control of shipping as it has previously of railroads, and also construct new ships so as to make up for the losses of the war. The prodigious profits made out of freights have contributed to the high cost of commodities. The food problem is very grave owing to the shortage of the crops in America, Australia and Argentina, and the cutting off of the Russian supply.

We must call upon the people of this country to make real sacrifices but it is essential, if we do so, that the sacrifice should be equal. Over-consumption by the fortunate must not be allowed to create a shortage for the less well-to-do. Every available square yard of land must be made to produce food and the labor available for tillage should not be turned to mere ornamental purposes until the food necessities of the country have been adequately safeguarded.

The inordinate war profits are to be cut down by a closer revision of prices and by the appropriation by the Government of eighty per cent of the excess profits on the manufacture of military supplies. "It is not what a nation gains but what a nation gives that makes it great."

In regard to Ireland, the Premier said:

I tried once to remove the misunderstanding between England and Ireland. I was drenched with suspicion of Irishmen by Englishmen and of Englishmen by Irishmen, and, worse and most fatal of all, suspicion by Irishmen of Irishmen. It was a quagmire of distrust which clogged my footsteps and made progress impossible. That is the real enemy of Ireland. If that could be slain I believe it would accomplish an act of reconciliation that would make Ireland greater and Britain greater and make the United Kingdom and the empire greater than they ever were before.

That is why I have always thought and said that the real solution of the Irish problem is largely one of better atmosphere, and in that I speak not merely for myself but for my colleagues.

The new Premier proposes, at an early date, to call an imperial conference in order to counsel with the dominions as to the course of the war and what further action is necessary.

Lloyd George paid a high tribute to his former chief, Mr. Asquith, and said: "If there were any faults of temper they were entirely mine and I have no doubt that I must have been very difficult at times."

The Premier concluded with a declaration of England's aim as follows:

This is a struggle for international right, international honor, international good faith—the channel along which peace on earth and good will among men must follow. The embankments, laboriously built up by generations of men against barbarism, were broken and had not the might of Britain passed into the breach Europe would have been inundated with a flood of savagery and unbridled lust of power.

The trained sense of fair play among the nations, the growth of an international consciousness for the protection of the weak against the strong, of a stronger consciousness that justice has a more powerful backing in the world than greed, the knowledge that any outrage upon fair dealing between nations, great or small, will meet with prompt and inevitable chastisement—these constitute the causeway along which humanity was progressing slowly to higher fields.

The triumph of Prussia would sweep it all away and leave mankind to struggle, helpless, in the morass of horror. That is why since this war began I have known but one political aim. For that I have fought with a single aim. That was to rescue mankind from the most overwhelming catastrophe that has ever yet menaced its well-being.

ENGLAND'S ANSWER

One of the most important speeches ever made in the world's history was the reply of the Prime Minister of England to the peace proposals of the German Chancellor. David Lloyd George appeared before the House of Commons for the first time as head of the Government on the afternoon of December 19 and spoke as follows:

I appear before the House of Commons today with the most terrible responsibility that can fall upon the shoulders of any living man. As the chief Minister of the Crown, and in the midst of the most stupendous war in which this country ever has been engaged, a war upon which its destinies depend, the responsibilities which rest upon the government have been accentuated by the declaration of the German Chancellor, and I propose to deal with that at once.

The statement made by him in the German Reichstag has been followed by a note presented to us by the United States Minister, without any note or comment. The answer which is given by the government will be given in full accord with all our various Allies. Already there has been an interchange of views, not upon the note itself, because it has only recently arrived, but upon the spirit which impelled the note. The note is only a paraphrase of the speech, so that the subject matter of the note itself has been discussed informally with the Allies, and I am glad to be able to say that we arrived separately at identical conclusions.

I am very glad that the first answer was given to the German Chancellor by France and by Russia. They have unquestionably the right to give the first answer. The enemy is still on their soil and their sacrifices have been greater. The answer they have given has already appeared in all the papers, and I stand here today on behalf of the government to give a clear and definite support to the statement they have already made. And here let me say that any man or set of men who wantonly and without sufficient cause prolongs a terrible conflict like this has on his soul a crime that oceans could not cleanse; on the other hand, a man or set of men who from a sense of war weariness abandoned the struggle without achieving the high purpose for which we entered upon it would be guilty of the costliest poltroon ery ever perpetrated by any statesman.

I should like to quote the well-known words of Abraham Lincoln under similar conditions:

"We accepted the war for an object, a worthy object. The war will end when that object is attained. Under God I hope it will never end until that time."

Are we to achieve that object by accepting the invitations of the German Chancellor? That is the only question we have to put to ourselves.

There has been some talk about the proposals of peace. What are those proposals? There are none. To enter, on the invitation of Germany, proclaiming herself victorious, without any knowledge of the proposals she intends to make, into a conference, is putting our heads into a noose with the rope end in the hands of the Germans.

This country is not altogether without experience in these matters. This is not the first time we have fought a great military despotism overshadowing Europe, and it won't be the first time we have helped to overthrow a military despotism.

We have an uncomfortable historical memory of these things, and can recall one of the greatest of these despots, whose favorite device was to appear in the garb of an angel of peace, either when he wished time to assimilate his conquests or to reorganize his forces for fresh conquests; or, secondly, when his subjects showed symptoms of fatigue and war-weariness, an appeal was always made in the name of humanity. He demanded an end to the bloodshed at which he professed himself horrified, altho he himself was mainly responsible.

Our ancestors were taken in once, and bitterly they and Europe rue it. The time was devoted to reorganizing his forces for a deadlier attack than ever upon the liberties of Europe. Examples of this kind cause us to regard this note with a considerable measure of reminiscent disquietude.

We feel we ought to know before we give favorable consideration to such an invitation that Germany is prepared to accede to the only terms on which it is possible for peace to be obtained and maintained in Europe.

What are these terms? They have been repeatedly stated by all the leading statesmen of the Allies. All I can do is to quote what the leader of the House, Mr. Bonar Law, said last week when he made practically the same statement of terms as those put forward by Mr. Asquith—"restitution, reparation, guarantees against repetition." So that there shall be no mistakes (and it is important that there should be no mistake in a matter of the life and death of millions), let me say *complete restitution, full reparation, and effectual guarantees.*

Did the German Chancellor use a single phrase that would indicate that he was prepared to accept such terms? Was there a hint of restitution? Was there any suggestion of reparation? Was there any indication of any security for the future, that this outrage on civilization would not again be perpetrated at the first profitable opportunity?

The very substance and style of the speech constituted a denial of peace on the only terms on which peace is possible. He is not even conscious now that Germany has committed an offense against the rights of free na tions. Listen to this quotation: "Not for an instant had they (the Central Powers) swerved from the conviction that a respect for the rights of free nations is in any degree incompatible with their own rights and legitimate interests." When did they discover that? Where was the respect for the rights of other nations in Belgium?

That, it is said, was for self-defense. Menaced, I suppose, by the overwhelming army of Belgium, the Germans were intimidated into invading Belgium, burning Belgian cities and villages, massacring thousands of inhabitants, old and young, carrying survivors into bondage—yea, carrying them into slavery at the very moment when the note was being written about the "unswerving conviction of the respect for the rights of other nations."

What guarantee is there that these terrors will not be repeated in the future? That if we enter into a treaty of peace, we shall put an end to Prussian militarism? If there is to be no reckoning for these atrocities by land and sea, are we to grasp the hand which perpetrated them without any reparation being made? We have to exact damages. We have begun; already it has cost us much. We must exact it now, so as not to leave such a grim inheritance for our children. Much as we all long for peace, deeply as we are horrified at the war, their note and speech give small encouragement to hope for an honorable and lasting peace. What hope is given in that speech? The whole root and cause of this bitterness—the arrogant spirit of the Prussian military caste—will it not be as dominant as ever if we patch up a peace now? The very speech resounds with the boast of the Prussian military triumph; the very appeal for peace was delivered ostentatiously from the triumphal chariot of Prussian militarism.

We must keep a stedfast eye on the purpose for which we entered the war. Otherwise the great sacrifices we are making will be all in vain. The German note states that for the defense of their existence and for the freedom of national development the Central Powers were constrained to take up arms. Such phrases cannot but deceive those who listen to them. They are intended to deceive the German nation into supporting the designs of the Prussian military caste.

Who ever wished to put an end to their national existence or to the freedom of their national development? We welcomed their development so long as it was on behalf of peace. The greater their development in that direction, the greater would humanity be enriched by that development.

That was not our design and it is not our purpose now. The Allies entered into this war to defend Europe against the aggression of Prussian military domination and they must insist that the end is a most complete and effective guarantee against the possibility of that caste ever again disturbing the peace of Europe.

Prussia, since she got into the hands of that caste, has been a bad neighbor—arrogant, threatening, bullying, shifting boundaries at her will, taking one fair field after another from weaker neighbors and adding them to her own dominions, ostentatiously piling up weapons of offense, ready on a moment's notice to be used. She has always been an unpleasant, disturbing neighbor to us. She got thoroly on the nerves of Europe, and there was no peace near where she dwelt. It is difficult for those who were fortunate enough to live thousands of miles away, to understand what it has meant to those who lived near. Even here, with the protection of the broad seas between us, we know what a disturbing factor the Prussians were with their constant naval menace. But even we can hardly realize what it has meant to France and Russia. Several times there were threats. There were two of them within the lifetime of this generation which presented an alternative of war or humiliation.

There were many of us who had hoped that internal influences in Germany would have been strong enough to check and ultimately to eliminate this hectoring. All our hopes proved illusory, and now that this great war has been forced by the Prussian military leaders upon France, Russia, Italy and ourselves, it would be a cruel folly not to see to it that this swashbuckling thru the streets of Europe to the disturbance of all harmless and peaceful citizens shall be dealt with now as an offense against the law of nations.

The mere word that led Belgium to her own destruction will not satisfy Europe any more. We all believed it; we all trusted in it. It gave way at the first pressure of temptation, and Europe has been plunged into this vortex of blood. *We will therefore wait until we hear what terms and guarantees the German Government offers other than those, better than those, surer than those, which she so lightly broke.* Meanwhile we ought to put our trust in an unbroken army rather than in a broken faith.

THE HIDE AND SEEK OF WAR

BY LOUIS LIVINGSTON SEAMAN

Dr. Seaman in the first months of the war visited England, Belgium and France as special representative of The Independent and wrote a series of articles on conditions as he found them. Especially noteworthy was his cabled description of the Zeppelin attack on Antwerp which he personally experienced. Now he has revisited the Western front and sets forth here the results of his new observations. Dr. Seaman's comment upon the medical and sanitary improvements that the war has brought forth are particularly valuable in view of his eminence as an authority of military sanitation and his wide experience in such matters in other wars. — THE EDITOR.

IN revisiting the war zone after an interval of eighteen months, one is inspired with admiration at the amazing patriotism and fortitude of the people and the armies of the Allies.

War has brought its ravages, and cleared the vision so that events which before were enigmatical, are today presented in clear perspective, and we see the tragedy in its true light. Those who view it from a moral standpoint regard it as the most logical event in history. For over half a century Prussian philosophy has taught that war is *good business*, and that any diabolical methods may be employed to accomplish its purposes. The Prussian population, and especially the army, has been so thoroly educated and drilled in this theory that no one is surprized at any of their barbarities. From the Zeppelin raids to the breaking of treaties, the murder of hostages, the bayonetting of the wounded and unmentionable crimes, to the deportation of inhabitants of captive territories and their reduction to abject slavery, it is but a repetition of what I saw of their practises in the Boxer War in China and with the Hereros in Africa.

Among the noticeable changes that one sees in visiting trenches are the improvements in sanitation—the superior hygiene of the troops, and the rapid transport of the wounded, so that even the battlefield has lost some of its terror. No longer do men lie on the bloody field twenty-four or sometimes thirty-six hours without even a drink of water, as occurred in the great pivotal battle of the Marne two years ago when I was there. The American Volunteer Motor Ambulance, with its American drivers, has largely contributed to this change, and now the wounded often reach Paris and even London within twenty-four hours after leaving the field.

Wonderful improvement, too, is seen in the treatment of the wounds. Preventive sera, administered on the field, stop the development of tetanus, which was so prevalent in the early stages of the war. Two years ago I inspected five hospitals in France for the British Red Cross and counted 456 cases of typhoid fever. This year in those same institutions, I failed to discover a case.

But most important is the wonderful success of Dr. Alex. Carrel, in his treatment of compound comminuted fractures by continuous saline irrigation, whereby he has solved the problem of destroying infection, and robbed war of one of its most fatal allies. The solution used to accomplish this result was discovered by Dr. Dakin, also an American, who with Dr. Carrel is attached to the Rockefeller Institute. It is a very simple solution of salts, which possesses the power of destroying septic germs and thoroly sterilizing wounds, without deleterious effect to the surrounding tissues. As a result wounds of the extremities which were formerly almost invariably treated by amputation, and frequently resulted fatally, are today cured in a period of three to four months.

The character of wounds differs very radically from those in former conflicts. No longer does the bullet play the leading role; ragged slivers of shrapnel from bursting shells have supplanted it. Shrapnel carries infection with it and its ravages are serious.

To enumerate the hospitals and institutions in Paris where excellent work is being accomplished in the care of the wounded would require pages. The vocational reëducation of the mutilated is being conducted on a magnificent scale at the Grand Palais on the Champs Elysees, where thousands of the wrecks of humanity who have recovered from their wounds are being taught useful trades. Peasants, incapacitated from rural pursuits by the loss of one or perhaps both legs, are being taught shoe making, tailoring, designing, soap making, and other trades. It is a beehive of industry, where men are being renewed with hope and made self-supporting and self-respecting.

On the evening of September 12, with Mr. Harjes, chairman of our American Volunteer Motor Ambulance Corps, we motored to Verdun, passing en route innumerable trains of lorries loaded with supplies and ammunitions for the front. Forty Germans had made their escape from the trenches and had surrendered to the French. They reported the recent mortality among their companions had been terrible. I conversed with all of these men and every one expressed his delight on escaping further military service during the war and complained of the bitter cruelty of their officers. Such testimony is evidence of the loss of morale that is affecting the German army, while the French *esprit* was never so fine as it is today.

War as practised today has none of the historic pageantry of battle. It is a game of hide and seek, where the fighting armies live underground in dug-outs or trenches, while the hundreds of thousands of reserves are completely hidden in the rear. The fighting fronts are the advanced line of trenches and No Man's Land is between, a space possibly not more than 100 yards in width. The artillery of the opposing forces hurl their shells of enormous calibre by tens of thousands over the heads of their own armies, to the lines of the enemy, far beyond, or to his trenches, in an effort to destroy him or drive him to his cover, thus giving the opposing force the opportunity to advance. It is then the terrible charges occur, when men are slaughtered by the hundreds, by rapid firing guns or bayonetted in hand to hand fighting. Avions, the eyes of the army, direct the fire of the artillery by wireless messages. At times the battlefield looks as lonely as a deserted graveyard, tho there are occasional puffs of white smoke from some exploding shell.

AMBULANCE WORK HAS ITS DIFFICULTIES

Paul Thompson

THE CRIPPLED SOLDIERS ARE TAUGHT PLAY AS WELL AS WORK

One Sunday morning, accompanied by the Etat Major of the French army, we visited Rheims. The country thru which we motored was one of the loveliest in France. This road and others leading to the front are often attacked by avions who shell the munition trains or marching troops as they pass by. It is here the artists of France have contributed their quota of protection. In many exposed places they have built canvas covers for the roads, under which the trains can travel without danger. The canvas is painted to imitate the adjoining fields, with trees and grass and animals grazing, and from a hight the roadway looks like a part of the country. Some miles distant canvas or white clay is laid across fields to imitate a road. Motor cars and trains of lorries are painted on these scenes, and the deception is so good that frequently the avions are led to shell it, while the real transport goes on safely under canvas or behind artificial hedges, miles away.

For miles we followed the valley of the Marne, where thousands of little crosses still mark the resting places of many of the men who in their last fight turned the tide to victory and drove the Hun back to his cover. On the way we saw the beautiful and historic Chateau of the Duke de Chandon, whose owner in 1870 purchased immunity for the people of Epernay and its vine-clad hills, from Bismarck for 500,000 marks, when the German hordes were on their triumphant march to Paris. History repeats itself, but with variations. Today the women are again toiling in the fields and vineyards while their men are winning the victories that will maintain their liberty.

It was noon when we reached Rheims, whose deserted buildings and streets had been again torn by bombardment only two hours before our arrival. The city resembles a city of the dead. Blocks of houses had been completely wrecked by bursting shells, and tall grass was growing between the stones of the pavements, once crowded by a happy people. Many of the lone chimneys, like gaunt sentinels, mark the scene, while great yawning gashes in the walls of lonely buildings show the merciless punishment the enemy inflicted. The cathedral stands alone, deserted—except by the exquisite and untouched statue of Jeanne d'Arc, that faces its portals, as tho in mourning and sorrow for the sins its assassins had committed. Heaven grant that France may leave it as it stands—scarred by the pitiless shells of a pitiless foe—a perpetual monument to the most monstrous crime in history. Nothing could visualize more forcefully the heinous barbarities and inhumanity of the Huns than this architectural pile in its silent dignity and beauty.

The sacristan unlocked the temporary door that had been erected to protect the ruins, and admitted us to the interior. The floor near the eastern entrance was piled high with stones, portions of the roof thru which a large obus had fallen. At the time of the attack, many German wounded were being carefully treated on beds of straw by the priests and attendants of the cathedral. It was this straw that caught fire when the obus exploded, and burned much of the interior woodwork of one of the towers, destroying several beautiful pieces of statuary, and some of the pulpits, while the priests carried the wounded to places of safety.

International Film

THE WORK OF GERMAN SHELLS

At Albert, Belgium, a beautiful church tower crumbling into ruins

One thousand two hundred and fifty-five shells have fallen in the city, more than 150 of which — the sacristan informed us — had struck the cathedral, marring its marvelous statuary, spire and gargoyles. One shell which penetrated the heavy interior roof fell near the altar, spattering its splinters of steel thru the woodwork, destroying many sacred pictures, but leaving unharmed the crucifix, and its symbolism of the supreme agony. It would seem to indicate that the brave heroes of this dreadful tragedy are giving their lives in the same spirit that the Saviour gave His, as a sacrifice for humanity, to escape the hell of German triumph and tyranny.

The palace of the archbishop, which adjoined the cathedral, is a mass of indistinguishable wreckage. We passed thru deserted streets piled with the debris of fallen buildings, over which vines are now climbing, with wild flowers among the ruins. Two miles away are the German entrenchments. Neither tramcars, nor telephones, nor gas, nor electricity remains in the city, which is still under fire. The few remaining inhabitants sleep in cellars, or have their offices in the great Champagne Caves, where schools for the children are conducted.

At La Panne I was invited to a private audience with Her Majesty, Queen Elizabeth, who refuses to leave Belgian soil. She spoke in keenest praise of America's generosity to her people, who but for their wonderful assistance would have perished from the face of the earth. She is living near the sea in a private villa, and she visits the hospitals almost daily in her work of devotion. Her whole soul is wrapt in the welfare of her suffering people and her desire to help them.

On the seashore, near the hospital, stands a rude little chapel recently erected. It is known as the Relic Church, and its pulpit, its font, and its altar were rescued from the wreckage of Nieuport and the ruined churches of Belgium. Many sacred pictures of rare beauty and age are here, and ancient crucifixes, marred and scarred by the enemies' shells. In strange contrast, in one corner was piled a heap of brown stone cannon balls, that had been unearthed by the soldiers while digging the trenches near Nieuport and which had been used in the Battle of the Dunes centuries before. For more than a thousand years Belgium has been the

cockpit of Europe, but the spirit of its people is still unconquered.

Havre, Etaples, Calais and Boulogne are the great war bases of Great Britain in France. In or near them are now concentrated the camps of hundreds of thousands of reserves, miles of warehouses of army supplies, rations and munitions, artillery, and extras of almost every conceivable article used in war, hospitals of enormous proportions, kitchens, laundries, thousands of heavy motor lorries, stables for cavalry, and thousands of mules and horses—docks and shipping facilities, everything necessary to equip one of the greatest armies the world has ever seen. Only one who has witnessed them can begin to comprehend the gigantic energies concentrated here, the enormous tonnage requisite for the maintenance of the army, and the efficient system.

London gave us a warm reception—almost equal to Antwerp two years ago last August. We had scarcely retired to our hotel on Trafalgar Square when a Zeppelin sailed over and dropt a series of incendiary and explosive bombs in Victoria street, and beyond near Buxtom, killing twelve persons, mostly elderly women and little children, and wounding many others. The old mother of a comedian and his little daughter were among those killed by the obus, the cap of which I have. When we arrived on the scene the neighbors were making a collection for the benefit of the sufferers, and in the name of the British War Relief Association I added five pounds to the sum and was presented with this souvenir of German kultur. The obus that fell on the house played grotesque havoc, blowing its roof to a house on the other side of the street and flinging floors and walls into a chaotic heap. Not a single person connected with the army was wounded, nor was damage done to any military establishment, and yet the Huns still call this war.

One of our last visits in London was made to St. Dunstan's in Regents Park, immortalized by Thackeray in "Vanity Fair." "This place," said Sir Arthur Pearson, its chairman, "is the happiest house in London, probably in the whole world, and I'll tell you why—it is so full of sympathy." The institution typifies the moral tone and spirit of England today. It is the spirit of hope, of life, of victory—of irresistible determination to rescue Freedom and Civilization from this terrible tragedy.

The aim of the Allies today is to secure for themselves the new birth of freedom pictured by Lincoln when he prophesied for our countrymen, "That government of the people, by the people, and for the people, shall not perish from the earth." The attainment of that purpose affects our country as deeply as it does the Allies. It is as much America's fight as theirs, for the predatory aggression of the Hun will not cease three miles from our shores, and in our deplorable state of helplessness, a state that resembles that of China, we not only invite war, but defeat and vassalage.

I am a man of peace, the vice-president of the Peace and Arbitration League of America. As an officer or observer I have participated in eight wars, and heaven knows I want to see no more. But until the end of this piratical conflict, in which the ideals of liberty and freedom and honor, for which my ancestors fought and died, are the stakes, I am heart and soul with the Allies. The traditional friendship between France and America, begun by Lafayette and Washington, would have been only a memory had not our great war relief societies kept it alive; and it is to them and our surgeons, our hospitals and nurses, our splendid ambulance corps and brave avions and foreign legion, that we owe the preservation of that friendship and the *entente cordiale* that exists between our countries today.

New York City

THE DISAPPEARANCE OF THE DINNER PAIL

BY MARY ALDEN HOPKINS

AUTHOR OF "THE SHORTENING DAY"

DO you remember the good old dinner pail with its vault for pie and hard-boiled eggs and its reservoir for cold coffee, topped by an inverted din dipper? You have not seen many of them lately. We used to elect presidents with them. I didn't hear them mentioned this campaign. Only a few years ago the presidential candidates of both parties emotionally promised the working man a "full dinner pail." Political clubs marched swinging shiny new ones that caught the flare of the torches. The tin dinner pail was our symbol of industrial prosperity. Yet this seemingly established institution has now gone the way of the warming pan, the dunce cap, and the moss covered bucket that hung in the well. In its place we find the factory lunch room.

Great corporations like the Metropolitan Insurance Company in New York City, the B. F. Goodrich Company in Ohio, the First National Bank in Chicago, the Curtis Publishing Company in Philadelphia, the National Electrical Lamp Works in Nela Park, Ohio, the National Biscuit Company, the Sunshine Biscuit Company, and many other business concerns all over the country, are providing their workers with hot noon meals at cost or even free.

Eating is no longer a private matter. **Food** is potential energy. The business **house** that wants concentrated efficiency spreads a table before its employees and cries:

"Eat, workingmen! For the work's sake, eat!"

The strain of manufacturing has revealed that sufficient food, as well as short hours and high wages, increases output. Put in, calories; take out, cartridges.

One need not then be suspected of philanthropy or socialism in calling attention to The People's Kitchen, located at 458 West Twenty-seventh street, New York City. This forlorn and hopeless neighborhood is taken up with small factories, laundries, lumber yards, teamsters' stables and dreary tenements. Poverty, malnutrition, drunkenness, sickness, and failure make the neighborhood desolate.

As I entered the Kitchen the other noon, a woman whose soft, ample figure was cut by apron strings came out of the door carrying a steaming "growler" of coffee. The small eating room was crowded with workers of every description. At my table sat a blue-coated motor man, a shabby genteel old lady, a thin factory girl and a fat one, two oily machinists in overalls, and a dirty-faced school boy.

Most of the dishes were five and ten cents. We had meat with vegetables, coffee, and pie. The machinists came again on pie. A huge plate of bread in the middle of the table was constantly replenished.

Not a saloon in all the neighborhood was so uncomfortably crowded. And this in a district where industrial alcohol is a matter of course. But there are dozens of saloons and only one Kitchen. The expenses are borne by Mrs. James A. Burden, Jr., and Mrs. William K. Vanderbilt. The work is managed by the Association for Improving the Condition of the Poor. But it is not a charity. It is slowly climbing toward the goal of self-support even in these months of the increasingly high cost of living.

As soon as the pioneer Kitchen is fairly on its feet, others will be started in other neighborhoods. Already several factories have asked the executive secretary of the committee to assist them in installing their own luncheon rooms.

Outfits, varying from a single gas burner called a "hot plate" on which a working woman can heat up her soup to elaborate steam cauldrons, are offered by manufacturers of kitchen utensils. Small manufacturers who cannot afford the initial outlay of lunch plants sometimes have huge pots of coffee or chocolate brought in at noon. Large factories and department stores are more and more installing full-sized lunch rooms. The great mail-order firm of Sears, Roebuck & Company in Chicago, has, I am told, a remarkably good system. Filene's, in Boston, deserves special mention. Others which immediately

come to mind in New York are Wanamaker's, Macy's, and Lord & Taylor's.

Any doubt as to the efficiency gain in providing lunch facilities is removed by the extraordinary policy of some of the large corporations. They furnish free dinners to their employees at noon. The managements say that their object is to safeguard the afternoon work. The companies can't afford to have their employees economize on food.

The City Bank provides a regular dinner. A young friend who works there assures me that it is better food than he gets at home. I know that his home food is very good indeed.

"I don't know that it really saves me money," continues the youth, who is paid ten dollars a week, "for I tip the waiter a dollar a week. Get better service that way."

The great bank probably knows the tendency of some very young, young men to throw away their money ostentatiously instead of investing it in meat and potato. But neither ten-dollar spendthrift nor ten-dollar miser can cheat the bank of the energy that follows good food.

The British Sessional Papers sum up this whole matter of noon feeding in a report on "Industrial Canteens." Lloyd George, the English Minister of Munitions, appointed a Health of Munition Workers Committee, in the fall of 1915, "to consider and advise on matters of industrial fatigue, hours of labor, and other matters affecting the physical health and physical efficiency of workers in munition factories and workshops." All of which simply means that the committee was to figure how to increase the output.

They have presented their findings and advice in a series of ten memoranda, taking up Sunday labor, welfare supervision, employment of women, hours, fatigue, industrial diseases, ventilation and lighting, sickness and injury, and feeding. These papers, altho a government report, are yet more radical than the reddest of the Fabian pamphlets. No trades union has ever asked for its members the physical consideration which this governmental committee recommends in efficiency's name.

© Underwood & Underwood

THE PEOPLE'S KITCHEN

"Industrial Canteens," as they call factory lunch rooms, are held to be the best way of meeting the food problem. The committee advises every munition manufacturer to serve a hot dinner at noon to his workers at cost. Breakfast and supper, too, if he has night shifts. "Refreshment barrows" to "perambulate" the workrooms at appointed times are commended. Attention is called to night workers' need of light, digestible, well-cooked and appetizing food, since they must eat at a time when their nervous energy is depleted.

The fundamental principles of fueling the human engine are given as simply as directions for coaling a steam boiler. A primer statement explains the relation of nutrition to health and of health to output. Food is divided into three general classes. Meat, cheese, milk, herrings, dried peas, beans, bread, oatmeal and like stuffs are rich in protein and mineral matter. They contribute to the formation of the body, its repair, and they also supply fuel for heat and energy. Fat and sugar afford fuel, but cannot maintain growth and repair. Fresh fruit and vegetables contain only a small proportion of nutriment, yet in other ways are important to health. The warmth of food is of great importance.

Plans and specifications for model canteens are supplied. The dining room, kitchen, scullery and larder are discussed in detail, even to setting the "pig tub" on concrete. I am especially pleased with the English phrasing of the suggestion that serving counters equipt with barriers like those at a railway booking office, from which the workers fetch their food, prevent crowding.

Lloyd George's committee finds that factories already using the canteen are reaping benefits. The workman's time is saved. He has a brief change from the workroom. The workroom can be ventilated. The general health of employees is better. Severe sickness is reduced. Absence and broken time are less. Alcoholism decreases. Efficiency rises. Output increases.

New York City

"EAT! FOR THE WORK'S SAKE, EAT!"

Employers nowadays find that it pays to feed their workers well, and the factory girls are learning to prefer bean soup to sodas

A POET OF THE PEOPLE

THE SHAFT

BY WILFRID WILSON GIBSON

Wilfrid Wilson Gibson is foremost among the younger poets in his portrayal of the life of labor. There is a new meaning in his treatment of old themes as there is a new rhythm in his verse. By the sentimentalist poverty and toil have been used to evoke tears; by the reformer they have been made the basis of bitter attacks upon society; while authors more aloof have found them picturesque or humorous. But Gibson sees the workingmen not merely as objects of compassion or victims of injustice, not as quaint or comic characters but as real human beings; as individuals not lumped together as a class or a problem. He has shown the poetry in prosaic lives and that without esthetic falsification or exaggeration. He is a modern realist, describing things as he sees them, but then he can see more than the rest of us. He does not avoid the use of recent and colloquial words, but on the other hand he does not use dialect. The thousands of Americans who have been drawn to him by the reading of his published volumes, "Fires," "Daily Bread," and "Battle Lyrics," will give him a hearty welcome when he comes here on a lecturing tour in January and February. We are pleased to see that he has chosen for his readings "Hoops" and several of the "Battle Lyrics" that The Independent had the honor of publishing.

He must have lost his way, somehow. 'Twould seem
  He'd taken the wrong turning, back a bit,
After his lamp . . . Or was it all a dream
  That he'd nigh reached the cage—his new lamp lit
And swinging in his hand, and whistling, glad
  To think the shift was over—when he'd tript
And stumbled, like the daft, club-footed lad
  His mother called him; and his lamp had slipt
And smashed to smithereens; and left him there
  In pitchy dark, half-stunned, and with barked shins?
He'd cursed his luck, altho he didn't care,
  Not overmuch: you suffered for your sins:
And, anyway, he must be nigh the shaft;
  And he could fumble his way out somehow,
If he were last, and none came by. 'Twas daft
  To do a trick like thon.

And even now
  His mother would be waiting. How she'ld laugh
To hear about it! She was always game
  For fun, she was, and such a one for chaff.
A fellow had no chance. But 'twas the same
  With women always: you could never tell
What they'ld be at, or after saying next:
  They'd such queer, tricky tongues; and it was well
For men to let them talk when they were vext—
  Altho, his mother, she was seldom cross.
But she'ld be wondering now, ay, that she would—
  Hands folded in her apron, at a loss
To know what kept him, even now she stood,
  Biting her lips, he'ld warrant. She aye bit
Her lips till they were white when things went wrong.
  She'd never liked his taking to the pit,
After his father'd . . . Ay, and what a song
  She'ld make . . . and supper cold! It must be late.
The last on the last shift! After today
  The pit was being laid idle! Jack, his mate,
Had left him working, hurrying away
  To back . . . And no night-shift! . . .

If that cursed lamp
  Had not gone out . . . But that was hours ago—
How many hours he couldn't tell. The cramp
  Was in his thighs. And what could a lad know
Who'd crawled for hours upon his hands and knees
  Thru miles on miles of hot, black, dripping night
Of low-roofed, unfamiliar galleries?
  He'ld give a hundred pound to stand upright
And stretch his legs a moment: but, somehow,
  He'd never reached a refuge, tho he'd felt
The walls on either hand. He'd bumped his brow
  Till he was dizzy. And the heat would melt

The marrow in his bones. And yet he'd gone
A dozen miles at least, and hadn't found
Even a crossway. On and on and on
He'd crawled, and crawled; and never caught a sound
Save water dripping, dripping, or the creak
Of settling coal. If he could only hear
His own voice even; but he dared not speak
Above a whisper . . .

There was naught to fear;
And he was not afraid of aught, not he!
He would come on a shaft, before he knew.
He couldn't miss. The longest gallery
Must end somewhere or other; tho 'twas true
He hadn't guessed the drift could be so long.

If he had not come straight . . . If he had turned,
Unknowing, in the dark . . . If he'd gone wrong
Once, then why not a dozen times! It burned
His very heart to tinder, just to think
That he, maybe, was crawling round and round
And round and round, and hadn't caught a blink
Of light at all, or hadn't heard a sound . . .
'Twas queer, gey queer . . .

Or was he going daft,
And only dreaming he was underground
In some black pit of hell, without a shaft—
Just one long gallery that wound and wound,
Where he must crawl for ever with the drip
Of lukewarm water drumming on his back . . .
'Twas nightmare, surely, had him in its grip.
His head was like to split, his spine to crack . . .

If he could only call, his mother'ld come
And shake him; and he'ld find himself in bed . . .
She'ld joke his fright away . . . But he was dumb.
And couldn't shout to save himself . . . His head
Seemed full of water, dripping, dripping, dripping . . .
And he, somehow, inside it—huge and dark
His own skull soared above him . . . He kept slipping.
And clutching at the crumbling walls . . . A spark
Flared suddenly; and to a blood-red blaze
His head was bursting; and the pain would break . . .

'Twas solid coal he'd run against, adaze—
Coal, sure enough. And he was broad awake,
And crawling still thru that unending drift
Of some old working, long disused. He'd known
That there were such. If he could only lift
His head a moment; but the roof of stone
Crushed low upon him. A gey narrow seam
He must be in,—and bad to work: no doubt
That's why 'twas given up. He'ld like to scream,
His cut knees hurt so sorely; but a shout
Might bring the crumbling roof down on his head,
And squash him flat.
If he could only creep
Between the cool white sheets of his own bed,
And turn towards the wall, and sleep, and sleep—
And dream, maybe, of pigeons soaring high,
Turning and tumbling in the morning light,
With wings ashimmer in a cloudless sky.
He'ld give the world to see a bonnie flight
Of his own pigeons rise with flapping wings,
Soaring and sweeping almost out of sight,
Till he was dizzy, watching the mad things
Tossing and tumbling at that dazzling hight.
Ay, and his homers, too—if they'd come in,
He hoped his mother'd fed them. They would be
Fair famished after such a flight, and thin.

But she would feed them, sure enough; for she
Liked pigeons, too—would stand there at the door
With arms akimbo, staring at the blue,
Her black eyes shining as she watched them soar,
Without a word, till they were out of view.
And how she laughed to hear them scold and pout,
Ruffle and fuss—like menfolk, she would say:
Nobody knowing what 'twas all about,
And least of all themselves. That was her way.
To joke and laugh the tantrums out of him.
He'ld tie his neckerchief before the glass;
And she'ld call him her pigeon, Peter Prim,
Preening himself, she'd say, to meet his lass—
Tho he'd no lass, not he! A scarf well tied,
No gaudy colours, just a red or yellow,
Was what he fancied. What harm if he tried
To keep himself respectable! A fellow—
Tho womenfolk might laugh and laugh . . .

And now
He wondered if he'ld hear her laugh again
With hands on hips and sparkling eyes. His brow
Seemed clampt with red-hot iron bands; and pain
Shot red-hot needles thru his legs—his back,
A raw and aching spine that bore the strain
Of all the earth above him: the dead black
Unending clammy night blinding his brain
To a black blankness shot with scarlet streaks
Of searing lightning; and he scarcely knew
If he'd been crawling hours, or days, or weeks . . .
And now the lightning glimmered faintly blue,
And gradually the blackness paled to grey:
And somewhere, far ahead, he caught the gleam
Of light, daylight, the very light of day,
Day, dazzling day!

Thank God, it was no dream.
He felt a cooler air upon his face;
And scrambling madly for some moments more,
Tho centuries it seemed, he reached the place
Where thru the chinks of the old crumbling door
Of a disused upcast-shaft, grey ghostly light
Strained feebly, tho it seemed the sun's own blaze
To eyes so long accustomed to the night
And peering blindly thru that pitchy maze.

The door dropt from its hinges—and upright
He stood, at last, bewildered and adaze,
In a strange dazzling world of flowering white.
Plumed snowy fronds and delicate downy sprays,
Fantastic as the feathery work of frost,
Drooped round him from the wet walls of the shaft—
A monstrous growth of mould, huge mould. And lost
In wonder he stood gaping; and then laughed
To see that living beauty—quietly

He laughed to see it: and awhile forgot
All danger. He would tell his mother: she
Would scarce know whether to believe or not,—
But laugh to hear how, when he came on it,
It dazzled him. If she could only see
That fluffy white—come on it from the pit,
Snow-white as fantails' feathers, suddenly
As he had, she'ld laugh too: she . . .

Icy cold
Shot shuddering thru him, as he stept beneath
A trickle. He looked up. That monstrous mould
Frightened him; and he stood with chattering teeth,
Seeming to feel it growing over him
Already, shutting out the fleck of sky
That up the slimy shaft gleamed far and dim.
'Twould flourish on his bones when he should lie
Forgotten in the shaft. Its clammy breath
Was choking him already. He would die,
And no one know how he'd come by his death . . .
Dank, cold mould growing slowly. By and by
'Twould cover him; and not a soul to tell . . .

With a wild cry he tried to scramble out,
Clutching the wall . . . Mould covered him . . .
He fell,
As close at hand, there came an answering shout.

THE MILITARY MIND

BY W. T. COLYER

A new viewpoint on the much-discussed problem of military preparedness is given by Mr. Colyer's analysis of "the military mind." He shows with unequivocal clearness the price a republic pays for armed protection.—THE EDITOR.

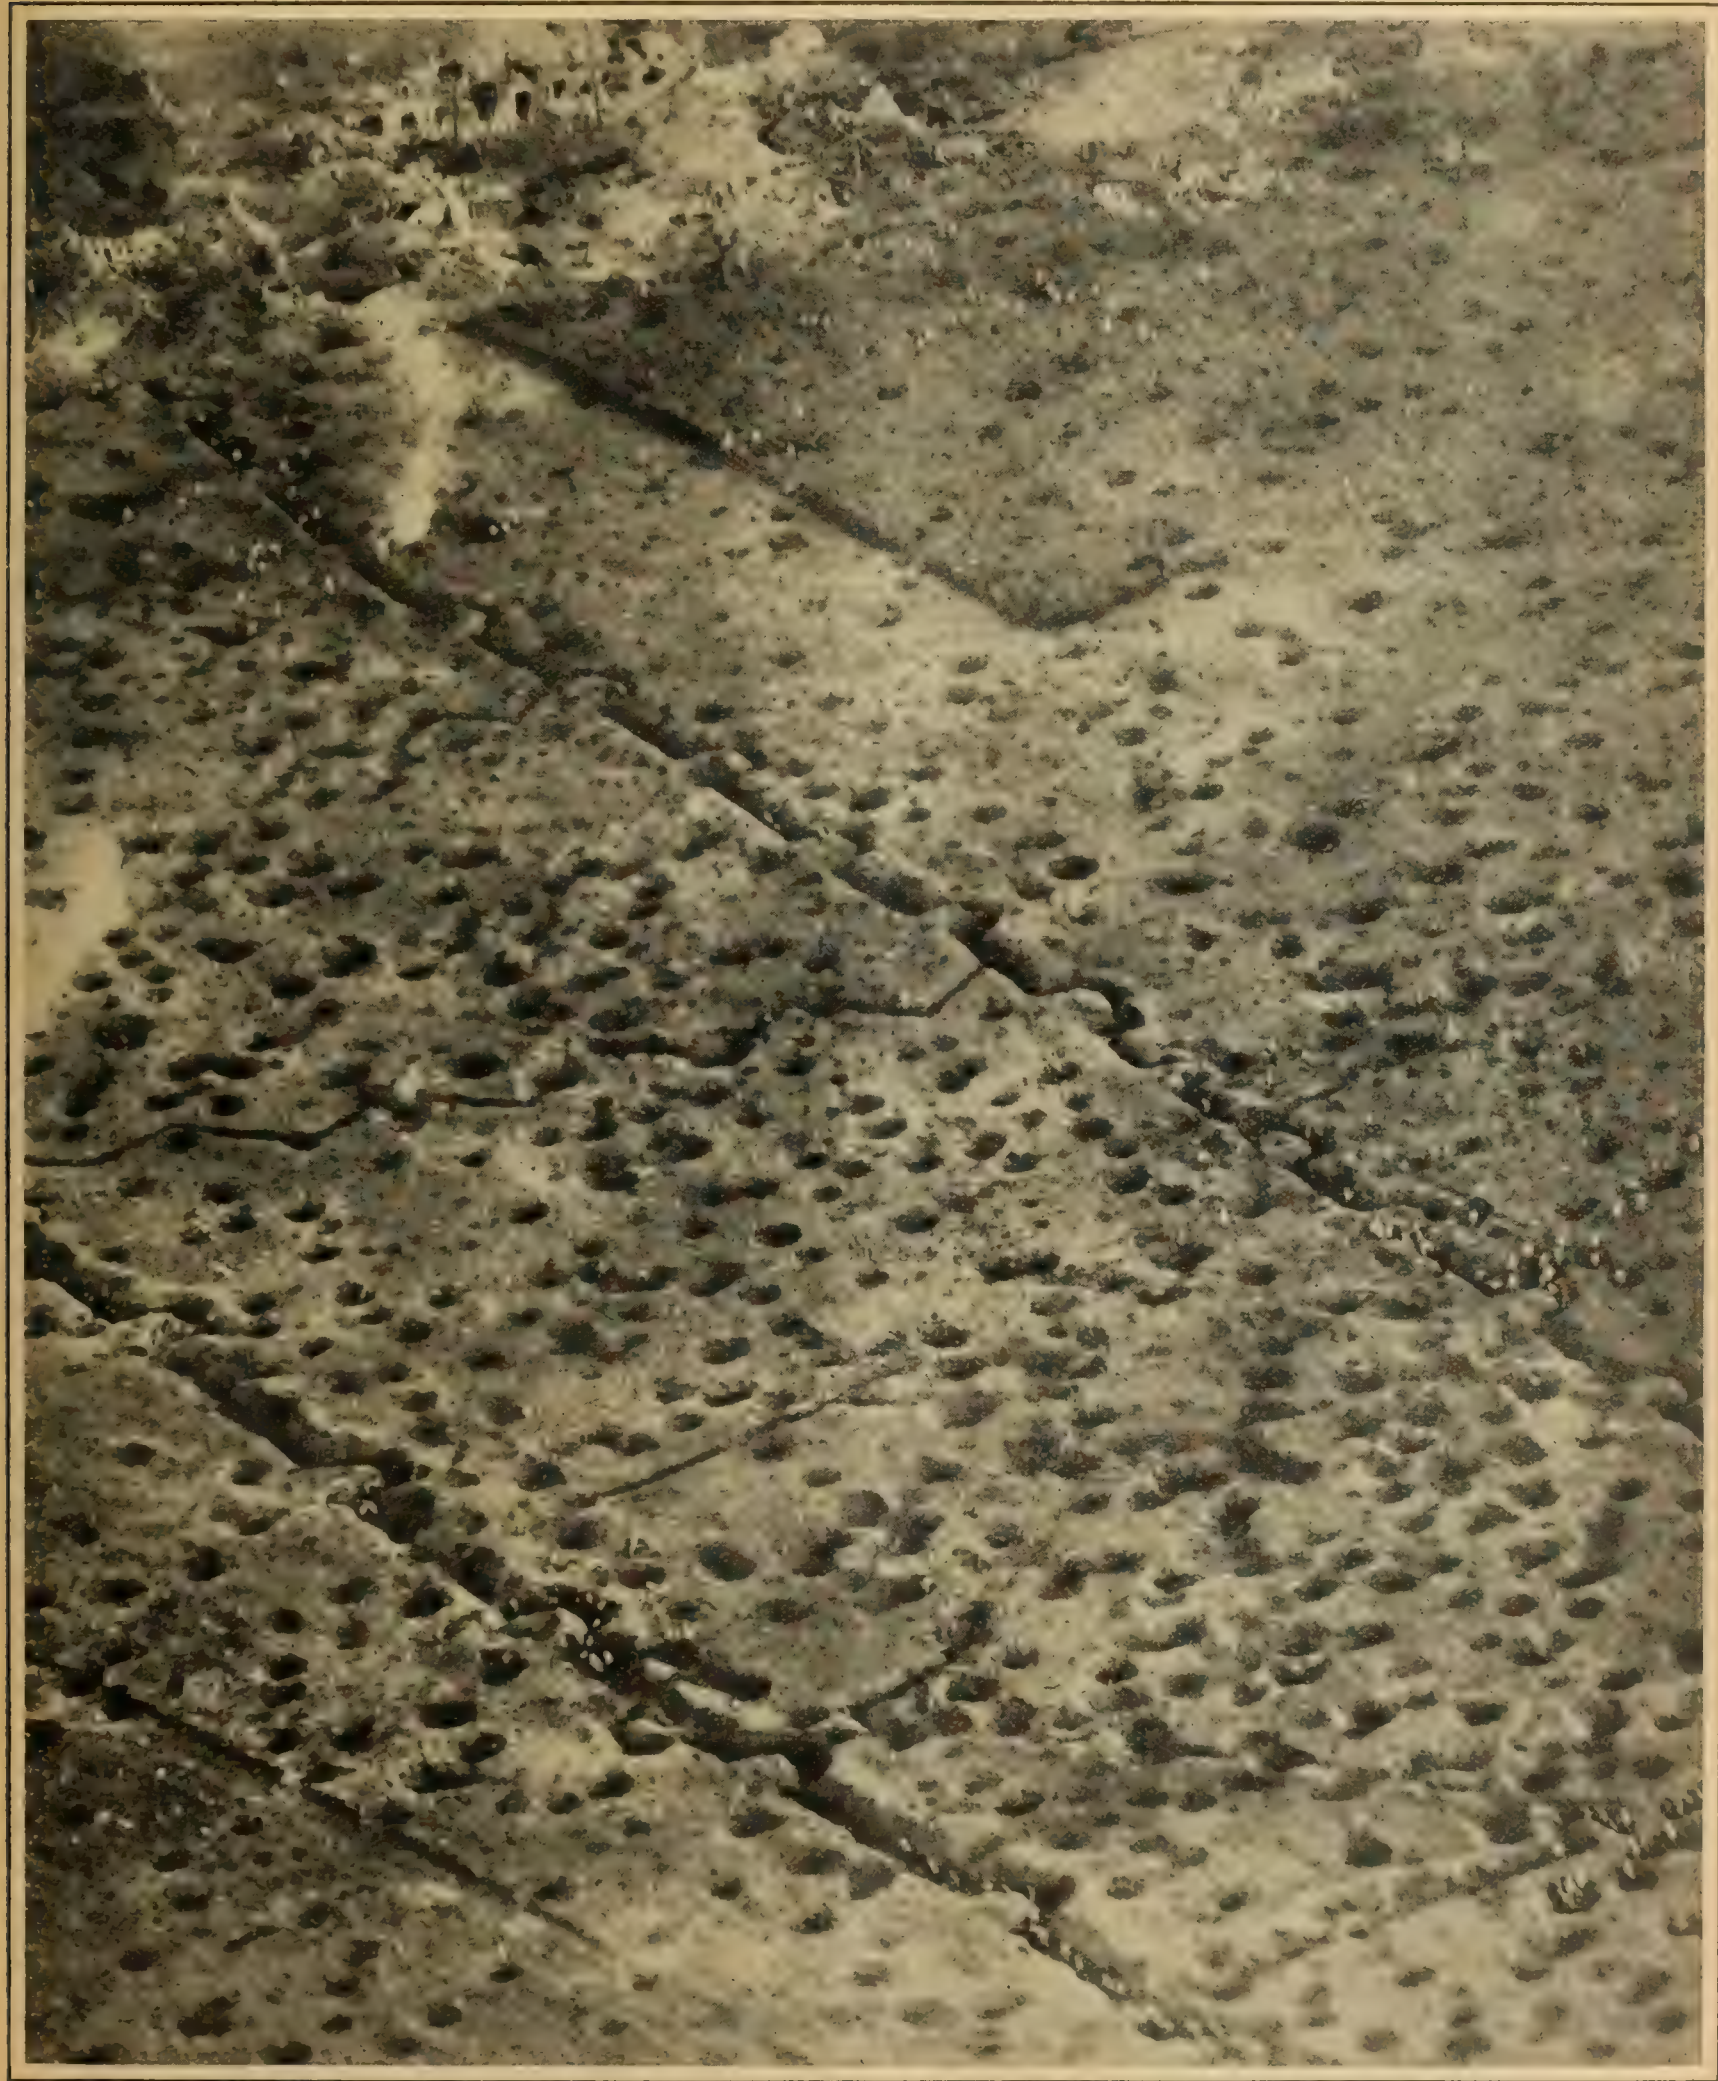
QUESTIONS of material safety and political expediency are generally recognized by thinking people to constitute only a part of the problem of military preparedness and compulsory service. Nor do considerations of the direct moral results, whether in the form of an aggressive temper or of habits of obedience, by any means exhaust the subject. A somewhat neglected, but important phase is concerned with the place that can be given in a democratic community to the military mind. By the military mind is meant a mind fitted by nature and equipt by training for just that kind of organization and purposeful activity in which the German General Staff has so completely overmatched its opponents. The cultivation of this sort of intelligence is quite independent of the chauvinistic spirit that is usually so closely associated with it in practise. Whatever the moral effects upon government or people, it is clearly incumbent upon any nation maintaining a great military establishment to secure the service of the best brains available for the purpose of minimizing the wastage of life and effort incident to war. In this connection, the distinction, from the military point of view, between loss and waste must be carefully borne in mind. The attacks in close formation which were a feature of the German rush into France, entailed frightful losses, but they were losses deliberately incurred for a specific end; the British attempt to force the Dardanelles involved frightful *wastage*, the greater part of the losses being due not to the adoption of a costly scheme of operations, but to the failure of the commanders to work out anything sufficiently coherent to deserve the name of scheme.

The voluntary system and the comparative smallness of the British army are no excuse for the officers who shirked their work, but it is perfectly legitimate to inquire whether men of the first rank, either in character or in ability, will ever be attracted in any considerable numbers into a profession which they regard as fated to be called upon less and less frequently for active service, and which will consequently fall steadily in public importance and esteem. Generally speaking, military officials will take their work seriously in proportion as they themselves are taken seriously by the public. In other words, a nation that is to maintain a thoroly efficient and up-to-date military establishment, must be prepared to pay large deference to the military mind. This, surely, is a situation that no democrat can regard without serious misgiving.

To realize adequately what is involved in deferring to the military mind, it is necessary to consider what are the outstanding characteristics of that mind. To begin with, it is a scientific mind of the steeliest type that even scientific specialism can show. Emotion is all very well for spectacular purposes, but wo betide the commander who permits any human feeling to mar his conduct of a campaign! What was true for Oliver Cromwell, Marlborough, Wellington and Napoleon, becomes more and more vitally important as the perfection of instruments of war increases the horrors incident to all serious warfare. The able and successful soldier is one who finds it possible, for official purposes, to concentrate his intellect, in a quite impersonal way, upon problems which involve, for thousands of his fellows, every kind of suffering.

Nor is the military mind simply scientifically un-human. It is materialistic in the worst sense of the word. It does not merely refer ideals to material causes—it has no use for ideals. The soldier is materialistic not only in method, but in outlook and objective. The men who fulfil his requirements are thought of in masses, which may be "pushed forward" here, or "held in reserve" there; "gains" in guns or miles are set over against "losses" in men; the world at large is considered as the habitation of such living masses as can be "hurled" at each other under military direction, and its surface is studied for the purpose of ascertaining its adaptability for such hurling and counter-hurling. The best human material for cultivation along these lines is undoubtedly that which under the influence of a different environment supplies the world with "practical, hard-headed men of business"—strictly limited intelligences, but tremendously powerful within their limits, supported by iron determination and ruthless absorption in a single purpose. Only in the most democratic environment attainable can such men be turned to good social account; in modern military surroundings their defects of character are increased and their virtues are developed into vices.

MUCH sentimental nonsense has been talked, both in Britain and America, about the Swiss model. In point of fact, that model is incapable of adaptation to the circumstances of any Great Power, with wide territories under its control and with large over-sea commitments. The tiny professional nucleus of the Swiss army would probably be as hostile to liberty as are the military castes in Germany, Russia, France, and Britain, but for the territorial smallness and the socialistic policies that have enabled Switzerland practically to solve the problem of poverty, and to make social and political democracy more of a reality than any great countries have as yet succeeded in making it.



If in the Swiss army there existed any considerable number of men who were seething with discontent under a sense of social, industrial and political injustice, the Swiss army would be forced to change its character at once. There is no room for agitators in military establishments, in which order and immediate efficiency are the supreme excellencies. Even in France, which is not infrequently cited with Switzerland as affording an example of democracy and military conscription existing side by side, when the Government wants to break a strike, it has only to call strikers to the colors and use them as reservists to destroy their own organization as wage-earners. The railway strike that was so broken only a few years since, showed that the terror of the military machine secures obedience.

OUR question is now ripe for answer—What place can be given in a democratic community to the military mind? The answer is—Only a place of jealously guarded subordination. So repugnant to republican institutions is the "theirs not to reason why, theirs but to do and die" principle of soldiering, that great military republics, whether Rome, Venice or revolutionary France, have rapidly and inevitably developed into military oligarchies or autocracies. In this respect the limited monarchies have some advantage over republics, inasmuch as their only partially democratized institutions may for a long time enable the more moderate militarist to get enough of what he wants to keep him quiet. But in a republic he must either gain all or nothing, for if the principles of democracy are not extirpated, they will be more vigorous and less easy to withstand than in a society which is still encumbered with old feudal and monarchical traditions. Hence, if a republic is to be militarized at all, the job has to be done quickly and thoroly. The military mind will never be satisfied with such extremely limited power as is consistent with free institutions. To secure first-class military "protection" a republic must be prepared to sacrifice all the qualities which most make it worth protecting.

The military mind is the direct antithesis of the democratic mind, but the conflict between the two in the countries of western Europe is complicated by the fears, entertained by the respective democracies, of permanent domination by a foreign conqueror. American democracy, immune, by reason of her size and geographical situation, from this fear, is in the happy position of being able, if she chooses, to fight upon a clear issue; and it is almost certainly in America that the question will be settled, whether it shall be the twentieth or some subsequent century that will witness the final vindication of the democratic, and the final disappearance of the military mind.

There is one kind of food that has not gone up: scollops, a shell fish oftenest found in the nets of Cape Cod fishermen

America's Great Railroad
The Union Pacific
And the Man Whose Foresight, Energy and Genius Made It the Almost Perfect Road

IT is a band of steel, that unites the two oceans, the West and the East, in a great Pacific Union. Sixty years ago, President Buchanan said: "Without such a road we cannot protect California and our Pacific Coast possessions against invasion." Abraham Lincoln was deeply interested in the construction of this great railroad, advocating it, not only as a military necessity, but because he believed that the building of this national highway, this iron band of commercial union, would keep East and West united in interest and close communication.

Hence the name "Union Pacific," typical of the permanent, Pacific Union between the East and the West of this country. The UNION PACIFIC was the name appropriately chosen for the great railroad.

The history of this great railroad is the history of this nation. It follows the natural path from the East to the West. It is within the nation like one of the great arteries within the body.

And like a great artery, it spreads out as it travels, finally, like a great fan, covering the Pacific Coast all the way from Seattle to Los Angeles.

* * * *

Daniel Webster said that nothing beyond the Mississippi could ever have much value. That great genius of *words* would have been surprised could he have been told that a great genius of *deeds* would spend hundreds of millions in a few short years *improving* a national belt of steel, the Union Pacific, carrying on its chief work in that region of which Webster thought so little.

Senator Green, of Missouri, addressing the Senate on April 17, 1858, had said:

UNION

(*Continued*)

"I believe the Pacific Railroad will increase the productive power and wealth of the country millions and tens of millions, although I believe every dollar invested in making such a road will be lost to the stockholders, whether built by the Federal Government or by private enterprise."

It appeared that this prophecy of financial disaster might become permanent reality. The railroad was indeed in bad financial condition when its destinies were first directed by E. H. Harriman and his associates.

He knew that a great engine of transportation, faithfully serving the people and putting service first, could not possibly fail financially or otherwise. For the people reward those who serve them.

Mr. Harriman had faith in the West and in Western people. He appreciated the great natural resources and the spirit of Western endeavor and inspired others by his faith.

UNION PACIFIC SYSTEM - THROUGH SERVICE ROUTES

He set about his task in a manner typical of his character, saying that the first thing was *to put money into the Union Pacific.*

Since the reorganization of the Union Pacific, in 1897, less than 19 years ago, $269,700,000 have been actually invested in extensions, branches and revision, including double-tracking, shortening the road, ballasting the line with scientific accuracy, and other improvements. In addition to this vast sum there went into the railroad and its development all the energy, ambition, mental power and high aspiration of a great railroad builder.

* * * * *

The great railroad, as great as the mountains and plains across which its locomotives travel every hour of the day and night, is that Union Pacific.

Thomas Jefferson gave to this nation the territory that it serves, and to which it gratefully acknowledges its obligations, its existence.

James Buchanan was its advocate.

Abraham Lincoln desired it and spoke for it, saying that it would hold the East and the West in pacific union.

Grant and Sheridan policed the building of it—protecting the workers from savages.

Great men planned it in the past; thousands of faithful workers at every station and on every mile of track serve this railroad in the present.

* * * * *

The Union Pacific is one of the great industrial triumphs of republican government, the result of individual initiative, combined with wise government interest and co-operation. Those to whom its management is entrusted find their greatest satisfaction in the fact that this powerful railroad is a servant of the public, contributing to the nation's health, facilitating circulation of wealth and population, rendering service to the farmer and to the manufacturer—
SERVANT OF ALL THE PEOPLE.

This is the first of a series of advertisements which will tell the Story of the Union Pacific and the part it plays in the development of the Nation

WHY I LIKE TO BE POOR

BY A WOMAN WHO FEARS SUCCESS

I AM considered a very ambitious person—too ambitious, my friends would tell you. If I had been less ambitious, they say, I should have succeeded long ago. Ten years ago.

That is what I have always thought, too, until lately, when it occurred to me that I am far too intelligent a person to be poor unless I wanted to be. The idea came to me as a relief, after years of trying to deceive myself into a disappointed state of mind, and to work myself up into a fever of effort.

I was sitting at the sewing machine making the baby a dress. In the back of my head there was the uncomfortable thought that I ought not be doing this sort of work, but should be at my desk making money, while some worthy woman was sewing for me at a dollar a day and two meals. That led to the usual train of self-accusation—that I ought to concentrate on some one piece of work, finish it, and get a big sum of money and the recognition which I always feel is just around the corner, waiting for me.

"Why can't I do it?" I asked myself, while I threaded the bobbin. "Why do I waste my time doing housework and working in the garden and making over clothes—when I might be writing masterpieces, or at least something which would sell?"

There was only one answer. Yet it had never come to me before in all the years I have "wasted"—

"I want to do what I am doing."

And the corollary to that is that I do *not* want to write these salable things, nor even the things which I should know were good, even if they did not sell. I have kept from writing for fear that I might succeed, and then——

That is the secret: If I succeeded, I should have to give up my life as I know it, and live some other way.

I was born with a strong taste for housework and sewing and the middle course of life. We were always poor; not the sort of poverty where there is deprivation; only the sort where you have to worry all the time about money. I got used to doing everything and going everywhere without being able to afford it. That gave me a sense of triumph, a sense of beating Fate.

But, of course, not knowing that I liked it, I have always thought that I was trying to escape from that insecurity. And I called that attempt at escape—ambition. Not for money. Oh, no! Nor did I use the word "career." I thought I was working hard to get on my own feet, and then help others to do the same.

There is something very satisfying in that kind of an ambition. It allows you to make demands on other people for their sympathy. I remember that once I had almost succeeded in selling a piece of work, when I was suddenly so overcome by the sense of what it would mean to my mother not to worry about money any more, that I broke down and cried. And the editor thought, I suppose, that it was to work on his feelings; and he changed his mind.

I see now that that was just what I wanted. Something in me knew that it would turn out that way if I would behave sentimentally. So I did. For in the first place, I did not need to worry about my mother. She must have liked that anxiety, or she would not have kept at it so long—being quite as intelligent and much cleverer than I, and having had two careers under way when she decided to stay poor. But why *she* should have made such a choice I do not know. For she is the temperament to be rich. She does not like sewing and housework as I do, who take after my father's family, all of whom managed to stay poor but one of the brothers. And he made up for his gift of making money by going on the notes of all his friends—whereby he turned out to be the poorest of all.

Fear of success! The world is full of it.

I like to be able to do without much company. If I were rich, I should be under obligations to be social—or my vanity would suffer. And I am very vain. Any one who is deceiving himself always is. Moreover, I hate to visit any one. And if I am poor and have to work, or even if my friends know that I am "ambitious," they do not expect me to. They "understand." I have a perfect system. I see that now.

There are a thousand delights in being poor which it would sound simple-minded to enumerate. But any one in my position knows what they are. There is, besides, the sense of getting at fundamentals that you miss as soon as you come in contact with money.

If you are poor you can criticize the rich. That may sound flippant, but it is said seriously. The rich are what you might be if you failed in your clutch at reality, and succeeded. The rich have gone under—even those who are trying to placate their consciences with a sense of their duty towards humanity. They are the worst of all. The thoughtless rich deserve their money. They are not liars.

I have known a good many rich people, and pretty intimately. That was, I see now, one way I kept myself from succeeding: I was always close enough to the results of success never to have any illusions.

But, now that I know why I am poor, the question is—have I the courage to stay poor? I find that I settled this problem, too, even before I was conscious of its existence. For, a long time ago I went into debt, and so heavily that even if I had a very fair amount of success, I could not pay my debts in ten years. When you realize that that is probably the reason Balzac was always so heavily in debt, you can see for yourself that I am still ambitious. And as for Sir Walter Scott and Mark Twain —I feel a bond with them.

When Balzac had paid his debts, he died. I shall see to it that nothing of that sort confronts me. There will always be things which I feel I must do, altho poor. And I will always find some one who thinks so, too, and will lend me the money. But my courage may give out about borrowing any more money—particularly as I am married, and it counts against your husband to borrow. In that case I can have another child or two, and so keep my nose to the grindstone.

That was a real blow to my friends —I married. That seemed to prove that my ambition was waning. They did not realize what an expedient it was: I had taken care not to marry the man who had money and who wanted me to "keep on with my work," but a poor man who cared more for his work than he did for money!

In this way I doubled my fear of success, and anchored myself more securely to poverty, in whose blessed reality I shall always firmly believe.

THE SPELL OF WORDS

BY FLORENCE L. PATTERSON

My book is closed, the restless flame
  Flickers o'er hearth and burnished brass,
The idle snowflakes settle down
  Beyond the casement's leaded glass;
Yet can I hear the warm winds croon
  A summer song and round me swells
The chime of myriad flower-bells,
  Ringing a Gloria to June.

Sunshine and summer and the lure
  Of sweet-lipped June! Upon the wall
The firelight dances, while without
  In lazy state the snowflakes fall,
And then,—white world and firelight gleam
  Are lost, my book has wrought for me
A charm so deep, reality
  Has not the power to break my dream.

PEBBLES

Examiner—How is Central America divided?
Pupil—By earthquakes.—*Passing Show.*

A funny old geezer named Burt
Had a brain which was rather inert;
He started to holler:
"I can't fix my collar"—
When he'd forgotten to put on his shirt.
—*Birmingham Age-Herald.*

"The Germans," said a noted surgeon, "are vaunting their war surgery. Two years ago, 80 per cent of their wounded returned to the front. Last year 90 per cent returned. Now 98 per cent returned. Rats!"
The professor made a gesture of repudiation.
"Why, at this rate," he said, "the Germans will be telling us that, every time an enemy bullet hits a German soldier in the head, its only effect is to fill a hollow tooth for him."—*London Opinion.*

"Well," said the Far West mayor to the English tourist, "I dunno how you manage these affairs over there, but out here, when some of our boys got tied up in that thar bankrupt telephone company I was tellin' yer about, they became mighty crusty!"
"Oh!"
"Yus; they didn't like the way the receiver was handlin' the business nohow."
"Indeed!" commented the earnest listener; "then, may I ask what they did?"
"Sartinly; I wus goin' ter tell yer. They just hung up the receiver."—*Puck.*

They were Tommies on four days' leave in Blighty. One day they had set apart for a visit to the local golf links. A small crowd of admirers was gathered at the first tee to watch the game, and the first man teed up and took a prodigious swipe. But the ball remained where it was. He tried again, without result. Yet again, and still nothing happened. Then his pal could stand it no longer, and in a voice that could be heard over three counties he cried, "Fer goodness sake 'it the bloomin' thing. Y'know we've only got four days' leave!"—*Tatler.*

Scientific study coupled with practical manufacturing methods—this is the basis of the MAZDA Service that helps lamp-makers produce better lamps. :: :: ::

MAZDA

"Not the name of a thing, but the mark of a service"

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

PIKE COUNTY BALLADS

In *The Complete Poetical Works of John Hay* we find the pleasure and inspiration which are always the result of an acquaintance with a fine personality. Clarence Leonard Hay, in his introduction, says of his father: "But for the statesman in him, he would have been more a poet; but for the poet in him, he would have been less a statesman." This would seem to be true. But it would be unfair and injudicious to class John Hay with the many ministers, professors, unoccupied ladies and public men who erroneously suppose that they can make good poetry as a pleasant by-product of other intellectual achievements. Their verse is usually lifeless and sterile of beauty, while his is gracious music and sincere speech. The famous Pike County Ballads are robust and ringing poetry of the popular type. George Eliot memorized one of them, "Jim Bludso" for her own pleasure. The translations from Heine are admirable as English verse. The sonnets are not lacking in grace and distinction. It is a pleasure to quote this chivalrous sonnet:

COMPENSATION

Pindar, the Theban, sang to Hieron
  In Doric verse, rich as rough-hammered gold,
  The immortals deal to men, now as of old,
Two ill things for one good. These words, forth blown
From such a trumpet, thru the ages groan
  A note of misery. And yet I hold
  That tho they deal us evils manifold
We owe the High Powers gratitude alone.
For one good may be worth a thousand ills;
And all the sum of wretchedness that fills
  The travailing earth, the sea, the arching blue
Cannot exceed the wealth of joy that lies
In sweet, low words, in smiles and loving eyes—
  Cannot compare with love, if love be true.

The Complete Poetical Works of John Hay, ed. by C. L. Hay. Houghton, Mifflin Company. $5.

A HOSPITAL ROMANCE

One of the best novels about the Great War was written before the war, "The Last Shot," by Frederick Palmer, the American war correspondent, who has since seen much of the actual fighting in France. His recent novel, *The Old Blood*, may therefore be taken as a real bit of life from the front; for the man who could describe so accurately the war that he had not seen, will hardly deal with unrealities after witnessing months of warfare. Yet the admirer of the earlier book will take up *The Old Blood* with a certain sense of disappointment, since it does not describe the movements and combats of great armies or the surging souls of the nations; it is a personal romance from start to finish, tho no doubt intended as a sample of a million similar stories which in their totality make up the war. The earlier chapters describing the peaceful Europe before August, 1914, and the first shock of the German invasion are on conventional lines, and almost nothing is told of the fighting in the trenches. The author's genius steps into the story for the first time when the young American volunteer in the cause of the Allies is sent to the hospital with a shattered jaw. The indefatigable triple alliance of the skilled physician, the wounded hero and his devoted sweetheart to fight off death and the madness of despair, and the triumph of surgery which in this, as in so many real cases, accomplished the seemingly impossible, comprize all the real interest of the book.

Bain

A LOOKER-ON IN THE TRENCHES

Frederick Palmer is one of the few novelists who has really seen the war of which he romances

The Old Blood, by Frederick Palmer. Dodd, Mead & Co. $1.40.

RECENT RELIGIOUS THOUGHT

Religion no less than other aspects of the common life has responded to the tense conditions in the world during the last two years. While the output of the religious press has been appreciably diminished by the stress of circumstances and the preoccupation of religious thinkers, the volumes which have made their appearance are uniformly stamped with a passion for reality and the spirit of high courage in the face of uncontrollable calamity and overshadowing mystery. It is as tho Christian thinkers were saying to themselves, We must dig deeper and ground the Christian civilization of the future upon a broader and more solid foundation of historical fact, experimental knowledge and philosophical reality. Every phase of religious thought and investigation is feeling the impulse of this vitalizing demand, as may be seen by a few of the religious volumes of worth and power that lie before us.

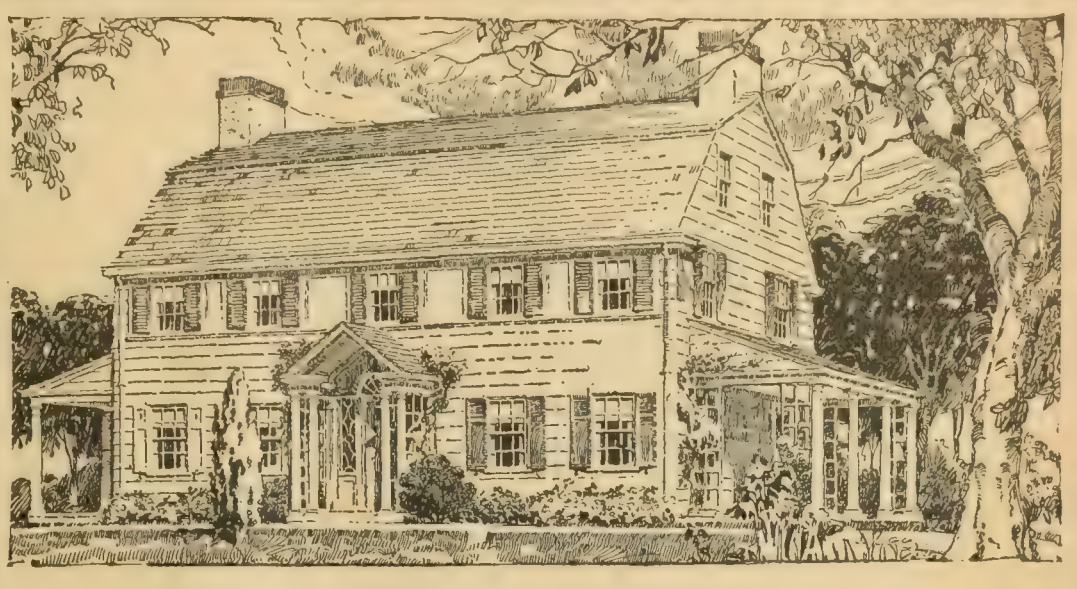
That truth and reality are more influential than tags of orthodoxy or heresy is shown by Professor Badè's splendid work, *The Old Testament in the Light of Today*. The writer is thoroly at home not only in the modern views of Old Testament authorship and literary development, but also in the rich fruitage of constructive ideals and historical values which recent criticism has made possible. The basis of his interpretation of the Old Testament is the ethical striving of the people of Israel exhibited in the moral beginnings of Hebrew religion; in the moral character of Jahveh; in the work of Isaiah the great prophet of holiness; and in the social ethics of Deuteronomy, the first legal résumé of prophetic teaching. The book is written in easy, graceful style and lays less emphasis upon destructive criticism than on the historical and religious processes which created the Old Testament literature, and on the moral concepts and values which have vitalized Hebrew religion, and still give it a universal appeal.

A book of great value, by one of our younger teachers of philosophy and religion, is concerned with an introductory survey of the *Problems of Religion*. Professor Drake considers the subject from three different and equally important points of view. He discusses the origins of religion, and gives a short sketch of the character of those systems which have had more or less connection with the Hebrew and Christian faiths. He continues the outline thru the history of Hebrew monotheism, the life of the founder of Christianity, and the historical development of the Christian Church. In the parts devoted to the psychology and philosophy of religion there are good résumés of recent achievements in both fields.

If one wishes to go deeper into spiritual realities and search the labyrinth of life with a trustworthy guide he can do no better than to read Dr. Gordon's *Aspects of the Infinite Mystery*. It is in many respects the best work of its author who has written so much and so well on religious and theological themes. It is a kind of unveiling of the writer's own experience of the divine mysteries. While Dr. Gordon writes that he is unconscious of any great departure from the views exprest in his earlier books, one cannot help feeling as one reads that there is a greater freedom of expression and that the author is coming closer to the eternal realities and giving without reserve an honest recital of what his deeper insight has found of conviction and faith. Overmastering idealism, moral passion, and unshakable faith in the triumph of righteousness are the soul of his work.

It is unusual to have a defense of the church from one outside its ranks, yet such an apologetic is ably given by Horace J. Bridges, leader of the Chicago Ethical Society, in the opening chapters of *The Religion of Experience*. His belief in the permanent and indispensable function of the church, however, leads to some wholesome criticisms of present tendencies and methods of work. He would have the church emphasize its function as an educator and unifier of

the nation; accept whole-heartedly the principle of freedom of thought for clergy and laity; carry out experiments in the use of liturgies and rituals; and give up activities of an institutional or social character that are irrelevant to the church's special function as an interpreter of God and of the meaning of human life.



If more ammunition is needed to demolish the Smith-Drews hyphenated Christ-myth theory of Christian origins a full supply is at hand in Thomas J. Thorburn's Bross prize volume just published. Step by step the author examines in detail the theories, assumptions and assertions made by Robertson, Drews, Smith and others who have propounded and still defend the *Mythical Interpretation of the Gospels*. Dr. Thorburn's method is not that of general argument or discussion. He proceeds with a careful comparative study of the Gospel stories and the mythical episodes from which these narratives are supposed to have been derived. A clear statement of the evidence, or lack of evidence, is usually enough to shatter the philological and historical props of this strangely credulous theory. Anyone disturbed by the Drews vagaries should consult this scholarly volume.

In Dr. Carpenter's lectures on *Phases of Early Christianity* we have an illuminating exposition of the inner development of Christian thought as related to the theme of salvation. The period covered is that from the close of the New Testament to the time of Cyprian, Bishop of Carthage. The person and work of the Saviour, the church and sacraments as means of salvation, and the once prevalent doctrine of salvation by Gnosis are considered. The volume is one of the most valuable contributions in the "American Lectures on the History of Religions."

The Old Testament in the Light of Today, by W. F. Badè. $1.75. *Problems of Religion*, by Durant Drake. $2. *Aspects of the Infinite Mystery*, by G. A. Gordon. $1.50. Houghton, Mifflin Company. *The Religion of Experience*, by H. J. Bridges. The Macmillan Company. $1.50. *The Mythical Interpretation of the Gospels*, by T. J. Thorburn. Charles Scribner's Sons. $1.50. *Phases of Early Christianity*, by J. E. Carpenter. G. P. Putnam's Sons. $2.

A GERMAN VIEW

For the reason that Dr. Eduard Meyer's historical facts are generally well grounded, his *England and the War Against Germany* is worthy of serious attention. In the main the chapters devoted to England's political organization and development are not devoid of accurate treatment. But it is in deduction from his facts that Dr. Meyer wanders into a region of imagination. While the English people unquestionably lack veneration for the German system of state-enforced organization, and may not be sufficiently conscious of the social tyranny pressing down on them, that therefore, they cannot get together in a national emergency is a sorry fallacy for Germany to have relied upon. Toward the United States the attitude is of sorrowful pity—a misguided people hoodwinked by "a degenerate and wholly unscrupulous press," with Dr. Butler thundering from Columbia Heights "attacks of

DIGNITY

As well as simplicity characterized the early colonial architecture of America. That is why it is still so popular among home builders of good taste.

In preparing our book on home building and the advantages of interior finish from

ARKANSAS SOFT PINE

We included eight especially drawn colonial designs, ranging from a lakeside cottage costing $1200 to a suburban home which can be built for $12,000.

Send for a copy of this book and set of finished samples. They are free; also our new instructive, illustrated booklet on finishing and painting. Architects will find our manual a valuable addition to their file—Sent on request.

NEW EPOCH BOOKS
SCIENTIFIC RELIGION—RELIGIOUS SCIENCE
THE SACRED NAMES OF GOD, by LEONARD BOSMAN. A new and true translation and a clear explanation of some Biblical mysteries, never before published.
Write direct to the publishers for this book. It might mark a new epoch in your life. Price 50 cents, mailed free, from THE DHARMA PRESS, 16 Oakfield Rd., Clapton, London N. E., England.

What 15c WILL BRING You FROM THE Nation's Capital The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth, now in its 23d year. This paper tells the half without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address The Pathfinder, Box 38, Washington, D. C.

bitter calumny." American sympathy for the fate of Belgium would seem to have been engendered "by the feminizing influence of the schools that are almost entirely in the hands of women."

England and the War Against Germany, by Eduard Meyer, Boston, Ritter & Co. $1.50.

AS THE FRENCH SEE WAR

A Volunteer Poilu, by Henry Sheahan, of the American Ambulance Service, is a remarkable revelation of the French attitude toward the war, as disclosed by a *chasseurs-à-pied* officer, an intellectual disciple of Psichari. He holds "to the Germans war is an end in itself, and in itself and in all its effects perfect and good; to the French mind this conception of war is barbaric, for war is not good in itself and may be fatal to both victor and vanquished." However, war is not a savage *ruée*, "but the discipline of history for which every nation must be prepared, a terrible discipline neither to be sought nor rejected when proffered." It was Psichari's voice, he believes, that saved France at the supreme crisis, by preserving in her army that morale of duty and discipline, those ideals of honor and sacrifice for the common good, submerged or abandoned in an industrialized world.

A Volunteer Poilu, by Henry Sheahan. Houghton, Mifflin Company. $1.25.

WAR AND THE WORLD

In his study of nationalism and war in their relation to civilization and of the fundamentals and the progress of the opposition to war, Edward Kreibiel presents in *Nationalism, War and Society* not a treatise, but a finely arranged syllabus giving the gist of the many-headed subject in brief paragraphs, with quotations of authorities from the extreme pacificist to Bernhardi. Ample bibliographies direct the reader to works on the Red Cross, finance, arbitration, confederation of nations, or whatever phase of the topic he may be seeking. Norman Angell furnishes a vigorous introduction.

Nationalism, War, and Society, by Edward Kreibiel. The Macmillan Company. $1.50.

GENERAL JOFFRE'S PLAN

General Joffre and His Battles, by Raymond Recouly, reminds us that, tho the leadership of the French army has now passed to General Nivelle, nothing can rob General Joffre of the honor of the battle of the Marne. Captain Recouly, of the French General Staff, points out most significantly that it was the "Mass of Maneuver" armies of Generals Maunoury and Foch which balked the German offensive, and snatched a decisive victory. According to the author this strategy was not born of eleventh hour desperation, but had been carefully planned by General Joffre for precisely such an emergency. Captain Recouly estimates the total German strength hurled upon France at about fifty army corps, or 2,500,000 men; which was vastly superior to the combined armies of France.

It was the French inferiority which compelled the retreat to the Marne. General Joffre is credited thruout with displaying the most admirable skill, and, what was of equal importance, a positive faith that the Germans would meet with defeat at the position he selected for the supremely critical battle. He holds the Germans' greatest mistake was in their failure to grasp the resilience of French character, that when by rule the French ought to have been annihilated, they turned upon the enemy with irresistible fury. There are extremely interesting first hand sketches of Generals Joffre, De Castelnau, Foch and Pétain. The personal journal of Captain Recouly adds to what is conspicuously one of the most valuable war records.

General Joffre and His Battles, by Raymond Recouly. Charles Scribner's Sons. $1.25.

A CYCLOPEDIA

The *American Standard Encyclopedia* in handy volumes awakens hopes that it does not fulfil. It is apparently printed from old plates, unpaged and pieced out with new matter—the new matter not equal to that by the old editors, many now dead, whose names are on the title page.

The census and the daily papers have brought some data up to date but many articles seem unrevised since 1900, while additions are superficial and in length the papers are not proportioned to importance. Valeric acid, for instance, has two pages, as have labor unions! The European war is handled very uncritically, a mere diary of more or less important events carelessly compiled from newspapers. For instance, it is stated that the Italians occupied Goritz (elsewhere spelled Garitz) on October 21, 1915, whereas they really did not take it till August 9, 1916.

The American Standard Encyclopedia, University Society. $34.50.

EXPLORATIONS AND THE BIBLE

Professor Barton, of Bryn Mawr, has performed a notable service for those interested in biblical studies by publishing a complete résumé of the relation between *Archaeology and the Bible*. The first part of the volume he devotes to a survey of the discoveries in the Oriental world which bear specifically upon the biblical narratives. He discusses the ways in which the archaeological materials were preserved in Egypt, Babylonia and elsewhere, and reviews the modern explorations which have brought these to the attention of the student and investigator. In the second part the author has given the translations of the ancient documents which confirm or illuminate biblical incidents, stories, customs and history. Each translation is accompanied with full explanations in which he gives the opinions of both the radical and conservative schools as to the bearing of the document upon biblical literature and truth. More than one hundred plates illustrating the entire subject and giving pictures of the most important archaeological objects and documents are appended on specially prepared paper.

Archaeology and the Bible, by G. A. Barton. Philadelphia: American Sunday School Union. $2.

25th Year

MOTOR PROGRESS

By John Chapman Hilder

SHOW time is arriving, and everybody connected with the motor industry is in a fine frenzy which will probably last for some months after the shows. In this miraculous motor business each season is greater than the last. Every year come new inventions, new refinements, new fashions, new foibles. Last year's experiments have become this year's certainties and last year's certainties are served up with new sauces.

First we have engine changes. Ever since twelve cylinders were adopted, people have been wondering whether that marked the end of cylinder multiplication or whether the future would bring forth motors equipped with two or four more. So far we have had no intimation that any fourteens or double eights are to be loosed on an expectant public. But some manufacturer may be keeping a few of these up his sleeve.

Not a few makers are adhering to a four cylinder policy—after all these years—and pointing to European motor practise as a criterion. Some of these four cylinder advocates have installed sixteen valves, instead of the usual eight. They claim that this gives the smoothness of a multi-cylinder engine, with the simplicity of a four.

A large army of stalwarts concentrate on sixes. They include some of the oldest and some of the youngest in the industry. Others make both fours and sixes. Others make fours and eights. Others make sixes and twelves. These upholders of two models have an advantage over those who turn out but one, in that they catch the prospective purchaser either direct or on the rebound. If he refuses one they land him with the other.

Eights have enjoyed considerable popularity and many of them are to be continued for 1917.

As to choosing any one type, advice on that score is just about as easy to give—and as reliable—as advice on choosing a wife. It is feasible, however, to generalize thus:

You should judge a car on four main counts:

1. Soundness of design regardless of type.
2. Quality of materials thruout.
3. Workmanship.
4. Relation of price to output of factory.

The significance of the first three points is simply this—a good four is better than a poor eight, and vice versa; a good twelve is better than a poor six and vice versa; a good six is

Pumps Up the Dust

A clean, snappy bristle brush "frees" the dust and dirt from your rugs. Then a heavy suction of air, made by three strong bellows, draws all this "free" or loosened dust into a receptacle. None of the germ-leaving dust from a thorough sweeping escapes into the air to settle on furniture, draperies, pictures, bric-a-brac and walls, or to be inhaled.

The dust bag comes out with the nozzle in one piece and empties from the rear. None gets away in its journey from your rug to the dust bin or the fire. Emptying takes but a moment. No need to think of soiling your hands. You are protected from that.

Such a treatment of your rugs keeps them always hygienic—always clean—fit playspots for the little folks. Isn't this a better way than to permit dust and dirt to accumulate until you have to adopt drastic methods to remove it, methods often fatal to the long life of your floor coverings? Thousands of women think so. For the daily brush-ups necessary in every home, Bissell's Carpet Sweeper is the ever-growing favorite of 40 years. Light-weight, convenience, and large brush capacity, give it its place in every home.

Vacuum Sweepers $7.50 and $9.00. "Cyco" Ball-Bearing Carpet Sweepers, $3.00 to $5.50. A trifle more in the west, south and Canada. Sold by the better dealers everywhere. Booklet on request.

Run Your Home On A Business Basis

Many a man knows his household and personal expenses are too high, but he doesn't know where or how to economize. No man would run his business as he runs his personal affairs.

This book tells him when and where the bills are too large; when his personal expenses are greater than they should be and so forth.

There is a proper place for each expenditure; and the totals, by weeks or months, can quickly be compared with other weeks or months, covering four years. You can set expenditures down in detail, or make them as general as you wish. The system is flexible; you don't have to account for every postage stamp or carfare.

Woolson's Economy Expense Book

The present high cost of living demands that you keep your expenses down. Give one of these books to your wife. She will appreciate it. Both of you will be better off for keeping this accurate and simple record of household expenses.

The book is attractively bound in black cloth, with red russia back and corners. It contains sufficient pages for four years' accounting, with a four years' summary at the back.

PRICE - - $1.75

Send the price, and we will send it, all charges prepaid. If you should prefer, send no money; but tell us who you are, and we will send the book on approval. In either case, if the book is not satisfactory, return it in five days and if you have paid for it your money will be refunded.

CAMP

CAMP PENN
Valcour Island, Lake Champlain, N. Y.

There is no need for hurry in looking up a camp for your son. There are some six months till "camp time," and if you desire merely the usual care-taking kind of camp, you have lots of time, and can safely make your decision at the last moment.

If, however, you desire a camp whose influence will have a fine and constructive effect, a camp of highest character-standard, a camp where your son will have a very real kind of camp-life, in carefully chosen companionship, under expert supervision, a camp that is conveniently near first class railroad facilities and yet which has the unusual isolation so obviously necessary these days, which has a resident physician, an enormous estate, and a system of a very "different" kind—if this is what you desire, you will need all the time you can get for your search—for such camps are not common!

And it may be that our booklet will describe the very kind of camp for which you have been looking.

A CALENDAR OF AUTOMOBILE SHOWS

Cleveland, Ohio, December 30 to January 6, in Coliseum.
New York City, January 2 to 10, Automobile Salon at Hotel Astor.
Milwaukee, January 6 to 11, in Auditorium.
New York City, January 6 to 13, Automobile Show at Grand Central Palace under auspices of National Automobile Chamber of Commerce.
Philadelphia, January 7 to 10, under auspices of Philadelphia Automobile Trade Association.
Montreal, Canada. January 20 to 27, under auspices of Montreal Automobile Trade Association.
Detroit, January 20 to 27, under auspices of Detroit Automobile Dealers' Association.
Chicago, January 27 to February 3, in the Coliseum, under auspices of National Automobile Chamber of Commerce.
San Francisco, February 10 to 17, Pacific Automobile Show under sanction of the Motor Car Dealers' Association of San Francisco.

better than a poor four and so on and so forth.

The relation of the price to the output of the factory was dealt with in my article for The Independent of September 18, 1916. It means that given two cars of equal size and similar type, selling for the same price, that which is made and sold in greater number will be the better car. As with all good rules, this one has its exceptions. But it holds true ninety-nine times out of a hundred.

AMONG engine changes probably the most prominent is the wide adoption of aluminum for pistons and also for cylinder castings, including crank cases, transmission boxes and other mechanical parts. It has been proved that aluminum pistons, by reason of their light weight, do much to reduce motor vibration and increase flexibility and acceleration. The development of aluminum alloys has enabled manufacturers to eliminate hundreds of pounds from the weight of their cars without sacrificing strength.

Nearly two dozen cars will be shown, during the next few weeks, in which aluminum has been used. Perhaps even more than this will be in evidence at the shows.

Ignition systems are not much changed, most of them being of the battery type, and only one or two cars featuring magneto as standard equipment. Transmissions remain much the same, practically all cars using the three speed, selective with center control. Four speed transmission is furnished on a few of the higher priced cars—and as a rule it is to be found in foreign machines. Three speeds seem to be enough under most circumstances. But a high fourth is sometimes an advantage when traveling over level country, as it permits greater car speed with relatively lower engine speed and is therefore rather economical in use. The trouble with it is that most people dislike changing gears and content themselves with working the three and neglecting the fourth.

Left hand drive is featured in all but about two American makes, and will probably never be supplanted by the old right hand method in this country—altho I hear sporadic outbursts against it from time to time. Right hand drive enables you to gage your distance from the ditch, but left hand drive gives you a more accurate idea of your proximity to cars traveling in the opposite direction. Foreign machines all have right hand drive, and their makers seem indisposed to change over to the other side.

There is a slight increase in the number of cars equipped with magnetic gear shifting apparatus, by means of which you shift gears with push buttons. This seems to work well, but has yet to be widely adopted.

CARS will differ from last year's in appearance to the extent that the high point of the design is at the front, instead of at the rear. The latest fashion is to have a high radiator, a higher cowl and a body lower than the cowl. In some of the four-passenger roadsters—one of the most popular designs—the body lines taper off, running straight down from the cowl to the tail-light. And the tendency is to keep the rear of touring car tonneaus as low as possible, whereas in previous years common practise ran chiefly the other way.

Manufacturers still show a desire to turn out cars that are devoid of contrast in their design. Everything is rounded off. All lines are curved. Doors are concealed so far as possible. The exterior of cars is egg-like—and, in my opinion, suffers from a monotony of smoothness.

Great stress has been laid of late on boat lines in the design of cars. Designers have evidently been impressed by the expression of speed which is certainly to be found in many of the more recent power cruisers and runabouts. They appear, however, to have lost sight of the fact that most boats are modeled with a combination of sharp angles, straight lines, flat surfaces and mouldings as well as gentle curves, and that they owe their beauty to this combination.

With all due regard for the difficulties of the problem, I would suggest that motor car designers might do well to stop trying to make automobiles look like something they are not. Boat designs belong in the marine field. Aeroplane designs belong in the aerial field. Motor cars are neither boats nor aeroplanes. So why not concentrate on the job of giving the automobile a typical design of its own?

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

The Dictaphone isn't a cost

It's an investment any way you figure. An investment that pays actual cash dividends of at least 33⅓% on every letter.

That's as definite as we can say it—and hundreds of concerns, big and small, have proved it.

For its economy alone The Dictaphone would be invaluable. When you add its wonderful convenience, accuracy and limitless speed, you have part of the answer why thousands of business men dictate to The Dictaphone.

Reach for your telephone and call The Dictaphone, and arrange for a demonstration on your own work. If you do not find that name in the book, write to

THE DICTAPHONE

HARTFORD

W. Douglas Mackenzie
President

Theological Seminary
Dean, M. W. JACOBUS

School of Religious Pedagogy
Dean, E. H. KNIGHT

Kennedy School of Missions
Secretary, E. W. CAPEN

Through these associated schools Hartford offers ample training, both scholarly and practical, for the Christian ministry; meets the present demand for trained lay workers in church, Sunday-school and social service; and gives special missionary preparation for the foreign field. Each of these schools has its independent faculty and its own institutional life, but together they form one interdenominational institution with the unity of a common aim and spirit.

THE YES BLANK

Did you send the YES BLANK from page 474 of the December 18th issue? If not, just glance over that wonderful list of contributors and consider once more the big offer of seven twenty-five cent numbers of The Countryside for One Dollar. Here is another YES BLANK for your convenience.

YES BLANK for THE COUNTRYSIDE
119 West Fortieth Street, New York

I either enclose or will shortly send

ONE DOLLAR

for which please forward the Christmas Number of The Countryside, with the Christmas Card, and the Six Monthly Issues beginning with January, 1917.

A WARNING TO SMALL INVESTORS

IT may be an oft-repeated phrase, but it is nevertheless true that prosperous times have brought on the usual flock of dishonest brokers with innumerable schemes to mulct the unsuspecting "investor" of his few hundred dollars. As this article is being written, a newspaper before me tells of a group of Philadelphia people who have swindled widows and orphans out of over $2,500,000 thru the sale of worthless securities. Every day one can read warnings to investors in almost any periodical, and still they buy and buy in the hope that their hundred dollars will become ten thousand in a few years.

Of course, it is not impossible; a man who bought International Mercantile Marine common in 1915 at 62½ cents a share could have sold out in 1916 at $50; this shows a profit on 100 shares bought for $62.50, of $4937. A purchaser of some of the Missouri, Kansas & Texas bonds at around 50 can now sell at 80 or 85. The Wabash Pittsburgh Terminal 4s, which sold in 1915 at $10, sold this year as high as $440 with an assessment of $300 paid, or $140 excluding the assessment. The man who bought U. S. Steel at 8⅜ a decade ago could have sold this fall at 129¾. But these are extraordinary cases, and it takes careful study to arrive at a conclusion when to buy even standard issues.

The man who buys copper, zinc and lead issues at $1 per share may see daylight some time, but his chances are very slim if he buys most of the prettily engraved certificates now being peddled around. Pick up even a reputable newspaper and you will find the financial pages littered with all sorts of absolute junk. The reason is found in the prevailing high prices for metals which have resulted in stock selling schemes being inaugurated by every promoter who could find a hole in the ground reputed to contain metal ore of some sort.

It is pretty generally known that copper has sold up from 12 cents a pound in 1914 to over 30 recently and is now around 34. It is obvious that any company that can produce copper for 5 cents, such as Kennecott, can make an enormous profit at such a price. The smaller companies are straining every effort to increase their facilities so as to produce copper even at 15 cents or more, so long as there is a profit.

This sort of business can continue while the price of copper holds, but if people only stop to consider that some day the demand for copper will not be abnormal, they will be careful as to what sort of stocks they place their savings in. If they stick to standard issues, they will not go very wrong; however, they sell too high for the very small investor, so the fakir provides stock at $1 per share, of companies adjoining the Copper Queen, Chino Copper Company, the Phelps Dodge properties, or the well-known Kennecott. Especial stress is placed on the proximity of large producing properties to that owned by the schemers. The announcement is also made that the price is now $1, but "shares are offered subject to an early advance," etc. Investors should keep away from brokers offering such stocks and save their stamps.

Then, with the large profits reported by many reputable and stable motor companies has come competition, not in the form of a new product in the automobile line, but in the stock selling game purely. One company claimed to be able to manufacture a car to sell for about $400, when it is known that it cost $1000 to produce the first car. A large New York newspaper recently had a remarkable exposé of this scheme with the result that the stock is not so widely advertised as it was. However, thru letters received from our readers we learn that the stocks are being offered by mail in the western states.

One concern which has come forth recently in the motor stock field secured considerable publicity thru the announcement that it had purchased a large building in the financial district. A few weeks ago it took a rather novel means of selling stock in a new motor car concern. One morning the clerks as well as officials in many banks and business houses found telegrams on their desks sent from Chicago reading something like this: "We have reserved twenty-five shares of —— Motor Truck Corporation for you and await your advice in the matter." One bank president is reported to have received two telegrams of the same tenor with the initial wrong in one case. It is needless to say that such methods savor of the quack and should not be encouraged.

In all cases, investors who wish to buy stocks or bonds should be guided by the character of the firm offering the securities. It must not be overlooked that many of the largest houses will execute orders to buy even one share of stock or a $100 bond; that many reputable concerns are selling good motor company stocks with an assured future, and they sell them after having made a very thoro investigation of the plants with the assistance of capable engineers and accountants. Also that such firms advertise regularly in The Independent.

From the majority of the letters re-

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

ceived from our readers during the past nine months, we judge that a portion are small investors who have little technical knowledge of securities and who could be easily misled by glowing statements made by irresponsible fakers. We remind these readers that it has been conservatively estimated that only about 10 per cent of the people who speculate on margin come out with profits, while the other 90 per cent lose out entirely. This is an argument for the investment in good bonds and stocks as against the purchase of speculative issues on margin or thru mushroom brokerage concerns.

With the large sums available for investment after January 1, we believe this warning to be quite opportune. We remind our readers that this department is conducted for their benefit solely, that it is conducted on an absolutely confidential basis, that their names are not divulged in any way, and that the advice we give is as conservative and fair as is possible.

The following dividends are announced:

Brooklyn Rapid Transit Company, quarterly, 1½ per cent, payable January 1, 1917.

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable January 1, 1917.

American Car and Foundry Company, preferred, 1¾ per cent; common, quarterly, 1 per cent; extra, 1 per cent, all payable January 1, 1917.

The Electric Storage Battery Company, common and preferred, 1 per cent, payable January 2, 1917.

American Can Company, preferred, quarterly, 1¾ per cent, payable January 2, 1917.

Baldwin Locomotive Works, regular, semi-annual, 3½ per cent, payable January 1.

Brooklyn Savings Bank, 4 per cent, payable on and after January 20.

United Fruit Company, quarterly, 2 per cent, payable January 15, 1917.

Pacific Gas and Electric Company, common, quarterly, $1.25 per share, payable January 15, 1917.

The New York Central Railroad Company, $1.25 per share, payable February 1, 1917.

D. C. Heath & Co., quarterly, 1¾ per cent, payable January 1, 1917.

United Shoe Machinery Corporation, preferred, quarterly, 1½ per cent; common, quarterly, 2 per cent, both payable January 5, 1917.

The American Agricultural Chemical Company, quarterly, preferred, 1½ per cent and quarterly, common, 1¼ per cent, payable January 15.

35 Years Without a Dollar Loss to An Investor

Each successive year is a milestone in the record of this House. Three and one-half decades ago, this business was founded on this fundamental principle: *Complete safety and thorough protection of the investor.*

How closely we have followed this principle our record indicates —a record of sound securities bought and sold, and thorough service to investors rendered for more than a generation.

5½% January Investments

We are now offering a varied list of sound and attractive first mortgage serial real estate bonds, safeguarded under the *Straus Plan*, to net 5½%. Each issue is directly secured by a first mortgage on a high grade building and land.

These properties are situated in New York, Chicago, Detroit, Baltimore, Pittsburg, Kansas City, St. Louis, Cleveland, Minneapolis, Los Angeles, and other large and prosperous cities. We have purchased these bonds after careful investigation and recommend them as safe investments.

FOREIGN FRAGMENTS

The first German university in Europe was founded in 1348 by King Karl IV in Prague.

The old Iberians solved their food-problem in a very simple way: they took only one meal a day.

China, according to the most reliable and most recent statistics, has only 330,000,000 inhabitants.

The leader of the Rumanian people of Transylvania, the priest Locali, publicly accuses Count Tisza of being the principal author of the crime of Serajevo.

A certain Félix Mouret recently uncovered near Béziers (France) an old burial ground containing painted Greek vases dating from the sixth to the third centuries B. C.

The present pact between Austria and Hungary expires December 31, 1917. This date explains, to a certain degree, the growing nervosity of the governmental circles in Vienna and Budapest.

Who would have searched the old Balearic Islands for deeds of gallantry! Their inhabitants, two to three centuries B. C., used to ransom one woman from pirates by the surrender of three to four men.

Mr. Cunisset-Carnot, in *Le Temps* (Paris), tells the authentic story of a dog, disconsolate by the death of his master, committing suicide by laying its head on the rails, a few minutes before the express train was due.

There are still people embarrassingly shaking their heads in reading in their Bible of the centuries old pre-Abrahamitic patriarchs. The fact that with some early peoples the year had only three months might help solving the apparent puzzle.

The population of Spain under Augustus (31 B. C.—14 A. D.) was about 6,000,000, increasing to 12,000,000 by the middle of the second century. Her present population is 19,588,688; a scanty increase, indeed, for a period of nearly eighteen centuries.

Spain, etymologically, means Coney Island, or, rather, Coney Peninsula. The word is, indeed, according to good authority, derived from the Punic Shafan-rabbit. This animal has been very numerous in the country, often destroying whole crops. African ferrets were kept to drive the animals out of their holes. We find the rabbit often represented on old Spanish coins.

The betrothal of Princess Masako of Japan to Prince Yi, who would have been Emperor of Korea if Japan had not absorbed the "Land of the Morning Calm," is the first instance of an imperial personage in Japan being allowed to intermarry with one of alien blood. This is a concession of the utmost significance and it undoubtedly foretokens the time when the privilege will be extended to the royal houses of Europe.

Our women readers and students of fashion in general will be interested to learn that the black mantilla was already a favorite costume among the woman folk of the old Iberians, the distant ancestors of the Spaniards of today. The Iberian ladies also wore bright robes with black hanging veils, sometimes iron necklets, and curious headdresses surmounted by curved rods like a crow's head. And—you would scarcely believe it—the Iberian young ladies prided themselves on the tightness of their waistbelts.

The Swiss architects, Rittmeyer and Furrer, of Winterthur, are the inventors of a composition of asbestos and cement which can be used for casements in heating apparatuses, as chimney shelves, socles, in staircase-wells, etc. Its principal qualities are safety against fire, and resistance to humidity, and it offers, over plaster of Paris, the advantage of not brittling away. If used for shingle roofs, it ought to be employed in its natural rusty brown color. The slabs, being of various shades, produce a beautiful play of colors.

W. E. UNDERWOOD

ON SURRENDERING POLICIES

Many inquiries on the subject of life insurance come to me from policyholders who for reasons of their own—some of them very good reasons, too—are dissatisfied with the contracts they hold, or with the companies issuing them. Sometimes this discontent crystallizes in an inclination to surrender the policy for its cash value for the purpose of securing insurance in another company. Occasionally I detect in a communication evidences of a hope that I will encourage the surrender. I rarely ever do.

There are exceptional cases when, in my judgment, such action would be profitable. These must be treated, each on its individual merits. Actual present conditions must control. But as a general rule, in the vast majority of cases, the effect would be injurious to the interests of holders of old line legal reserve insurance. In his annual premium a man pays much more than the present actual cost; each year his equity in the company's accumulated fund grows; each year he is older and, usually, more impaired physically. This process commenced, even in a company of commonplace ability, should not be interrupted, for there is no such thing as beginning over again in life insurance.

Money is not the only, nor the most valuable, thing invested in a life insurance policy. Time has gone into it. Money can be lost, but it can also be regained. But time is not of that order. So much of it as we put into a contract of life insurance should be conserved, if we are to have the fullest service. The system was so designed; it is, to use a colloquialism, a "continuous performance," one that suffers injury when interrupted.

Under these conditions, the necessity for being properly insured—of getting started right, securing that plan best adapted to one's peculiar circumstances, and of having it in a company of the right kind—is obvious. Most of the life insurance troubles brought to my attention are due to errors of the sort indicated. Aside from promptly abandoning reserveless assessment insurance, one should carefully consider the surrender of existing contracts.

H. F. W., Elwood, Ind.—Insurance Commissioner J. O'Neil of Pennsylvania recently announced that the Pension Mutual Life Insurance Company of Pittsburgh was heavily impaired, forbade the company to transact any new business and has applied to the courts for a receiver. As to the security, if any, behind your reinsured Commercial policy, would advise you to make inquiry of Commissioner O'Neil at Harrisburg, Pa., who is in full possession of all the facts.

Help us remove this sign!

The Off-the-Street Club, where children living in the congested districts of Chicago can congregate, is overcrowded. The three-story building with its play rooms, its reading rooms and warm firesides are closed to newcomers. More room is needed. Will you help?

Those Outside

have no yard to play in, seldom a home for comfort. The dirty, noisy, crowded street is their yard and almost their home. Many a fine mind and many a sturdy character has been ruined in these surroundings.

Those Inside

are given a place to play during the day and evening, finding mentally, morally and physically, healthy companions. The children are not objects of a charity, but subjects for the making of opportunities. The Off the Street Club has thus developed a fine woman out of many a girl whose future was doubtful, and has built the manhood of hundreds and hundreds of boys.

It is heart-rending to exclude newcomers. But it is better to do this than further to overcrowd those within.

25c pays the expenses every day and evening for one child for 22 days

$1.00 takes care of 3 children for a month

$2.00 takes care of 6 children for a month

$5.00 takes care of 15 children for a month

$10.00 takes care of 30 children for a month

$25.00 takes care of 75 children for a month

$100.00 takes care of 300 children for a month

Send any subscription you wish (mailing check or money order payable direct to Corn Exchange National Bank, Chicago) or send first for booklet.

The Off the Street Club in Chicago is rendering such a **unique** service that everybody interested in social problems should investigate. The plan will appeal especially to self-made men and to women of strength—for this is not an ordinary "charity"—it is a movement for the making of opportunities.

The Off the Street Club is incorporated in Illinois, without profit. Open to all. No creed, no race distinctions. Practically no overhead. (The superintendent gets no salary.)

The men back of this organization are the publishing and advertising interests of the country. Practically every magazine and newspaper in the United States has a representative who contributes either in time or cash—generally both—to the Off the Street Club.

Stories of the Off-the-Street Club

By Edwin Balmer, the Noted Magazine Writer

We wish to send you free a little booklet called "Stories of the Off-the-Street Club." These stories, with many side lights and interesting tales from the congested districts of a metropolis have been written by Edwin Balmer. The tales are full of the deepest human interest. And they will open your eyes to the problems of the child whose home is the street. This booklet will be sent without obligation.

The boys of the Off-the-Street Club, having themselves been helped, are taught to help others. That, and that alone, makes for character. Here is a group of boy scouts from this club, taking Xmas bundles to poor families in the neighborhood.

Off-the-Street Club
C. H. Porter, Treas.

F. E. ANDRUSS, Cashier.

BOTH SIDES A DEBATE

GOOD WILL VERSUS WAR

RESOLVED, That the principle of non-resistance should govern the foreign policy of the United States.

NON-RESISTANCE, as it is used here, means not only refusal to engage in war, but the substitution, by a nation, of the positive, moral force of good will for war in settling international difficulties. Advocates of non-resistance object, not to force, but only to the misuse of force.

This debate was prepared by Mary Prescott Parsons.

ARGUMENT FOR THE AFFIRMATIVE

I. Non-resistance is practical.

A. It is more expedient than war. 1. War fails to ensure safety. (a) It may end in defeat. (b) Victorious war does not protect lives of citizens. (c) It fails to protect territory. (d) It fails to ensure future safety.

2. Any possible outcome of non-resistance would be safer than war. (a) Non-resistance would probably prevent invasion. 1. No nation could distrust our word. 2. No nation could fear aggression on our part. 3. No nation could justify invasion of our territory. 4. History shows that non-resistance prevents attack. (a) In Ireland, during the rebellion of 1798, not one unarmed Quaker was harmed. (b) In Pennsylvania, during Indian wars, the savages left the Quakers undisturbed for more than seventy years. (c) Disarmament on the Canadian border has resulted in a hundred years of peace and security. (d) Hostile invasion would not endanger our safety. 1. Invaders, met in a spirit of goodwill, would be unlikely to commit atrocities. 2. Even should they persist in hostility, non-resistance would doom their plans to failure. (a) They could not take control of the government and industries. 1. Enough persons could not be imported to do all necessary work. 2. Invaders could not compel our citizens to obey them. (a) Imprisonment would accomplish nothing. (b) Killing of unarmed citizens, the only alternative, would fail. (c) An attempt to collect an indemnity and depart would result in the same alternative of killing unarmed persons. 3. Even if some citizens were killed for practising non-resistance, fewer lives would be lost than in war.

3. Non-resistance is wiser economically than war. (a) Even victorious wars do not pay financially. (b) The waste now due to war and to preparation for war would be eliminated. (c) No nation could profit by collecting an indemnity from us.

4. Non-resistance would improve social conditions. (a) It would remove the bitterness between classes which is now caused by war and by preparation for war. (b) Money and time saved by disarmament could be devoted to social needs. (c) The spirit of non-resistance would be a great power in righting social wrongs.

B. It is workable. 1. War is not inevitable.

2. Non-resistance does not necessitate abolishing police and courts. (a) Force used by police and courts is safely lodged in the hands of neutral authority. (b) Force, in war, is in the hands of the parties to the quarrel. (c) Force of the law is never used in ruthless destruction.

3. The ideal of non-resistance can be made practical thru education.

II. Non-resistance is right in principle.

A. It is Christian. 1. It was taught by Christ. 2. It is in harmony with the spirit of Christianity.

B. War is morally wrong. 1. It is irreconcilable with Christianity. 2. It causes unnecessary suffering. 3. It takes life. 4. No kind of war can be justified. (a) War of aggression is wrong. (b) War against oppressors is wrong. 1. It is impossible to distinguish between real and imagined oppression. (c) The theory that war is right in defense of the weak or in self defense is unfounded. 1. No end justifies wrong means. 2. Moral force is a stronger defense than physical force. 5. The argument that war is needed to develop character is untrue. (a) Fine qualities offset by brutality. (b) Non-resistance develops character. 1. It teaches self control. 2. It takes more courage than war. 3. Peace offers chances for heroism. 4. The ideal of non-resistant character is Christ.

C. Non-resistance promotes civilization. 1. It teaches humanity and brotherhood. 2. It establishes justice. 3. It leaves human energy free for constructive work. 4. It offers the best means of promoting universal peace. (a) The most reasonable alternative, an international court founded on force, is impractical. 1. It will be long before enough nations will agree to try it. 2. There is danger that the force would be misused. 3. No real security can come thru a program based on fear. (b) Non-resistance can be put into practise by one nation.

D. It is patriotic. 1. It promotes the truest liberty for all men. 2. The worst consequences could not destroy our nation.

ARGUMENT FOR THE NEGATIVE

I. Non-resistance is impractical.

A. It is unworkable. 1. It can not be tried without the agreement of every citizen. (a) In case of invasion, if one person should fight back, others would do the same. (b) This would furnish a pretext for aggression. 2. Such an agreement can never be carried out. (a) Armaments are needed against semi-civilized peoples. (b) Instincts of self-preservation and of revenge would prove too strong even among believers in non-resistance. 3. War is inevitable in the present state of society. (a) War is necessary for the development of man. (b) War is bound up with the modern capitalistic system. (c) Modern states are founded on force. (d) It is inconsistent to maintain that force is unnecessary in international relations while it is necessary in internal affairs.

B. Even could non-resistance be practised, it would be inexpedient. 1. Defense with an army and navy is sure to protect us. 2. Non-resistance would fail to protect us. 3. Non-resistance would lead to economic ruin. (a) Our gold supply and our securities would be confiscated. (b) Invaders would take over our industries. 4. We should lose our liberty forever. (a) Representative government would be taken from us. (b) A foreign language would be taught in the schools. (c) Citizens would be reduced to slavery. (d) We should be forced to fight for the invaders. (e) We could never regain our liberty. 1. To revolt would be abandoning our principle of non-resistance. 2. Revolt would be hopeless against a military nation.

II. Non-resistance is wrong in principle.

A. The claim that it is enjoined by Christianity is unfounded.

B. Non-resistance would be morally wrong. 1. It would encourage aggression. 2. It would weaken character. No "moral equivalent" has ever been found for military training or for war. 3. It would cause national degeneration. 4. It would force us to approve evils worse than war. 5. It would make us break solemn pledges. (a) To ensure "life, liberty and the pursuit of happiness" to our citizens. (b) To uphold the Monroe Doctrine. (c) To protect the Philippine Islands.

C. War is often justifiable. 1. It upholds moral principles more vital than war. 2. As society is now constituted, it is the only way to maintain those principles.

D. Non-resistance would check the advance of civilization. 1. History shows that the highest civilization has been attained by nations which have been willing to defend it. 2. The example of China proves that a non-resistant nation becomes backward in civilization.

E. Non-resistance is unpatriotic. 1. It would expose our country to unnecessary danger. 2. It would sacrifice all that is best in our national life. 3. It would make us fail in our duty to humanity.

White
Sixteen valve 4

Marked individuality of appearance in high grade cars is attained either by remaining behind general progress in body design, or by keeping so far in advance of it that popular tendencies are transcended and anticipated.

White bodies are highly individual in being markedly progressive within the conservative bounds of good taste.

Upholstery and finish may be selected to suit the owner's individual taste.

BOOKS AND WRITERS

Among the valuables brought us by the "Deutschland" was a single copy of Count von Reventlow's *Vampire of the Continent;* 300 of these books were sent here from Germany in various ways; 299 never reached these shores. Who says the British are careless!

A special list of books for prison libraries has been published by the New York State Library. It is proposed also that this state have a prison library supervisor, who shall visit all the prisons and reformatories and see what can be done to direct the reading of the prisoners.

Margaret Deland has been the treasurer of the American Authors' Fund for the Allied Wounded; $1 each was asked of writers, and the money, $4500, has been divided between the Serbians, Italians, English and French, the last going appropriately to the work under Edith Wharton.

Beautiful Joe, Marshall Saunders' touching dog story, that has been translated into Swedish, German, Bulgarian, Chinese, and is triumphantly shabby in the libraries, won the prize of the Humane Educational Society some twenty-five years ago, and then journeyed six months from publisher to publisher before it could find any one who would risk publishing it.

Speaking of homes and housework and parents and schools and so on, Roland G. Usher, who is doing some of our best work in political science, learned his French and German at home with his mother, and found no difficulty in using them when he went abroad. His father taught him Latin, and made him one of the none too numerous Americans who really read Latin readily.

Joshua Slocum, the strange, fearless old man who wrote *Sailing Alone Round the World,* set out years ago on another solitary voyage of which the story will probably never be written. He was heard of at British Honduras. There was a rumor of him in the Amazon. That was eight years ago and now the law accounts him dead, and orders the accumulated dividends of these years paid to his heirs.

Women used to be trained to be jacks of all trades, but given a chance they seem to have an amazing tendency to specialization. Two bookshops have recently been opened by women, not mere bookshops, however. One is a women's bookshop where one can get books by Ellen Key and Marion Harland and all the degrees between. Another is a children's bookshop, with a story-telling hour and a fireplace.

Jean Kenyon Mackenzie who, by the publication of *Black Sheep* last year found herself suddenly changed from an unknown worker in an unknown African mission to a person of importance in the literary world, has gone back to Cameroons to serve in an emergency. She is the only French speaking missionary fitted for the post, and the mission, once under German Government, is now by the fortune of war under French, and has to learn a new tongue.

Don Marquis, author of *The Cruise of the "Jasper B,"* and beloved of New Yorkers, as colyumnist of the *New York Sun,* has made a literary confession. He has tried four times to read "Tom Jones," and managed five pages! He has read one act of the "Vicar of Wakefield" after six attempts! An effort a year for twenty years has got him no "forrader" with the "Divine Comedy." He has read one poem of Walt Whitman, written an essay on Don Quixote, and knows there is a life of Dr. Johnson by one Boswell. Why you are a friend and a brother, Mr. Marquis!

REMARKABLE REMARKS

RUDYARD KIPLING—Damn neutrals anyhow.

G. K. CHESTERTON—Democracy is on the march.

SARAH BERNHARDT—Charm is the greatest asset in life.

J. PIERPONT MORGAN—It is a certainty that the Allies will win.

OLIVER OSBORNE—No man can flirt with a woman unless she starts it.

PRESIDENT LI YUAN-HUNG—I am a man without talent or ability.

H. G. WELLS—A habit is much more trustworthy than an instinct.

JOHN D. ROCKEFELLER—The apostle Paul was a fine business man.

WOODROW WILSON—I suppose that in government I am a pragmatist.

CARDINAL MERCIER—Be calm and courageous and utter not a murmur.

SECRETARY DANIELS—Complacent retrospection is the father of dry rot.

DR. PARKHURST—The perfect woman nobly planned, is always religious.

GOVERNOR STOKES—Sectarianism is again raising its head in America.

DR. FRANK CRANE—All Americans lecture as soon as they become prominent.

OTTO H. KAHN—Neither Wall Street men nor Socialists have claws or hoofs.

"BUGS BEAR"—By disguising himself as a bear a Maine guide lived to be sixty-five years old.

REV. CHARLES A. EATON—Some day we may wake up and see the buildings of Manhattan crumbling.

NIXOLA GREELEY SMITH—There are practically no women between thirty and fifty in New York.

ALFRED NOYES—All great art is based on the first four words of the great Book, "In the beginning God."

THOMAS A. EDISON—I have never had the time to be tempted to do anything against the moral law.

THOMAS G. BOWLES—The British Government is no more able to make peace than it is to make war.

REV. W. E. BENTLEY—The Lord took away John Calvin and gave us William Shakespeare, a glorious exchange.

PROF. WILLIAM I. HULL—I would rather be alive in the decade to come than in any past period of the world's history.

FOOD COMMISSIONER DILLON—All the exchanges in food products are a menace to the consumer and producer of foods.

MICHAEL MONAHAN—Vote she never so often, woman must either be a producer of children or a plaything or a parasite.

CORRA HARRIS—Like all Gaul, every church is divided into three parts—the Christians, the hardened saints and the choir.

J. A. HOBSON—I confidently expect to see a rich crop of religious varieties springing out of the blood-soaked mind of the nations.

CARDINAL GIBBONS—I regard "women's rights" women, and the leaders of the new school of female progress as the worst enemies of the female sex.

JAMES BRAID—Many a man might make himself a very great golfer if he made up his mind that nothing on earth should prevent him from becoming one.

RABINDRANATH TAGORE—I love God who is in fire and in water, who pervades the whole world, who is in the annual crops as well as in the perennial trees.

EMPEROR WILLIAM—We will be grateful to Him that we have thus far the honor of being His instruments in the divine judgment that has come upon our enemies.

MILTON GOODMAN—Some day we shall bind these white papers, gray papers, blue, orange and yellow papers together with the scrap of paper and give them all the common title of the black papers.

Cadillac
Standard of the World

The Man and the Motor Car

Judge the Cadillac by this Criterion

THE qualities you admire in a man——are they not also the things you most admire in a motor car?

When we speak with deep affection of a friend, we say of him that he is "always the same."

And what is there that pleases us more than this constancy in a motor car, year after year?

A friend who is always the same, and a car that is always the same—they are both valued because they never disappoint our needs, no matter how much, nor how often we call upon them.

Character in a man, and character in a motor car—both are the product of principles deeply embedded.

Character in the man, expresses itself in conduct unswervingly true—under every circumstance and condition.

Character in the car, expresses itself in performance—equal to every emergency and satisfying in every conceivable situation.

We admire a man of quick decision—a man who never fumes and frets, but goes straight to the root of a decision.

We admire a car which is instantaneous in action—which does not halt nor hesitate, but does what it has to do, decisively, and without a moment's delay.

We admire power, and especially control of power, in a man—and we admire it above all else, in a motor car.

We admire the man whom we know to be possessed of reserve power—and we admire a motor car which always has power to spare, for heroic occasions.

We admire the strong man who makes no show of his strength—and we admire the car which gives no sound or sign of strain, or stress, or labor.

We admire a man who is quietly effective—and how we admire a car that is quietly effective!

We admire a man who wears the outer marks of good breeding—and we admire a car whose appearance bespeaks its quality.

The analogy could go on indefinitely.

It is interesting for one reason.

It indicates how much of themselves, men can build into motor cars.

A motor car rarely rises above the motives of its manufacturer.

The integrity of a car is measured by the integrity of those who build it.

If it is the product of high ideals and rare ability, it will express them both in performance and in length of life.

As you would inquire into the record and the ancestry of a man seeking your friendship—so it is well to inquire into the antecedents of a motor car seeking your favor.

Cadillac coach-builders have provided eleven styles of bodies from which Cadillac purchasers may choose, as follows:—SEVEN-PASSENGER TOURING CAR, $2240; FOUR-PASSENGER PHAETON, $2240; TWO-PASSENGER ROADSTER, $2240; FOUR-PASSENGER CLUB ROADSTER, $2240: FOUR-PASSENGER CONVERTIBLE VICTORIA, $2710; SEVEN-PASSENGER CONVERTIBLE TOURING CAR, $2835· FOUR-PASSENGER COUPE, $2960; FIVE-PASSENGER BROUGHAM, $3110; SEVEN-PASSENGER LIMOUSINE, $3760; SEVEN-PASSENGER IMPERIAL, $3910; SEVEN-PASSENGER LANDAULET, $3910. Prices include standard equipment, F. O. B. Detroit. Prices are subject to advance without notice

Cadillac Motor Car Co. Detroit, Mich.

The Independent
WITH WHICH IS INCORPORATED
HARPER'S WEEKLY
A Journal of Civilization

DISAPPOINTING

THE German reply to President Wilson's peace note fails to meet his suggestion that the terms of peace which Germany would consider be made public. It also asserts that the work of preventing future wars can be begun only when the present war is ended.

If Germany really means what this reply says, it is not only disappointing. It is short-sighted.

It must be clear to the German leaders that the Allies do not intend to enter a conference at this stage of events without a previous statement from Germany of what its peace proposals are. It must be quite as clear that the Allies intend to have included in the ultimate terms of peace some kind of guarantee against future wars.

In insisting, as they unquestionably will insist, upon these points as conditions precedent to a peace conference, the Allies are well within their rights and within the bounds of reason. It is Germany that has asked for a discussion of peace. Germany should be the first to set forth the proposals which it will bring forward for discussion. The Allies are perfectly justified in reserving their final reply to the invitation to enter a conference until Germany has communicated its tentative terms. They ought equally to insist that any joint consideration of the terms of peace must cover not only the present cessation of conflict but the problem of future security from war.

It is quite possible, of course, that Germany will make a more satisfactory and complete exposition of its position when the Allied reply to its proposal for a conference has been received. It is greatly to be hoped.

Germany has blazed the way. Germany must not now be the one to show reluctance in treading the path thus pointed out. There are many, in neutral as in Allied countries, who suspect German sincerity. Only frankness and openness—and sincerity—will allay that suspicion.

The proposals which we suggested last week, if Germany would but make them, would be a real evidence of that sincerity without which the last state of the German nation will be worse than the first. We reiterate them here: Let Germany

1. Offer to leave all questions of territory and indemnities, either to a tribunal of belligerents, or to a tribunal of belligerents and neutrals, or to a tribunal of neutrals.

2. Declare her willingness to enter upon an agreement with other nations for the limitation of armaments.

3. Announce her readiness to join a League to Enforce Peace.

Nothing less will meet the needs of the situation.

THE BERTRAND RUSSELL CASE

ONE of the most grievous features of the war is to see the liberal nations of Europe gradually succumbing to internal tyranny while fighting against external tyranny. We all realize that in time of war freedom of speech and individual liberty must, to some extent, be sacrificed in order to secure the necessary unity of national action, nevertheless, we must deplore a condition where such a man as the Hon. Bertrand Russell comes to be regarded as a public menace to be suppressed by force. Bertrand Russell is recognized the world over as one of the most profound and original thinkers of our times. His volumes on the philosophy of mathematics and logic are indeed beyond the appreciation of the ordinary reader, but his essays have made him known to the public as a valiant champion of democracy and the rule of reason in ethics and politics. Cambridge took pride in him and more than one American university has tried to get him. He had an engagement to lecture at Harvard this year and it has been rumored that he was likely to succeed to the chair left vacant last September by the death of Professor Royce.

But the British Ambassador at Washington notified the president of Harvard last June that he would not be allowed to come to America. Scotland Yard has notified him that he will not be allowed to visit Scotland, Liverpool or the English coast towns. He has been dismissed from the faculty of Trinity College and forbidden to continue his lectures on mathematical logic in Cambridge. He has been arrested and fined $500 because he exposed the brutal and illegal treatment of those who, from conscientious reasons, refused to serve in the army.

The British War Office refused to permit him to give his proposed course of lectures on the "Philosophical Principles of Politics" in the areas under their control

Drawn for The Independent by W. C. Morris

CHORUS OF KINGS, CZARS, STATESMEN, EDITORS, MUNITION MAKERS AND FINANCIERS:
"ON WITH THE WAR! IT'S NONE OF WILSON'S AFFAIR"

unless he would promise "not to continue a propaganda which if successful would in their opinion militate to some extent against the effective prosecution of the war." Mr. Russell submitted a syllabus of his proposed lectures and promised that there would "be nothing about the diplomacy preceding the war, about conscientious objections, about the kind of peace to be desired, or even about the general ethics of war," but more than this he would not agree to. As he says:

It is just as imperative a duty to me to fight tyranny at home as it is to others to fight against Germans abroad. I will not, on any consideration, surrender one particle of spiritual liberty. Physical liberty can be taken from a man, but spiritual liberty is his birthright, of which all the armies and governments of the world are powerless to deprive him without his coöperation.

He also raises the practical objection that he cannot tell in advance what the military authorities will regard as dangerous to the safety of the realm:

May I say that I consider homicide usually regrettable? If so, since the majority of homicides occur in war, I have uttered a pacifist sentiment. May I say that I have respect for the ethical teaching of Christ? If I do, the War Office may tell me that I am praising conscientious objectors. May I say that I do not hold Latimer and Ridley guilty of grave moral turpitude because they broke the law? Or would such a statement be prejudicial to discipline in His Majesty's forces?

Lloyd George, who not many years ago narrowly escaped being killed by a mob because he ventured to speak in favor of stopping the Boer war, defended in his capacity of Minister of War the action taken against Bertrand Russell. In reply to a question in the House of Commons he said:

I do not care in the least what the lectures are called, but they undoubtedly interfere with the prosecution of the war, they lead to weakness and inefficiency, and if this is tolerated it will hamper us in the prosecution of the war.

Such language would lead one to think Bertrand Russell were a dangerous fanatic, but he is far from it. His views are accessible to any one in America as they have been published here in the volume entitled "Justice in War Time." The sentiments there exprest are such as would have been generally regarded as innocuous or even commendable before the war. He is not an extreme pacifist; he does not think all wars are wrong. He holds, however, that the armies and navies of the world should be under the control of some central authority. In short, the crime for which he is being punished is believing in a League to Enforce Peace.

He is not a pro-German. He exprest his dread and detestation of the Kaiser twenty years ago when some of those who now condemn him were showering the Kaiser with sycophantic flattery. He says now:

I consider that either a serious weakening of England, France, and Italy, or a serious strengthening of Germany, would be a great misfortune for the civilization of the world. I wish ardently to see the Germans expelled from France and Belgium and led to feel that the war has been a misfortune for them as well as for the Allies.

Mr. Russell married in 1894 an American girl, a Quaker and a graduate of Bryn Mawr. She has visited the United States, but he cannot come with her. In the opinion of the British Government his presence in America would tend to excite prejudice against Great Britain. Would it not be well for the Government to consider if his absence from America is not more likely to excite prejudice than his presence?

A young lady who has recently reached this country smuggled over a letter from Bertrand Russell to President Wilson, from which we quote a few paragraphs:

The Allied Governments have not had the courage to acknowledge publicly what they cannot deny in private, that the hope of a sweeping victory is one which can now scarcely be entertained. For want of this courage they are prepared to involve Europe in the horrors of a continuance of the war, possibly for another two or three years. This situation is intolerable to every humane man. You, Sir, can put an end to it. . . .

The harm which has already been done in this war is immeasurable. Not only have millions of valuable lives been lost, not only have an even greater number of men been maimed or shattered in health, but the whole standard of civilization has been lowered. Fear has invaded men's inmost being, and with fear has come the ferocity that always attends it. Hatred has become the rule of life, and injury to others is more desired than benefit to ourselves. The hopes of peaceful progress in which our earlier years were passed are dead, and can never be revived. Terror and savagery have become the very air we breathe. The liberties which our ancestors won by centuries of struggle were sacrificed in a day, and all the nations are regimented to the one ghastly end of mutual destruction. . . .

The United States Government has the power not only to compel the European governments to make peace but also to reassure the populations by making itself the guarantor of the peace. Such action, even if it were resented by the governments, would be hailed with joy by the populations. . . .

Like the rest of my countrymen, I have desired ardently the victory of the Allies; like them, I have suffered when victory has been delayed. But I remember always that Europe has common tasks to fulfill; that a war among European nations is in essence a civil war; that the ill which we think of our enemies they equally think of us; and that it is difficult in time of war for a belligerent to see facts truly.

Above all, I see that none of the issues in the war are as important as peace; that harm done by a peace which does not concede all that we desire is as nothing in comparison to the harm done by the continuance of the fighting. While all who have power in Europe speak for what they falsely believe to be the interests of their separate nations, I am compelled by a profound conviction to speak for all the nations in the name of Europe. In the name of Europe I appeal to you to bring us peace.

The same mysterious messenger brought to us an article by Bertrand Russell which will soon appear in The Independent.

THEIR MUTUAL FRIEND

IN case Germany says she will not lay her cards on the table unless the Allies do the same, why should not President Wilson gently whisper in each belligerent's ear that he is ready to act as their mutual confidant? If they will disclose their peace terms to him he can then compare them and advise each party whether the terms should be exchanged, or whether they are so far apart that there would be no use in opening negotiations until more concessions are made.

THE PARCELING OUT OF "PORK"

SENATORS and Congressmen have always wanted "pork." They want "pork" because it makes them popular at home and helps toward their reëlection. They want "pork," in short, because their constituents want it.

The Congressman, after all, is merely human. He goes to Washington imbued with the conviction that as representative of the people in his district it is his serious duty to do what those people want. It is the most natural thing in the world that he should forthwith proceed to "get something for his district." For accomplishment in that direction is in considerable degree the popular measure of his success as representative.

Most of us think parochially and concretely. The

building of a new and splendid post office or court house in our own community of Smithville; the dredging for the reception of vast mythical commerce of the familiar Mud Creek or Hiram's Harbor; those are achievements of present reality compared with which the revision of the tariff or the building of the Panama Canal is as remote as the canals of Mars.

If Congressman Willowreed has been adroit and influential enough to get into the Public Buildings bill or the Rivers and Harbors bill an appropriation for Our District, our hearts swell with pride and overflow with gratitude to Our Representative. Is it any wonder that Congressman W. works his head off to get that appropriation for us, and agrees to vote for appropriations for the districts of a hundred of his party associates in return?

So the "pork barrels" swell and swell, and fill with juicy morsels for the sovereign districts of distinguished (in the district) statesmen. All because the people want it.

The closing weeks of the most expensive Congress the country has ever seen finds the party in power proposing to appropriate $120,000,000 for "pork." The Democrats have long been on the "porkless" side of the legislative halls, and their control of the next Congress promises to be precarious. It is their first chance at the "pork barrel" for a long time; it may be their last. Who can blame them?

No one who believes in "pork." No one who does not hold the revolutionary belief that the first duty of legislators is to the general welfare rather than to the selfish sectionalism of their constituents.

So long as the majority of the American people want "pork" we shall go on having it handed out. Unless some time we should happen to have in the posts of leadership men of vision and bravery who would refuse to be parties to these shameless raids upon the public treasury.

A President could stop it, if he would. The party leaders in either House could stop it, if they would. The people could stop it, if they would.

Will they?

AN UNDEMOCRATIC PRACTISE

MR. GEORGE WICKERSHAM, in a letter severely criticizing President Wilson's peace note, has drawn attention to a shortcoming in our plan and practise of national government which should receive serious consideration on its merits and quite irrespective of the occasion which prompted Mr. Wickersham to write about it.

As Mr. Wickersham points out, we, in the United States, not only are ignorant before the event of what is about to happen in the conduct of our foreign affairs, but we helplessly remain ignorant forever afterward of what actually has been done. The European governments, including those that we regard as most undemocratic in constitution and procedure, have had the grace and the wisdom to let the light of publicity beat upon their decisions after the event. They publish their various White, Blue, Orange and other chromatic documents for the entire world to inspect. It will come as a shock of most unpleasant discovery to a majority of Americans when they read Mr. Wickersham's absolutely true statement that we issue no general publication of diplomatic correspondence bearing upon any given subject, even after it has passed the controversial stage.

We believe that Mr. Wickersham has put his finger upon the focal point of explanation of American amateurishness of mind upon all great questions of world policy. The amateurishness is not to be denied. The people of the United States, intelligent as they are in matters pertaining to personal business and local affairs, are uninformed and nebulous respecting larger interests. A fifteen minutes' conversation with an Englishman or a Frenchman of any given intellectual or social rank, from the proletarian to the financier or the man of affairs, reveals to us a grasp of big public questions which a sample American of the corresponding rank rarely exhibits. Our deficiency has been attributed to many and various causes, including selfishness, materialism, isolation and provincialism. The cause indicated by Mr. Wickersham is more than probably the true one. The people are no part of the American Government in matters of foreign policy. This is a startling proposition for a republic of a hundred million souls, which has not been overmodest in proclaiming the superiority of its self-governing in policies, to face and explain, but who can deny its truth?

The fact is mischievous. Our relations with the nations of the world are becoming day by day closer, more complicated, more delicate. To go on permitting any one man, or any small circle of men, to adjust or disturb these relations in practical irresponsibility, instead of so amending our governmental plan and methods that public opinion shall control, will be incomprehensible folly and, one of these days, disastrous.

DANISH ISLANDS VOTED OURS

THE people of Denmark, men and women, have voted by 283,000 to 157,000 to accept the offer of $25,000,000 by the United States for the Danish West Indies. The opposition came from the Conservative and the pro-German part of the population, while the Liberals, Radicals and Socialists favored it on the ground that the islands were only an expense to Denmark and that it was wrong to hold the islanders against their will.

This settles the question since it only remains for Congress to appropriate the money and the islanders to vote for annexation. That they are anxious for it cannot be doubted, for they have exprest the desire to come under the American flag, both formally thru the local councils and informally in mass meetings. The school children are already singing an annexation song.

But it should be remembered that there are powerful interests in the islands which are doing everything in their power to prejudice the people against the United States. The Hamburg-American Line hoped to make St. Thomas a German commercial port. There are many Danish officials and plantation owners and holders of government monopolies who will be disadvantaged. All of the islanders are naturally anxious to know what are the intentions of the United States and what will be done to relieve the distress into which they have been plunged by the war.

But there is no one to speak for the United States. Only her enemies are heard. Stories of Southern lynchings and of Northern race prejudice are assiduously

circulated. The newspapers publish wild fabrications of "American atrocities" in Santo Domingo. It is asserted that the three Danish islands are to be made a mere appendage of Porto Rico, with which they have nothing in common, not even language. It is feared that they will be put under carpet-bag government and made the victims of a spoils system with "deserving Democrats" as rulers. It is rumored that the free port privileges which they have enjoyed since 1764 are to be taken away.

We know how much this misrepresents the intentions of the United States, but how is an ignorant and untraveled negro to know it? However absurd and malicious the rumor, there is no one on the spot to deny it in the name of the United States. Fifty years ago when the islanders voted on annexation, the American Government sent a commission, composed of an admiral and a clergyman, to talk to them, explain to them the policy of the United States and answer their questions. As a result the people voted by 1044 to 22 in favor of annexation. They doubtless will vote for it now in spite of the agitation against it, but if we want them to come into the Union with enthusiasm and confidence we should do something now to show them that they are welcome and will be well treated.

THE EUROPEAN CIVIL WAR

THE English papers which we have read delight in explaining the Great War to their American readers in the terms of the only big war, as measured by numbers and losses, which this fortunate country has ever experienced. The *Spectator* is always writing editorials assuring us that the severity of the British blockade of Germany is nothing to the blockade which the fleets of the North established against the neutral commerce that sought the Confederate ports. Mr. Chesterton warns us against mediation by citing the resentment which we showed at the projected intervention of France and England in the Civil War. And now Lloyd George declares in Parliament that the determination of the Allies to make no peace except on the basis of absolute victory finds its parallel in the similar determination of President Lincoln. He does not choose to mention, however, that Lincoln stated his terms of peace repeatedly and explicitly and was always ready to end the war the instant they were agreed to by the South. Lincoln even met the Confederate leaders in person at a formal conference in Hampton Roads several months before the end of the war, altho it was pointed out to him that to meet rebel leaders was, in a manner, to recognize their government.

No doubt the many striking external resemblances between the two wars is the chief cause of the many comparisons drawn between them. Both were really civil wars, for Germany's support of Austria in the refusal of the latter to submit the Serbian quarrel either to The Hague Court or to some informal conference of diplomats was really an act of secession from the vague confederation known as the Concert of Europe. The Central Powers stood for national and imperial sovereignty against the internationalism which had permeated to a greater or less degree the other countries of Europe, just as the Confederacy stood for the sovereignty of the State against the growing nationalism of the North and West. Some of the Balkan states have taken sides with the Allies and some with the Central Powers, just as Virginia and Tennessee threw in their lot with the Confederacy and Kentucky and Maryland stood by the Union.

Like the Entente Allies the Union had an overwhelming superiority of men and an even greater advantage in ultimate resources. The Union achieved an early naval superiority and blockaded the Southern ports, as the Allies have done with Germany. But Confederate privateers, like the German submarines, ran the blockade and inflicted enormous injuries upon the commerce of the North. The complications and real or alleged violations of international law arising from the enforcement of the blockade and the actions of the blockade runners were then, as now, a source of strained relations between the belligerents and neutral powers. Like the Allies, again, the North was unready for war and "muddled thru" months of disastrous blundering before finding the men who could cope with the political and military difficulties of the times.

Our Southern states, thank God, had little resemblance to Turkey or Austria-Hungary. But in some respects their position was not unlike that of modern Germany. The South was an aristocracy, with widely sundered social classes and an essentially feudal code of honor in which the duel held an essential place. The South was united and aggressive in public policy, skilled in warlike exercises, led to battle by excellent officers. These facts gave the South an initial advantage and enabled them to triumph repeatedly over superior forces. The South also had the advantage of position, possest by the Central Powers today, in being able to operate on "interior lines" against an encircling foe. Like the Germans the Confederates, believing that the best defensive was a strong offensive, did not wait to be attacked. Therefore they invaded the Union states wherever possible, just as the Germans have invaded Belgium, France, Russia and Serbia.

But the Union crushed the Confederacy after four years of war by the pressure of the blockade, the attrition of bloody campaigns and the unshakable resolution of the people; just the factors on which the Allies are relying for victory. The North waged war for many months on the voluntary system, but at last submitted, tho not without much opposition from persons who had no sympathy with the Government's policy, to conscription. England, with similar reluctance and similar internal friction, has abandoned her voluntary system as the only way to win the war. It would be wrong, however, to assume that history will in all respects repeat itself. In some ways the military task of the Allies is much more difficult than was that of the Union in the Civil War. The South was not an industrial region; Germany is eminently so. The Northern states disagreed somewhat in policy, but at least they were parts of one government and spoke a common tongue. But the statesman who can keep Japan and Russia and Italy and France and Britain, with their conflicting interests and divergent civilizations, working in harmony thru long years of disappointment and suffering will have achieved little less than a miracle. What the Allies need most of all, if they will repeat the success of the North, is statecraft. Have they yet found their Abraham Lincoln?

THE STORY OF THE WEEK

Russia's Response

The Czar, in a general order to the Russian armies issued December 25, makes the following reference to Germany's move for peace:

Germany is feeling that her complete defeat is near, and near also is the hour of retribution for all her wrongdoings and violations of the moral law. As in the time of her strength she declared war, so now feeling her weakness she offers to enter upon peace negotiations, desiring to complete such negotiations before her military strength is exhausted. At the same time she is creating a false impression about the strength of her army by utilizing her temporary success over the Rumanians, who lack experience in the conduct of modern warfare.

To conclude peace at this moment would mean failure to utilize the fruits of the untold trials of the heroic Russian troops and fleet. These trials and the still more sacred memory of those noble sons of Russia who have fallen on the battle field do not permit any thought of peace until final victory over her enemies.

This time has not yet arrived. The enemy has not been driven out of the provinces he has occupied. Russia's attainment of the tasks created by the war—regarding Constantinople and the Dardanelles, as well as the creation of a free Poland from all three of her now incomplete tribal districts—has not yet been guaranteed.

Who dares to think that he who brought about war shall have it in his power to conclude the war at any time he likes?

This pronunciamento from the ruler of all the Russias has several interesting points. It will be observed that the Czar took advantage of the occasion to make it plain that Russia regards the possession of the Dardanelles as one of the essential objects of the war. Premier Trepov, in a recent speech to the Duma, makes public the fact that Great Britain, France and Italy had promised the Dardanelles to Russia. The Czar, like the other Allies, interprets the German desire for peace as a confession of defeat. He lays the blame for the Rumanian disaster upon the Rumanians themselves, altho opinion in neutral and even in other Allied countries has commonly ascribed part of the responsibility to Russia's failure to give Rumania the expected support. Also it will be noticed that the Czar speaks of "a free Poland," which, if correctly translated, is a considerable advance upon the vague promise of something less than autonomy made before Germany had promised independence to Russian Poland.

British Reception of Wilson Note

It was of course to be expected that the first suggestion of peace from a neutral source would be openly scouted by the belligerents generally, but the bitter indignation manifested by press and public men of all parties in Great Britain at the polite and cautiously worded note of President Wilson is disappointing, and in some respects inexplicable. The resentment is chiefly based upon the idea that the President held the opinion that both sides had the same aim, altho the note expressly precludes this misinterpretation when it says that

the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world.

The equally explicit disclaimer of any association with the German peace proposals of the week before is also ignored, and even the organs most friendly to the United States regard the note as evidence that President Wilson has been won over by the German propaganda. It does not appear to be realized in England that the note was not addrest to England alone, but to all the belligerents, large and small, and so had to be couched in terms courteous to all. The *Pall Mall Gazette* demands its withdrawal:

His determination to cling to the abstract and to handle the world's problems as tho he had neither eyes nor ears eliminates him completely from any capacity of usefulness even if such a rôle had awaited him, unless his blunders are promptly revoked. It will bear evil and irrevocable fruit. He should withdraw the note and let its deplorable effect be assuaged by the forces of time and silence.

The London *Times* says:

Special weight is laid upon the contention that the United States might have to fight with a possible recrudescence of submarine atrocities. That America should shrink from such a necessity is natural, but the argument is dangerous on the lips of a statesman who has claimed that his fellow citizens are trustees of the moral judgments of the world. What it comes to is that in order to save America from being impelled by conscience and honor to fight the perpetrators of the atrocities the Allies ought to assent to a course which would play into the criminals' hands.

The Dean of Westminster, preaching in the Abbey on Christmas Day, said:

President Wilson has either in a fit of mental aberration sent the wrong note, or he had entirely misapprehended the European situation.

The Rev. C. Campbell Morgan, formerly of the City Temple, but now in the Episcopal Church, said on the same day:

The good intentions of President Wilson are sadly marred by his most tragic mistake that he has declined to express any opinion as to the moral issues.

In the speech from the throne proroguing Parliament till February 7, the King used one sentence that might be construed as a reply to the peace suggestions:

The vigorous prosecution of the war must be our single endeavor until we have vindicated the rights so ruthlessly violated by our enemies and established the security of Europe on a sure foundation.

SCANDINAVIAN NATIONS SPEAK FOR PEACE

Norway, Denmark and Sweden have sent individually, but in identical form, the following note to the United States, endorsing President Wilson's note to the belligerents:

It is with the most lively interest that the Norwegian Government has learned of the proposals which the President of the United States has just made with the purpose of facilitating measures looking toward the establishment of a durable peace, while at the same time seeking to avoid any interference which could cause pain to legitimate feelings.

This government would consider itself failing in its duties toward its own people and toward all humanity if it did not express its deepest sympathy with all efforts which could contribute to put an end to the ever increasing suffering and the moral and material losses. It has every hope that the initiative of President Wilson will arrive at a result worthy of the high purpose which inspired it.

The Conquest of the Dobrudja

Rumania attracts attention upon the map because of its peculiar shape. One limb stretches toward the north, another toward the west and a third and shorter section connects the angle where these two join, with the Black Sea on the east. It looks as tho Rumania had been made out of three distinct countries fastened together in the middle. And so it was. It consists chiefly of two ancient provinces, Moldavia, the northern, and Wallachia, the western. These rival and often inimical countries were, somewhat unwillingly, joined together by the

greater powers and then, in order that the new principality should have access to the sea, the Dobrudja was added. The Germans have now conquered two of these three provinces, Wallachia and the Dobrudja, and entered the third.

The area of the Dobrudja is 3500 square miles, so it is larger than Delaware and smaller than Connecticut. It is rather high and hilly as a whole, but is fenced in on the west and north by the Danube swamps, and on the east by the Black Sea. On the south side it has no natural protection and it was thru this opening that Mackensen marched with his army of Germans, Bulgars and Turks. The Rumanians evidently depended upon the Russians to stop this invasion from the Bulgarian side, but the Russians were slow in arriving and when they came they offered an ineffectual resistance, and they have been successively dislodged from the three lines of defense which they drew across the Dobrudja from the river to the sea. Their first line was about twenty miles south of the railroad by which Bucharest is connected with the seaport of Constanza. Mackensen broke thru this and so gained the shipping and grain stores of Constanza and the railroad bridge of Chernavoda (or Tchernavoda) over the Danube.

General Sakharoff, the Russian commander, then established himself on another line, again paralleling the railroad, but this time twenty miles north of it. Last week he was driven from this position and fell back to a new line of great natural strength, his left protected by the salt water lakes and the sea, and his right by the Danube marshes. But now this has been abandoned and Mackensen's forces have advanced north clear to the Danube delta. The towns along the Danube, including one fortified point, were evacuated on the approach of Mackensen's forces and the only part of the Dobrudja still held by the Russians is the little angle where the Danube turns from north to east. It is important to hold this, for if the Germans force them out of this corner they will be able to bombard Galatz, just across the river. Braila is already within range of their guns from the Dobrudja side.

These two riverine cities are virtually seaports, altho they are a hundred miles up the Danube. The shipping of Galatz amounts to a million tons a year, altho its population is only about 60,000. In these towns is stored much of the grain which ordinarily is shipped out thru the Dardanelles, and the Germans will make every effort to capture the cities before this rich prize can be removed or destroyed.

The Danube Delta The conquest of the Dobrudja has now brought the Germans, Bulgars and Turks under Mackensen right up to the Russian frontier. Only the Danube bars the way to Bessarabia, and beyond that 125 miles away is the great Russian seaport of Odessa. But however tempting the outlook in this direction, there is no probability that the Germans will undertake an invasion of Russia at this time and from this direction. For one thing they would be at a serious disadvantage, for there is no railroad running thru the Dobrudja from south to north which could serve as a feeder for the army. But the Russians have a railroad running thru Bessarabia down to Reni at the junction of the Pruth and Danube rivers, opposite Galatz. It is likely, however, that the Germans will try to break the Russian line of communication with Galatz by crossing the Danube to take Reni, or at least bombard it from the southern side of the river so as to make it untenable.

About thirty miles east of Reni the Danube splits up into three main channels and many smaller streams which interlace the lowlands of the Delta. To cross this triangle of swamps and streams, thirty miles wide, would be a difficult task for a modern army. If any crossing is attempted it would be at some point between Reni and the Delta, where the Danube flows in a single tho very broad channel.

As it is, without crossing the river, the forces of Mackensen opposite Braila command the left flank of the new Russian line, while the forces of Görke in the Carpathians command the right flank. A frontal attack upon the Russian position is also being made by the army which Mackensen sent north via Bucharest.

In spite of this simultaneous attack on three sides, however, the Russians ought to be able to hold the line they have now established, for it is the best possible position for defensive purposes. It stretches across Rumania at its narrowest part from the mountains on the west to the Danube on the east. Two of the cities back of the line, Galatz on the left and Fokchani in the middle, are provided with permanent fortifications, built under Brailmont's

A SNOW FORT IN REAL WAR

Each winter in the trenches finds the soldiers better equipt to fight their common enemy. And after all snow can be more of a help than a hindrance in warfare—any American boy knows that

THE SWISS NOTE TO THE BELLIGERENTS

Switzerland, following the example of the United States, has addrest the following note to all of the powers at war:

The President of the United States of America, with whom the Swiss Federal Council, guided by its warm desire that the hostilities may soon come to an end, has for a considerable time been in touch, has the kindness to apprise the Federal Council of the peace note sent to the Governments of the Central and Entente Powers. . . .

The most meritorious personal initiative of President Wilson will find a mighty echo in Switzerland. True to the obligation arising from observing the strictest neutrality, united by the same friendship with the states of both warring groups of powers, situated like an island amidst the seething waves of the terrible world war, with its ideal and material interests most sensibly jeopardized and violated, our country is filled with a deep longing for peace, and ready to assist by its small means to stop the endless sufferings caused by the war and brought before its eyes by daily contact with the interned, the severely wounded and those expelled, and to establish the foundations for a beneficial coöperation of the peoples.

The Swiss Federal Council is therefore glad to seize the opportunity to support the efforts of the President of the United States. It would consider itself happy if it could act in any, no matter how modest, way for the rapprochement of the peoples now engaged in the struggle and for reaching a lasting peace.

GERMAN REPLY TO AMERICAN PROPOSAL

Germany was the first nation to respond to the note despatched by President Wilson to all the belligerents suggesting the statement of terms of peace. On December 26, 1916, the following note was handed to James W. Gerard, the American Ambassador at Berlin:

The Imperial Government has accepted and considered in the friendly spirit which is apparent in the communication of the President the noble initiative of the President looking to the creation of bases for the foundation of a lasting peace. The President discloses the aim which lies next to his heart and leaves the choice of the way open.

A direct exchange of views appears to the Imperial Government as the most suitable way of arriving at the desired result. The Imperial Government has the honor, therefore, in the sense of its declaration of the 12th instant which offered the hand for peace negotiations, to propose speedy assembly on neutral ground, of delegates of the warring states.

It is also the view of the Imperial Government that the great work for the prevention of future wars can first be taken up only after the ending of the present conflict of exhaustion. The Imperial Government is ready, when this point has been reached, to coöperate with the United States at this sublime task.

direction, for the protection of Rumania against Russian invasion. We shall now see whether they will serve as well in the reversed direction with the Russians defending them.

During the past week the Russian line has been pushed back in the middle, but the entrenchments captured by the Germans may not be the main line of defense. This will more probably be along the Sereth River. The Germans claim the capture of 12,000 Russian prisoners here and in the Dobrudja within a few days.

Switchmen Gain Eight-Hour Day

The Switchmen's Union has won by arbitration substantially the terms which the four Brotherhoods of engineers, firemen, brakemen and conductors refused arbitration in order to win. The Adamson eight-hour law did not apply to the railroad switchmen, and therefore the organized switchmen of thirteen railroad companies have attempted to secure for themselves the advantages which the law gave to the Brotherhoods. On Saturday, December 23, the Federal Board of Arbitration filed an award on the demands of the switchmen, which have been under discussion since last August. The switchmen demanded an eight-hour day, an increase in the rate of pay per hour, and time and a half for overtime work. The eight-hour day was granted, but the arbitrators decided that overtime should be paid at the normal hour rate. The prevailing day's work for switchmen has been ten hours, but the new eight-hour day will not mean that the men will be paid as much for eight hours' work as they have been paid for ten. The increase in the rate of pay per hour which was awarded will only amount to nine hours' pay, at existing rates, for the eight-hour day.

The representatives of the union and of the railroads alike dissented from some points of the final award, so that the compromise was largely the work of the two neutral arbitrators appointed by the United States Board of Mediation: Judge Charles B. Howry, of Washington, and Professor Jeremiah W. Jenks, of New York University. The supplementary statement of Professor Jenks and Judge Howry gave no little comfort to the railroad managers in their fight against the principle of the Adamson law, since the arbitrators exprest some doubt as to whether the eight-hour day was universally practicable in railroad service. "Altho it has seemed wise to award an eight-hour day as the standard minimum day," said the report, "the overwhelming weight of testimony shows that the conditions of the various kinds of railway work are so different that only trial can determine just how far eight-hour shifts can be worked without prohibitory cost to the roads and undue disturbance of the work of their patrons."

FOOD FOR GERMANY?

Braila, the depot of Rumanian grain and oil, and an important riverport and railroad center, is the present goal of Field Marshal von Mackensen's drive in the Dobrudja. German guns are shelling it from across the Danube

THE GREAT WAR

December 23—Austrian and Italian destroyers battle in Otranto Strait. British attack in Arras region.

December 24—Switzerland supports American peace proposals. Germans reach Danube in Dobrudja.

December 25—Czar declares possession of Constantinople to be Russia's aim.

December 26—Germany replies to American note by asking for peace conference. British fleet sent to American coast to meet U-boat menace.

December 27—Falkenhayn defeats Russians in Rumania, taking 10,000 prisoners. Sweden despatches peace note to belligerents.

December 28—Germans attack Hill 304, west of Meuse. British airmen destroy bridge on German Bagdad railroad.

December 29—Rumanian port of Braila bombarded by Germans across Danube.

December 30—Norway, Denmark and Sweden send notes to United States endorsing President Wilson's note to belligerents.

The Mexican Deadlock

Whether Villa is yet master of Torreon or not is still open to doubt. Spokesmen of the de facto government deny the reported capture absolutely. But there is no question that Villa has been very active in the neighborhood of the city. Adherents of Villa claim also the capture of San Luis Potosi to the southeast of Torreon and successes in many other parts of Mexico. Estimates place the number of armed followers of Villa at no less than seven thousand, and much uneasiness is felt on the border because of persistent rumors that the next objective of attack may be Juarez, just across the international frontier from El Paso. The rebels hold many miles of railroad south of Chihuahua City and have succeeded in dynamiting a troop train of the Government at Carneros, near Saltillo, and killing a number of soldiers who escaped from the wreck. General Obregon has taken charge of the campaign against Villa in northern Mexico.

Carranza still refuses to accept the protocol agreed upon by the American-Mexican Joint Commission, but he is apparently equally unwilling to take the risk of rejecting the terms of the agreement. It would seem that his policy is to concede as little as possible of the demands of this country in order to retain his prestige as a patriotic leader and champion of Mexican rights against the foreigner, while not breaking off negotiations so abruptly as to leave the United States with no alternative but armed intervention. Carranza sent a long message, which was delivered to the American Commission on December 28 by Luis Cabrera, chairman of the Mexican delegation of the Joint Commission, discussing the terms of the protocol. The text of the Mexican communication has not yet been made public, but it is believed to contain proposals for a revision of the protocol to make it more acceptable to public opinion in Mexico. This policy of "watchful waiting" pursued by the de facto government in Mexico has this disadvantage that an American army remains on Mexican soil and there is the continual danger that some untoward incident may in the existing state of international tension force it to take military action. For example, on Christmas Eve Mexican snipers fired across the border at a detachment of Kentucky infantry until the Americans drove them away by machine guns.

Santo Domingo Protests

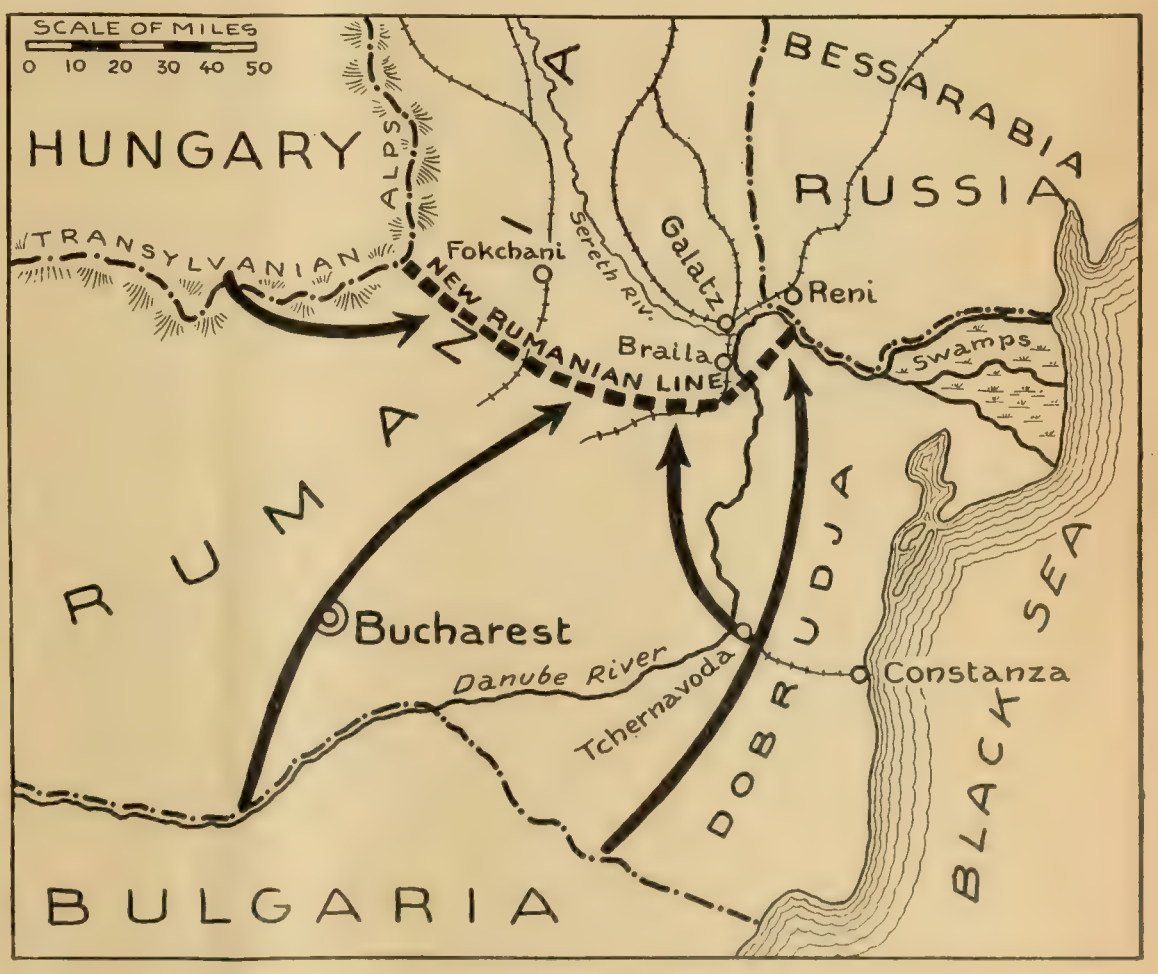
Señor Perdomo, Minister to the United States from the Republic of Santo Domingo, has addrest a formal protest to the other members of the diplomatic corps against the military authority exercized by the United States for the pacification of the island. This act will probably result in his removal. In the course of the efforts of the American Government to reëstablish law and order in the turbulent republic it was recently discovered that large quantities of munitions of war had been secreted in Porto Rico to serve as a

Numero, Turin

THE SPENDTHRIFT

Russia's illimitable resources of manhood. She flings soldiers to half a dozen fronts at once

base of supplies for Dominican revolutionists. The confiscation of these supplies and the precautions taken to prevent a renewal of munitions smuggling has acted as a damper upon revolutionary enterprizes. So thoroly have the American marines done their work of pacification that nearly five hundred marines, who had served in Santo Domingo since August, 1915, were allowed to return to the United States on the transport "Hancock" in time to enjoy a home Christmas. There are still a few hundred marines doing police duty in the island, but their work is being gradually taken over by a native constabulary trained under American auspices.



President Picks Shipping Board President Wilson appointed on December 22 the five members of the federal shipping board who will be charged with the administration of the much discussed shipping act, which Congress passed at the urgent insistence of the President. The board is empowered to organize a fifty million dollar corporation to build or buy merchant ships, and to operate them should private enterprize fail to undertake the task.

Two of the five members of the board are Republicans, John Barber White, an exporter and lumberman of Kansas City, Missouri, and Theodore Brent, a railroad man of New Orleans. The three Democrats on the board are: William Denman, of San Francisco, a lawyer prominent for his work on behalf of municipal reform; John A. Donald, of New York, a business man with experience in a steamship firm, and Bernard N. Baker, of Baltimore, for thirty years president of the Atlantic Transport Line.

Opening the Pork Barrel The fact that it is uncertain whether Republicans or Democrats will control the House of Representatives in the next Congress has stimulated the Democratic majority of the present "hold over" session to gain the greatest possible partizan advantage during their few remaining weeks of undisputed power. Criticism is directed chiefly against the $38,000,000 appropriation for post offices and the $45,000,000 appropriation for improving the Mississippi below its junction with the Ohio. The Treasury Department has condemned many of the proposed new post office buildings as needless and unprofitable expenditures. Small Southern towns profit most by the new post office appropriations, and it is perhaps no mere coincidence that Representative Frank Clark, of Florida, is the chairman of the Committee on Public Buildings and Grounds. In many cases the estimated cost of maintaining the new post office buildings will nearly equal the total annual receipts of the local office. President Wilson has intimated his intention to veto the public buildings measure unless the appropriations are substantially reduced.

The Mississippi reclamation scheme, on the other hand, is unquestionably a worthy and important enterprize. Altho its final cost will, it is thought, be more nearly $200,000,000 than the present appropriation of $45,000,000, yet the money will be returned many times over in the enhanced value of the swamp lands of the lower Mississippi. Where the measure is open to criticism is in the fact that most of the benefit of the river bank improvements will go to a few private land owners and real estate speculators instead of to the people of the whole nation. The owners of the Mississippi lands to be improved by the new project will pay only one-third of what the Government will spend on the reclamation work, and there is no limit to the "unearned increment" which private owners will be allowed to reap. The Government will also appropriate sufficient funds to control the Sacramento River in California.

Insurgents in Congress Recent events promise to revive in another form the fight between regular and insurgent Republicans which split the party strength in Congress during Mr. Taft's administration. Representative Mann is the Republican leader in the House of Representatives and would be the logical candidate of the party for Speaker when the new Congress meets next winter. But a strong minority of the party, including all who were at one time associated with the Progressive party and many who have always been orthodox Republicans, are so dissatisfied with Mr. Mann's leadership that they are resolved to oppose him for the Speakership, even if the quarrel results in the reëlection of the present Democratic incumbent, Mr. Clark. The Republican insurgents at present seem to favor Representative Lenroot of Wisconsin for Speaker. The most active leader of the movement is Representative Gardner, of Massachusetts, who opposes Mr. Mann not so much on the ground

THE CONQUEST OF RUMANIA

One of the most brilliant strategical movements of the war is that displayed by the above map. The armies under the general direction of Field Marshal von Mackensen invaded Rumania from three sides. One entered thru the mountain passes on the northern side, one crost the Danube from the southern side, while the third swept up the Dobrudja on the eastern coast. Now all three, as shown by the arrows, are concentrated upon the new line of defenses established by the Russians across Rumania from the mountains to the river and including two fortresses, Galatz and Fokchani. If the Germans should break this line they will be in a position to invade the Russian province of Bessarabia. They have now almost complete possession of the Dobrudja and their guns are within range of the Russian railroad center of Reni and the Rumanian port of Braila

of his reactionary attitude on domestic policies as because of his alleged pro-German sympathies. Mr. Mann favored the McLemore resolution warning Americans not to travel on armed merchantmen of the belligerent powers, criticized President Wilson for his threats to Germany on the submarine question, and endorsed his recent move for peace. Senator Gardner himself is avowedly pro-Ally, a strong advocate of preparedness, and perhaps the ablest opponent of the Democratic administration in either House of Congress. In the Senate also five or six Republicans of progressive tendencies are showing a disposition to act quite independently of the party caucus. In both Houses the insurgents demand that the Republican party announce a program of constructive legislation as an alternative to the policies of the administration instead of contenting themselves with the easy and ignoble role of destructive criticism.

The Nigger in the Coal Scuttle

The Federal Government has been conducting a thoro investigation into the causes of the present high prices of food and fuel, and it is thought that several price manipulators may have to face indictments for illegal practices. Certain coal dealers are particularly worried by the statement of District Attorney George W. Anderson, of Boston, who is directing the national inquiry into high prices as special representative of Attorney General Gregory. "The delay in car movements," he said, "has probably been due to deliberate attempts to cause shortages and enhance prices. In some sections we find that certain coal cars have been kept unloaded from two to five times the normal period. These are suspicious facts. If cars, particularly coal cars, are not hereafter promptly unloaded and put back into service the country may expect that some grand jury will do something unpleasant to somebody."

Uncle Sam's Best Year

If prosperity bears any relation to the volume of the export trade the United States is now riding the crest of a wave of affluence which finds no parallel in any past year. The total exports for the first eleven months of 1916 are valued by the Department of Commerce at $4,961,200,000, representing an increase of nearly eighteen hundred millions over the same period in 1915, and more than twice the highest figure for any equal period before the Great War. The exports in November alone reached the sum of $517,900,000, the greatest volume of exports recorded in any one month. Imports up to the 1st of December amounted to $2,186,800,000, or less than half the value of the exports, altho even the import figures are considerably larger than last year's.

In spite of rising prices, increased wages and fixed freight rates, the railroads of the United States made a total net profit during 1916 of $1,098,000,000, according to the estimates of the Interstate Commerce Commission. This figure is one-third higher than the net profits of railroad operation in 1913, the best year previous to the present. The gross income of the railroads during the year is expected to reach over three billion six hundred million dollars. The unprecedented increase in gross income and net profits is ascribed by students of railroad affairs to the heavy volume of freight traffic sent to the Atlantic Coast ports for export. So abnormal were the conditions thus created that many other parts of the country complained of a serious car shortage due to the congestion of the Eastern lines. The labor unions are making use of the statistics furnished by the Interstate Commerce Commission to support their contention that the railroads can well afford to establish an eight-hour day and pay high wages.

Coöperation in Texas

The State Farmers' Union and Coöperative Association of Texas has undertaken to supply pure-bred live stock to Texas farmers in order to improve the breeds in common use. The report of the executive committee of the Farmers' Union recommends that local associations be organized thruout the state to supply every farmer whose application is favorably passed upon by the association with a stated number of dairy cows, pigs and hens and, in sheep raising districts, a small flock of sheep. The farmer will not pay anything on the cost of the live stock thus supplied him for the first two years, and eventual repayment may be made in small annual instalments. Delayed payments will bear interest at six per cent. To utilize the expected increased production of dairy products some 300 creamery stations will be established in various parts of Texas, and pens and barns will be built to handle live stock pending distribution to the local associations. Fort Worth has been selected as the central distributing point of the system, and the bankers of this and other Texas cities express their approval of the plan and their willingness to support it by lending money on live stock.

Wyoming Brings Water Rights Suit

The Supreme Court is now considering an action brought by the State of Wyoming against Colorado which is of the highest importance as affecting future water rights thruout the semi-arid states of the West. The building of a canal in Colorado connecting the Laramie with the Poudre River diverted a large flow of water from Wyoming and injured the large section of southeastern Wyoming which depends upon the Laramie for irrigation. The original action was brought by Wyoming in 1911, but has not hitherto received the consideration of the Supreme Court.

Nebraska is even more interested than Wyoming in the outcome of the suit, as the volume of water which could be diverted from the Nebraska rivers by states containing the river sources would inflict peculiar damage upon a state so largely agricultural. Attorney-General Reed of Nebraska is following the case on behalf of his state, but he says that Nebraska will not take part in the present suit because to do so would confine Nebraska to the evidence introduced by Wyoming, since its interests are identical with those of Nebraska; but if the Wyoming suit should fail he would institute an independent action on new evidence.

AS THE WORLD LIVES ON

BY H. G. WELLS

AUTHOR OF "MR. BRITLING SEES IT THROUGH"

NOTHING will be the same after the war." This is one of the consoling platitudes with which people cover over voids of thought. They utter it with an air of round-eyed profundity. But to ask in reply, "Then how will things be different?" is in many cases to rouse great resentment. It is almost as rude as saying: "Was that thought of yours really a thought?"

Let us in this paper confine ourselves to the social-economic processes that are going on. So far as I am able to distinguish among the things that are being said in these matters, they may be classified out into groups that center upon several typical questions. There is the question of "How to pay for the war?" There is the question of the behavior of labor after the war, "Will there be a labor truce or a violent labor struggle?" There is the question of the reconstruction of European industry after the war in the face of an America in a state of monetary and economic repletion thru non-intervention. My present purpose in this paper is a critical one; it is not to solve problems, but to set out various currents of thought that are flowing thru the general mind. Which current is likely to seize upon and carry human affairs with it, is not for our present speculation.

There seem to be two distinct ways of answering the first of the questions I have noted. They do not necessarily contradict each other. Of course the war is being largely paid for immediately out of the accumulated private wealth of the past. We are buying off the "hold-up" of the private owner upon the material and resources we need, and paying in paper money and war loans. This is not in itself an impoverishment of the community. The wealth of individuals is not the wealth of nations; the two things may easily be contradictory when the rich man's wealth consists of land or natural resources or franchises or privileges the use of which he reluctantly yields for high prices. The conversion of held-up land and material into workable and actively used material in exchange for national debt may be indeed a positive increase in the wealth of the community. And what is happening in all the belligerent countries is the taking over of more and more of the realities of wealth from private hands and, in exchange, the contracting of great masses of debt to private people. The net tendency is toward the disappearance of a reality holding class, the destruction of realities in warfare, and the appearance of a vast *rentier* class in its place.

Paul Thompson
MR. WELLS

At the end of the war, much material will be destroyed for evermore, transit, food production and industry will be everywhere enormously socialized, and the country will be liable to pay every year in interest a sum of money exceeding the entire national expenditure before the war. From the point of view of the state, and disregarding material and moral damages, that annual interest is the annual instalment of the price to be paid for the war.

Now the interesting question arises whether these great belligerent states may go bankrupt, and if so to what extent. States may go bankrupt to the private creditor without repudiating their debts or seeming to pay less to him. They can go bankrupt either by a depreciation of their currency or — without touching the gold standard—thru a rise in prices. In the end both these things work out to the same end; the creditor gets so many loaves or pairs of boots or workman's hours of labor for his pound *less* than he would have got under the previous conditions. One may imagine this process of price (and of course wages) increase going on to a limitless extent. Many people are inclined to look to such an increase in prices as a certain outcome of the war, and just so far as it goes, just so far will the burden of the *rentier* class, their call that is for goods and services, be lightened. This expectation is very generally entertained, and I can see little reason against it. The intensely stupid or dishonest press, however, in the interests of the common enemy, which misrepresents socialism and seeks to misguide labor in Great Britain, ignores these considerations, and positively holds out this prospect of rising prices as an alarming one to the more

Copyright by H. G. Wells, 1917. Translation rights reserved

credulous and ignorant of its readers. But now comes the second way of meeting the after-the-war obligations.

This second way is by increasing the wealth of the state and by increasing the national production to such an extent that the payment of the *rentier* class will not be an overwhelming burden. Rising prices bilk the creditor. Increased production will check the rise in prices and get him a real payment. The outlook for the national creditor seems to be that he will be partly bilked and partly paid; how far he will be bilked and how far paid depends almost entirely upon this possible increase in production; and there is consequently a very keen and quite unprecedented desire very widely diffused among intelligent and active people, holding war loan scrip and the like, in all the belligerent countries, to see bold and hopeful schemes for state enrichment pushed forward. The movement toward socialism is receiving an impulse from a new and unexpected quarter, there is now a *rentier* socialism, and it is interesting to note that while the London *Times* is full of schemes of great state enterprises, for the exploitation of Colonial state lands, for the state purchase and wholesaling of food and many natural products, and for the syndication of shipping and the great staple industries into vast trusts into which not only the British but the French and Italian governments may enter as partners, the so-called socialist press of Great Britain is chiefly busy about the draughts in the cell of Mr. Fenner Brockway and the refusal of Printer Scott Duckers to put on his khaki trousers. *The New Statesman* and the Fabian Society, however, display a wider intelligence.

There is a great variety of suggestions for this increase of public wealth and production. Many of them have an extreme reasonableness. The extent to which they will be adopted depends, no doubt, very largely upon the politician and permanent official, and both those classes are apt to panic in the presence of reality. In spite of its own interest in restraining a rise in prices, the old official "salariat" is likely to be obstructive to any such innovations. It is the resistance of spurs and red tabs to military innovations over again. This is the resistance of quills and red tape. On the other hand the organization of Britain for war has "officialized" a number of industrial leaders and created a large body of temporary and adventurous officials. They may want to carry on into peace production the great new factories the war has created. At the end of the war, for example, every belligerent country will be in urgent need of cheap automobiles for farmers, tradesmen, and industrial purposes generally. America is now producing such automobiles at a price of four hundred dollars. But Europe will be heavily in debt to America, her industries will be disorganized, and there will, therefore, be no sort of return payment possible for these hundreds of thousands of automobiles. A country that is neither creditor nor producer cannot be an importer. Consequently, tho those cheap tin cars may be stacked as high as the Washington Monument in America, they will never come to Europe. On the other hand the great shell factories of Europe will be standing idle and ready, their staffs disciplined and available, for conversion to the new task. The imperative commonsense of the position seems to be that the European governments will set themselves straight away to out-Ford Ford, and provide their own people with cheap road transport.

BUT here comes in the question whether this commonsense course is inevitable. Suppose the mental energy left in Europe after the war is insufficient for such a constructive feat as this. There will certainly be the obstruction of official pedantry, the hold-up of this vested interest and that, the greedy desire of "private enterprise" to exploit the occasion upon rather more costly and less productive lines, the general distrust felt by ignorant and unimaginative people of a new way of doing things. The process after all may not get done in the obviously wise way. This will not mean that Europe will buy American cars. It will be quite unable to buy American cars. It will be unable to make anything that America will not be able to make more cheaply for itself. But it will mean that Europe will go on without cheap cars, that is to say it will go on more sluggishly and clumsily and wastefully at a lower economic level. Hampered transport means hampered production of other things, and increasing inability to buy abroad. And so we go down and down.

It does not follow that because a course is the manifestly right and advantageous course for the community that it will be taken. I am reminded of this by a special basket in my study here, into which I pitch letters, circulars, pamphlets and so forth as they come to hand from a gentleman named Gatti, and his friends Mr. Adrian Ross, Mr. Roy Horniman, Mr. Henry Murray and others. His particular project is the construction of a Railway Clearing House for London. It is an absolutely admirable scheme. It would cut down the heavy traffic in the streets of London to about one third; it would enable us to run the goods traffic of England with less than half the number of railway trucks we now employ, it would turn over enormous areas of valuable land from their present use as railway goods yards and sidings; it would save time in the transit of goods and labor in their handling. It is a quite beautifully worked out scheme. For the last eight or ten years this group of devoted fanatics has been pressing this undertaking upon an indifferent country, with increasing vehemence and astonishment at that indifference. The point is that its adoption, tho it would be of enormous general benefit, would be of no particular benefit to any leading man or highly placed official. On the other hand it would upset all sorts of individuals who are in a position to obstruct it quietly—and they do so. Meaning no evil. I dip my hand in the accumulation and extract a leaflet by the all too zealous Mr. Murray. In it he denounces various public officials by name as cheats and scoundrels, and invites a prosecution for libel.

In that fashion nothing will ever get done. There is no prosecution, but for all that I do not agree with Mr. Murray about the men he names. These gentlemen are just comfortable gentlemen, own brothers to these old generals of ours who will not take off their spurs. They are probably quite charming people except that they know nothing of that Fear of God which searches the heart. Why should they bother?

So many of these after-the-war problems bring one back to the question how far the war has put the Fear of God into the hearts of responsible men. There is really no other reason in existence that I can imagine why they should ask themselves the question, "Have I done my best?" and that still more important question, "Am I doing my best now?" And so while I hear plenty of talk about the great reorganizations that are to come after the war, while there is the stir of doubt among the *rentiers* whether, after all, they will get paid, while the unavoidable stresses and sacrifices of the war are making many people question the rightfulness of much that they did as a matter of course, and of much that they took for granted, I perceive there is also something dull and not very articulate in this European world, something resistant and inert, that is like the obstinate rolling over of a heavy sleeper after he has been called upon to get up. "Just a little longer. Just for *my* time."

One thought alone seems to make these more intractable people anxious. I thrust it in as my last stimulant when everything else has failed. "There will be *frightful* trouble with labor after the war," I say.

They try to persuade themselves that military discipline is breaking in labor.

WHAT does British labor think of the outlook after the war? As a distinctive thing British labor does not think. "Class-conscious labor," as the Marxists put it, scarcely exists in Britain. The only convincing case I ever met was a bath-chairman of literary habits at Eastbourne. The only people who are, as a class, class conscious in the British community are the Anglican gentry and their fringe of the genteel. Everybody else is "respectable." The mass of British workers find their thinking in the ordinary halfpenny papers or in *John Bull*. The so-called labor papers are perhaps less representative of British labor than any other section of the press; *The Labor Leader*, for example, is the organ of such people as Bertrand Russell, Vernon Lee, Morel, academic *rentiers* who know about as much of the labor side of industrialism as they do of cock-fighting. All the British peoples are racially willing and good-tempered people quite ready to be led by those they imagine to be abler than themselves. They make the most cheerful and generous soldiers in the whole world, with-

out insisting upon that democratic respect which the Frenchman exacts. They do not criticize and they do not trouble themselves much about the general plan of operations, so long as they have confidence in the quality and goodwill of their leading. But British soldiers will hiss a general when they think he is selfish, unfeeling, or a muff. And the socialist propaganda has imported ideas of public service into private employment. Labor in Britain has been growing increasingly impatient of bad or selfish industrial leadership. Labor trouble in Great Britain turns wholly upon the idea crystallized in the one word "profiteer." Legislation and regulation of hours of labor, high wages, nothing will keep labor quiet in Great Britain, if labor thinks it is being exploited for private gain.

Labor feels very suspicious of private gain. For that suspicion a certain rather common type of employer is mainly to blame. Labor believes that employers as a class cheat workmen as a class, plan to cheat them, of their full share in the common output, and drive hard bargains. It believes that private employers are equally ready to sacrifice the welfare of the nation and the welfare of the workers for mere personal advantage. It has a traditional experience to support these suspicions.

In no department of morals have ideas changed so completely during the last eighty years as in relation to "profits." Eighty years ago everyone believed in the divine right of property to do what it pleased with its advantages, a doctrine more disastrous socially than the divine right of kings. There was no such sense of the immorality of "holding up" as pervades the public conscience today. The worker was expected not only to work but to be grateful for employment. The property owner held his property and handed it out for use and development or not, just as he thought fit. These ideas are not altogether extinct today. Only a few days ago I met a magnificent old lady of seventy-nine or eighty, who discoursed upon the wickedness of her gardener in demanding another shilling a week because of war prices.

She was a valiant and handsome personage. A face that had still a healthy natural pinkness looked out from under blonde curls, and an elegant and carefully tended hand tossed back some fine old lace to gesticulate more freely. She had previously charmed her hearers by sweeping aside certain invasion rumors that were drifting about.

"Germans invade *Us!*" she cried. "Who'd *let* 'em, I'd like to know. Who'd *let* 'em?"

And then she reverted to her grievance about the gardener.

"I told him that after the war he'd be glad enough to get anything. Grateful! They'll all be coming back after the war, all of 'em, glad enough to get anything. Asking for another shilling indeed!"

Every one who heard her looked shocked. But that was the tone of every one of importance in the dark years that followed the Napoleonic wars. That is just one survivor of the old tradition. Another is Blight the solicitor, who goes about bewailing the fact that we writers are "holding out false hopes of higher agricultural wages after the war." But these are both exceptions. They are held to be remarkable people even by their own class. The mass of property owners and influential people in Europe today no more believe in the sacred right of property to hold up development and dictate terms, than do the more intelligent workers. The ideas of collective ends and of the fiduciary nature of property, had been soaking thru the European community for years before the war. The necessity for sudden and even violent coöperations and submersions of individuality in a common purpose, which this war has produced is rapidly crystallizing out these ideas into clear proposals.

WAR is an evil thing, but people who will not learn from reason must have an ugly teacher. This war has brought home to every one the supremacy of the public need over every sort of individual claim.

One of the most remarkable things in the British war press is the amount of space given to the discussion of labor developments after the war. This is in its completeness peculiar to the British situation. Nothing on the same scale is perceptible in the press of the Latin allies. A great movement on the part of capitalists and business organizers is manifest to assure the worker of a change of heart and a will to change method. Labor is suspicious, not foolishly but wisely suspicious. But Labor is considering it.

"National industrial syndication," say the business organizers.

"Gild socialism," say the workers.

There is also a considerable amount of talking and writing about "profit-sharing" and about giving the workers a share in the business direction. Neither of these ideas appeals to the shrewder heads among the workers. So far as direction goes their disposition is to ask the captain to command the ship. So far as profits go, they think the captain has no more right than the cabin boy to speculative gains; he should do his work for his pay whether it is profitable or unprofitable work. There is little balm for labor discontent in these schemes for making the worker also an infinitesimal profiteer.

During my journey in Italy and France I met several men who were keenly interested in business organization. Just before I started my friend N, who has been the chief partner in the building up of a very big and very extensively advertised American business, came to see me on his way back to America. He is as interested in his work as a scientific specialist, and as ready to talk about it to any intelligent and interested hearer. He was particularly keen upon the question of continuity in the business, when it behooves the older generation to let in the younger to responsible management and to efface themselves. He was a man of five and forty. Incidentally he mentioned that he had never taken anything for his private life out of the great business he had built up but a salary, "a good salary," and that now he was going to grant himself a pension. "I shan't interfere any more. I shall come right away and live in Europe for a year so as not to be tempted to interfere. The boys have got to run it some day, and they had better get their experience while they're young and capable of learning by it. I did."

I like N's ideas. "Practically," I said, "you've been a public official. You've treated your business like a public service."

That was his idea.

"Would you mind if it was a public service?"

He reflected, and some disagreeable memory darkened his face. "Under the politicians?" he said.

I took the train of thought N had set going abroad with me next day. I had the good luck to meet men who were interested industrially. Captain Pirelli, my guide in Italy, has a name familiar to every motorist; his name goes wherever cars go, spelt with a big long capital P. Lieutenant de Tessin's name will recall one of the most interesting experiments in profit-sharing to the student of social science. I tried over N's problem on both of them. I found in both their minds just the same attitude as he takes up toward his business. They think any businesses that are worthy of respect, the sorts of businesses that interest them, are public functions. Money-lenders and speculators, merchants and gambling gentlefolk, may think in terms of profit; capable business directors certainly do nothing of the sort.

I met a British officer in France who is also a landowner. I got him to talk about his administrative work upon his property. He was very keen upon new methods. He said he tried to do his duty by his land.

"How much land?" I asked.

"Just over nine thousand acres," he said.

"But you could manage forty or fifty thousand with little more trouble."

"If I had it. In some ways it would be easier."

"What a waste!" I said. "Of course you ought not to *own* those acres, what you ought to be is the agricultural controller of just as big an estate of the public lands as you could manage—with a suitable salary."

He reflected upon that idea. He said he did not get much of a salary out of his land as it was, and made a regretable allusion to Mr. Lloyd George. "When a man tries to do his duty by the land," he said . . .

But here running thru the thoughts of the Englishman and the Italian and the Frenchman and the American alike one finds just the same idea of a kind of officialism in ownership. It is an idea that pervades our thought and public discussion today everywhere, and it is an idea that is scarcely traceable at all in the thought of the early half of the nineteenth century. The idea of service and responsibility in property

has increased and is increasing, the conception of "hold-up," the usurer's conception of his right to be bought out of the way, fades. And the process has been enormously enhanced by the various big scale experiments in temporary socialism that have been forced upon the belligerent powers. Men of the most individualistic quality are being educated up to the possibilities of concerted collective action. My friend and fellow-student Y, inventor and business organizer, who used to make the best steam omnibuses in the world and who is now making all sorts of things for the army, would go pink with suspicious anger at the mere words "inspector" or "socialism" three or four years ago. He does not do so now.

A great proportion of this sort of man, this energetic directive sort of man in England, is thinking socialism today. They may not be saying socialism but they are thinking it. When labor begins to realize what is adrift it will be divided between two things, between appreciative coöperation, for which gild socialism in particular has prepared its mind, and traditional suspicion. I will not offer to guess here which will prevail.

THE impression I have of the present mental process in the European communities is that while the official class and the *rentier* class is thinking very poorly and inadequately, and with a merely obstructive disposition, while the churches are merely wasting their energies in futile self advertisement, while the labor mass is suspicious and disposed to make terms for itself rather than come into any large schemes of reconstruction that will abolish profit as a primary aim in economic life, there is still a very considerable movement toward such a reconstruction. Nothing is so misleading as a careless analogy. In the dead years that followed the Napoleonic wars, which are often quoted as a precedent for expectation now, the spirit of collective service was near its minimum; it was never so strong and never so manifestly spreading and increasing as it is today.

But service to what?

I have my own very strong preconception here, and since my temperament is sanguine they necessarily color my view. I believe that this impulse to collective service can satisfy itself only under the formula that mankind is one state of which God is the undying king, and that the service of men's collective needs is the true worship of God. But eagerly as I would grasp at any evidence that this idea is being developed and taken up by the general consciousness, I am quite unable to persuade myself that anything of the sort is going on. I do perceive a search for large forms into which the prevalent impulse to devotion can be thrown. But the organized religious bodies, with their creeds and badges and their instinct for self preservation at any cost, stand between men and their spiritual growth in just the same way the forestallers stand between men and food.

The second article in the series THE WORLD IN RECONSTRUCTION will be "The Remade Map," by Rear-Admiral Peary.

Their activities at present are an almost intolerable nuisance. One cannot say "God" but some tout is instantly seeking to pluck one into his particular cave of flummery and orthodoxy. What a rational man means by God is just God. The more you define and argue about God the more He remains the same simple thing. Judaism, Christianity, Islam, modern Hindu religious thought, all agree in declaring that there is one God, master and leader of all mankind, in unending conflict with cruelty, disorder, folly and waste. To my mind, it follows immediately that there can be no king, no government of any sort, which is not either a subordinate or a rebel government, a local usurpation, in the kingdom of God. But no organized religious body has ever had the courage and honesty to insist upon this. They all pander to nationalism and to powers and princes. They exist so to pander. Every organized religion in the world exists only to divert and waste the religious impulse in man.

This conviction that the world kingdom of God is the only true method of human service, is so clear and final in my own mind, it seems so inevitably the conviction to which all right thinking men must ultimately come, that I feel almost like a looker-on at a game of blindman's buff as I watch the discussion of synthetic political ideas. The blind man thrusts his seeking hands into the oddest corners, he clutches at chairs and curtains, but at last he must surely find and hold and feel over and guess the name of the plainly visible quarry.

Some of the French and Italian people I talked to said they were fighting for "Civilization." That is one name for the kingdom of God, and I have heard English people use it too. But much of the contemporary thought of England still wanders with its back to the light. Most of it is pawing over jerry-built, secondary things. I have before me a little book, the joint work of Dr. Grey and Mr. Turner, an ex-public schoolmaster, and a manufacturer, called "Eclipse or Empire?" The title "World Might or Downfall?" had already been secured in another quarter. It is a book that has been enormously advertised; it has been almost impossible to escape its column long advertisements, it is billed upon the boardings, and it is on the whole a very able and right spirited book. It calls for more and better education, for more scientific methods, for less class suspicion and more social explicitness and understanding, for a franker and fairer treatment of labor. But why does it call for these things? Does it call for them because they are right? Because in accomplishing this, one serves God?

Not at all. But because otherwise this strange sprawling empire of ours will drop back into a secondary place in the world. These two writers really seem to think that the slack workman, the slacker wealthy man, the negligent official, the conservative schoolmaster, the greedy usurer, the comfortable obstructive, confronted with this alternative, terrified at this idea of something or other called the Empire being "eclipsed," eager for the continuance of this undefined glory over their fellow creatures called "Empire," will perceive the error of their ways and become energetic, devoted, capable. They think an ideal of that sort is going to change the daily lives of men. . . . I sympathize with their purpose, and I deplore their conception of motives. If men will not give themselves for righteousness, they will not give themselves for a geographical score. If they will not work well for the hatred of bad work, they will not work well for the hatred of Germans. This "Empire" idea has been cadging about the British Empire, trying to collect enthusiasm and devotion, since the days of Disraeli. It is, I submit, too big for the mean spirited, and too tawdry and limited for the fine and generous. It leaves out the French and the Italians and the Belgians and all our blood brotherhood of allies. It has no compelling force in it. We British are not naturally Imperialist; we are something greater—or something less. For two years and a half now we have been fighting against Imperialism in its most extravagant form. It is a poor incentive to right living to propose to parody it.

THE blind man must lunge again. For when the right answer is seized it answers not only the question why men should work for their fellow men, but also why nations should cease to arm and plan and contrive against nation. The social problem is only the international problem in retail, the international problem is only the social one in gross.

My bias rules me altogether here. I see men in social, in economic and in international affairs alike, eager to put an end to conflict, inexpressibly weary of conflict and the waste and pain and death it involves. But to end conflict one must abandon aggressive or uncordial pretensions. Labor is sick at the idea of more strikes and struggles after the war, industrialism is sick of competition and anxious for service, everybody is sick of war. But how can they end any of these clashes except by the definition and recognition of a common end which will establish a standard for the trial of every conceivable issue, to which, that is, every other issue can be subordinated; and what common end can there be in all the world except this idea of the world kingdom of God? What is the good of orienting one's devotion to a firm, or to class solidarity, or *La Republique Francaise*, or Poland, or Albania, or such love and loyalty as people profess for King George or King Albert or the Duc d'Orleans, or any such intermedi-

ate object of self abandonment? We need a standard so universal that the plate layer may say to the barrister or the duchess, or the Red Indian to the Limehouse sailor, or the Anzac soldier to the Sinn Feiner or the Chinaman, "What are we two doing for it?" And to fill the place of that "it," no other idea is great enough or commanding enough, but only the world kingdom of God.

However long he may have to hunt, the blind man seeking service and an end to bickerings will come to that at last, because of all the thousand other things he may clutch at, nothing else can satisfy his manifest need.

London, England

ONE MORE ITALIAN OPERA

BY CHARLES L. BUCHANAN

AUTHOR OF "FUTURIST MUSIC"

ON the night of Friday, December 22, at the Metropolitan Opera House, Riccardo Zandonai's new opera, "Francesca da Rimini," was produced for the first time in this country. Obviously the presentation of the latest operatic offering of a composer, who is considered by many excellent authorities the most significant composer of Italy today, is a matter of considerable importance in the world of music. We may assume that it represents the Metropolitan's most important contribution to the present season's operatic activities. Under such circumstances it merits a serious and tolerant consideration.

Unfortunately, the impression will not down that a maximum of effort has been expended upon a minimum of result. As we sat in the dim and sparsely populated auditorium of the Metropolitan and watched the work being rehearsed for the last time, we could not help thinking how futile it all was. It did not seem quite worth while. True, we had approached the work under a misapprehension. Somehow or other, we had gathered the impression that it was a work of a more or less revolutionary nature (revolutionary in a substantial sense), that its young, thirty-three year old composer represented, to a certain extent, Italian opera's equivalent to the emphatic modernisms of Schonberg, Ornstein, and Stravinsky. Not that we would for a moment have Zandonai consciously ape the manner of these gentlemen; we should infinitely prefer that his work were avowedly reactionary than that it were premeditatedly and spuriously progressive. He is to be commended for his abstinence from a facile, mechanical and superficial use of ultra-modern idiom. His work is written along conventionalized Italian patterns, the method a kind of elongation of Puccini, the later Verdi, and Leoncavallo. This in itself is a matter of no moment; the important thing is the unhappy fact that this new score over which much valuable time has been dissipated, and from which much has been expected, seems lacking in the faintest trace of that vitality, that coarse-grained but indubitable eloquence and dramatic instinct that fills to overflowing the music of "Tosca" or "Pagliacci."

The legend about which Zandonai has built his music has attracted the attention of innumerable poets and musicians. Tchaikovsky rose to some of his greatest hights in his symphonic treatment of the subject. From the operatic standpoint it is even yet pregnant with possibilities. Debussy's treatment of a similar theme in "Pelleas and Melisande" achieves what many redoubtable critics think is a preeminent and incontestable exploitation of a certain side of this immortal love story. Maeterlinck's dream play necessitated and found in Debussy a musical recorder of as super-subtle a sensitiveness as itself. Here music and drama twine inextricably about each other like mist about a wood; they seem to be two removes from us, to be reflected back to us from a mirror of clouded silver. What the Debussy-Maeterlinck drama indubitably and dangerously lacks is passionate, irresponsible, cumulative force. The repression stifles us; we cry out in vain for one memorable and moving rush and blare of sound.

ZANDONAI, on the other hand, is frankly and almost exclusively dramatic and dynamic. But if our impression is to be trusted, he gets nowhere. His work, in a word, is padded. One cannot help comparing the laborious, ineffectual movement of the drama with Puccini's clean-cut, concise and pungent knack of going straight to the gist of the matter. For this D'Annunzio is partly to blame. His play is, as we see it, precisely the worst treatment of this story that an operatic composer could have chosen. D'Annunzio's talent—an overelaborate, meretricious one, if you wish—is essentially literary; dramatized, it becomes diffuse, devious and inconsequential. For our part, we should have preferred the point of view of Stephen Phillip's "Paolo and Francesca" to the ornate handling afforded the subject by D'Annunzio. We are offered a mechanical craftsmanship of gilt and tinsel in place of the authentic glamor and gold of youth. Simplicity, mystery and pathos are lacking; nowhere is there a trace of that sense of remoteness, of inevitableness, of sorrow colorful yet reticent that made memorable the libretto of "L'Amore dei Tre Re."

Perhaps this work does not adequately represent the capacities of its composer, a composer, by the way, who is remarkable in that (contrary to the records of Italian operatic composers) he is a composer of symphonic, as well as operatic music. If we may judge him by his "Francesca da Rimini," he is mostly a replica of the music of the last twenty years or so. That his work is conspicuously reminiscent of Wagner means little; everyone that has written since Wagner (we do not even exclude Debussy) reminds us of that incomparable genius. Where this work falls short is in its total lack of any one distinguishing feature. Its first act (to our way of thinking its most successful) contains an indubitable atmosphere. Paola's entrance in the finale of this act is a well constructed piece of climatic writing; the archaic tones of the solo lute and viola pomposa played on stage contributing a cleverly calculated effect of exotic beauty to the general ensemble. But atmosphere is, comparatively speaking, a fairly easy thing to create and to project. It is accomplished, to a large extent, with the adroit aid of materials extraneous to an inherent and specific genius. Zandonai's instrumental writing lacks the grace and dexterity of Puccini—particularly the Puccini of "Butterfly"—and his declamatory writing is negligible. Go back no farther than the composer of "Butterfly," "Tosca," "Bohême," and you have a composer who, despite all his alleged faults and deficiencies, is nevertheless a potent, unmistakable, at times irresistible force. Take the opening theme of the duet in "Butterfly," the passage in 6-8 time played on the strings. You are instantaneously struck by the appropriateness of the musical idea; it appeals to you as just the sort of thing you would have written yourself if you had thought of it first. Take again that theme, reiterated with sinister insistence, that the flute utters during Scarpia's cross-examination of Cavaradossi in the grisly second act of "Tosca." You hear this sort of thing, and you react to it; you have received and registered an impression. Puccini's action as declaimed by his singers, his song as sung by them possesses what our vernacular expressively, if inelegantly, describes as "punch." It is precisely this "punch" that is lacking in "Francesca da Rimini."

And yet we must always bear in mind the fact that genius does not grow on trees. Zandonai's "Francesca da Rimini" is a performance obviously well worth seeing, if only for the extraordinary opportunity it offers those excellent artists, Martinelli and Alda. But it is not a work of genius; it is merely one more Italian opera.

A rare chance Worlds Great

WARNING!

Sets of the new Britannica printed on the last genuine India paper obtainable are selling fast. No promise can be given as to how long the remaining sets will last.

Therefore *we urge you to act immediately* as the only way of getting the new Britannica in the popular "Handy Volume" form, printed on genuine India paper. You certainly want it in this, its most useful form.

India paper is the most wonderful, most useful paper made. It is *light-weight, thin* and *strong*. Its use for the new Britannica was a near-miracle in book publishing. It made it possible to put this great Library of *all* Knowledge in convenient form—29 compact volumes, requiring only 29 inches of shelf space.

And *remember—when the sets now on hand are sold,* no more can be offered printed on this famous paper. Because—war has entirely cut off the supply of the special kind of flax necessary to manufacture this beautiful paper. This flax is grown only in Great Britain, Belgium and Germany—*and no more can be had.*

That's the whole story. This difficulty was not foreseen. When the Britannica was put into "Handy Volume" form, the publishers thought they would be able to get all the India paper needed to print as many sets of the Britannica as could be sold. The fact is that the remaining sets, printed on the last obtainable India paper, will meet only a fraction of the demand.

You can't afford to wait until "tomorrow" to own a set—the time to act is now—today.

The Encyclopaedia Royal Road

HOW much do you *know?* How much do you earn? Are you **above** or *below* the line of "average-intelligence, average-income"?

If you are keeping step with Twentieth-century progress, you realize that you must know *more and more* every day. And what you know must be *facts.* Generalities don't help you out.

It is obvious tnat you can't accumulate all the knowledge you need by traveling and talking to others—nor can you carry in your head all you want to know outside your own personal experiences. Therefore, the new Britannica is *indispensable* to you—

BECAUSE—it deals with life and civilization and progress in the broadest sense. Its scope is universal—comprising the sum and substance of human thought and activity. It covers everything under the sun—and the sun itself.

This great *library of knowledge*—consisting of 30,000 pages teeming with facts and information—is the work of 1500 master minds, the world's foremost experts in every line. Its contents are too comprehensive to be adequately described here. Sufficient it is to say that the Britannica discusses in a way you can understand every branch of science and industry, literature and art, religion and philosophy, invention, engineering, history, biography, geography, geology, architecture, astronomy, law, botany, education, electricity—EVERYTHING.

The new Britannica is a book for men and women in all walks of life—for the millionaire as well as for the wage-earner, for the expert as well as the student, for the clerk as

Act Now

Britannica Is the to Success

well as for the merchant, for the bank president as well as for the bank clerk—for the *home* as well as the *office.*

You probably have some idea of how *useful* the Britannica would be to you—just as its daily practical value is proved in the case of its 160,000 present owners.

Andrew Carnegie has said: "*A half-hour a day spent on a particular line of study is the best investment any man can make.*"

Whatever your "*particular line*" is, the Britannica will equip you to become proficient in the highest degree. Whether you are interested in the stars above or in coal mining, in electricity or chicken raising, in house building or carpet manufacture, the Britannica is an invaluable aid. You need it—you should have it.

Carnegie's "half-hour a day" spent with the Britannica will soon make you a more intelligent, more interesting man or woman. It will expand your power to *think* and *talk* and *do.* Thus you will become more *successful*—life will grow to be more and more worth while.

You can't afford to miss this chance to own the new Britannica. You should have this great work—and of course you want it printed on genuine India paper.

Don't wait until tomorrow, Act *now.* Cut out the coupon on the next page—sign it—send it in.

Charles M. Schwab, President of the Bethlehem Steel Corporation and one of the leading self-made Americans, says of the popular "Handy Volume" Issue of the Britannica that it brings "*the most important and authoritative work of its kind in the world within the reach of those who need it most—the men who are raising themselves from the ranks to positions of responsibility.*"

How Many "10 Cents" Do You Spend and Get Nothing for Them?

Realize that this small sum daily will, in a very short time, give you the outright *ownership* of the world's greatest book of knowledge—the new Britannica, in the popular "Handy Volume" form.

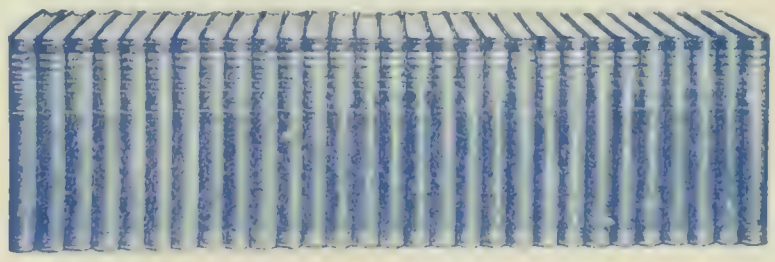
You obtain the entire set (29 volumes) on a first payment of only $1 and you pay the balance in small monthly amounts averaging 10c a day (for the cheapest binding).

Whatever your business or profession, the Britannica will increase your practical knowledge along any line—it will enable you to be a more profitable factor in your work—it will make you more efficient, more successful.

Do you say that you "can't afford it"?

Considering the many advantages it offers you (and your family), can you afford ***not*** to own it?

Considering the *low price* asked for the remaining sets of the Britannica printed on the famous India paper, and the easy payment plan, can you afford ***not*** to own a set?

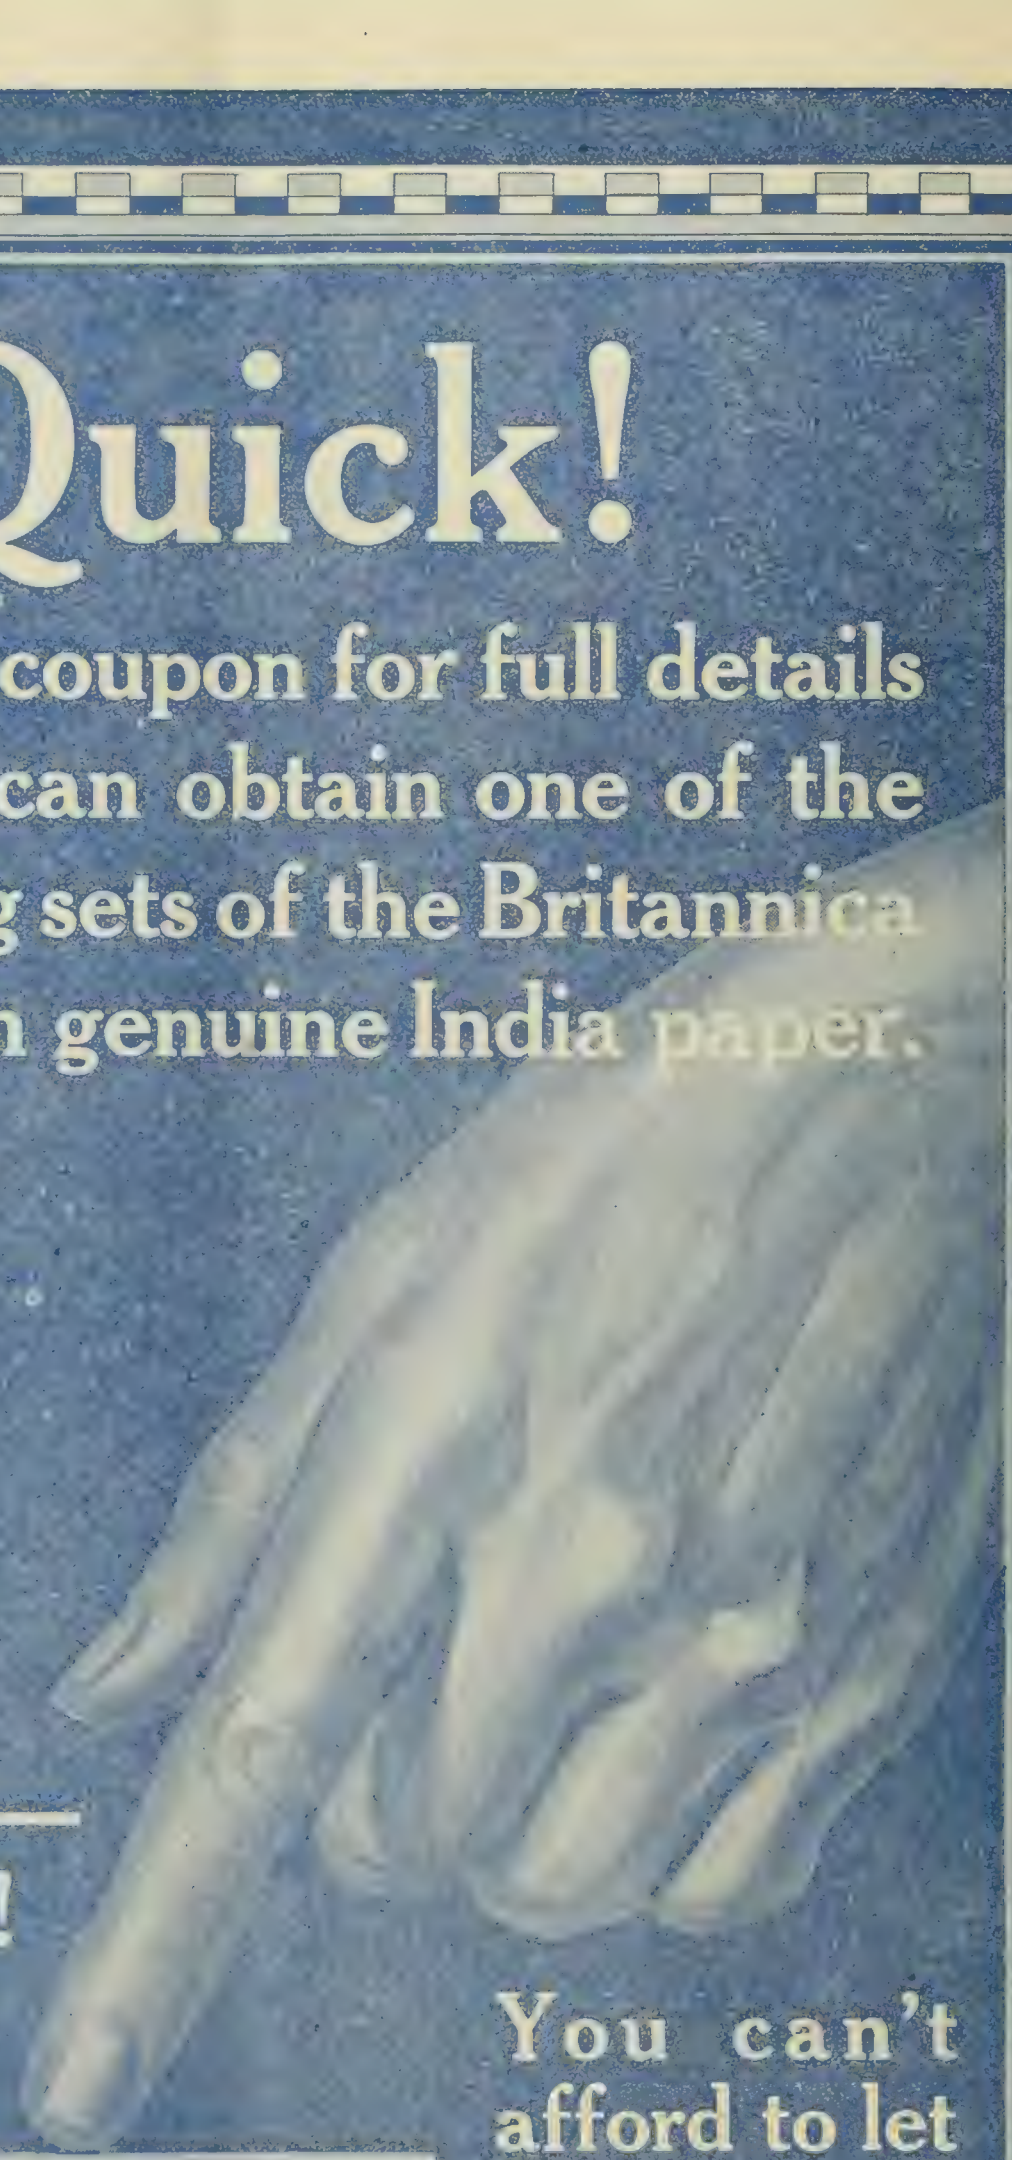


Think this over—read the preceding paragraph again.

Half on hour or so a day spent in reading the Britannica will soon make you realize that it actually pays for itself.

"It is a great thing for education to have this unrivalled Encyclopaedia reduced to really popular prices."

RICHARD C. MACLAURIN
President, Massachusetts Institute of Technology.



Here is the sum and substance of all human knowledge—41,000 articles, 30,000 pages, 15,000 illustrations, 500,000 indexed facts

THE POEMS OF SAROJINI NAIDU

GUERDON

To field and forest
  The gifts of the spring,
To hawk and to heron
  The pride of their wing;
Her grace to the panther,
  Her tints to the dove—
For me, O my Master,
  The rapture of Love!

To the hand of the diver
  The gems of the tide,
To the eyes of the bridegroom
  The face of the bride;
To the heart of a dreamer
  The dreams of his youth—
For me, O my Master,
  The rapture of Truth!

To priests and to prophets
  The joy of their creeds,
To kings and their cohorts
  The glory of deeds;
And peace to the vanquished
  And hope to the strong—
For me, O my Master,
  The rapture of Song!

—From "The Bird of Time," published by John Lane & Co.

COROMANDEL FISHERS

Rise, brothers, rise, the wakening skies pray to the morning light,
The wind lies asleep in the arms of the dawn like a child that has cried all night.
Come, let us gather our nets from the shore, and set our *catamarans* free,
To capture the leaping wealth of the tide, for we are the sons of the sea.

No longer delay, let us hasten away in the track of the sea gull's call,
The sea is our mother, the cloud is our brother, the waves are our comrades all,
What tho we toss at the fall of the sun where the hand of the sea-god drives?
He who holds the storm by the hair, will hide in his breast our lives.

Sweet is the shade of the coconut glade, and the scent of the mango grove,
And sweet are the sands at the full o' the moon with the sound of the voices we love.
But sweeter, O brothers, the kiss of the spray and the dance of the wild foam's glee:
Row, brothers, row to the blue of the verge, where the low sky mates with the sea.

—From "The Golden Threshold," published by John Lane & Co.

THE ROYAL TOMBS OF GOLCONDA

I muse among the silent fanes
Whose spacious darkness guards your dust:
Around me sleep the hoary plains
That hold your ancient wars in trust.
I pause, my dreaming spirit hears,
Across the wind's unquiet tides,
The glimmering music of your spears,
The laughter of your royal brides.

In vain, O Kings, doth time aspire
To make your names oblivion's sport,
While yonder hill wears like a tiar
The ruined grandeur of your fort.
Tho centuries falter and decline,
Your proven strongholds shall remain
Embodied memories of your line,
Incarnate legends of your reign.

O Queens, in vain old Fate decreed
Your flower-like bodies to the tomb;
Death is in truth the vital seed
Of your imperishable bloom.
Each new-born year the bulbuls sing
Their songs of your renascent loves;
Your beauty wakens with the spring
To kindle these pomegranate groves.

—From "The Golden Threshold," published by John Lane & Co.

IN SALUTATION OF THE ETERNAL PEACE

Men say the world is full of fear and hate,
And all life's ripening harvest-fields await
The restless sickle of relentless fate.

But I, sweet Soul, rejoice that I was born,
When from the climbing terraces of corn
I watch the golden orioles of Thy morn.

What care I for the world's desire and pride,
Who know the silver wings that gleam and glide,
The homing pigeons of Thine eventide?

What care I for the world's loud weariness,
Who dream in twilight granaries Thou dost bless
With delicate sheaves of mellow silences?

Say, shall I heed dull presages of doom,
Or dread the rumored loneliness and gloom,
The mute and mythic terror of the tomb?

For my glad heart is drunk and drenched with Thee,
O inmost wine of ecstasy!
O intimate essence of eternity!

—From "The Bird of Time," published by John Lane & Co.

THE SOUL OF INDIA

BY JOYCE KILMER

AUTHOR OF "SUMMER OF LOVE," "TREES AND OTHER POEMS"

"SHE springs from the very soil of India," wrote Edmund Gosse of Sarojini Naidu. "Her spirit, altho it employs the English language as its vehicle, has no other tie with the West. It addresses itself to the exposition of emotions which are tropical and primitive, and in this respect, as I believe, if the poems of Sarojini Naidu be carefully and delicately studied they will be found as luminous in lighting up the dark places of the East as any contribution of savant or historian. They have the astonishing advantage of approaching the task of interpretation from inside the magic circle, altho armed with the technical skill that has been cultivated with devotion outside of it."

Edmund Gosse wrote this some years ago, before the Occidental discovery of the mind and soul of the East had progressed so far as it has today. But even today, when Dr. Ananda K. Coomaraswamy is explaining the splendors and mysteries of Indian art, and Madame Ratan Devi is chanting to us the ancient folk-songs of Persia, and Rajpat Lai is revealing the passionate Indian desire for nationality, and Rabindranath Tagore's poems are known from New York to San Francisco—even today Sarojini Naidu brings us something of Indian emotion and thought that we can find nowhere else.

Rabindranath Tagore's poems are cosmopolitan. Sir Rabindranath has been influenced by French, English and American writers; the reader of his poems is never sure whether a sentiment or a figure is genuinely Oriental in origin or not. This is not said in disparagement of the author of "Chitra," it is said merely to emphasize the difference between Tagore's poems and those of Sarojini Naidu. Mrs. Naidu makes no attempt to be a world figure, to synthesize the thought of the East and the thought of the West, to spread a universal philosophy. She is content to express in beautiful English verse the thoughts of her purely Oriental mind. And in so doing she draws aside, for a moment, the curtain that hangs before the mysteries of India, and permits England and America to look at strange and lovely things.

Mrs. Naidu dedicates her book, "The Golden Threshold," "To Edmund Gosse, who first showed me the way to the golden threshold." And in his preface to Mrs. Naidu's "The Bird of Time" Mr. Gosse tells just how he directed the course of this poet's genius.

Sarojini Chattopadhyay, the daughter of Dr. Aghorenath Chattopadhyay, who founded the Nizam College at Hyderabad, was born in Hyderabad in 1879. She was the eldest of a large family, all of whom learned English at an early age. She was taught science by her father, and from him and from her mother she inherited a strong tendency towards poetry. She began writing at the age of eleven—at thirteen she

SAROJINI NAIDU

wrote a drama of two thousand lines and a thirteen hundred line narrative poem in the manner of "The Lady of the Lake."

All this early work was thoroly English in theme and in manner. And this is where Mr. Edmund Gosse comes into the story of her development. Sent to England by her parents in the hope of breaking her of her love for Dr. Govindurajulu Naidu, who was not considered an acceptable suitor because he was not a Brahmin, Sarojini, then sixteen years old, met Edmund Gosse and at his request showed him her poems in manuscript.

The verses which Sarojini had entrusted to him, he tells us, were skilful in form, correct in grammar, and blameless in sentiment, but they had the disadvantage of being totally without individuality. They were Western in feeling and in imagery; they were founded on reminiscences of Tennyson and Shelley.

Mr. Gosse told the young poet to consign to the waste basket all the verse that she had written in this falsely English vein. He urged her to consider that from a young Indian of extreme sensibility, who had mastered not merely the language but the prosody of the West, what Europe wished to receive was not a rechauffé of Anglo-Saxon sentiment in an Anglo-Saxon setting, but some revelations of the heart of India. He urged her "to be a genuine Indian poet of the Deccan, not a clever machine-made imitator of the English classics."

This excellent advice Sarojini took to heart, and English literature is therefore the richer, and our understanding of the Oriental mind is therefore the fuller. The young poet went back to India, married Dr. Naidu (breaking thru the bonds of caste to the scandal of all India) and commenced to make poetry out of her own life and the life of her race.

So now in her poems we find the most vivid and colorful presentments of India's rich civilization ever put into English. Her exquisite art gives to the lines of "Palanquin-bearers" the very swaying of the gay litter that carries the light body of the lovely Indian maiden; the wandering singers, the weavers, the corn-grinders, the snake charmers, the young brides with henna-dyed fingers, the harvesters, the gipsies, the widows going to suttee with passionate joy—all these figures pass before the eyes of the reader of "The Bird of Time" and "The Golden Threshold." And with them appear other figures—figures from the tremendous pageant of India's past and India's mythology—the Princess Zeb-un-nissa, the kings and queens whose splendor is splendidly entombed at Golconda, Savitri, Sita, Draupadi, Damayanti and Sakuntala, the five immortal women of Sanskrit legend, Radha the fairest of milkmaids, and Lord Krishna himself, playing on his bamboo flute an idyl of love and spring.

With what consummate art she conceals her art, suiting the rhythm to the thought with unfailing appropriateness! A memorable example of this is her "Coromandel Fishers"—a song which gives us in its lilting music the wash of the waves and the recurrent stroke of the oars, and almost the salt smell of the spray. How triumphantly rise the voices of the grateful men and women in "The Harvest Hymn," how veritably do the rhythms of the poem called "Indian Dancers," suggest the graceful movements of the lithe brown bodies in their glittering garments of purple, and the "tinkle and tread of the slumber-soft feet"!

Like every true poet, Sarojini Naidu makes her songs out of her own life as well as out of the life about her. She has written a charming sequence of poems to her four little children, Jaya Surya, Padmaja, Ranadheera, and Lilamani. Her love lyrics are no mere exercizes in versification, they are the expressions of a great and noble passion.

But the poem which seems to me to be the most complete revelation of this true poet's soul is not a love poem, nor is it a study of the streets or forests of her dear native land. It is a poem called "Guerdon"—an address to the master of songs and singing, craving for all the members of creation the boons appropriate to them, and for the poet herself "the rapture of song." In that phrase we have the perfect definition of Sarojini Naidu's contribution to literature, the secret of her genius. Not for her the laborious effort to force upon the world a philosophy, not for her the task of deliberate description and interpretation, for her only the spontaneous expression of inevitable beauty, for her "the rapture of song"!

New York City

WHAT'S WRONG WITH LEGISLATURES?

BY ELWOOD MEAD

Criticism or rather complaint of our legislative methods is common enough in this country, but for the most part it comes from those who have no better way to suggest unless it be some novel scheme that they have happened to think of and that nobody has tried. The author of the following article, however, has the exceptional, possibly the unique qualification of having many years experience in the governmental affairs under the American and British flags and is able from personal knowledge to point out the weakness of our system and how it may be remedied. Mr. Mead has served in the capacity of irrigation expert in Colorado and Wyoming and at Washington. Later he was called to Victoria, Australia, to take charge of the extensive irrigation and colonization projects there.—THE EDITOR.

THE weakness shown in the American conduct of public affairs arises chiefly from our unthinking optimism which clings to the belief that the action of a multitude of individuals even if moved by a thousand sources of ignorance or short-sighted selfishness will give as good results as carefully thought out, purposeful action. The greatest menace to our future is the pernicious carelessness with which we disregard manifest dangers and continue to drift instead of trying to find out where we are going and why we are going there.

Nowhere are these things more clearly shown than in our methods of making and enforcing laws. In this we have retained without material improvement an organization adopted when parliamentary government was in its infancy. It is wholly unsuited to the complex requirements of the century when the Government is being used more and more as an instrument of direct service. Other countries have recognized this. Great Britain has had reform after reform until its method of preparing and enacting bills is as superior to their procedure of one hundred and fifty years ago and as superior to ours of today as the motor car is to the ox cart as a means of travel.

In business and in industry no nation is quicker than America to discard an old machine or system to adopt a new and better one but when it comes to legislation there is an altogether different record.

The forty-eight states of this country have just elected in all about four thousand members of the state legislatures. They will soon assemble to turn out a new grist of laws and provide for the running expenses for the next year or next two years. If these men had been chosen to operate railroads or factories each one would have been required to show that he was qualified for the task, that he either had practical experience, or knew something of its theory. This greater task of government, which touches the lives and welfare of the people more intimately than banks or railroads has equal need of competent and efficient direction.

It would be interesting to know how many of those elected have any adequate knowledge of their state's needs or definite plans regarding the work ahead of them. I happen to know two of the recently elected members. One is a university graduate who has served in previous legislatures. He has the benefit of some knowledge of the theory of governments and of the working of the legislative machine. His record is good. But this did not insure his election. It required the hardest kind of work on the part of his friends to prevent his being defeated by a candidate without previous experience in legislation and with no apparent equipment for the duties of a legislator.

The other member is a carpenter. This is his first session. He knows nothing of the large problems of the state and has no concern about them. To him politics is a pastime. His chief idea is loyalty to his party and to help it down the other side, exactly as he supports the local baseball team against those from other towns. His feeling of partizanship has no connection with the purposes and policies of legislation. It is doubtful if this member could prepare a bill of any kind if he worked on it the whole length of a session. He has, however, no intention of attempting it, and yet it is certain that when the records are made up his name will appear as the introducer of a considerable number of bills. He is canvassing now for such a grist, telling his supporters, "If there is anything you want done, fix up the bill and I will introduce it." And all over this state and probably all over the country bills are being incubated by the hundreds and will in time be dumped into the legislative hoppers of the several states without any coherent idea of what is to be accomplished and with the final outcome of the session quite largely a matter of blind chance.

At the last legislative session in California 2877 bills were introduced. Of these the governor vetoed 227 and 771, an appalling number, became laws. The Session Laws of Arkansas for 1915 comprize a book of 1046 pages and of Massachusetts 1100 pages. Think of the tremendous adjustment it requires to have such a mass of inchoate and illy digested laws added to the existing accumulation.

The worst feature of these laws is that most of them are of trivial importance, prepared to serve local or individual interests. They do not touch the great social and industrial questions which are becoming so important.

In this state there is need of legislation which will provide a better vocational training, so that we will equip fewer clerks and more expert artizans. We need some definite policy to control the diversion and use of streams for power and irrigation. We need a better system of land colonization, one which will improve the conditions of the farm laborer and lessen the menace of non-resident ownership and tenant farmers. The subject of social health insurance, the modifications of our laws for the regulation of public corporations are all matters of anxious thought in the every-day life of the state. But legislation on any of these questions cannot be undertaken lightly. It should be based on long and careful investigation. Those who prepare bills need to understand conditions here and to know what other countries have done in order that the world's experience may be utilized. Such laws can only be prepared by men of ability and special training, but if such men are members of the legislature, it is accidental.

Our political system does not encourage men to prepare for public service because it gives no hope of a career. The sessions of the state legislature are regarded as a casual and rather disagreeable incident to be gotten rid of as quickly as possible. In some states the time is restricted to sixty days. In all it is too brief to permit of the work being properly done. The pay hardly meets the members' expenses while at the State Capitol. The position of legislator is held in so little honor that ambitious young men are discouraged from taking interest in public affairs. Those who seek nominations usually do so for personal reasons.

When these members meet, their ability to perform the tasks that need to be accomplished will be restricted by their primitive conceptions of their duties and responsibilities. But this is not the most serious obstacle to effective service. The other weakness in our legislation is that there is no centralized authority for directing the business of the session. This is because of our unfortunate committee system, under which the mass of bills are considered in private, with seldom a record of votes, with party lines not closely drawn and with no definite program of legislation to be carried out by the party in power or accountability on the part of the government for failure to have such a program. The members of the legislature cannot acquire the information needed to deal wisely with the bills that come before them. They have no time. They have to work on the unending grist of new bills. The result is that obsolete methods and wasteful practises are perpetuated simply because legislators do not have the opportunity of informing themselves sufficiently to make effective reforms.

In this state the last legislature appointed several separate commissions, most of them to work without compensation, to investigate different industrial and economic questions and to submit bills covering these subjects.

The objection to these devices is that they are neither economical nor effi-

cient. They take too much time for the results attained and they do not overcome certain essential defects in our legislative organization. The commissions in this state have spent months studying conditions. They will bring their information and conclusions to an entirely different body of men than the one which provided for their appointment. Instead of this work being done by unpaid substitutes, all such investigations should be made by the legislators themselves. Then matters could be properly presented to the legislative body by some one having first hand information.

Such an arrangement is not now possible because in most states the members of the lower house are only elected for a single session, whereas they ought to be elected for at least three. This would give time to prepare themselves for their duties, to become informed regarding the people's needs. They cannot do this, however, unless there is an entire change in the compensation. A law maker in this country ought to have more responsibilities and larger duties than are now imposed on him, and the salary ought to correspond. Instead of a meager *per diem* for the few days of the state session, members ought to be paid an annual salary and be required to give their entire time to legislative duties. In the Australian states, which have a smaller population and far less difficult legislative problems, parliament members receive from $1500 to $1800 a year. Members of the Ministry receive from $4000 to $6000 a year. The benefits which the people of Australia have derived from the enlargement of the activities of their government make these salaries one of the best possible investments.

In their organization and operation our state legislatures are archaic, obsolete and unworkable. They not only need to be reformed, but to be reconstructed. Instead of our decentralized, irresponsible committee system we need a centralized, responsible authority, like the cabinet of the British Government or of Canada, which will determine what laws are to be considered and cast aside without mercy the mass of trivial and irrelevant bills that now discredit our legislative records and are such a dangerous nuisance to the business in this country. Some provision must be made for the proper preparation of important bills. In nearly every government except our own the ministry acting as an executive committee of the legislature works continuously between the sessions considering government affairs and perfecting measures to be introduced at the next session. Some of the important industrial measures are often worked on two or three years before being introduced. We need in this country what other efficient governments have—a committee representing the party in power which will determine the bills that are to be considered and an officer having the legal knowledge to put all bills considered into proper legal form and determine in advance their effect on existing laws.

Berkeley, California

Prof. Anderson's Supper

Which Millions Have Adopted

Prof. A. P. Anderson, the expert on foods, invented a way to explode food cells in grain.

Each wheat or rice grain contains millions of food cells, which should be broken to digest. Cooking breaks but part of them. He wanted all the food cells broken, to make every atom feed.

So he steam-exploded grains of wheat and rice. He puffed them to eight times normal size. Whole grains were thus made wholly digestible. And the world obtained ideal grain foods.

They are Like Bubbles

Puffed Wheat and Puffed Rice are like bubbles. They are airy, flaky, crisp and porous. The flavor and form are delightful.

Of course, they are breakfast dainties. They are served with cream and sugar, or mixed with any fruit. No other morsels half so choice are found on morning tables.

But they are supper tit-bits too. In millions of bowls of milk or cream they are served in place of bread.

These are ideal good-night dishes. They are whole grains, with all the whole-grain elements. They easily and completely digest. And their toasted, fragile crispness makes them fascinating foods.

You will not let a day pass without them when you learn how people like them.

Puffed Wheat **Puffed Rice**

and Corn Puffs

Each 15c, Except in Far West

Like Nuts

The fearful heat gives Puffed Grains a taste like toasted nuts. They are often used like nut meats. Folks use them in candy making, and as garnish for ice cream. Mothers douse them with melted butter for the children to eat at play.

Puffed Wheat, Puffed Rice and Corn Puffs all taste like confections. But the flavor differs vastly. You should serve them all. Keep a package of each on the pantry shelf so your people may have a variety.

THE NEW BOOKS

GREEK WAYFARERS

It was evidently a labor of adoration for Edwina Stanton Babcock to write the verses in her volume of *Greek Wayfarers*. She wrote them, it appears from almost every line, not because she felt she must write poetry but because she knew she must write about Greece. Miss Babcock is an able and skilful writer of rhythmic, imaginative, colorful verse. What is more she is an ardent and reverent lover of the Greek tradition, the Greek spirit and the Greek land. She has wandered thru Greece; she has immersed herself in its present charm and picturesqueness; she has studied and contemplated and dreamed over the richness of its past. She has woven the two into her songs, but the glowing olden thread is always the dominant note in the pattern.

We are moved to quote two of the poems from Miss Babcock's book. They are fair—perhaps a little more than fair—specimens of its quality:

THE BLACK SAIL

How did it seem, that warm thyme-scented
day
When emerald figs hung swelling in the
dark
Rose-nippled glooms of laurel and of bay,
And pomegranate flowers burned their
spark
Thru cypresses, to wait 'neath temple
frieze,
Scanning the hermless highways of the
seas.

Watching for one white canvas far away,
And when the morning seemed to grow
so late,
Going, amaracus and grapes to lay
With reeds and gums on Nike's stylobate,
Muttering: "'Tis the Day—he cannot
fail!"
Then on a sudden, seeing—the black sail!

We cannot agree with those critics who find fault with such a word as "hermless." As soon as one recalls that a "herm" was the statue of Hermes that marked the highways of old-time Greece, "hermless" becomes a vivid poetic epithet. The other bit of verse is in quite a different tone:

THE LITTLE SHADE

No longer that gray visage fix,
Charon,
Asking me how I come to mix
With this pale boat-load on the Styx,
Charon.

I am so very small a Shade,
Charon,
Holding the vase my father made
And toys of silver all inlaid,
Charon.

Ferry me to the golden trees,
Charon,
To isles of childish play and ease
And baths of dove-like Pleiades,
Charon.

Ferry me to the azure lands ,
Charon,
Where some dead mother understands
The lifting of my baby hands,
Charon.

When one has received such abundant pleasure at a writer's hands, it is perhaps ungracious to pick out a tiny slip for criticism. But we cannot forbear to chide Miss Babcock for rhyming "ten cents" with "antecedents"—even tho Browning himself did sometimes commit similar atrocities.

Greek Wayfarers, by E. S. Babcock. G. P. Putnam's Sons. $1.25.

THE GREATER WAR

A notable book is Israel Zangwill's *The War for the World*, which contains some forty odd essays and papers, most of them concerned directly or indirectly with the present conflict. The war to which the title refers, however, is the ceaseless war of civilized justice and reason against force. While this book is pro-Ally in sympathy, it is still courageously frank in criticism of certain "Prussian" tendencies in England's conduct under war conditions. Bristling with ideas, it throws a most interesting light on British thought and feeling at the present hour. Clear, hard thinking thruout, and finished literary art mark the work. Its author will be heard with special attention where he speaks of the Jews in relation to the present European struggle, of the woman's movement in England in the same connection, and of the relation of literature to the war.

The War for the World, by Israel Zangwill. The Macmillan Company. $1.50.

ELLA FLAGG YOUNG

In 1895 a woman of fifty, with more than thirty years of unusual success in building the schools of a city, entered a university seminar and began a new period of twenty years' service.

Probably Ella Flagg Young's greatest services have been in perceiving and forwarding possible advances in educational democracy. She learned much from Dr. Dewey and supplemented him in his undertakings, nowhere with greater significance than in the development of his elementary school experiment at the University of Chicago which opened a new period in education. She supported the elementary teachers in their efforts at organization when other leaders failed to see the necessity of this step for educational progress.

MRS. YOUNG

The same spirit appeared in her work in the National Education Association, the Illinois State Board of Education and the administration of the Chicago schools. She was a practical politician, but did not hesitate in 1899, for instance, to resign from her position as assistant superintendent when an issue arose which she felt must be resolved in this manner.

Dr. McManis has succeeded in giving the impression of a strong personality accomplishing a great work oftentimes in the face of serious opposition. Those who know Mrs. Young in her private life could wish that a chapter had been given to her rare power in organizing a home life which afforded a base of supply for the strength required and shown in her public service.

Ella Flagg Young, by J. T. McManis. Chicago. A. C. McClurg & Co. $1.25.

THREE STUDIES OF LIFE

Ethel Sidgwick's new novel, *Hatchways*, is a skilfully written narrative of a young French aviator's social adventures in England. Unlike many novelists Miss Sidgwick does not make a flimsy fairy tale of the life of the best English society. She contrives to give us a sense of the normal humanity of this society, and by the subtle, effective use of details and by adroitly presented situations the men and women of the story are successfully characterized and differentiated. But *Hatchways* lacks the vigor of thrilling event and powerful theme. We cannot build skyscrapers with shingles.

The Keys of the City, by Oscar Graeve, is a story of the bitterness and humiliation faced by two young lovers of idealistic tendencies because they began life in an unfortunate social environment and without adequate preparation for usefulness. Bewildered by circumstances, they make compromises with their love and with their ideals and are led farther and farther away from each other and thru sloughs of unloveliness. When they finally come together, in a way not altogether satisfactory to the thoughtful reader, we feel the poignant pity of it, we are angry at the futility of struggles for success that only shatter dreams and ideals. Here is a wan light where should have been the full glory of a satisfying love. The author understands cause and effect.

The Nest Builder, by Beatrice Forbes-Robertson Hale, is really the story of the race told in the lives of one woman and one man. Mary is the ideal racial woman, strong in labor and self-reliance, brave and compassionate, she is never

the lure of femininity, but always womanhood, the oracle and the end. Her mate is a genius, brilliant and inconstant and restless, a lover of strange honey. He is man, the conquerer, lording it where he wills, but he is also man, the child, returning, after life has broken him, to the quiet nest, the brooding wings, the inward victory. The story is an eloquent appeal from thin-souled, callow individualism to the pride of racial sacrifice and strife and glory.

Hatchways, by Ethel Sidgwick. Boston, Small Maynard & Co. $1.40. *The Keys of the City*, by Oscar Graeve. The Century Co. $1.35. *The Nest Builder*, by Beatrice Forbes-Robertson Hale. F. A. Stokes Company. $1.35.

AT HOME IN BERLIN

The Hausfrau Rampant, by Dr. Julius Stinde, has been translated by E. V. Lucas. Such a book as this condensation of "The Buchholz Family" comes with refreshment at this time of war and bitter reprisals. We had almost forgotten that the Germans are essentially a gentle, domestic, sentimental people; lovers of quiet pleasures, fond of flowers, and music and family festivals. Frau Buchholz is a typical German housemother, vitally interested in her kitchen, her daughters' chances for suitable life-partners, and in the orderly processes of middle-class life. Her match-making schemes are ingenuous, her bits of sentiment are whole-hearted, and her views of life not to be scorned as they result from experience and occasional sound sense. We find German fun sometimes elephantine, but it is certainly a relief again to get glimpses of the German at home, and at peace with the world.

The Hausfrau Rampant, translated by E. V. Lucas from the German of Julius Stinde. George H. Doran Co. $1.30.

INSIDE THE HOUSE

Surely one of the most interesting of the season's books is H. H. Adler's *New Interior*. You may not agree with its theory; you may not like its examples of "modern decoration for the modern home,"—this making of a room a work of art in itself, instead of the receptacle for a more or less miscellaneous collection of articles grouped together for use, for association and for intrinsic beauty. But the chapters and the pictures will set the house furnisher thinking, even questioning the use or the beauty of some conventional purchases.

It is the most intelligent study we have seen of the new fashions in house decoration. If it be extreme—and it is—it gives reason for the faith that is in it, and this reasonableness reassures us. After zebra stripes have faded; when the reincarnation of flower painted "cottage furniture" has returned to kindly obscurity; when we cease to regard color as the present fiction writer regards fact, any fact, as a virtue in itself; that is, when we have learned to discriminate between novelty and beauty, there should remain to us a great gain in simplicity, and a taste for winning beauty rather in our needful furnishings than in ornaments.

The New Interior, by H. H. Adler. The Century Company. $8.

The NEW YEAR *and the* NEW KNOWLEDGE

NOWADAYS in order to secure the *fullest* measure of success, it is necessary to know something about many things outside of your own profession or business, especially about the *new knowledge* of which the present is so fruitful.

It is therefore worth while to be well posted and *keep* so, and the first requisite is a *comprehensive, up-to-date, practical* general reference-work—just such a work as the *New Second Edition* of

The Great Question-Answerer

Made in America; it covers the world

THE NEW INTERNATIONAL ENCYCLOPÆDIA

STRONG POINTS:

1. **Accuracy:** Every important article written by specialists.
2. **Authority:** Can be quoted without fear of successful contradiction.
3. **Comprehensiveness:** Covers a wider field than any other general reference-work—80,000 articles, 30,000 more than in any other encyclopædia.
4. **Lucidity:** Written in language so plain that even the young folks can understand.
5. **Attractiveness:** Not only *educational* but *attractive* and *entertaining*.
6. **Illustrations and Maps:** Carefully prepared to *illuminate* and *explain* the text.
7. **Convenience:** Printed on thin paper—not *too* thin but easy to *handle* and to *leaf*.
8. **Arrangement:** All subjects alphabetically arranged and *easy to find*.
9. **Pronunciation:** All except the most common words made clear by a simple phonetic system.
10. **Bibliography:** Every important subject supplemented by a full list of books that may be consulted.
11. **Courses of Reading and Study:** Affording specialized help toward *self-instruction* in leading branches of knowledge.
12. **Research Bureau Service:** Provides subscribers the *free privilege* of information from our Editors on any encyclopædic subject.

Not an ordinary revision but an entirely new production.

THE END OF PUSSY'S TAIL

IN our issue of December 4 we published something in the form of vers libre which was entitled "Puss and Her Tail," and was accredited to the authorship of "H. O. Nosreme." The first and last sentences read as follows:

I make! Oh, no!
I clap my hands
In infantine joy and amazement
Before the first opening to me
Of this august magnificence.
. . . . . .
What imports it
Whether it is Kepler and the sphere;
Columbus and America;
A reader and his book;
Or puss with her tail?

We prefaced this with the request that our readers tell us frankly what they thought of it and of "free verse" in general, and we are much indebted to those who were kind enough to comply, for their letters form an interesting contribution to the question, now so much discussed, of the psychological effect of the free verse form. We print below some quotations, but we have thought it best under the circumstances to omit the writers' names.

We are obliged now to confess, what some of our correspondents recognized at sight, that the lines were taken from Ralph Waldo Emerson's famous essay "Experience." The new linear arrangement we owe to Miss Ellen B. Sherman, of Weston, Massachusetts, but the quotation was otherwise reprinted without change even of a punctuation point.

As I haven't a complete set of Emerson by me, will you kindly impart volume and page, saving weary hours of tracking "Puss" to her lair? What does "H. O." stand for?

New York

Since "Hplar Odlaw" has an awkward as well as a suspicious look, it was thought best to use the initials when the names are reversed. We are sure Mr. Emerson would have preferred it so.

I liked your puzzle department after I got over being indignant at "Nosreme" for plagiarism of that wonderful sentiment from "Experience." I would be thankful if a page each week could be devoted to that great writer's works.

Brooklyn

Several of our correspondents take occasion to send us contributions of their own as a substitute for Emerson:

I think the space could be much better utilized by reproducing the enclosed sermon.

Iowa

Perhaps the joke is on Emerson. Enclosed please find two manuscripts in rimed verse, written by the undersigned.

Colorado

We should explain that our referendum was not intended as a hoax, but to test a theory of ours that some objected to free verse and some admired it simply because of the novelty of its form without respect to its inherent merit. Some of the letters received confirm this theory in our minds.

Don't make a fool of The Independent by publishing any more "Puss and Her Tail" matter. What has become of Pebbles? Surely that column never failed to interest.

New York.

This form of verse is in my judgment to poetry what Mutt and Jeff, the Katzenjammer Kids, etc., and particularly the Cubist pictures are to Art. I have no use for it.

Ohio

I have enjoyed your publications of "free verse" very much, especially Mr. Nosreme's. Let us have more of it.

Ohio

Really, Mr. Editor, I just can't see why you publish this vers libre. I don't deny that I can appreciate some of it, for here and there one stumbles upon a fragment that has something worth while in it. And, once in a long while, the form adds to the effect or the language adds to the vividness. But can one justify the publishing and reading of vers libre on that ground? Cannot equally good arguments be advanced in behalf of the trashy novel or the "cheap" moving picture show? Yet most of us do not waste our time on these. We read only the best novels and see only the best "movies" because life is too short to hunt for a needle of truth or beauty in a haystack of worthless and commonplace encumbrances.

But, say,—if *you* see anything in it worth while, you might publish a course of instruction aimed at making *us* see it, too!

Pennsylvania

If the author of "Puss and Her Tail" intended to convey a meaning, to express something he had in mind, won't you please ask him to translate it? Perhaps then back woods folks like myself could understand what he was trying to say.

Pennsylvania

It is unfortunately too late to get the author to translate it, but even when he was alive he would never do it, tho many folks, not always from the back woods, beseeched him to.

"Puss and Her Tail" has, as any one may see by inspection, the correct shape of a comb, minus some of its teeth, which we are told is characteristic of this sort of verse. It also has a coherent idea running thru the lines which is more than can be said of some of the vers libre in art, that comes in under the head of "Modernism," "Cubism," "Futurism," "Synchronism" and other schools. But when you have said that you have said all.

"Puss and Her Tail" lacks the supernality of Thomas Gray, the life and movement of Rudyard Kipling, the sentiment of Eugene Field and even the charm of Ben King or Arthur Guiterman. Of course a pussy's tail is a very important thing, in so far as the pussy herself is concerned, and merits the most serious consideration. Mr. Nosreme has lost the opportunity that lay within his grasp of producing some heroic verse, he has neglected to seize upon an epic and he has merely groveled in vers libre without rime or reason. He has played with the muse and lost.

New York City

I have read with interest—but without thrill—the bit of free verse by Mr.—or is it Miss or Mrs.?—Nosreme in the current Independent. This "free verse," I submit, is not poetry. Not because it is "free," but for quite other reasons. Interested as I am in the idea which Mr. Nosreme presents, I am left cold by his presentation of it. Poetry—as is poetry—does not leave me cold. It warms my heart and sends a pleasant glow running thru my emotional processes.

When a "piece" does not produce this glow, even tho it be cast in the most iron-bound of verse forms, I deny it the name of poetry. When it does vivify my emotions and raise their temperature, I know I am reading poetry, no matter what its eccentricities of meter and rime and form in general.

Mr. Nosreme's "piece" is good prose; but it isn't even poetic prose.

Mr. Nosreme should stick to his prosaic last, unless he can touch the old-time lyre of the formal strings to better effect than

he can the lawless instrument of the modern day.

New Jersey

Our New Jersey correspondent seems to have got his last and his lyre mixt, but we agree with him that the hightening of the emotional temperature is a good test of good poetry. Some critics have denied to even Emerson's rimed verse the title of poetry on the ground that it left them cold.

I am an old woman in my eightieth year, and all my life I have delighted in poetry. My personal test of its value is this, Does it fix itself in the mind or when once read is it passed by and forgotten? I venture to say that no one returns again and again to such vers libre as "Puss and Her Tail" and commits it to memory. But take Tennyson's "Ring Out Wild Bells," Bayard Taylor's "Song of the Camp" or in later years "Lydia Is Gone This Many a Year," by Lizette Reese; they haunt the memory and will not be forgotten.

Perhaps I am mistaken and *vers libre* is not meant for poetry. What is it then and why should it take up so much room on the printed page?

California

The point raised in this last sentence is one that appeals to every editor. If the price of paper keeps on going up the vers librist movement must be supprest somehow.

Rime and rhythm may not be essential to poetry, but if they help to highten our emotion they should not be lightly discarded. Words have a meaning beyond the definitions of the dictionary, and when properly grouped leave a deep impression on the mind. In this respect the recent writers of free verse do not seem to have made the best use of their enlarged opportunity.

Realism has taken the place of idealism, and with distinct loss. The idealism of Plato has not yet faded from the world. Man has not yet

"Forgot the glories he hath known
And that imperial palace whence he came."

Poetry, as it seems to me, should at least give us glimpses of the spiritual life that is over all and at times touches us all.

Massachusetts

We are disappointed that our Massachusetts correspondent found Emerson deficient in idealism and spirituality.

If this late aberration to which so many are becoming addicted has any relation to art it is in the sometime vision or thought they mangle and offer in an odious and unacceptable form—in rare instances their intent may be well, but they, with the crude amateur, should not be allowed to demolish all standards of beauty and form.

Illinois

Since you invite opinions, and assure us that both you and the author of "Puss and Her Tail" are proof against hurt feelings, I venture to ask, "*Must* you publish vers libre?" And is that selected on the same ground as the "Remarkable Remarks"? Or possibly the office boy is really guilty in this case?

As to "Puss and Her Tail," I do dimly perceive a thought hidden behind its formlessness, but, while I would not make "odious" comparisons, could you, just for a moment, place the expression of that thought beside the ordered beauty and dignity of Tennyson.

New York

We can remember the time when The Independent was publishing the verse of an unknown writer by the name of James Whitcomb Riley and was receiving the same sort of letters it receives now whenever it publishes free verse.

The Riley stuff was not, as our distrest correspondents pointed out, the sort of thing hitherto called poetry and

Best and Cheapest Service in the World

Here are some comparisons of telephone conditions in Europe and the United States just before the war.

Here we have:

Continuous service in practically all exchanges, so that the telephone is available day and night.

A telephone to one person in ten.

3,000,000 miles of interurban or long-distance wires.

Prompt connections, the speed of answer in principal cities averaging about 3½ seconds.

Lines provided to give immediate toll and long-distance service.

In Europe:

Nine-tenths of the exchanges are closed at night, and in many cases, at mealtime.

Not one person in a hundred has a telephone.

Not one-eighth as many miles in proportion to population and territory.

In the principal cities, it takes more than twice as long for the operator to answer.

No such provision made. Telephone users are expected to await their turn.

As to cost, long-distance service such as we have here was not to be had in Europe, even before the war, at any price. And exchange service in Europe, despite its inferior quality, cost more in actual money than here.

Bell Service is the criterion for all the world, and the Bell organization is the most economical as well as the most efficient servant of the people.

Tennyson or Wordsworth would never have written it. We do not wish to base any argument on this. We merely happen to recollect it.

The publication of "Puss" brought us several excellent discussions of the value of verse and its relation to prose. We must quote from two of them at some length:

For one, I think it well worth a place in this notably good issue of The Independent—the thought is at once simple and searching, and the expression of it in every way felicitous. But when it comes to calling it verse, why, unless one is willing to sweep away the distinctions of a well-established terminology, he feels inclined to protest. In spite of the capital letters at the beginning of its lines, I can see nothing in it, hear nothing in it, but pleasingly rhythmical prose; nor would any one else, I take it, were the composition to be printed in the form of a prose paragraph. If giving it the present form has changed that prose into verse, the same process can transmute any bit of prose whatever. I take from a notebook in my desk this random record of travel, and without the change of a single word transcribe it in vers libre form:

As we neared Cologne,
At seven-thirty last evening,
The sun set
Gloriously—
A huge ball of fire
That made a path of crimson light
On the surface of the stream.
Above
Was the crescent moon,
And ahead, thru the gathering shadows,
The great spires of the Cathedral
Loomed.

Am I, then, what one of your contributors a few weeks ago so happily called a "verse libertine"? As regards this evidence, at least, I can prove an alibi, on the basis again of a generally accepted terminology; for verse is verse and prose is prose, and never the twain shall meet—the difference being that the rhythm of verse is the regularly recurring rhythm that we know as meter, while the rhythm of prose is continually varied. Walt Mason's lucubrations are verse, because they are metrical, and printing them solid cannot make them prose; "Puss and Her Tail"—Montaigne's cat in another ovation—is prose, for its rhythm is not recurrent, and printing it open cannot make it verse, free or otherwise. That its content is poetic one freely grants, but that is another matter, outside the present discussion.

One might recall in closing that the bits of composition which masquerade in these latter days as vers libre were popular a dozen years ago under the name of "pastelles in prose"—a far more accurate designation.

Vermont

All poetry is limited to the demands of human nature, the mental make-up of the individual. "Those chords which vibrate to the tenderest emotions" (so painfully experienced by Mr. William Guppy) have more of reality in them than appears superficially. Man acts according to his vibrations, vitally uniform waves and intervals of stress and give; he not only responds to vibrations—he himself sets things to vibrating. We walk, run, fly, metrically. Show me the man that takes step No. 1 twenty-two inches in one second, No. 2 twenty-four inches in three-fourths of a second, No. 3 twenty inches in a second and a half, No. 4 twenty-six inches in half a second, until he gets somewhere. Why, we are *regular* measuring worms! Pedometers are made on the supposition that a man will take fairly even, uniform steps, *metred* steps. A troop breaks step across a bridge. A lone dog *ought* to, but he doesn't. Even he, dog that he is, sets up a powerful vibration. Suppose you and I take a walk across some bridge, you no doubt thinking about the picturesqueness of what you consider uphoppled lines, and I galloping with The Highwayman himself. You are the one who is going to break step, and I the one who is to set the whole structure in motion, and, if I were a poet, the world itself. The intellect does not vibrate. It grinds.

Most "free verse" I am inclined to think, is didactic. There is some metrical verse that should be "free verse." John Masefield's "The Enduring Good" is an example of that. There is no reason either in his meter or in his rime. Well lined "free verse" might bring out the underlying rhythm. Mr. Nosreme's "Puss and Her Tail" is, of course, didactic in tone. It makes me think beautifully, but nevertheless, abstractly. He has chosen well its form. I pick up Henry Van Dyke's "The Name of France." It makes us Americans feel like—well, it makes us *feel, feel, that* is the point, it makes us *feel*—which "free verse" has, it seems to me, so far been incapable of doing effectively.

The end of a verse line is an invisible punctuation. The mind learns to pause. Read true verse and you will discover it so. An apt illustration is found in Robert Cameron Rogers' "My Rosary":

"I tell each bead unto the end—and there
A cross is hung."

We men (generically—admit the women!) we men love motion. We women (scat the men!) love emotion. Let us keep the two in poetry, in the highest plane of poetry, and call verse, verse, and prose, prose, however poetic the latter may be. We Anglo-Saxons make our words double-faced hypocrites.

One great defect of "free verse" is that, having been accepted sincerely as *verse*, it sprawls disappointingly upon being read, and thus lacks somewhat in force. There is rhythm in it just as in metred verse and in prose, but there is no place where metre-stress and rhythm-stress may meet in one great effect. "Free verse" is all too apt to straggle out and haul up unexpectedly—it has not the delightful assurance and anticipation of the measured foot.

With any one who doesn't like metred verse, or prefers "free verse" to it, and writes accordingly, I have no quarrel. But I do have a difference with the man who is attracted to "free verse" seemingly only because the printer has lined it up in imitation of metred verse. (How many editors, I wonder, have heretofore accepted "free verse" that came to them in typed prose form, or would have accepted it if it had so come to them?) But not a very great difference, for I am an admirer of the printer's art and believe he has made improvements within even the past five years that he ought to be praised for. Library books tell the tale. I like good printing, and I like to have poetic prose lined according to the rhythm universal to prose and poetry. To that extent "free verse" pleases me more than poetic prose. Poetic prose—let us *see* the rhythm in it—*visibly!*

But best of all I like that poetry which is all aquiver with the touch of life. To my mind "free verse" is like those coasters or scenic railways met with in pleasure parks. You never know when you are going to be plastered into your seat by a forced, well-nigh perpendicular gradient. Or be compelled to let your (bring in that "invisible punctuation"), your, mortal insides grovel to the God of Gravitation. Give me the lovely ripplets of the sea—and now and then some mighty rhythmic swell at which all the little waves—and I with a lightsome heart—shall laugh in glee.

Washington, D. C.

On the whole our readers seem to have taken "Puss and Her Tail" in quite the proper spirit. Some were attracted and some were distracted by the strange form, but in spite of this most of them recognized the beauty of the language and were willing to accept its message for what it was worth regardless of typography. This is as it should be, for as Kipling says:

There are nine-and-sixty ways
Of constructing tribal lays,
And every single one of them is right.

PEBBLES

Jinks—What is the limit in this club?
Binks—The food.—*Last Word.*

The order of the day: more men and less menus.—*London Opinion.*

She—I could dance to Heaven with you.
He—Can you reverse.—*Lehigh Burr.*

Song for the new Food Inquisitor: "Tell me where is fancy bread?"—*Passing Show.*

Sad is the lot and sad is the portion of the restaurant patron, now that his portion is no longer a lot.—*London Opinion.*

"They say the King of Denmark leads a dog's life."
"Of course. He's a Great Dane."—*Lampoon.*

Soph—Have you a minute to spare?
Fresh—Sure.
Soph—Tell me all you know.—*Syracuse Orange Peel.*

"I hope you will come out ahead, Bobbie. What are you being examined at this time of the school year for?
"For adenoids."—*Early Bird.*

"The automobile business," writes Old Becky Scharps, "is not stable." "Maybe not," madwags A. G. B., "but it's garage."—*F. P. A. in the New York Tribune.*

Hamilton College is an alma mater sed ingrata. "We shall be glad," says *Hamilton Life*, "to hear of the death of any of our alumni.—*F. P. A. in New York Tribune.*

I used to serve in Serbia,
But was chased from my domain—
The Huns have got Roumania,
E'en there I can't roumain.
—*Harvard Lampoon.*

Captain (examining uniforms which are expected to be marked with the owner's name)—What does this mean, my man? Your name seems to be obliterated.
Private (in the rear rank)—No, sir. It's O'Brien.—*Saturday Night.*

Professor Fudge—What do you mean, Mr. Jones, by speaking of Dick Wagner, Ludie Beethoven, Charlie Gounod and Fred Handel?
Jones—Well, you told me to get familiar with the great composers—*Musical America.*

Absolute knowledge I have none,
But my aunt's charwoman's sister's son
Heard a policeman on his beat
Tell a housemaid in Downing Street,
That he had a brother who had a friend
Who knew when the war was going to end.
—*Christmas Card.*

The editor was pretty mad.
"Are you the chump who wrote up that recruiting ball?" he said to the quaking reporter. "Oh, you are? Well, look here. 'Among the prettiest girls in the room was Colonel Oldnut.' Nice rubbish, that is. The Colonel's a man. I suppose, isn't he?"
"He may be," said the reporter brazenly, "but that is where he was."—*New York Times.*

Sir: During the past summer, in my travels about town, I noted the following signs:
"Healthatorium." "Pantatorium."
"Hospital for sick clothes."
"I dye to live."
"Don't chew the rag; chew our elegant 20-cent meals."
"Umbrella Surgeon."
"Eat." "Eatery." "Eatateria."
"If your feet ache bring them in."
"Our sodas are the best—soda all say."
"Our eggs are like Cæsar's wife."
Could fill pages, as these signs are numberless. Isn't it about time to organize a society for the suppression of these atrocities? The sign plague and the phrase "He kept us out of war" are fast bleaching my hyperion forelock.—*Chicago Tribune.*

NABISCO
Sugar Wafers

WHEN friends drop in for a little chat, their visit can be made the more enjoyable by tempting refreshment. Try a few Uneeda Biscuit with peanut butter or marmalade, followed by those exquisite dessert confections, Nabisco Sugar Wafers, and a cup of tea or cocoa. Your guest will appreciate your good taste and thoughtfulness. Nabisco Sugar Wafers are sold in ten-cent and twenty-five-cent tins.

ANOLA—Chocolate-flavored sugar wafers with most delightful, sweetened, creamy fillings. Serve with any dessert or beverage, or as a confection.

NATIONAL BISCUIT COMPANY

What 15c Will Bring You from the Nation's Capital

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published **at the Nation's Center,** for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new Friends. **The Pathfinder, Box 39, Washington, D. C.**

THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTIETH YEAR
A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.
WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.
ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life.
You are invited to come and see for yourself. Catalog sent on application.
ALVAN E. DUERR, Headmaster

TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

PINEHURST NORTH CAROLINA

CAROLINA HOTEL and Cottages open for the Season
HOLLY INN, BERKSHIRE and HARVARD open early in January

ANDIRONS

MARBLE, STONE and WOOD MANTELS

Wm. H. Jackson Company

2 West 47th Street New York City

MR. PURINTON'S EFFICIENCY QUESTION BOX

370. Mr. S. K. M., New York. "Am thinking of taking up civil engineering, first starting with surveying. Could you tell me the future of this profession, extent of the field, chance for advancement, salary, qualifications, good books on the subject, and great engineers of today with publishers of their biographies?"

We congratulate you on your eagerness for knowledge, but can hardly offer an encyclopedia in the few lines at our disposal. The International Correspondence Schools of Scranton, Pennsylvania, or the American School of Correspondence, Chicago, would doubtless be glad to answer some of your questions. Others might be referred to the editor of a professional journal, such as *Engineering Magazine*, 140 Nassau street; *The Engineering Record*, 239 West Thirty-ninth street; *Engineering News*, Tenth avenue and Thirty-sixth street; all of New York. The Librarian of the Engineering Societies, 29 West Thirty-ninth street, New York, might also furnish data. Possibly you would be answered by the Secretary of the Engineers' Club, 32 West Fortieth street; or of the Board of U. S. A. Engineers, 39 Whitehall street; both of New York.

---

371. A Reader from New Jersey. "I have charge of planning and buying the food in our home. I feel that I am not managing properly, as I have no idea of the amount spent in a week or a month, until the bills come in. We have charge accounts, but I have no control of them. (a) How shall I regulate these expenses? (b) Our food last year, for a family of six, was about $1000. Do you consider this too high? (c) Should one have a definite system for the use of one's personal income? What amounts or percentages should go to various items—clothes, travel, charity, sickness, books, et cetera?"

(a) Make list of all foods; unite standard prices where they remain same, get current prices by telephone from dealers when ordering perishable goods; keep record of daily costs with orders; check up all memoranda of bills when received; and compare deliveries, to ensure full weight and measure, and accurate statements. Join one or two national housekeepers' organizations; enroll for partial or full domestic science course in a correspondence school; addresses from Efficiency Publishing Company, Woolworth Building, New York.

(b) About $100 too high, in view of other data in your letter. Unknown, unregulated costs are almost sure to be too high.

(c) Fix your budget, ask our opinion of concrete amounts, based on your actual income. Never mind percentages, quote figures.

---

372. Mr. C. L. F., Minnesota. "I am a young man of twenty-one years, with two years of college and one year of teaching experience. I desire to enter the banking world, and would like to know of the different branches, the best field to enter, and the best schools adapted to fit one thoroly for this profession. Would it be wise to finish the two years in college, and would the knowledge I have gained of the Spanish language be of any benefit to me?"

Get copies of *Bankers' Magazine*, 253 Broadway; *Bankers' Home Magazine*, 20 Nassau street; *Banking Law Journal*, 27 Thames street; *American Banker*, 5 Beekman street; *American Bank Reporter*, Bergen avenue and 149th street; all of New York. Study articles, reply to advertisements, subscribe for several journals.

Can you study law, accountancy, or other business subjects at your college? If so, do it while finishing your course; if not, go to Harvard, Northwestern University, or some other school teaching business branches. You could learn banking from La Salle Extension University, Chicago—secure their book, "Banking and Finance." A course from the Business Training Corporation, 185 Madison avenue, New York, would probably help you. The Walton School of Commerce, Chicago, or International Correspondence Schools, Scranton, Pennsylvania, could teach you accounting by mail—this

would be a good start for a bank position. Your Spanish would be valuable in a Southern bank, or an export house.

---

373. Prof. W. R. R., Iowa. "A certain student of mine seems constitutionally unable to spell. He ranks high in technical studies, and shows some literary ability; never could learn spelling in grammar and high school, and now fails to write many of the simplest words correctly, tho he and his teachers have tried every means known to the schools to correct this fault. The young man says he will not need spelling greatly, however, in his career as engineer; he proposes to hire stenographers, typewriters and proofreaders, and to waste no more time and energy on a task for him so apparently impossible. He cites the adding machine, and declares he must have spelling-machines, to leave his mind free for more important work. Is he justified in a belief so unusual?"

Probably, yes. A slight malformation of the brain, or some forgotten injury during childhood, may have created an abnormal condition that no amount of ordinary study will overcome. A thoro investigation of modern memory training systems—Atkinson, Berol, Dickson, Loisette—should yield profitable suggestions; data from Efficiency Publishing Company, Woolworth Building, New York. Further help might be had from an experienced psychologist or psychiatrist, found at almost any large university, hospital or medical college. But a youth can become a great engineer without being a champion orthographer and we commend the young man's resolution.

---

374. Mrs. M. P. K., Pennsylvania. "I am starting to rebuild an old farmhouse on a twenty-two acre property a few miles from Philadelphia. In your recent article on 'The Efficient Home' you spoke of the possibility of installing a modern electric lighting plant. Where should I apply for such information? I have investigated the plan of cooking with electricity, and would like to experiment along this line, if the cost of a good plant is not excessive."

Write to Western Utilities Company, 204 Grand avenue, Milwaukee, Wisconsin; to Ohio Electric Works, Cleveland, Ohio; and to Gray Motor Company, Gray Motor Building, Detroit, Michigan. Also obtain booklet "The Electrical Way in the Home" from Western Electric Company, 463 West street, New York.

---

375. Mrs. G. K. W., New Jersey. "Your article on 'The Efficient Housewife' is to be the basis of a program for our next meeting of The Housewife's League. (a) How may we have access to the five channels of information you mentioned? (b) Can we get extra copies of your article? (c) How can a housewife save thirty per cent on home expenses, keep a daily schedule, become expert in home hygiene, as you recommend?"

(a) See Question Box answer No. 286 in The Independent for July 24, 1916.

(b) Yes—apply to Efficiency Publishing Company, Woolworth Building, New York, for additional copies of any of my writings.

(c) Too many, and too broad subjects for adequate presentation here. Obtain literature suggested under (a), look for answers to your queries, then ask us in detail about results of your search. Your club library should own several modern books treating all phases of household management, and members be advised to consult them freely. Titles of books may be had from Efficiency Publishing Company.

---

376. Mr. K. D. K., Illinois. "I have read with great interest and appreciation your recent article on 'Concentration.' Will you kindly recommend two or more books on the subject?"

You should find helpful thoughts in the books on the meaning and use of Concentration written by Elizabeth Towns, Elbert Hubbard, Dr. Julia Seton, F. W. Sears, Henry Harrison Brown, and others. Obtain list from Efficiency Publishing Company, Woolworth Building, New York.

A better group of texts for the average man would probably be composed of such works as "Will Power," by Frank Channing Haddock, "Education of the Will," by Jules Payot, "Personal Power," by Keith J. Thomas, other recent books by Orison Swett Marden, W. W. Atkinson, Herbert Kaufman, Harrington Emerson.

---

377. A Western Woman. "I am a school teacher, not fitted for the work I am doing, feel I *must* make a change. Wrote several character analysts but find their fees very large, as I have only $300 to keep me till established in another line (a) Shall I be helped enough to warrant paying fees? (b) Will these experts tell me where and how to get work immediately? (c) Is phrenology a worth while science? (d) Could I not, for a change, learn to do office or secretarial work?"

(a) In your case we think several good books on character analysis and vocational guidance would be a better investment, with your limited capital; don't pay over $12 to $15 for such advice or literature.

(b) Probably not. The inability to start you practically on the road to success that they themselves mark out is a proverbial weakness of character analysts. But for any new occupation you will need preliminary technical training, which no counsellor can supply.

(c) It is not yet complete, by Efficiency standards.

(d) Yes—a good plan, learn by mail while teaching. Ask Efficiency Publishing Company, Woolworth Building, New York, for list of correspondence schools of typewriting, stenography, bookkeeping, etc. Consult back files of Question Box for addresses of Secretarial schools.

---

378. Mr. M. D. S., Michigan. "I am a junior in high school, have to give a talk in which I imagine myself the president of a large railroad. Please advise me, on this basis, how I can bring my business more patronage; run it for less cost, reduce accidents; eliminate loss of lives; and so forth."

Give better service—more prompt, comfortable, hygienic; run frequent excursions to places of interest; coöperate with farmers, clubs, manufacturing plants, boards of trade, in developing new enterprises and tracts of land; originate methods to gain patronage and good-will of large shippers; learn scientific management and apply to your company; take correspondence course in traffic organization and supervision; obtain all available literature of the big railroad systems, such as The Pennsylvania, The Baltimore & Ohio, The New York Central, and study for ideas; read biographies of great pioneers in railroading, such as E. H. Harriman, James J. Hill; get particulars of Safety First Society, 6 East Thirty-ninth street, New York; see articles and advertisements in magazines like *Railway Engineering*, 50 Church street; *Railway Review*, 30 Church street; *Railway Age Gazette*, Woolworth Building; *Railroad Man's Magazine*, 8 West Fortieth street, all of New York.

---

379. Mrs. W. R. S., Florida. "Would you kindly suggest physical exercizes for a boy of thirteen who is growing very fast? He is healthy and strong, but has one physical defect—his shoulders incline to droop."

Swimming, rowing, boxing, tennis, horizontal bars and gymnasium rings, military "setting-up" drill, Boy Scout Maneuvers.

Look up methods and instructions of American Posture League, 30 Church street, New York; the habit of standing, sitting and lying straight should be made a special study.

Obtain catalog of A. G. Spalding and Brothers, 520 Fifth avenue, New York, and rig up a home gymnasium for the boy, letting him choose the games and implements so far as possible. Go over advertisements in *Physical Culture* Magazine, Flatiron Building, New York, and compare the details of various systems of home exercize.

---

380. Mr. H. B. H., Massachusetts. "Will you please tell me the best book or authority on *Concentration?* I have read several books and articles, but all are most unsatisfactory, without practical aids or methods, either advanced or rudimentary. We all know the value of concentration, but few have the power, or knowledge of the practise. Won't you tell us how to begin?"

Resolve to make your work at least fifty per cent better, faster, more profitable; study Taylor, Gilbreth, Emerson, for time and motion saving adapt principles to your work; find reasons why you aren't earning twice your present income, thru application of my recent article on 'The Efficient Salesman'; figure out plan to make your spare time bring you money, and stick to the plan till it does.

Learn physical exercizes to aid concentration—Macfadden, or Swoboda, or a good gymnasium director could here be of help. Choose games and diversions that focus your mind and muscle—golf, tennis, diabolo, quoits, lasso throwing. See Question Box answer to Mr. K. D. K., Illinois, published in this issue—there is no "best authority." You will have to become your own.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

THE UNION CENTRAL CASE

Another chapter of the Union Central stock-dividend matter has been completed. The committee of the National Convention of Insurance Commissioners, which has been examining the accounts of the company for the purpose of ascertaining if the surplus earnings from non-participating policies were sufficient to meet the dividend of $1,500,000 declared last March, has reported. The report made by the accountants who did the work for the committee has not been made public as yet and it is, therefore, impossible to discuss those details. Extracts from the report of the committee, submitting that of the accountants, have appeared in the insurance press, from which it appears that the examination of the accounts did not go back of January 1, 1908, the year in which the first stock-dividend of $400,000 was declared; and that the non-participating earnings from the above date, to January 1, last, were $1,247,447.

As the amount of the non-participating earnings from the beginning of the company to January 1, 1908, claimed by the management of the company at $779,000, was challenged by a committee of insurance commissioners in 1909 to be in excess of the fact, the work just completed settles nothing. The controversy over the sufficiency of the earnings to cover the total of the two stock-dividends, $1,900,000, remains where it was. If the earnings first claimed, $779,000, are correct, there remained on July 1, 1908, where the stock-dividend of $400,000 was declared, a balance of $379,000; that amount added to the $1,247,447, earned since, would make a total of $1,626,447, out of which it would be easy to declare the stock-dividend of $1,500,000 on March 1, last.

But as there has never ceased to be serious doubt as to the non-participating earnings up to 1908, as the actuary of the company, in a report to the president estimated in July, 1904, that there had been a loss of $95,000 on the non-participating business written up to the beginning of that year, impartial judges are warranted in laying the claim of $779,000 profit four years later under suspicion. It was desirable, both for the company and the participating policyholders, that the amount of the non-participating earnings to January 1, 1908, be ascertained and that this committee of insurance commissioners did not settle that question seems to me a matter of serious regret.

Personally, until it is so ascertained, I shall remain skeptical, keeping in memory that the same actuary who found a profit of $779,000 in 1908 reported a loss of $95,000 in 1904. In 1904 there was no motive for the calculations made by the actuary save those which prompted the president of the company (who died in 1906) to learn the exact results, as nearly as could be, of the company's non-participating business; in 1908 there was a desire by the new administration to increase the capital stock of the company from $100,000 to $500,000 and pay it up, if possible, out of non-participating earnings.

The committee of insurance commissioners which has just reported, composed of the commissioners of Connecticut, Massachusetts, New York, Virginia and North Carolina, after citing the amount of non-participating surplus earned during the past eight years, referred to the doubt surrounding the sufficiency of the previously claimed surplus from that source, and concluded by observing that there could be no high degree of certainty that the total amount of the stock dividends was actually earned. As to the foregoing, and the quotations which follow, the committee was divided, the commissioners of Connecticut and New York dissenting from it. The majority report (which was subsequently adopted by the convention) contained the following:

An important question here is where will it all end? The by-laws of the company are no obstacle to another stock dividend. Its charter presents no obstacle. The laws of Ohio do not stand in the way. The courts apparently do not look with disfavor upon such increases. Public opinion is the power that will finally end it. But public opinion does not operate in respect to an issue of which it knows little. Hence it is the duty of those who are informed to give the facts to the uninformed. One pertinent fact in this case is that all the company had to do to increase its capital twenty-fold was for two-thirds of its stockholders to assent and a resolution for the increase to be adopted by the directors. There is in this respect no check to the will of the stockholders; no state control; no state approval required. If the company confined its business to its home state this would be only an Ohio problem, but when it transacts business in other states its doings interest a broader field and other states must take steps to protect their policyholders in the future even if there is no remedy for the past.

It is true and should be mentioned that the suit now in court in Ohio, brought by a policyholder to test the legality of the stock dividend, or suits brought by other policyholders for a like purpose, if numerous enough, may operate, when justice passes upon the true equities involved, to nullify in whole or in part the wrong to the participating policyholders pointed out to this convention by a former committee. But the uncertainty of it in view of the fact that one policyholder withdrew his suit upon receiving an agreement from the company to pay him $10,000 in settlement under certain conditions, or $5000 under certain other conditions, leads us to recommend remedial measures that we, as insurance commissioners, if we are in earnest in this matter, can have some voice and in-

fluence in having it enacted into law in our various states which will prevent stock dividends in the future, at least until they have been approved by a representative of the state. We, therefore, present for adoption the following resolution:

Resolved, That in each state where not already provided for, a law be enacted prohibiting any change in the amount of the capital stock of a life insurance company doing business therein, or any change in its charter or articles of incorporation, without express authority granted in writing by the official of the state to whom is entrusted the duty of supervising insurance companies, provided, however, that this requirement may not be waived in case of a life insurance company of another state, where the laws of its domicile give like authority to its supervising insurance official.

The Connecticut and New York commissioners concurred in recommending the resolution.

Let us sum up. For forty years, from 1867 to 1908, the company operated on a paid-up capital of $100,000, its stockholders receiving annual dividends of ten per cent. In 1908, when the company was fully established, with assets of $62,242,454 and a net surplus of $2,410,620 and in need of no capital at all, $400,000 was appropriated out of an alleged non-participating surplus and capitalized, raising the value of the stockholders' interest to $500,000, and their annual dividends to $50,000. The action was contested in the Ohio courts unsuccessfully, the decision being in effect that all the surplus of the company belonged to the stockholders and that not a cent of it was the property of the policyholders. In March, 1916, another stock dividend was declared, this time of $1,500,000, which was capitalized, and at the same time the authorized capital was made $2,500,000. So there yet remains to be paid up another block of stock amounting to $500,000. I join in the majority report of the commissioners to the extent of inquiring: "Where will it all end?"

H. E. W., Chicago, Ill., wants to know why he should not drop an Ordinary Life policy of $5000 in the Penn Mutual which is costing him $95, net, a year, for $6000 in the Guarantee Fund Life Association at "a cost approximately of $80 a year," the Penn Mutual rate being at age 31, the Guarantee Fund at age 35. My correspondent asks that good reasons be given against the exchange. Well, to begin with, if the Guarantee Fund's proposition were mathematically possible, the Penn Mutual would have adopted it years ago. The solid reason why he should not make the exchange is that the Guarantee Fund cannot provide insurance from age 35 to age 96, to all its policyholders, at $13 per $1000, and that is what it must do under an Ordinary Life contract. A policyholder has the privilege of staying until he dies, whenever that may happen. Consider this comparative situation. The Guarantee Fund had assets on January 1, 1916, of $1,385,853. Its total liabilities were $104,628. The difference is surplus, or looks like it, and it sounds fine. That surplus is $1,281,225. There is no reserve. The outstanding life insurance contracts in the hands of policyholders aggregate $69,390,000. Behind that sum, as an offset to the increasing cost of insurance due to advancing age, is the surplus of $1,281,225. The outstanding insurance of the Penn Mutual is $646,383,305, not ten times that of the Guarantee Fund. Its accumulated reserve to protect that insurance is $133,031,761, more than one hundred times the amount of the Guarantee Fund's surplus. I would suggest that you have the representatives of the Penn Mutual and the Guarantee Fund argue the matter in your presence.

THE MARKET PLACE

STOCKS AND THE PEACE MOVEMENT

The stock market in the week that ended on the 30th became comparatively dull and narrow, after two weeks of great activity and, at times, of demoralization which closely approached panic conditions. On Tuesday, the day after Christmas, only 773,000 shares were sold. The preceding two weeks will be remembered for a long time by brokers and all others directly interested in the market for securities. Following a preliminary decline on the 11th, prices fell sharply on the 12th, owing to the announcement of Germany's peace proposals. The next day saw a general recovery, due mainly to the covering of what are called short sales, made by traders who expect to gain if prices fall, but on the 14th, when the business transacted rose to 2,464,000 shares, there was another break and the downward movement continued on the 15th. At the same time the price of wheat at Chicago was going down, for peace proposals or overtures at once suggest the opening of the Dardanelles and the release of Russia's accumulated two years' surplus of grain. Japan has been enriched by the war, and a vision of possible peace caused so much excitement and apprehension in the stock market at Tokio that it became expedient to close the Exchange there. Net losses here for the week were large, so far as the shares of all companies directly connected with war supplies were concerned. The loss for Steel Corporation common stock was 12⅝ on transactions amounting to 2,637,000 shares, or nearly one-quarter of the week's total of 10,602,000. From the price of Bethlehem Steel 66 points were taken. Remarkable firmness and strength were shown by railroad shares, net changes as a rule ranging from ¼ to ½.

At the beginning of the week that followed, the market was waiting for Premier Lloyd George's response to the German proposals. When this was published, on the 19th, prices fell in a violent way, and on the 20th there were signs of much demoralization and weakness, with declines of 5 to 11 points for active stocks. On the following day the depression was emphasized and greater losses were recorded. People were talking about a panic in Wall Street. What took place was due to President Wilson's note to the belligerents, urging consideration of peace terms, and to the unfortunate statement of Secretary Lansing that this country had been "on the verge of war." At the end of the week the official figures showed a long list of heavy losses, Bethlehem Steel leading with 72 points. Prices of several of the prominent war order stocks were reduced by 10 or 15. Steel Corporation shares (129¾ not long ago) fell to 100⅛, but partial recovery made the net reduction only 8. These shares were still leaders in activity, for 2,613,000 of them changed hands, the week's total for the entire list being a little more than 9,000,000.

Exhaustion or the elimination of many traders who had lost both their courage and their money made the market of Christmas week a quiet one. There was some reaction. On the 26th, when, as has been said, the business was only 773,000 shares, a small average gain was made. The reply of Germany to the President's note had little effect. The market seemed to be waiting for more light on the situation. When it became known that the New York Federal Reserve Bank had been authorized to establish a connection with the Bank of England some thought that this would tend to remove the unfortunate impression made in England by the Federal Reserve Board's warning about investment in British Treasury notes or Exchequer bills. The connection will permit and facilitate investment of surplus funds in commercial paper abroad. On the 27th the market was still a comparatively narrow one, and an average showed scarcely any gain or loss. Railroad stocks were almost stationary. As to the meaning and possible results of the peace correspondence there was a well defined division of opinion. The following day saw a slight increase of business (931,000 shares) and a downward tendency for war order stocks, but railroad shares were but slightly affected. There were additional signs that a considerable part of the trading "public" had found the market unattractive. During the steady and remarkable advance of war order stocks the "public" was drawn in. Much of the business in the long series of million-share days was done in response to orders by wire from the West, and, probably, upon small margins. Exhaustion of these by a peace decline compels liquidation and may lead the selling loser to avoid the market afterward. The discomfiture of weak holders gives to professional traders their opportunity, and the downward movement is accelerated by their sales. Thus the number of small holders is largely decreased, and there may be no buyers of the same class to take their places.

The reasoning of the average trader or investor in what are called war order stocks as to the effect of peace takes into account little except the effect upon companies whose products are in demand only for war purposes. While peace would sharply affect the profits of a majority of these, there are some whose output may be equally serviceable when there is no war. This

DIVIDENDS

Irving Savings Institution

115 Chambers St., New York

The trustees have declared a dividend for the six months ending Dec. 31, 1916, at the rate of

FOUR PER CENT.

per annum on all sums from $5 to $3,000 entitled thereto under the By-laws, payable on and after Jan. 15th, 1917.

is true of steel companies and of those which make rolling stock and other things which are required for railroads. Many industries will be exporting their products after the war because these will be needed for reconstruction. But the more than doubled prices of the present time must then be reduced.

STEEL PROSPERITY

Proposals for peace negotiations have not affected the steel industry, for additional price increases have been made and many new orders, both foreign and domestic, have very recently been placed. It is understood that those from abroad, which call for shell steel, have clauses which permit substitution of kinds of steel which will be useful after a declaration of peace. Foreign governments are still buying rails, ship plates and pig iron. At the present time there is a slight restriction of output, owing to a shortage of railway cars. Nineteen of the Steel Corporation's furnaces have been banked for lack of coke, and several mills have shut down because they cannot get coal. The domestic demand has been growing rapidly, but delivery must be long delayed, for existing contracts cover the capacity of nearly all the mills thruout next year. Several recent orders provide for delivery in 1918. The foreign demand for ship plates cannot be satisfied, and they are needed here. Our shipyards have contracts for more than 400 steel vessels. Japan is still trying to buy such material.

FOREIGN TRADE

Growth of our exports has not been checked. The shipments in November, $517,900,000, were the largest on record. In February exports for the first time exceeded $400,000,000. The figures for eleven months are of an extraordinary character, especially when they are compared with those of preceding years. The total is $4,961,200,000, while the value of what we sold abroad in corresponding months was $3,195,400,000 last year, and only $1,867,879,000 in 1914. Imports have declined since June. The excess of exports over imports in November was $340,900,000. Excess comparisons are even more impressive than those which relate to exports. This balance of trade in favor of the United States, $2,774,400,000 for the eleven months, was $1,588,600,000 in the corresponding months of last year, and only $193,260,000 in 1914. For the full year the exports will be almost $5,500,000,000, and the excess will be a little more than $3,000,000,000.

Gold imports have been large in December. The arrival of $33,000,000 from Canada on the 28th made a total of $149,000,000 for the month, against only $46,500,000 in November, and the sum was more than had ever before been received in one day. The year's receipts have been $676,000,000. Going back only two years we find exports of gold exceeding imports, but this year the net gain has been about $650,000,000. Most of it has come in to pay for what Great Britain has bought here.

"A New Plan by Old Interests."

A Method of Distributing among Moderate (and wide-awake Small) Investors the

Important Profits of Legitimate Timber Investments

IN SELECTED REGIONS UNDER "IRON-CLAD" CONDITIONS

Many of the most substantial fortunes of today are rooted in timber investments of past years. The similar opportunities of today are less frequent, but when they do occur they are as remarkable as they are unusual.

It is usual for timber owners in distress to present their needs to the James D. Lacey Timber Co., who are thereby enabled by their resources and prestige not only to relieve with cash the needs of the seller but also to thus acquire for the profit of their clients various tracts and timber rights at figures very greatly below their value.

Our facilities for re-sale of the timber, at very attractive profits, are unequalled.

At the suggestion of many minor investors we have arranged a MOST INTERESTING FORM OF INVESTMENT, ENTIRELY NEW in our field, which we nominate

Lacey Profit-Sharing Bonds

They extend to a public wider than our usual clientele the exact advantages (and all of them) which heretofore have accrued to the initiated few. It is our belief that they will be genuinely appreciated by many cautious investors. The legitimate expectations are identical in character with those on a large scale of individual investment through James D. Lacey & Co.

You have read about the status, prospects and limitations of lumber at this date. Everything WOOD is a value rapidly and automatically enhancing. There never will be timber purchasing opportunities equalling the few which now, from time to time, become available. Some now in our control compare well with the more notable profit-yielders of the past. (We pay no attention to properties ordinarily offered for public sale.)

WE HAVE A BOOKLET ABOUT THE EXCEPTIONS and the NEW PLAN. YOUR NAME AND ADDRESS WILL EVIDENCE TO US YOUR ALERT AND INTELLIGENT INTEREST AND WILL IMPLY NO OBLIGATION WHATEVER.

HELENA MONTANA

A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

"Smell I the flowers or thee?" cried Pierre.

"See I lakes or eyes?" cried Lucy, her own gazing down into his soul as two stars gaze down into a tarn.

That was the way lovers talked to each other in the fifties according to Herman Melville, or else that was the way he thought they ought to talk. From this sample of the dialog it is no wonder that his novel of "Pierre or the Ambiguities" never attained the popularity of "Typee" and "Omoo." Most of the admirers of Melville believe that after writing "Moby Dick"—some would say before—his mind flew the track and went off on a tangent for the remaining forty years of his life. But embedded in the "Ambiguities"—to give the strange romance its most appropriate name—there is fragment apparently brought down from some earlier mental epoch. It is entitled "Chronologicals and Horologicals," and contains an original theory of local morality based upon the idea of local time, especially pertinent just now when countries are shifting their clocks back and forth to save daylight or rather gaslight. It is a theory of ethics that would naturally occur to a sailorman, if a sailorman theorized on ethics at all, for as he went from port to port he would find them all with different times and with different codes of morality, and he would have to adopt both while in the port if he wanted to get along smoothly with the people there. Yet above all the ports he would see the stars which somehow must be eternally right.

* * *

Melville considers the case of a ship which sets its chronometer by Greenwich and carries it to China where it is wrong and yet it has guided the vessel aright across the trackless deep. Then he applies his analogy in this fashion:

> Now in an artificial world like ours, the soul of man is further removed from its God and the Heavenly Truth, than the chronometer carried to China is from Greenwich. As that chronometer, if at all accurate, will pronounce it to be twelve o'clock high noon, when the China local watches say perhaps it is twelve o'clock midnight, so the chronometric soul, if in this world true to its great Greenwich in the other, will always in its so-called intuitions of right and wrong, be contradicting the mere local standards and watchmaker's brains of this earth.
>
> Bacon's brains were mere watchmaker's brains; but Christ was a chronometer; and the most exquisitely adjusted and exact one, and the least affected by all terrestrial jarrings, of any that have ever come to us. And the reason why his teachings seemed folly to the Jews, was because he carried Heaven's time in Jerusalem, while the Jews carried Jerusalem time there. . . . But whatever is really peculiar in the wisdom of Christ seems precisely the same folly today as it did 1850 years ago. Because in all that interval his bequeathed chronometer has still preserved its original Heaven's time, and the general Jerusalem of the world has likewise carefully preserved its own. . . . Nor does God at the Heavenly Greenwich expect common men to keep Greenwich wisdom in this remote Chinese world of ours; because such a thing were unprofitable for them here and indeed a falsification of himself in as much as in that case. China time would be identical with Greenwich time, which would make Greenwich time wrong.
>
> But why then does God now and then send a heavenly chronometer (as a meteoric stone) into the world, uselessly as it would seem, to give the lie to all the world's timekeepers? Because he is unwilling to have men without some occasional testimony to this: that tho man's Chinese notions of things may answer well enough here, they are by no means universally applicable and that the central Greenwich in which he dwells goes by a somewhat different method from this world.

From this Melville reaches the conclusion "that this world's seeming incompatibility with God absolutely results from its meridional correspondence to him." This conclusion is as convenient as it is ingenious for it enables one to postpone to Heaven any precepts that prove impracticable on earth. Which anyway is what we all do even without hearing of his justification.

A virtuous expediency, then, seems the most desirable or attainable earthly excellence for the mass of men, and is the only earthly excellence that their creator intended for them. When they go to Heaven, it will be quite another thing. There they can freely turn the left cheek, because there the right cheek will never be smitten. There they can freely give all to the poor, for *there* there will be no poor to give to.

It is lucky Melville lived before Michelson's interferometer abolished the ether, for with the ether would have been swept away the last remnant of his orthodoxy. For according to the now fashionable theory of relativity there is no such thing as absolute time and simultaneity is a simulacrum dependent upon the motion of the observers. What the theory of relativity will do to ethics when it gets in there is appalling to contemplate.

* * *

Now that our militia are home for the holidays it may be permissible to quote what the most famous of New England authors, Hosea Bigelow, said when the militia were sent to Mexico seventy years ago:

> It must be aloud that there's a streak of nater in lovin' sho, but it sartinly is 1 of the curusest things in nater to see a rispecktable dri goods dealer (deekon of a chutch maybe) a riggin' himself out in the Weigh they du and struttin' round in the Reign aspilin' his trowsis and makin' wet goods of himself. Ef any thin's foolisher and moor dicklus than militerry gloary it is milishy gloary.

* * *

When the English went to Australia they found that the poetry they brought with them would not keep in their new climate so they set themselves to cultivate indigenous varieties of verse. In this they have been quite successful and the home-grown product will now compare favorably with that of any country of the population both in quantity and quality. Our American poets, in spite of the Revolution, were not so quick to shake off the traditions they brought over in the "Mayflower." I presume some of them are still writing about the skylark and the nightingale and they stick to the English idea that May is a joyous and November a gloomy month, altho the contrary is nearer the truth in America.

But the Australians, as I say, do not get their poetry out of the old books but keep an eye on nature. From a sonnet sequence on the twelve months contributed to a prize contest by the Sydney *Bulletin*, I quote the one on January:

JANUARY

By C. E. Moore

From blazing skies she comes with flaming face,
And scant red robe the which no charm conceals;
And Earth, the Titan, trembles when he feels
The searing passion of her warm embrace.
Incarnate Summer, full of languorous grace
And ripened lusciousness, her beauty steals
All gain from virtue—only that appeals
When July, austere, reigneth in her place.

So January—by day a scorching flame,
By night a houri breathing love and bliss,
Like erring mistress fearing words of blame
Who stops her lover with atoning kiss.
Ah! Hail the heat of torrid days that frame
The velvet splendors of a night like this!

* * *

The devilish ingenuity displayed by the belligerents in the devising of cruel and unusual weapons of warfare seems to have no limit. The latest outrage reported is that Captain Gabrielle d'Annunzio, swapping Pegasus for an aeroplane, has been flying over Triest and dropping his poetry down upon the noncombatants of this open city. If The Hague is powerless to protect innocent men, women and children from being pelted with d'Annunzio poetry appeal should be made to the Comstock Society.

* * *

A Sunday school which had raised ten dollars for the Belgian Relief Fund sent it in with this letter written by one of the pupils: "This is for the sufferers of the war. We hope the suffering is not all over yet." It is charitable to suppose that these young Christians did not mean what they said but, judging by the way stocks go down at a rumor of peace, Wall Street does mean it.

* * *

The Allies remind me of a boating party: when one falls overboard, the rest jump in even if they cannot swim, making so many more to be rescued. Rumania, who jumped in to save Serbia, has just gone under, and now Greece is called upon to save Rumania.

* * *

My office chair must have some Hawaiian sap in its veins. Whenever I lean back it squeaks like a ukulele.

JUST A WORD

What Is the Best Thing in Your House? The readers of The Countryside want to know. For the best letter and picture of a Best Thing received before February 1 The Countryside will pay fifty dollars. For the next best thing, a prize of twenty-five dollars is offered. The manuscripts must not be more than 200 words long, and the Best Thing must not be alive. Those are the only conditions. But unmounted, glossy photographs are desirable, and Best Things which are not *wholly* sentimental in appeal stand a better chance than those which are—and you have no idea how many folks get sentimental in manuscript! We will gladly return photographs and letters if a stamped and self-addrest envelope comes with them. Otherwise not. Address The Editors, The Countryside, 119 West Fortieth street, New York, telling what is the Best Thing—why it is the Best Thing—and what you do with it.

In the editorial columns of this magazine on June 5th, 1916, appeared the following reference to the probable tourist "invasion" of Europe as soon as the real invasions are over: "The long serpentine line of battle, stretching from the sea to Switzerland and coiling about Ypres and Verdun, will be a path of pilgrimage for all future time. . . . If one of those fine roads that the French know how to make were laid along the neutral strip between the battle lines, automobiles and buses could carry tourists all the way from Nieuport to Pont-a-Mousson."

We reproduce the forecast for the reason that Mr. George Burdett Ford told an audience at New York the other evening that the French are actually planning such a motor bus service, together with many other more important after-the-war measures.

Particularly will the effort at efficient reconstruction be manifest, he said, in the matter of town planning. The replacing of ruined houses, buildings, streets, and cities, is being arranged for along the most modern lines, while very important steps are also being taken to secure greater industrial efficiency, which Mr. Ford studied as a member of the American Industrial Commission invited by the French Government to "see France at work," and to coöperate in making that work more efficient.

THE NEW PLAYS

Gamblers All. An English sporting importation by May Martindale. Repellant, depressing. (Maxine Elliott's Theater, Thirty-ninth Street east of Broadway.)

The Harp of Life. A drama of ideas with Laurette Taylor as the comrade mother to her adolescent boy. Unusual, purposeful and inspiring. (Globe Theater, Forty-sixth Street and Broadway.)

Little Lady in Blue. Frances Starr at her best in a charming, old-fashioned comedy of England in 1820. Testy admiral and gay lieutenants well played, too. But wait till you see Cobbledick! (Belasco Theater, Forty-fourth Street east of Broadway.)

A Kiss for Cinderella. Barrie at his Barriest, Maude Adams at her Babbiest. Result: fancy, whimsicality, humor, pathos, preposterousness, truth, romance, blended into two hours of unalloyed delight. (Empire Theater, Broadway and Fortieth Street.)

The Thirteenth Chair. At seance, held behind locked doors, occupant of thirteenth chair is murdered. Murderer must be in room. Which is it? Solution of problem provides three acts of suspense and thrill. (Forty-eighth Street Theater, east of Broadway.)

The Master. Brutally frank presentation of the frankly brutal Nietzschian philosophy of life. Highly emotional. Splendid character study by Arnold Daly. Nefarious play if accepted as gospel. Not for the young. (Fulton Theater, Forty-sixth Street and Broadway.)

Mile-a-Minute Kendall. The hero's troubles keep up with his name, entertaining difficulties concerning creditors, engines and girls. Finally a happy ending: engine goes, money comes and girls disappear—all but the right one. (Lyceum Theater, West Forty-fifth Street.)

REMARKABLE REMARKS

PRINCE RUPPRECHT—I am still the anvil.

GENERAL VON HINDENBURG—There is no blind fate.

GEORGE BERNARD SHAW—I dislike all cooked food.

CHAMP CLARK—The *Congressional Record* isn't necessary.

GABRIEL NICOLET—Women under thirty-five are simply veal.

MICHAEL MONAHAN—The fake college man is the meanest of snobs.

ROMAIN ROLLAND—I desire nothing more than the right to think freely.

WOODROW WILSON—I wish that foreign affairs were as simple as agriculture.

COL. PAUL VIGNAL—Joan of Arc was the greatest soldier France ever had.

CORRA HARRIS—The Scriptures prove that the Lord thinks well of widows.

W. J. BRYAN—Science, religion and war have joined forces against king alcohol.

AMBASSADOR JUSSERAND—Jeanne d'Arc is the cause of French existence today.

REV. W. M. HESS—The race is multiplying faster than we can evangelize them.

THEODORE ROOSEVELT—Second rate work is second rate work even if it is done badly.

CHARLES DARNTON—Arnold Daly is the most intelligent actor on the American stage.

GRANTLAND RICE—Don't play out of a bunker with a brassie unless you tee the ball.

CHAUNCEY M. DEPEW—Have an eye for a pretty girl and tell your wife all about her.

DR. E. L. FISKE—A woman should be in the full bloom of physical attractiveness at forty-five.

KING GEORGE—My navy and my army have by their unceasing vigilance and indomitable valor justified the highest trust I placed in them.

66,000,000 words of text—*equal to 660 ordinary books.*

866,000 subjects—*everything suggested by a thought or a word.*

600,000 definitions—*the meaning of every word the world uses.*

300,000 quotations—*Bartlett's "Familiar Quotations" contains only 6,000.*

24,689 illustrations—*every one authoritative and instructive.*

492 full-page plates—*many in colors; collected from every field.*

569 maps, showing 125,000 places—*more than in the largest atlas published.*

5,000,000 facts—***the sum and substance of human knowledge.***

You get this—

the essentials of the world's knowledge

Only $1 *for*

down and $4 a month for a short period

in the new Encyclopaedia Britannica, "Handy Volume" Issue, and the revised Century Dictionary.

HERE is your opportunity to own these two most useful works in their most useful form (printed on genuine India paper). But you *must act now* to profit by this special combination offer. This great offer means that you get *both* the Britannica and the Century in a specially built bookcase, at practically 60% *less* than the price asked for these works separately in their former expensive form. And you pay only $1 down and $4 a month for both—instead of $2 down and $6 a month, the terms on which both are sold separately.

This special offer gives you a complete Library on the lowest, easiest terms

These splendid works, which every intelligent person needs, are offered together *for a short time* on *special terms.* Think of it—the wonderful Britannica (29 volumes) and the great Century Dictionary, in a bookcase specially built for them, *are yours* for $1 with your order. You pay the balance (a price so low that any one can afford it), at the rate of only $4 a month.

Each sells for $1 down and $3 a month, but under this special combination offer you can own *both* of them and pay only $1 down and $4 a month, instead of $2 and $6.

Both will be shipped to your home or office immediately on receipt of your order. As you see them here in one and the same bookcase (*which goes with them*), they form an ideal library of reference and utility, unparalleled for scope, compactness and convenience.

By taking advantage of this special combination offer (*which will last only for a limited time*), you have immediate use of these works. Consider their great value to you—and remember that you must *act promptly. To-day* is your opportunity—*now.*

See next page for descriptions and coupon →

See preceding page for special offer for these works

The New Britannica

a complete Library in twenty-nine volumes

(*on genuine India paper*)

This wonderful work, the greatest reference book ever published, is a complete and authoritative survey of knowledge—an interesting and instructive record of all human thought and achievement. It contains 41,000 separate articles, written by 1500 world-renowned experts, giving facts and comprehensive information about everything you desire to know. It cost $1,500,000 to produce—$1,500,000 for writing and editing alone.

The Britannica contains the history of all nations, the geography of all countries, the story of the development of all religions and philosophies, all sciences and inventions, the essential facts about everything, the principles and fundamentals of mechanics and engineering, the salient features of all art, literature and industry—whatever invites your curiosity or practical interest.

The new Britannica is far more than a book of reference—it puts at your command the facts you need to know to be more intelligent—more efficient—more interesting—more successful. Reading it deepens your whole interest in life—it inspires a new and broader vision. It answers every question prompted by the daily news and contact with other men and women. It is a guide to *knowing*—and *knowing* is *education.*

Where there are children the new Britannica offers a supreme advantage. It is a collegiate course in the broadest sense. It is truly the Royal Road to Learning.

and

The Century Dictionary

the ten volumes bound in one

(*on genuine India paper*)

Wherever the English language is spoken, The Century Dictionary (revised and enlarged) is acknowledged to be the only *complete, adequate* and *final authority* on words. It defines every word, new and old, known to the English tongue, and gives every accepted form of pronunciation and usage, whether English, American, French, provincial or colloquial.

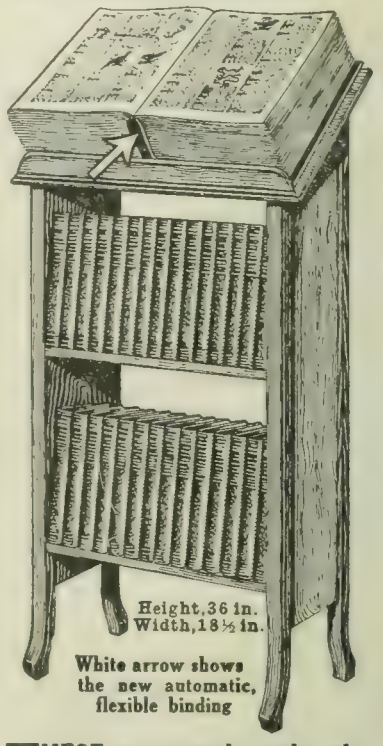
Every person who reads, or writes, or talks—needs the Century. It teaches the art of speaking and writing *correctly, concisely, explicitly, effectively.* The Century goes deeply into the history and etymology of words, as well as changes of meanings. It explains more than 50,000 idiomatic phrases, and has more than 300,000 quotations, elucidating every shade of meaning of words and phrases. The Century contains every usable synonym and antonym. It has 10,000 illustrations, including full-page plates, many of them colored.

The Century will give you a thorough understanding of the English language. When you "look up" a word in the Century, you learn how it is spelled and pronounced, what it means in its one or half a dozen usages, from what it was derived, and *how to use it correctly and effectively.* The Century gives you the right use of words—a mastery of English.

Clip out—sign—mail—NOW

SEARS, ROEBUCK and CO., Chicago, Ill.

Please send me, free, illustrated "Book of 100 Wonders," describing the popular "Handy Volume" Issue of the new Britannica, printed on the last genuine India paper that could be obtained; also send me the beautiful illustrated book, "The Growth of the English Language Since Shakespeare's Day," describing the complete 10-volume Century Dictionary bound in one volume, and printed on India paper.



And quote me prices of special offer on which I can purchase the Britannica and the Century.

Name_____

Address_____

(aa-17)

This handsome bookcase (mahogany or oak) given FREE to those who purchase both the "Handy Volume" Issue of the Britannica and The Century Dictionary.

White arrow shows the new automatic, flexible binding

THESE two masterly works—the new Britannica, "Handy Volume" Issue, 29 volumes, and the revised Century (the ten volumes bound in one) contain the essentials of a complete library.

The Britannica is a fact-book or *general knowledge-book,* educating you on all subjects. The Century is a word-book or *language-book;* it helps you to master language. The two together give you a complete synopsis of all the world's learning. They hold the sum and substance of the greatest libraries—all in a FREE bookcase for *easy* and *instant* use.

Printed on the last genuine India paper that could be bought

You need both the Britannica and the Century—you should have them printed on the famous India paper. India paper is the thinnest tough paper ever invented. It has made possible the publication of the new Britannica in 29 compact, attractive, convenient volumes. It has made it possible to publish the 10-volume Century *complete in a single volume*—not a line, not a word, not a comma changed.

But war has cut off the supply of flax out of which this beautiful paper is manufactured. This flax can be grown only in Great Britain, Belgium and Germany—but no more can be had. And the few remaining sets of the Britannica and the Century are the last that can be offered on this wonderful paper.

Don't wait until tomorrow. Act *now.* Just cut out the coupon, sign it and mail it. This is the greatest useful book bargain of years. You should have these books, the new Britannica and the enlarged Century, just as they are offered here—printed on genuine India paper, in one and the same bookcase.

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

A Journal of Civilization

THE ALLIES' REJOINDER

THE reply of the Allied nations declares specifically and in terms that peace will be made when the object for which the Allies are waging the war is achieved, and not before. That object, as all the world has reason to know, is simply this: The right of all peoples on this earth to enjoy life, liberty and the pursuit of happiness, under their own self-governing institutions.

Germany denies that right. She has both argued and boasted that she denies it. The foremost, the middlemost and the endmost article of the platform of Kultur is a denial of that right, as a thing abhorrent to a race destined by natural selection to rule the world. Germany began this war to smash that right.

The Allies do not wish or intend to crush Germany. That idea is nonsense. When Germany abandons her purpose to impose rule and to spread Kultur by the sword, and proves her sincerity by works meet for repentance, the Allies will make peace, and not before. Germany has only to admit explicitly or by clear implication her sincere renouncement of this purpose to secure not merely a conference for peace, but peace itself.

Absolutism and militarism must go, and when peace is made the kings must go. This earth must be the inheritance of free peoples: free in their own way and under their own laws and self-constituted governments, to enjoy life, liberty and the pursuit of happiness.

THE ATLANTIC GULF

THE strange misconstructions of President Wilson's note in the British and continental press following upon the continuous misconceptions of American policy and opinion thruout the war have made us all realize as we never did before the depth of the differences which separate Europe from America. Even when they talk what appears to be the same language as ours the mode of thinking and the fundamental assumptions lying back of the words are so foreign to us that we fail to understand one another. In spite of mail steamers, cables and ether waves those who stand on opposite shores of the Atlantic have to shout at one another. The message loses most of its meaning in getting over and all that is heard is the confused sound of a voice.

A recognition of this radical difference between the ideals of the New World and the Old is to be found in President Cleveland's message on the Venezuela question, one of the most famous of state papers because it exprest the sentiments of the American people in blunt and undiplomatic language. We quote a paragraph, for it is apposite at a time when Europe is resenting American interference as "both incongruous and injurious."

> Europe as a whole is monarchical, and with the single important exception of the Republic of France, is committed to the monarchical principle. America, on the other hand, is devoted to the exactly opposite principle—to the idea that every people has an inalienable right of self-government—and, in the United States of America, has furnished to the world the most conspicuous and conclusive example and proof of the excellence of free institutions, whether from the standpoint of national greatness or of individual happiness. It can not be necessary, however, to enlarge upon this phase of the subject—whether moral or material interests be considered, it can not but be universally conceded that those of Europe are irreconcilably diverse from those of America, and that any European control of the latter is necessarily both incongruous and injurious.

That Cleveland hit the keynote of American character is proved by the course of public opinion during the last two years. The American people, believing Germany guilty of precipitating the war, were most earnestly desirous of espousing whole-heartedly the cause of every one of the Allies, but it must be confest that they have found it increasingly difficult to maintain that full and instinctive understanding without which complete sympathy is impossible. A representative of the London *Times* who has been traveling thru the United States to ascertain public sentiment reports that the American people are still as a whole pro-Ally, but that their sympathy and affection go out toward France rather than toward England or any of the other Allies. This is most amazing to the British mind, for the United States has always been regarded in England as a sort of semi-detached part of the British Empire, hardly so alien as Australia. We share with England a common literature, while very few Americans read French books and still fewer Frenchmen read American books. The strongest strain in our ancestry is that which came from the British Isles, while France has sent us fewer immigrants than Galicia or Syria. Why then this feeling of kinship with France that has persisted for more than a hundred years? Evidently the hidden factor which the British fail to detect is that which Cleveland revealed. France is the only republic involved in the war

and the United States can never feel entirely in sympathy with any monarchy. This seems, to the British mind, a foolish prejudice against the mere name of king. Perhaps it is. But undeniably it exists and politics consist largely in making allowances for foolish prejudices.

CONGRESSIONAL GRAFT

AMONG the forms of petty graft that exasperate people in Washington is one involved in the recent raise in the salaries of the secretaries of members of the House of Representatives, from $1500 to $2000. If the secretaries themselves got the benefit of it, no one would object. In fact, in probably the majority of cases, it simply amounts to an increase in the salary of the Representative himself. These secretaries are the only employees of the Government who are *not* on the payroll, and as a result, the Representative himself draws the salary, and pays it out as he pleases. In some cases he employs a member of his own family; this is perfectly legitimate provided he pays that member full rates for the work. In many cases we understand Representatives, who do not have much secretarial work, club together, hire a single secretary, and divide the balance among themselves. There have been numerous efforts to get these secretaries on the regular payroll, but so far without success.

THE LEAGUE TO ENFORCE PEACE MISSTATED

WHEN a movement as vital as the League to Enforce Peace is seen to be sweeping over the country, it is to be expected that all the doubters, objectors and maligners will become vocal.

But we think it ought not to be asking too much if the League's enemies should be required to read the twenty-two words in the League's preamble, the one hundred and sixty-four words contained in its four proposals, and the sixty-five words added as the official interpretation of Article III.

Thus in the Senate last week no less a legal luminary than Senator Borah was moved to say:

> Suppose the United States and Argentina and some of the nations of Europe enter into a League of Peace, and let us suppose that Argentina and one of the governments of Europe disagree in one of their disputes and Argentina refuses to submit her dispute to an international tribunal or to a council of conciliation. Under the doctrine of the League to Enforce Peace we would not only have agreed that the European nations could come here and get in war with Argentina, but if we were called upon we would have to join with our army and navy to enforce the matter against Argentina.

This is, of course, a misstatement of the League's position.

Article III of the platform, as interpreted by the executive committee, reads as follows:

> The signatory powers shall jointly use forthwith their economic forces against any of their number that refuses to submit any question which arises to an international judicial tribunal or council of conciliation before issuing an ultimatum or threatening war. They shall follow this by the joint use of their military forces against that nation if it actually proceed to make war or invade another's territory.

It follows, therefore, that if Argentina refuses to refer her dispute with a European power to an international tribunal or council of conciliation, the other members of the League will not make war, but "forthwith use their economic forces" against her. They will not proceed against her at all with their military forces unless she actually first make war on the European power. Of course, if she submits her case to a court or council she can then make war without any resistance whatsoever by the League.

Mr. Roosevelt makes even a more flagrant misstatement of the position of the League in his diatribe in the February *Metropolitan Magazine*. Says he:

> The proposals of this League vary somewhat from time to time; but in their essence they are that nations shall arbitrate all questions and that they shall agree to enforce the decrees of the arbitral court by war.

In the first place, the League's proposals have not been changed one iota since their adoption at Independence Hall, Philadelphia, June 17, 1915. In the second place, there is no proposal whatsoever "to enforce the decrees of the arbitral court by war." The proposal is not even to enforce a reference to the Court or Council of Conciliation by war. The only time that force is invoked by the League is when it proceeds against a nation that goes to war without first submitting to a reference before the Court or Council of Conciliation.

A DANGEROUS APPEAL

ON the last day of the old year a public appeal was issued to "The Christians of America" signed by fifty distinguished Christian clergymen and laymen. The signers included Bishop Laurence of Massachusetts, Bishop Gaylor of Tennessee, Bishop Rhinelander of Pennsylvania, Bishop Anderson of Illinois, Bishop Nelson of Georgia, and Doctors Lyman Abbott, Newell Dwight Hillis and William T. Manning of New York.

That our readers may thoroly perceive both the spirit and the letter of the appeal we publish it herewith:

When war drenches Europe in blood it is natural that we Americans should shudder at the sight. To call upon the combatants to stop the carnage is an impulse so strong that it even tends to displace judgment and distort values. We are apt to forget, at any rate for the time being, that there are conditions under which the mere stopping of warfare may bring a curse instead of a blessing. We need to be reminded that peace is the triumph of righteousness and not the mere sheathing of the sword. To clamor for an ending of the present war without insuring the vindication of truth, justice, and honor, is not to seek peace, but to sow disaster.

Because it is so easy to lose sight of these essential principles, we, the undersigned, view with some concern the organized and deliberate effort now being made so to stampede Christian sentiment as to create a public opinion blindly favorable to stopping hostilities without adequate consideration of the issues which the war involves.

We are Christians, and as such deem that truth and righteousness are to be maintained inviolate, even at the sacrifice of physical life. We are citizens of the United States, and as such are conscious of the solemn responsibilities of our Christian citizenship. We accordingly venture to direct the attention of our fellow Christians to a few of the vital issues which are making their mute appeal for final decision.

The ravage of Belgium and the enslavement of her people; was it right or wrong?

The massacre of a million Armenians; was it a permissible precaution or an unpardonable crime?

The desolation of Serbia and Poland; was this a regrettable necessity or a frightful injustice?

The destruction of life through the sinking of the Lusitania and other merchant ships; was this an ordinary incident of warfare or was it deliberate and premeditated murder?

The starvation of Jews and Syrians in the Holy Land; is this an accident of economics or a violation of the laws of God and man?

The attempt to array Moslems against Christians in a "holy war"; was it a laudable act of imperial statesmanship or was it the treachery of a Christian monarch?

The intimidation of small nations and the violation of international agreements; are these things excusable under provocation or damnable under all circumstances?

In the presence of these pending and as yet unsettled issues we feel impelled to warn our brethren against those who say "Peace! Peace!" when there is no peace. The just

A CHUNK OF PORK

Drawn for The Independent by W. C. Morris

FIRST CITIZEN: "BY GRASS, EZRY, TIMES IS GETTIN' BETTER IN OUR ME-TROP-A-LUS"
SECOND CITIZEN: "YEW DON'T SAY, CY?"
FIRST CITIZEN: "YEP, THE POSTMASTER SEZ HE'S SOLD THE THIRD POSTAGE STAMP THIS MONTH"

God, who withheld not His own Son from the cross, would not look with favor upon a people who put their fear of pain and death, their dread of suffering and loss, their concern for comfort and ease above the holy claims of righteousness and justice, and freedom and mercy and truth. Much as we mourn the bloodshed in Europe, we lament even more than supineness of spirit, that indifference to spiritual values which would let mere physical safety take precedence of loyalty to truth and duty. The memory of all the saints and martyrs cries out against such backsliding of mankind. Sad is our lot if we have forgotten how to die for a holy cause.

We solemnly declare to you our conviction that the question of all questions for our immediate consideration is this: Shall the ancient Christian inheritance of loyalty to great and divine ideals be replaced by considerations of mere expediency?

With the reiterated demand of the distinguished signers that we must have no peace save that which is founded on justice and righteousness, we find ourselves in accord. Tho why it was necessary to proclaim it now we are at a loss to understand. We know of no responsible man or movement in the United States, official or unofficial, demanding an unjust unrighteous or premature peace.

We regard, however, the putting forth of the appeal at this time as a grave mistake—to say the least. It cannot fail to be construed as a movement to halt all peace discussion and to flout the efforts of the President of the United States and the neutral governments of Europe, who with all the special sources of information at their disposal have at last declared the time is ripe to begin the substitution of reason for armed conflict. But more than that, one of the belligerents has actually offered to make peace. And now these eminent ecclesiastics and laymen rush in "warning their brethren against those who cry peace when there is no peace," without even knowing whether the Central Powers are ready to make "complete restitution, full reparation and effectual guarantees." It would seem as tho the signers have put themselves in the position where the public will believe they are advising their brethren in Europe to continue to slaughter one another on the supposition that "the ravage of Belgium," "the desolation of Serbia and Poland," "the destruction of life thru the sinking of the Lusitania," "the starvation of the Jews and Syrians in the Holy Land," "the attempt to array Moslems against Christians," and "the intimidation of small nations and the violation of international agreements" can only be atoned by blood.

The inference may be unfair to what these gentlemen have in their hearts. But it is almost inevitable that it should be drawn. If the result of their appeal should be to prolong the war an unnecessary day they will have incurred a terrible responsibility.

B. B. B. B. B. B.

THE aims of the Allies are vague and various. The aim of the Germans, according to Herr Hamburg-Amerika Ballin, is plain and direct. It is the Berlin-Budapest-Belgrade-Byzantium-Bagdad-Bahn, or as we Americans would express it, the B. B. B. B. B. B. R. R. To connect the Orient and the Occident by land as the British have by sea has long been the German ambition and now it has been attained. The announcement comes from Germany that the Taurus Mountains have been pierced. If this means all the tunnels including the great Bagtche tunnel of 16,000 feet thru the Amanus Mountains east of the Taurus proper the way is now cleared to the Mesopotamian plains. It has been known that the German engineers were working with feverish activity in the Taurus section ever since the war began, but it was not anticipated that these tunnels, which rival the Mont Cenis and St. Gothard tunnels of the Alps in extent and difficulty, would be so soon completed. The rest of the route is comparatively easy and we may assume that the one or two hundred miles of desert plain that at last accounts still separated the railroad from the Tigris has been spanned, at least by a light track. The successful defense of Bagdad against the British Mesopotamian expedition proves that.

This means that munitions may be shipped from Berlin—say rather from Essen—to the Egyptian frontier or to the heart of Mesopotamia all the way by rail with the exception of the ferriage across the Bosporus. It also means that cattle, corn and cotton can be shipped directly into Germany. But so long as the British hold the mouth of the Tigris and Euphrates the Germans can never attain their seaport on the Persian Gulf which was to give them entrance to the East.

The German railroad to Bagdad is, according to English authorities, the best built of any in the world. It is laid thruout on heavy steel ties and with heavier rails than have ever been used. From Konieh in Asia Minor, where the German concession begins, the distance to Bagdad is about 900 miles. The older road from Konieh to the Bosporus opposite Constantinople is some 300 miles and from Constantinople to Berlin is 1700, so the total distance is not far from 3000 miles. As soon as Belgrade was captured and a way broken thru Serbia, express trains, handsomely equipt, were run from Germany, even from Antwerp, thru Bulgaria to Constantinople.

The conquest of western Rumania opens another route thru the Balkans, equally entitled to be called a bee line, via Brasso and Bucharest. So it would not matter much now if the Allies did succeed in reconquering Serbia and cutting the Belgrade-Constantinople line, for the alternative route thru Rumania would still connect the Central Powers and their Ottoman ally.

Both war and commerce are nowadays largely based upon railroad strategy. But the importance of free waterways to the open sea has not been diminished. At Constantinople, the crossroads, the two came into conflict. Russia demands passage thru the straits from north to south. Germany demands passage across the straits from west to east. The two crossings might easily be accommodated so far as traffic goes, since a tunnel, a ferry or even a bridge would not interfere with the passing of ships. But both powers demand exclusive control of the straits, for each is, not without reason, unwilling to trust the other.

Up to the very eve of the war it was an established part of the British policy that Russia must, at all costs, be kept out of Constantinople. With this object sixty years ago Great Britain joined with France in the Crimean War. With this object three years ago she was almost willing to join with Germany. In the March, 1913, issue of *The Nineteenth Century and After* we find an article on "The Final Solution of the Eastern Question," by H. H. Johnston, which fairly reflected British opinion, tho it may be doubted if it represented the views of Sir Edward Grey. Speaking of the Balkan War he says:

Even if Turkey is quickly brought to her knees in the next few weeks and concludes a peace that surrenders all,

or nearly all, her possessions in Europe, she will remain a menace for some time to come if not placed under some sort of international control. And no civilized people which has once tasted the delights of freedom, of liberty of speech and movement, would invite the intervention of Russia. Poland and Finland are a witness to what may result from calling in such an arbiter. . . .

The situation . . . is not one that would justify British interference unless Crete were taken from Greece, or Russia occupied Constantinople or the Dardanelles. . . . Any Russian occupation of this strait between Europe and Asia, or an establishment on the west or south coast of Asia Minor, would be too serious a menace to the balance of power in the Mediterranean to meet with British acceptance. . . . Russia is too great a colossus to impinge any more on the progressive nations of Europe or on regions which lie on the direct route from Europe to the Persian Gulf. . . . In resisting her movement toward the Dardanelles and Anatolia, therefore, Austria-Hungary and Germany are acting—perhaps unconsciously—as the allies of the British Empire.

This then was the traditional British policy up to three years ago. It would be interesting to know at what time since and under what influences it became completely reversed. As soon as peace terms began to be discussed openly the Russian premier hastened to announce that Great Britain and her Allies were committed to the Russian possession of Constantinople. Since all of the Allies are pledged not to make peace so long as any one of them has not attained its aims it would seem that the English will have to fight on until Constantinople is captured and handed over to Russia, the very thing which a few years ago they were willing to fight to prevent. Russia has not changed her nature; it is only that a new and more formidable foe to British trade and dominion has arisen. In themselves the Russian claim of a water route and the German claim of a land route are commendable and not incompatible. But the British have good reason to suspect that the Germans are not content with their string of B's but would like to add Brussels to one end of it and Bombay to the other.

JACOB SCHIFF, MASTER OF EFFICIENCY

ONE does not become—and remain for thirty years—head of one of the two most influential private international banking concerns in America without a very high type of efficiency. Jacob H. Schiff passed his seventieth birthday last week; and his efficiency as financier, as philanthropist, as citizen is by common consent at the highest point of his life.

It is a Wall Street saying that Kuhn, Loeb & Company have issued more good investments and fewer bad ones than any other banking concern in America. The great Union Pacific-Southern Pacific railway system, that holds secure the fame of Edward Harriman as an empire builder, the wonderful Pennsylvania Terminal in New York with the great tunnels under the Hudson and East Rivers, these majestic accomplishments owe quite as much to the financial support and backing given by Mr. Schiff and his firm as to their actual constructors. The selling here of $200,000,000 worth of Japanese bonds when the Russo-Japanese War broke out, and the placing of $50,000,000 worth of Pennsylvania Railroad bonds in France, where they were listed on the Paris Bourse, are characteristic examples of the big financial feats that the Schiff house is wont to perform. In the financial world the mere fact that Mr. Schiff leads the firm of Kuhn, Loeb & Company is sufficient to establish his position as a master of banking efficiency.

Mr. Schiff is much more than a financier. It is told of him that on the day of the great Northern Pacific panic in Wall Street, the other members of Kuhn, Loeb & Company tried excitedly and in vain to find Mr. Schiff. He had not come to the office; he was not at home; he was not, as might have been suspected, in conference with Mr. Harriman; he was nowhere that he ought to be or would naturally be expected to be on such a day. He was finally run to earth at the Montefiore Home for Chronic Invalids, quietly attending a meeting of its managers. When his partners remonstrated with vigor, he replied quietly, "I thought the poor people up there needed me more than you people down here."

It was characteristic. Mr. Schiff has a great heart. He is a confirmed philanthropist. He contributes largely of his money to colleges, hospitals, libraries, charitable organizations, the Red Cross and similar organizations. But, what is more, he gives himself. Many of the movements in which he is interested owe quite as much to his brain and his heart as to his pocketbook. He is an efficient philanthropist because he gives ungrudgingly and intelligently, and above all, warm-heartedly.

But the thing nearest to Mr. Schiff's heart is his ideal of citizenship. One who has long known him writes truly of him thus:

His fetich is not, as popularly supposed, Judaism, but citizenship. It is his creed that a man must first, last and always be a good, loyal citizen, intensely zealous in discharging all the responsibilities of citizenship. With him citizenship ranks above sect. He holds that unless a man is a worthy citizen he cannot be either a worthy Jew or a worthy Gentile. Everything is secondary to citizenship. All his public service, all his givings to education, his continuous donations to charities, his endeavors for the promotion of the best literature of his race—all have been prompted by his sense of what citizenship demands.

He interprets this duty of responsible citizenship not merely as a Jew, but as an American. In a speech in reply to some criticism of his attitude toward his own people, he said:

We hold our Jewry, our flag, as high as our fathers did, but we recognize that we are Americans, and we want our children to be Americans. We want our children to love our religion. We want them to be able to read in the original language our laws and our codes, but we also want them to think in English, to read in English, to adopt American ways.

Jacob Schiff is the highest type of American citizen. His achievements as financier, his deeds as philanthropist, his ideals and his acts as citizen of city, state and nation—in all of which relations he combines the hard-headed efficiency of the intellect with the warm-hearted efficiency of the sympathies—rank him high as a Master of Efficiency.

MR. MABIE

IN the death of Hamilton W. Mabie last week American journalism and letters loses a real soldier of conscience. Honored by many academic degrees, eminent in his profession, in great demand as a platform speaker, and beloved by all who came within the spell of his personality, he probably had a larger following among the American people during the last twenty-five years than any other critic in America. Yet he was more interpreter than critic. His passion was to interpret, as his colleague, Dr. Abbott, has called it, "the meaning and duty of our time." This he did with a pen both gentle and fearless, sympathetic and strong.

THE STORY OF THE WEEK

Senate Indorses Wilson

By a vote of 48 to 17, the Senate passed the resolution offered by Senator Hitchcock on January 5. The original resolution gave a general approval of "the action taken by the President in sending the diplomatic note of December 18," but the Democratic majority accepted an amendment offered by Senator Jones, of Washington, which avoided an indorsement of any part of President Wilson's note except the request that the belligerent powers state their terms of peace. As amended and accepted the note read:

Resolved, That the Senate approves and strongly indorses the request of the President in the diplomatic note of December 18 to the nations now engaged in war that these nations state the terms upon which peace might be discussed.

Republicans are inclined to regard the amendment as a parliamentary victory, and they point out that it was accepted after Senators Lodge and Borah had delivered powerful speeches attacking the diplomatic policy of the administration. The opposition warned the Senate that a general approval of the President's note would commit the Senate unwittingly to the principles of the League to Enforce Peace, since a suggestion of international coöperation for the future peace of the world could be found in the note. The fear that such a scheme of international organization would endanger the Monroe Doctrine influenced the action of many Senators.

The modified Hitchcock resolution was not strictly a party test, as ten Republicans voted with the majority. Senator Martine, of New Jersey, who has his own quarrel with the administration, was the only Democrat to oppose the vote of indorsement. A better test of party strength was afforded by the defeat of the substitute resolution offered by Senator Gallinger, which exprest a hope for "a just and permanent peace," and approved "all proper efforts to secure that end." The Gallinger resolution did not mention President Wilson or refer in specific terms to his note. It was rejected by a vote of 36 to 27; only Senator Martine, of the Democrats, supporting it, and only Senator Norris among the Republicans voting with the Democratic majority.

Looking for a Leak

Congress is adding to its numerous duties an investigation of the alleged "leak" of advance information that President Wilson was about to issue a note to the belligerent nations suggesting preliminary steps toward the conclusion of peace. Just before the diplomatic note of December 18 was made public a marked decline in certain "war prosperity" stocks showed that rumors of coming peace were alarming their holders. The question therefore arose, did the speculators know anything that the general public did not or were they selling on a basis of guess work only? On January 4 the Committee on Rules of the House of Representatives subpoenaed Thomas W. Lawson, the well-known Boston journalist and financier; Representative Augustus P. Gardner, of Massachusetts, and Representative William R. Wood, of Indiana, to appear and give testimony on the matter. Mr. Lawson refused to tell in advance who, in his opinion, was responsible for giving out information to stock speculators, but Representative Bennet, of New York, stated that current report placed the blame upon Mr. Bernard Baruch, a member of the Council of National Defense and a large contributor to the Democratic campaign fund. Representative Gardner suggested that President Wilson should be summoned as a witness before the House Rules Committee.

THE NEW TENANT

1917: "It's pretty bad, but I'll try to clean it up"

A New Adamson Bill

Representative Adamson, the author of the famous eight-hour law for railroad operatives, has introduced into the House a new measure combining in one bill President Wilson's various recommendations for further railroad legislation. It covers substantially the same ground as the measures introduced by Senator Newlands in the Senate.

It includes the proposed prohibition of strikes or lockouts while a railroad dispute is under investigation by a special board of inquiry in the event of a failure on the part of the Federal Board of Mediation and Conciliation to arrive at a satisfactory decision of the controversy. The board of inquiry must submit its report "as soon as may be, and in no event later than three months from the reference of the controversy." The most remarkable provision of the bill is designed to meet the objection that the eight-hour law was in reality only a grant of increased pay to railroad men and did not reduce the working day at all. A new section makes it "unlawful for any common carrier . . . to require or permit any employee, subject to this act, to be or remain on duty for a longer period than eight hours in any twenty-four hours." The drastic character of this provision is, however, modified by permitting the Interstate Commerce Commission "to prescribe regulations of, or allowances and tolerances for, necessary overtime to be paid for at not exceeding the pro rata of wage per day."

The railway brotherhoods are at present in a very awkward situation. The eight-hour law went into effect on January 1, but the litigation before the Supreme Court is suspending its operation so that few if any railroad operatives are now enjoying any benefit from the provisions of the law. The postponement of the operation of the Adamson law implies also, as the union leaders declare in a recent public statement, that the special commission chosen by the President to investigate the working of the law cannot commence its labors. If the Supreme Court decides adversely Congress will have to devise new legislation to meet the situation thus created, and this will mean still more delay and perhaps indefinite postponement of the benefits expected from the law. Some of the railroad operatives are jealous of the switchmen, who won the eight-hour day by arbitration and so are not affected

by litigation in the courts, and are inclined to blame the brotherhood chiefs for their failure to secure the immediate operation of the new time schedule.

President Wilson is taking a keen personal interest in the passage of the railroad legislation which he has recommended to Congress. The new Congress, which meets after March 4, will not have a working Democratic majority in the House of Representatives and will be less likely than the present House to consider favorably his legislative program. Even the present Congress is inclined to resent executive urgency, and on January 4 the House of Representatives refused by 167 votes to 145 to give privileged status to a resolution extending for one year the life of the Newlands commission appointed to investigate interstate commerce conditions and needs.

Finding the Money Congress is confronted with the unpleasant dilemma of decreasing the contemplated lavish appropriations for preparedness and public improvements or providing against a deficit. Many unusual expenses must be met, such as the twenty-five million dollars which will be appropriated for the purchase of the Danish West Indies and the cost of maintaining an army upon the Mexican border. To meet the financial difficulty thus created many expedients have been proposed. Direct taxes, especially the income tax, may be somewhat increased; tax increases on whiskey, beer and cigarettes are suggested, and a small but general upward revision of tariff duties for revenue purposes finds many advocates in both parties. Secretary of the Treasury McAdoo opposes any bond issue for current expenses, but he believes that bonds should be issued to meet the special expenditures for the border patrol, the Alaskan railroad, the Danish Islands purchase, and other exceptional demands upon the national revenues. The amount which will have to be covered by increased taxation is estimated at about two hundred million dollars, even if the expenditure for public buildings is reduced to a minimum.

On January 1 the new federal taxes provided by the Emergency Revenue Act of last September went into effect. Unmarried persons with net incomes of more than three thousand dollars or heads of families with incomes of more than four thousand dollars will pay a tax of two per cent instead of the old rate of one per cent, and higher incomes will also be taxed at a higher rate than hitherto. The corporation tax is also increased and a graduated inheritance tax imposed upon fortunes of more than fifty thousand dollars. Munition manufacturers are subject to a special levy of one-eighth of their net profits.

The Paper Famine The Federal Trade Commission is now completing an eight months' investigation of the high cost of news print paper. The testimony of publishers and jobbers has been taken, but some large manufacturers have refused to testify before the commission on the ground that they had not had time to study the tables prepared by the federal investigators revealing large profits. Small publishers have suffered most, and a distribution plan is therefore urged by which large publishers would agree to relinquish a part of their normal paper supply for next year. Various methods of relieving the situation have been proposed. Many publishers have entered buying associations or started paper making plants of their own; and A. J. McIntyre, of the Newspaper Publishers' Association, predicts that within less than two years the publishers will be virtually independent of the paper makers. The officers of the Minnesota Editorial Association, consisting of owners of country newspapers, have urged the state to establish a publicly owned paper mill which would not only meet the needs of the newspaper men but would provide a steady income for the state and furnish useful employment for Minnesota convicts. The state owns large tracts of timberland, so that the only cost of the venture would be for the operation of the paper mill. Representative Dillon, of South Dakota, has another plan. He wishes Congress to lay an embargo upon print, book and linen paper, pulp and its products, and has introduced a bill to that effect. He asserted that the export of print paper from this country for the first four months of 1916 was seven times what it was during the corresponding period of 1915.

The Cuban Election Dispute The dispute over the presidential election in Cuba, which has continued ever since the first of November, 1916, is still undecided, but the Liberal party was much encouraged by the decision of the Electoral Board giving Camaguey Province to the Liberal candidate, Dr. Zayas. If this decision is allowed to stand it means that Dr. Zayas will succeed President Menocal, the present Conservative incumbent. But the Conservative party managers are not satisfied of the impartiality of the Electoral Board and will make an appeal to the Supreme Court of the republic. New elections will be held in February in certain districts where the November elections were officially annulled on account of frauds.

The Liberals devoutly believe that they won the November election and

PORK PALACES

Can we afford to continue building such monuments as these to the provincialism of our Congressmen? Winchester, Tennessee, with its $55,655 post office for a population of 1351; Lewiston, Idaho, 6043 people and a post office that cost $77,000; and London, Kentucky, where an $88,882 building houses the mail of 1638 people, are only fair samples of country-wide greed and short sightedness. The present Congress proposes to spend $120,000,000 in erecting more "pork palaces"—a needless extravagance it would seem. But if Congress finds it wise, why not be impartial? On a similar basis of expenditure New York must have a $258,698,740 post office; Chicago one that costs $118,595,308. And when none of the cities and towns in the United States have been slighted we shall have spent $5,427,000,000—say it over again, five and a half billion dollars!

were afterward counted out by Conservative officials working in the interest of President Menocal. So embittered were some of the party leaders that they advocated American intervention as the only way to secure honest elections. But at a recent conference the directorate of the Liberal party decided not to make any appeal to the United States, since to do so would be an admission that the Cuban people were incapable of self-government and, consequently, an invitation to this country to turn intervention into annexation. A few speakers at the conference hinted vaguely at revolution if they could not secure a just verdict by peaceable means, but impartial observers seem to discount such threats and agree that the Government is too well established to be overturned by any insurrectionary movement.

To Stay or Not to Stay? Altho First Chief Carranza still withholds his approval of the protocol agreed upon by the Mexican-American joint commission, President Wilson will probably soon order the withdrawal across the border of the 12,000 American troops now in Mexico. Military officials favor this policy, since the army in Mexico is accomplishing nothing and would afford equal or greater security to this country if kept on the border. The President is also mindful of the constant irritation and suspicion aroused in the Mexican mind by the continued presence of American soldiers. Indeed, Carranza's refusal to assent to the protocol seems to have been largely due to a feeling that it would be contrary to the dignity of the Mexican nation to concede that a foreign army had any right whatever to remain on Mexican soil. The de facto government has persistently declined to discuss American coöperation in the regeneration of Mexico until after the retirement of the American forces. It is true that the protocol, the text of which has now been made public, provided for the evacuation of Mexico by the American army within forty days after the approval of the agreement by both governments, but it also required that this be accomplished in such a manner "as to insure the safety of the territory affected by the withdrawal," and that "the territory evacuated by the American troops shall be occupied and adequately protected by the Constitutionalist forces." These qualifications looked to the Mexicans like pretexts for indefinitely extending our unwelcome stay, since a renewal of disorders in the part of the country now protected by the Americans is a permanent possibility.

General Murguia is reported to have won a decisive victory over Villa's main army near Jiminex, 150 miles south of Chihuahua City. Each army contained approximately 7000 men. The opposing forces came into contact on the last day of the year, and four days later Villa abandoned the field to the victorious Constitutionalists, leaving behind him several hundred dead and wounded, and a large quantity of munitions of war. This battle, supposing it to have been correctly reported, was not only important but also very timely as the rebel successes in many parts of Mexico were shaking the loyalty of adherents of the de facto government. It is rumored that all the insurrectionary forces in Mexico, especially the followers of Villa, Zapata and Felix Diaz, have entered into an agreement to cooperate against Carranza and chosen Jose Robles, an adherent of Villa, as the leader of the whole movement.

A State with Two Governors The Democratic governor of Arizona, G. W. P. Hunt, created a stir thruout the state when he refused to surrender his office to Thomas E. Campbell, the Republican governor-elect. Governor Hunt believes that when the ballots cast at the November election are recounted his reëlection will be established beyond a doubt, and, acting upon that belief, he refuses to recognize in any way his opponent. Mr. Campbell is governor upon the face of the returns, and his election has been conceded by the Democratic State Central Committee. The question of which of the two claimants is the rightful governor will be fought out in the courts. New Yorkers cannot fail to be reminded of the time when Governor Sulzer and Lieutenant-Governor Glynn both attempted to exercize authority as the chief executive of the state during the impeachment proceedings against the former.

On the first of January both would-be governors expected to be inaugurated, and the town of Phoenix filled with partizans of each side ready to take a hand if there should be a conflict. Governor Hunt, however, locked his rival out of the capitol building and governor-elect Campbell did not insist upon going thru the formal ceremony. He had already satisfied the requirements of the law by taking the oath of office before a notary, and so he contented himself with an informal address to the crowd on the capitol grounds. Governor Hunt still refusing to accept his credentials, governor-elect Campbell established a temporary executive office in another part of the city. Feeling on both sides ran high, but trouble was averted by the large force of deputy police, by the new prohibition law, which made liquor inaccessible, and by the good sense and self-restraint which often characterizes even a very angry American crowd.

Assassination of The Mystic Monk The report of the discovery of the body of Rasputin, shot thru with many bullets and thrust beneath the ice of the Neva at Petrograd, is the final chapter of a strange tale of court intrigue and oriental superstition. For many years it has been rumored that the power behind the Russian throne was the monk magician from Siberia, Gregory Rasputin. Ignorant and illiterate, coarse and licentious, yet he became the chief favorite of the Czar and Czarina and controlled the removal and appointment of the highest dignitaries of Church and State. Some called him the evil genius, others the guardian angel of the Czar, but both parties agreed as to the extent of his influence. He is accredited with having induced the Czar to abolish with a stroke of the pen the sale of alcoholic liquor thruout the Russian Empire at the outset of the war. He is accused of endeavoring to persuade the Czar to a premature peace such as would sacrifice the interests of his country.

Rasputin gained a reputation among the common people as a miracle-worker when he was curing the sick in Siberia by the laying on of hands. His eloquence made him the leader of one of those mystical movements so common in Russia, and about ten years ago

brought him into favor with nobility and royalty. The Czarina had disappointed her husband and her people by presenting them in succession with four daughters but no son, and when at last an heir appeared he was sickly, some say deformed, from birth. The "mystic monk" was called to treat him and apparently accomplished what the doctors thought impossible. But whenever the Czarevitch was taken away from his healer his health declined, so Rasputin became an indispensable intimate of the imperial household.

Many attempts have been made to remove him in more or less legitimate ways, but hitherto without success. He has been openly denounced in the Duma as a danger to the realm, but his status at court was unshaken. In July, 1914, he was stabbed by a woman, Julia Guseva, who gave as her reason for the act that he had ruined the lives of young girls and brought scandal upon the Church. It was while he was disabled by this wound that the Russian armies were mobilized, which precipitated the Great War. His friends believe that the attempted assassination was a plot to get him out of the way so the Czar could be forced into war in spite of the pacifist principles with which Rasputin had inspired him.

Whether his death was instigated by jealousy of his political power or by the fear lest he should betray Russia to the Germans is known only to his murderers. There are several versions of the assassination, and since they are equally unauthentic, we choose the most dramatic. This is that he was invited to a banquet at the palace of Prince Felix Yusupov in Meika street. There were said to be six young men of prominence at the dinner and after drinking together one of them handed a revolver to Rasputin and told him to shoot himself. He took the revolver, but fired instead at the man who had given it to him. The shot hit and killed a wolf-hound and while the monk was trying to escape he was brought down by three bullets. His body was taken to the Petrovsky Bridge and dropt over into the river, but the attached weights broke off as the body in falling struck the end of a bridge beam, so it was carried down by the current instead of sinking to the bottom. No action will be taken against the assassins as the police are said to have reported that the act was committed "in self defense."

A "DRY" CELEBRATION

The booze flowed freely—from a water wagon—when Phoenix, Arizona, celebrated the state decision in favor of prohibition. Several hundred gallons of contraband liquor were sprinkled on the streets while the prominent citizens fought for the privilege of getting on the wagon

Turkey Declares Independence

The admission of Turkey to equal alliance with Germany and Austria-Hungary has emboldened her to repudiate the suzerainty which the European powers have exercized for the last sixty years. At the beginning of the war the Ottoman Government renounced the capitulations which had since the seventeenth century granted to foreign residents the privileges of extra-territoriality, and now this has been followed by a declaration of independence in a note addrest to Germany and Austria-Hungary, and communicated to the neutral nations. In this note the Ottoman Government announces that it regards the conventions of Paris and Berlin as no longer binding upon Turkey. The Treaty of Paris was signed in 1856 at the close of the Crimean War in which France, England and Italy fought Russia to protect Turkey. The Treaty of Berlin, in 1878, was the result of the joint intervention of England, France and Germany to prevent Russia from taking Constantinople, after she had, with the aid of Rumania, defeated Turkey. The Ottoman Government points out—not without reason as any reader of history must admit—that while the powers in these treaties expressly guarantee the independence and territorial integrity of Turkey and disclaim any interference with its subjects and with its internal administration, "they have violated their promises, either openly or secretly, so that after having obtained the application of the clauses which were to the disadvantage of the Ottoman Empire, they did not trouble themselves about those which were in its favor, and they even opposed them constantly." The six powers whose control over Turkey is thus shaken off were Great Britain, France, Russia, Italy, Germany and Austria-Hungary.

The Ottoman Government specifically announces the abolition of the acts, according to which the province of Lebanon was placed under the special protection and control of the Christian Powers and was required to have a Christian governor. Lebanon is in the district that France will claim in case Turkey is divided.

THE CASE OF CAMPBELL VS. HUNT

There is one governor too many in Arizona just at present, but no one seems to know quite what to do about it. Governor Campbell, Republican, has an official plurality of thirty votes and has been inaugurated—on the front lawn of the Capitol, for Governor Hunt, Democrat, considers possession ten points of the law and stays at his desk, with the State House doors locked and guarded

TO THE MEMORY OF LAFAYETTE, AN AMERICAN MUSEUM IN FRANCE

American men and women have bought the birthplace of Lafayette, now the Chateau de Chavinac-Lafayette, in France, to be kept as a Franco-American Memorial Museum

It is an interesting coincidence that this repudiation of the humiliating conditions imposed upon Turkey thru her defeat in 1878 by Russia and Rumania was proclaimed just after the Turks under German leadership had inflicted an humiliating defeat upon the Russians and Rumanians. When the triumphant Turks entered Bucharest last month they found before a monument in that city the cannon they had lost in 1878 when the Rumanians and Russians took Plevna after a five month siege. The recaptured cannon will be taken to Constantinople and there set up as a trophy in front of the War Office.

While the Turks have been successfully engaging in the European campaign they do not seem to have suffered in Asia. The Caucasian army, under the Grand Duke Nicholas, has been mostly inactive since the capture of Trebizond, and has apparently been losing ground of late. The British in Mesopotamia have renewed their efforts to advance up the Tigris toward Bagdad. On the last day of the year they made an attack upon the Turkish positions near Kut-el-Amara, where their previous expedition was lost. The reports of the engagement are conflicting. The British claim to have gained ground, but the Turks claim that the British attack was repulsed with the loss of over five hundred men.

THE GREAT WAR

December 31, 1916—British attack Turkish lines at Kut-el-Amara. The body of the monk Rasputin is found in the Neva.

January 1, 1917—British transport "Ivernia" sunk in Mediterranean. Turkey declares her independence of the European Powers.

January 2—Germans complete conquest of Dobrudja.

January 3—British attack in German East Africa. England cuts off coal from Norway.

January 4—Austrian and German commanders in conference with Kaiser at his field headquarters.

January 5—Allied ministers hold war council at Rome. Germans capture Braila.

January 6—Russians attack German lines west of Riga.

January 7—Russians begin a strong counter-offensive along the Sereth. Allied conference adjourns.

U-Boat Depredations

The German submarines are starting on a winter campaign with greater energy than ever before, and British shipowners are becoming alarmed over the prospect. Orders have been issued to stop the announcements of steamship sailings and all shipping news except the reports of casualties. The new U-boats are large enough to go half way around the world, and it is feared that even the Pacific will soon cease to be safe. There is no definite news of German submarines in the north Atlantic, but several ships of the Allies have mysteriously disappeared recently and it is suspected that they have been sunk either without warning or so far from land that their crews if allowed to embark in the lifeboats at all could not reach the shore on either side.

Berlin boasts of having sunk, during November, 133 hostile merchant ships with an aggregate tonnage of 314,500. Of this, 244,500 tons were British. Besides, fifty-three merchant ships of 94,000 tons gross, belonging to neutral nations, were sunk for carrying contraband. From the beginning of the war up to the end of November, according to the German estimate, the Allies had lost 3,636,500 tonnage, of which 2,794,500 was British.

This may be compared with the following British estimate from Sir Norman Hill, secretary of the Liverpool Steamship Owners' Association:

In the twenty-seven months of war from August, 1914, to October, 1916, 435 steam vessels of more than 1600 tons, representing 1,744,000 tons gross register, were lost thru war perils. Great Britain started the war with 3600 steamships of 16,000,000 tons gross, so that the losses represent twelve per cent in numbers, or eleven per cent in tonnage, being less than one-half of one per cent a month.

Sir Norman Hill estimates that the value of the cargoes lost amounts to less than a half of one per cent of the total carried, and he adds, "A ten shillings in 100 pounds blockade will never starve us."

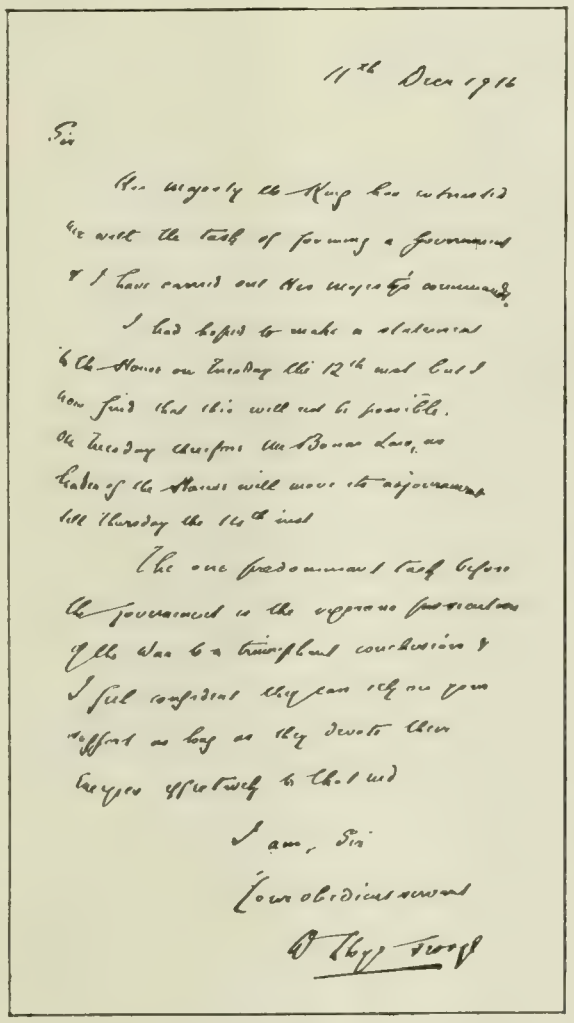
But it is evident that all of his countrymen do not share his optimistic view. A meeting of citizens of London held last month passed strong resolutions demanding that the Government instantly adopt measures for the protection of oversea trade, that merchant vessels be "so armed as to enable them to defend themselves against piratical attacks," and a more effectual blockade be enforced, and "that the British Navy be set free to exercize to the full its lawful sea powers." Lord Beresford, in moving this resolution, said that since the war 1470 Allied and neutral ships had been sunk and that the country was at present losing about 70,000 tons of cargo a week and accordingly food was going up in price. The line of communication across the Channel was now stopped and the situation there was more serious than he could say.

Gibson Bowles, who seconded the motion, said the loss of shipping was so great that unless checked England would be blockaded as well as Germany. This meant privation of raw material, the loaf at famine prices, grave discontent and the gravest dangers to the state. "There are rat-traps for these vermin that may be used and must now be used to the full."

The activity of the U-boats in the Mediterranean has greatly increased

Kirby in New York World

BACK TO THE TRENCHES



and Italian shipping has suffered especially. During the first twenty months of the war twenty-one Italian ships were sunk, but during the next six months the Italian loss was ninety-one. The first victim of the new year was the British transport "Ivernia," which was carrying troops in the Mediterranean when sunk, with a loss of 153 men. The "Ivernia" used to be a Cunard liner and she was valued at $3,000,000.

The Battle of the Sereth Last week we chronicled the completion of the conquest of two of the three grand divisions of Rumania, that is to say, Wallachia the western, and Dobrudja the eastern. This naturally raised the question of whether the Germans would be content with these gains which had shortened their line from some 660 miles to less than a hundred, or whether they would proceed to the conquest of the third division of Rumania, that is, Moldavia, which stretches toward the north between the Carpathian Mountains and the Pruth River.

It appears now that the Germans are ambitious to get possession of all Rumania, for they have entered Moldavia from the south and west, and are pushing a vigorous attack on the new line established by the Russians to protect what remains of Rumania. This line, as shown by the map in last week's issue, extends across Rumania at its narrowest part from the angle of the Carpathians on the west, to the angle of the Danube on the east, following for a great part of the way the Sereth River, which rising in the mountains, runs into the Danube at Galatz. This line was provided with an elaborate and expensive system of fortifications years ago as a protection against Russia. But such permanent fortifications of concrete and steel as Brailmont constructed for Belgium and Rumania have not proved dependable against modern artillery. Bucharest, which was regarded as the strongest fortified city of the world with the exception of Paris, surrendered without a blow as soon as the troops of Mackensen got to it. Doubtless it could have held out for some time, but the old adage, "a city besieged is a city taken," is now truer than ever, and to have held Bucharest would have merely meant the eventual loss of the garrisoning troops, without even serving the purpose of retarding the German advance, for the invading forces had already swept around it and on.

But the defense of the Sereth line is quite another question. It is not an isolated city but a frontier with all Russia behind it and three railroads leading up to it. Unless the Russians have completely lost their power they should be able to hold it as long as the French have held the Meuse or the Germans the Aisne. The most threatening feature of the situation is that the Russians do not seem to be able to hold the Carpathians, which protect the western end of the Sereth line. Altho the passes are filled with snow the Austrian and German troops under General Gerck have succeeded in entering Rumania from the Hungarian side and are now attacking the right flank of the Russians, while the troops under General Krafft von Delmensingen are attacking this end of the line from the front.

In the center and on their left wing the Russians are faring no better. The center was beaten back last week and now the German guns are within range of Fokchani, the main fortress in the middle of the line. The Russian left now rests upon the Danube just above, this is, south of Braila. But the Russians who occupied the Dobrudja, east of the Danube, have been driven out, and the troops of Mackensen now hold the bridgehead directly opposite Braila. The Danube, with its marshes, is nearly ten miles wide here, however, and the bridge over the main stream is merely a pontoon, which could have been destroyed by the Russians when they had effected their retreat across it and were safe in Braila. But the Russians made no effort to prevent the crossing of the Danube, and so the German and Bulgarian infantry entered Braila from the Dobrudja about the same time as the cavalry entered from the west. Braila was evacuated without resistance by the Russians, who after burning the factories and stores, retreated to Galatz, behind the Sereth River. To save Moldavia from further invasion, the Russians took the offensive on January 7 along a fifteen mile front, thus temporarily checking the German advance.

11th Dec 1916

Sir

His Majesty the King has entrusted me with the task of forming a Government & I have carried out His Majesty's command.

I had hoped to make a statement to the House on Tuesday the 12th inst but I now find that this will not be possible.

On Tuesday therefore the Business Leader of the House will move the adjournment till Thursday the 14th inst

The one paramount task before the Government is the vigorous prosecution of the War to a triumphant conclusion & I feel confident that I can rely on your support as long as my efforts have your approval.

I am, Sir

Your obedient servant

D Lloyd George

THE FIRST PRIME MINISTER TO DISREGARD PARTY

In the English Parliament the Prime Minister and all the members of his government have seats either in the House of Commons or the House of Lords. In times of peace, the Prime Minister, if he sits in the House of Commons, sends a formal letter a few days before the opening of each session of Parliament to each member of the House who supports him, asking him to be present when Parliament meets. A similar letter is sent to his own supporters by the Leader of the Opposition in the House of Commons. If the Prime Minister is a member of the House of Lords, he sends a letter only to the Peers who support him. His supporters in the House of Commons would be addrest by his leading minister in the House.

The above is a facsimile of the first letter issued by Mr. Lloyd-George as Prime Minister. It is a historic document, and apart from its dramatic interest arising from the circumstances under which it was written it is noteworthy because for the first time in modern English history it is an example of a letter written by a Prime Minister and sent to every member of Parliament without distinction of party

Coronation of the King of Hungary Charles IV was crowned at Budapest on December 30 with such magnificence that the American correspondent, Cyril Brown, can find nothing to compare it with except a motion picture film. His description is as colorful as an imagist poem, and we cannot do better than to quote a bit of it:

> No cathedral could possibly have housed a more pictorially brilliant scene than has St. Mary's today. On both sides of the center aisle, tier on tier of improvised grandstands almost to the roof were banked solidly with gold and jewels, velvet, and costly furs. The massive granite pillars of the Gothic cathedral from roof to floor were draped with rich purple velvet bordered with gold.
>
> Near the altar stood two thrones of deep crimson velvet, that of Queen Zita brocaded with the white lilies of Bourbon-Parma. In pews to the left of the thrones sat the Austrian Archdukes, mostly in gorgeous gala uniform, including Maximilian, the King's younger brother, and Archduke Field Marshal Friederich, in the vermilion garb of a Hungarian cavalry general. In the pews to the right of the thrones were massed the Austro-Hungarian ministers, including late Foreign Minister Burian. Next to these were the neutral diplomatic corps in various costumes, including Ambassador Penfield, wearing a dress suit, and the Ministers of Siam and China in gold-braided court costumes. In precedence the American Ambassador was placed second only to the Turkish Ambassador, with the Spanish representative third.
>
> In the balcony to the left of the altar sat Ferdinand, King of Bulgaria, in the gala uniform of a Hungarian cavalry general, while in lofts to the left and right were massed Austrian Archduchesses. The rest of the cathedral was filled with Hungarian magnates, wearing Robin Hood caps, with feathers at rakish angles, held by pearl, turquoise and emerald clasps. The magnates also wore coats of ultramarine, green, brown, saffron and crimson velvet over gold and silver, embroidered with white, lavender, green and purple waistcoats, jewel-studded sashes, russet or golden boots, with spurs.

The announcement by the new King that he and Queen Zita will spend six months of each year in Hungary was very gratifying to Hungarian pride, which demands equality in all particulars with the Austrian Empire. The radicals of Hungarian Parliament refused to have anything to do with the coronation, holding that it was scandalous to spend so much on pomp and ceremony when the country is fighting for existence and the people are starving.

WRITING "FINIS" TO DECADENCE

BY G. K. CHESTERTON

AUTHOR OF "TREMENDOUS TRIFLES"

MOST of us would agree in talking of that queer period called "The Eighteen Nineties" that, in spite of some very different elements, it may justly be called the age of the decadents. The critic who would write truly of that age must be just severe and fastidious enough to smell poison in the period, but not too severe or fastidious to appreciate it in small doses. There are some for whom the unmanly moral antics in which that age ended are so horrible that they can have no patience with the quaint and harmless accessories. They have come to dread every dandy as a possible criminal; they think the praise of emeralds can only be a prelude to the drinking of absinthe; the praise of rubies only a prelude to the shedding of blood. I am not of such a temper. I think the jokes of the decadents extremely good—as long as they were jokes. I derived, and still derive a very positive literary pleasure from such fantasias as *The Sphinx*. I like fantastic moons to shiver in some stagnant lake. I positively request a scarlet snake to dance to fantastic tunes. I am very much gratified to hear that there is a hole "left by some torch or burning coal on Saracenic tapestries"; partly because it is such fun to think that the tapestries are spoilt. A small but strong pleasure is really given by these fancies; and can do no harm as long as we know they are fanciful. The mistake of these people was that they tried to turn dolls into idols.

> Sometime a horrible marionette
> Came out and smoked his cigarette
> Upon the steps like a live thing.

You are all right if you never fall into the error of thinking it is a live thing.

One can, I think, be genuinely interested in the arabesques of that artistic age; one need not be impatient with them; no nation which has to govern Oriental peoples should ever be impatient with arabesques. One should, I think, appreciate, for instance, the real delicacy (yes, and humility) of a man like Mr. Max Beerbohm—who is in a very true sense the "town" and all that is best in the town. But while we sympathize with these small things, we must also sympathize with some big things. We must realize that in *The Ballad of Reading Gaol* there is, after all, very little of the *bizarre* which its author generally pursued.

Fin de siecle is a phrase much used, and, I think, rightly so used, to describe the period of the Eighteen Nineties; tho one must, of course, see its lack of logic. A century has no hair; and it cannot whiten. A century has no teeth, and they cannot fall out. It was an arithmetical coincidence that the decay of the Victorian comfort and conviction occurred at the end of one hundred arbitrarily selected years. Yet, as I say, the phrase, tho not logical, is really significant; and for this reason: that the authors and artists in question were not only coming to the end of the century but to the end of everything. There was an element in their work not easy to define except by some simile of death. They were "the last word in art," or "the last word in criticism," not only in the general sense of being the newest, but in the literal sense that there was no more to be said. Their self-emancipation was suicide. If I may presume to imagine or imitate their literary method, it is not difficult to conceive their talking about it under the image of suicide. One might have said, "I would fling myself into the fire, if I knew it was of burning roses"; or one might say, "Haman was the most enviable of human beings. I would willingly hang myself, but my gallows must be higher than the stars"; or another might say, "If I commit the harakari I should not be thinking of the sanguinary pattern on the floor, but of the silvery pattern on the sword." One may like that style or dislike it; it is still true to point out that whether you burn yourself or hang yourself or stab yourself, your next stage of development is being what is known as "dead"; and, except in theological hypotheses, done with. *Qualis artifex pereo* is your last epigram; any other would be an anti-climax; and there are neither epigrams nor climaxes nor flatterers nor foolish ladies nor sycophants of the intellect in the grave, whither thou goest.

There was this sterility and finality in all their criticism. To take a case at random, one of them defined a woman as a sphinx without a secret. Given this, we can only say that the remark is interesting—and the woman isn't. In so far as a word can kill a sentence, or a sentence can kill a book, he will merely be acting like a barbarian who burned the library of Alexandria. If he is wrong, he has missed the secret; and even if he is right he has not increased the interest. If there is no secret there is no sphnix. As I have said, I warmly second the motion that a scarlet snake be induced to dance to fantastic tunes. But if it be finally settled that there are no snakes in Iceland, I will not go to Iceland and play fantastic tunes for indefinite periods to stimulate a snake who I know isn't there. The same killing of all further interest in the topic can be seen in the parallel pictures of women by a man like Beardsley. The portrait of a lady by Gainsborough or Romney may suggest almost any shade of morals or manners between Lady Hamilton and Mrs. Siddons. But every touch of the brush on dress or distance somehow suggests that the sitter, like the painter, had a thing called a heart, whether it led her right or wrong. Therefore she is still alive, and Meredith might have written a novel about her, or Shaw a play. But Beardsley, in black and white (both literally and symbolic) in lines as clear as fine print, does succeed in suggesting a woman without a heart. And to me looking at a heartless lady is as boring as talking to a headless lady. A headless lady (to borrow the ladies' phrase) has no expression.

What produced this, then, in all this period is the sense of the word "Finis"; with a Beardsley tail-piece. Despite the pure note of Francis Thompson, the purer element does not predominate. Thompson's words increased and multiplied to replenish the earth and subdue it. His thoughts *bred;* because he began with a thought that he really thought. But of most of them one thinks as of those terminal figures that Beardsley could draw. The head on the pedestal might laugh like Pan; and not merely leer like Priapus. But it is in every sense a terminal figure. It stands and smiles at the limit of our lives; and beyond it there is no road.

Beaconsfield, England

A STATE CREED

BY THE UNIVERSITY OF NORTH DAKOTA

We believe in North Dakota, in the beauty of her Skies, and in the glory of her Prairies.

We believe in the people of North Dakota, in their Strength of Body and Mind, and in their Desire to establish a Great Commonwealth wherein the things that count for Human Welfare shall be first.

We believe in Government and Order, in the observance of the Law and in the Ability of our people to conduct their Affairs in the Ways of Wisdom when guided by the Divine Author.

We believe that here is a Place to work, where our Sons and Daughters may establish Homes of their own and make their Contribution to the General Wealth and Happiness.

We pledge to those seeking new Homes the Hand of Hospitality and extend to them a Welcome to our Commonwealth where they may find Peace and Happiness.

We pledge that the Freedom our Fathers won here and elsewhere shall continue as the Heritage of our Children.

We, as a People, because of Growing Intelligence and Nobler Outlook, hope to render a Larger Service to the State and Nation.

THE NATION'S BURDEN

BY MAY PRESTON SLOSSON

Against the background grim of sullen strife,
  Floats a pure pennon with its cross of peace;
It speaks of love—not hate—not death—but life;
  It promises the dreamed-of day when war shall cease.

When none shall write of custom, race, or creed,
  Manhood itself shall hold mankind in awe,
Each nation's only burden others' need,
  And sympathy shall hold the silken bonds of law.

When man—white, black, or red, or what you will,
  Will read upon that flag which floats above,
"Bear ye each other's burdens"—thus fulfil
  The law of Christ; the love of law—the law of love!

FOR CONSCIENCE SAKE

BY BERTRAND RUSSELL

In the editorial on "The Bertrand Russell Case" last week we explained the circumstances under which the distinguished English philosopher had been dismissed from Cambridge, fined $500, prohibited from lecturing in a large part of the United Kingdom and forbidden to come to America to fulfil his engagement at Harvard. On account of the censorship it has been extremely difficult to get correct information in regard to the treatment of pacifists and conscientious objectors to conscription, but at last we have been fortunate enough to obtain an article from Mr. Russell himself which will give American readers an opportunity of learning his side of the case. The manuscript was brought to this country by a young lady who buried it in a box of chalk.—THE EDITOR.

THIS war, as the Allies have caused the world to know, is being fought for liberty and democracy; devotion to these principles, we are assured, has mobilized the legions of the Tsar no less than the armies of the Western powers. This language was not insincere, but the logic of events has shown that it was short-sighted. Cromwell's Ironsides fought for democracy, and established a military tyranny. Our soldiers, who volunteered with generous enthusiasm in the early days of the war, are horrified, when they return wounded or on leave, to find what "patriots" at home have made of the country which was once the land of freedom.

My own treatment, tho very lenient compared to that of less conspicuous offenders, illustrates the loss of freedom essential to the prosecution of a great war. It is from that point of view that I wish to deal with it, not from the point of view of personal complaint. Personally, I have gained by the Government's blundering efforts at suppression—gained in influence and reputation and in the power of getting a hearing.

FROM the very beginning of the war I have protested against it. I believe that all wars between civilized states are unnecessary, and that if men had sufficient courage they could achieve by peaceful means whatever is legitimate in the things for which they fight. My opposition to war is based not upon religious grounds, but upon common sense and common humanity. I came to the conclusion during the early days of the war that if I had been of military age I could not conscientiously have taken part in the fighting. This feeling was not based upon any sympathy with the German Government; on the contrary, I should have felt it even more strongly if I had been a German. When conscription was introduced into this country, I felt bound to champion the cause of those men of military age who refused on conscientious grounds, as I should have done in their place, to enter the army or to help in the prosecution of the war. Some fifteen or twenty thousand of these men were combined in an organization called the "No Conscription Fellowship," whose members undertook not to enter the army whatever might be the penalties for their refusing. Some of them were Quakers, some belonged to other religious denominations, some were international Socialists, some were men who, like myself, without the support of any definite creed considered war a folly and a crime against which it is the duty of sane men to protest by every means in their power, I threw in my lot with the No Conscription Fellowship, and gave them such service as it was in my power to render.

Under the military service acts men who have a conscientious objection to combatant service are nominally exempt. In fact, however, the conscience clauses in the acts have proved largely illusory. Claims to exemption are heard by tribunals consisting, naturally, of men entirely out of sympathy with the conscientious objectors, whom they believe to be merely cowards in disguise. The tribunals have to decide whether a man's conscience is genuine or merely an excuse for shirking. If they decide that it is genuine there are three forms of exemption which they may grant: (1) They may grant absolute exemption, which leaves a man free to direct his own life as hitherto. This form of exemption is hardly ever granted. (2) They may grant exemption conditional upon undertaking some work which in the opinion of the tribunal is of national importance. (3) They may grant exemption from combatant duties only, on condition of the applicant entering what is called "the non-combatant corps," which is part of the army and performs such military duties as do not consist in actual fighting. The intention, when the acts were passed, was that the tribunals should grant whichever of these three forms of exemption was necessary in order to meet the conscience of the applicant.

No one realized at that time how impossible it would be for members of tribunals to understand a point of view so alien to their own as that of the conscientious objectors. Many of the most genuine were declared not to have a conscience within the meaning of the act. In early days those who were recognized as genuine were almost always placed in the non-combatant corps. It should have been obvious that a genuine objection to warfare involves an objection to the operations subsidiary to the actual fighting just as much as to actual participation in battle. But the tribunals were so firmly persuaded that all conscientious objectors were really cowards that they supposed they would be giving satisfaction in merely relieving them from the dangers of war. This, of course, was soon found to have been a complete misunderstanding. The men who had been placed in the non-combatant corps refused to perform the duties assigned to them. They were court-martialled and sentenced to varying terms of imprisonment. Up to the present some thousands have suffered in this way. Thirty-four of them were sentenced to death, but the sentence was commuted to ten years penal servitude.

One of the first to be condemned was a school teacher named Everett. As it was impossible to induce the newspapers to publish the facts concerning the prosecution of conscientious objectors, the No Conscription Fellowship decided to secure publicity by means of leaflets, and I wrote for them a leaflet upon the subject of Everett. This leaflet in its entirety was as follows:

Two Years' Hard Labour for refusing to disobey the Dictates of Conscience. This was the sentence passed on Ernest F. Everett, of 222 Denton's Green Lane, St. Helen's, by a Court Martial held on April 10th. Everett was a teacher at St. Helen's, and had been opposed to all war since the age of 16. He appealed as a Conscientious Objector before the Local and Appeal Tribunals, both of which treated him very unfairly, going out of their way to recommend his dismissal from school. They recognised his conscience claim only so far as to award him non-combatant service. But as the purpose of such service is to further the prosecution of the war, and to release others for the trenches, it was impossible for him to accept the decision of the Tribunals. On March 31st he was arrested as an absentee, brought before the magistrates, fined £2, and handed over to the Military Authorities. By them he was taken under escort to Warrington Barracks, where he was compelled to put on uniform. On April 1st he was taken to Abergele, where he was placed in the Non-Combatant Corps, which is part of the Army. He adopted consistently a policy of passive resistance to all military orders. The first morning, April 2d, when the men were ordered to fall in for fatigue duty, he refused, saying: "I refuse to obey any order given by any military authority." According to the Corporal, who gave the order, Everett "said it in quite a nice way." The Corporal informed the Lieutenant, who repeated the order, and warned Everett of the seriousness of his conduct. Everett still answered politely, but explained why he could not obey. The Lieutenant ordered the Conscientious Objector to the guard-room, where he remained all night. The Captain visited the prisoner, who stated that "he was not going to take orders." The Captain ordered him to be brought before the Commanding Officer on a charge of disobedience. Everett was next brought before the Colonel, who read aloud to him Section 9 of the Army Act, and explained the serious consequences of disobedience. But Everett remained firm, saying, "He could not and would not obey any military order." The result was that he was tried by Court Martial on April 10th. He stated in evidence in his own defence: "I am prepared to do work of national importance which does not include military service, so long as I do not thereby release some other man to do what I am not prepared to do myself." The sentence was two years' hard labour. Everett is now suffering this savage punishment solely for refusal to go against his conscience. He is fighting the old fight for liberty and against religious persecution in the same spirit in which martyrs suffered in the past. Will you join the persecutors? Or will you stand for those who are defending conscience at the cost of obloquy and pain of mind and body? Forty other men are suffering persecution for conscience sake in the same way as Mr. Everett. Can you remain silent whilst this goes on? Issued by the No Conscription Fellowship, 8 Merton House, Salisbury Court Fleet Street, London, E. C.

(The last two sentences were not mine, but were added while the leaflet was in the press.)

A quarter of a million copies of this leaflet were distributed, and very shortly after its publication Everett's sentence was reduced to 112 days. I do not think any of us imagined at the time that the leaflet could be regarded as illegal. In this, however, we were mistaken. Men engaged in distributing the leaflet were prosecuted and sentenced to varying terms of imprisonment with hard labor. As soon as I found that this was happening I wrote to *The Times* to state that I was the author of the leaflet. A prosecution naturally followed, in which I was charged with contravening the regulation that "no person shall in writing or in any circular or other printed publication make statements likely to prejudice the recruiting and discipline of His Majesty's forces." The case was heard before the Lord Mayor on the 5th June of this year. I conducted my own defense and was fined £100, a sentence which was upheld on appeal to quarter sessions.

This sentence had two consequences. First it led the Government to refuse me permission to fulfil my engagement to lecture on philosophy at Harvard. This refusal was conveyed in a letter from our ambassador at Washington to the president of Harvard, dated June 8, when my case was still *sub judice* owing to my appeal. (The conviction before the Lord Mayor was the only ground alleged for the refusal of a passport.) The second consequence was my dismissal from my lectureship at Trinity College, Cambridge, also explicitly based on this ground. The college, however, showed more sense of justice than the Government, since it waited until the sentence had been confirmed on appeal.

THE next stage in the proceedings arose out of a series of meetings in South Wales, at which I spoke in favor of the initiation of peace negotiations, always with the all but unanimous approval of the audience, even when I spoke in the open air to perfectly casual crowds. This series of meetings seems to have alarmed the war office. They were misled by inaccurate reports from casual reporters, which they did not show to me, and which I only saw long afterward. After thinking the matter over for some six weeks they served a notice on me forbidding me to enter "prohibited areas." The power of serving such notices was given to them for the purpose of dealing with spies. Prohibited areas are for the most part places near the sea. They include the whole coast, and a good many whole counties abutting on the sea. The object of the regulation permitting such orders was to prevent suspicious characters from being able to signal to German submarines, or give notice of the embarkation of troops, or otherwise afford help to the enemy. The war office was good enough to state that it did not suspect me of such activities. Nevertheless, a power only intended to guard against them was used by the military authorities to hamper my movements, and to restrict my opportunities for propounding arguments which they evidently did not know how to answer except by force.

Some amusing results followed from this prohibition. I had arranged (mainly for the innocent purpose of earning my living) to give a course of six lectures on the philosophical principles of politics in various large towns. Some of these happened to be in prohibited areas, and I was, therefore, unable to fulfil my engagements in those towns without the express permission of the war office. I stated publicly, in print, that my lectures would not be concerned with the war, but this was not enough to satisfy the war office. They asked me to give an honorable undertaking that I would not infringe the defense of the realm regulations. This I could not do, since these regulations are so framed that every one who speaks or writes must necessarily infringe them.

THE result of the war office prohibition has been, of course, to afford an immense advertisement to my lectures, causing them to be much more widely attended, where I can give them, than they would otherwise be. In prohibited areas, they have been read by friends to crowded audiences. The first lecture of the course, on "Political Ideals," was read before 1000 people in Glasgow by Robert Smillie, president of the Miners' Federation of Great Britain, a man whom the Government dare not offend because of his power in a vital industry. The matter has been repeatedly debated in Parliament, and ministers have had such a poor case that they had to descend to statements directly contrary to the facts, as for example, that they had asked me to give an undertaking not to do propaganda in America, and that I had refused. No hint of such a request ever reached me. The publicity which they dread, and which in other cases they have usually succeeded in avoiding, has been forced upon them in my case, largely owing to the fact that my proposed visit to Harvard was prevented. If they had permitted this visit, my time would have been occupied in preparing and delivering lectures on ethics and mathematical logic. As it is, most of my time has been free for the activities which they dislike. So much for the wisdom of interference with free speech.

The authorities have recently made repeated offers to me to withdraw all orders against me if I will cease to agitate for better treatment for the conscientious objectors. But this I cannot do. I have never urged any one not to enlist, tho the authorities say and most people believe that I have done so. The principle for which I stand is liberty of conscience—a principle universally accepted before the war, even by those who now attack me. I have urged the Government not to prosecute men for their genuine convictions, and I have urged the public to bring pressure to bear on the Government to this end. At first those who stood for a reasonable treatment of the conscientious objectors were very few. Gradually, as these few succeeded in making the facts known in spite of the penalties for so doing, public sympathy largely changed, until even the Archbishop of Canterbury demanded less cruel penalties. Solitary confinement, dark cells, irons, bread and water, brutal insults from commanding officers, and often gross physical ill-treatment, proved the courage and genuineness of the victims. Now, the worst features of the persecution are at an end. The men who have come before the tribunals recently have usually been awarded civil work of national importance, not work in the non-combatant corps, and a revision of sentences has

extended this change to those who were sentenced earlier. The proportion of shirkers among those who claim to be conscientious objectors is very small, because the obloquy which has to be endured is, for most people, much harder to bear than the trenches; and this fact has gradually come to be recognized. The chief problem remaining is as to those who will not accept what is called "work of national importance." Among such men are included most of the leaders of the movement, and probably a majority of those who realize the full implications of resistance to participation in war. They argue that they are already doing the work for which, in their own opinion, they are best fitted, and that if they are asked to change their occupation, it is with a view to organizing the nation's resources for war.

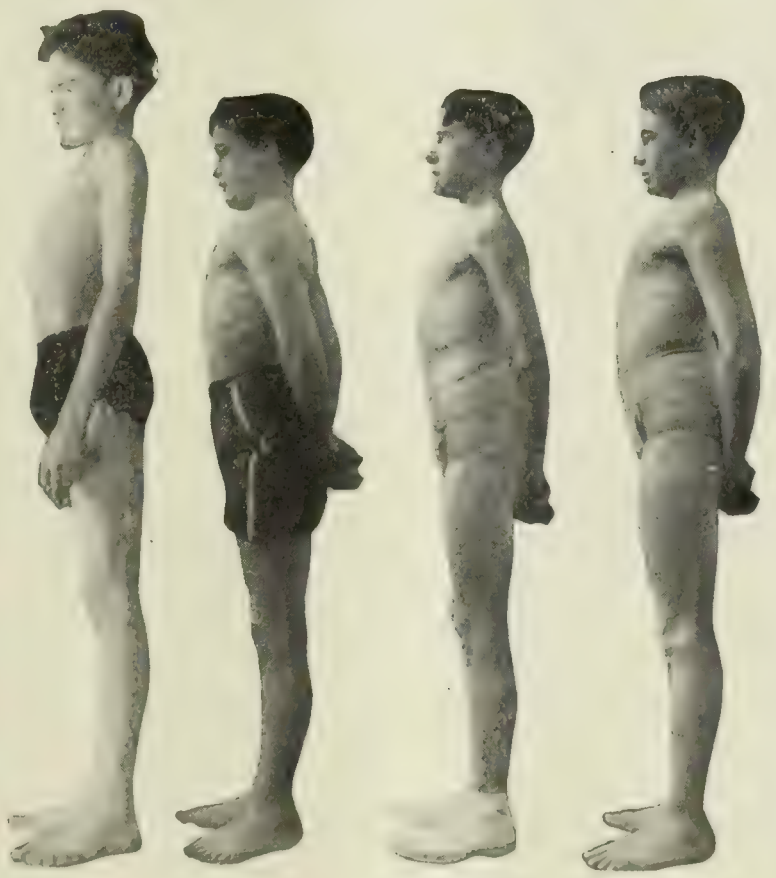
Is it to be supposed that, under such circumstances, I can pledge myself to do nothing further on behalf of the conscientious objectors? The agitation in which I have borne a part has already achieved a very notable success. Those who are willing to do civil "work of national importance" are now allowed to do so, whatever may have been the original sentence of the tribunal, provided their subsequent conduct has given evidence of their genuineness. They are a very large section, and in regard to them the main battle is won. I think it is fair to claim that this measure of toleration, imperfect as it is, reflects credit on the British nation and the British Governments; no continental power, I am convinced, would have hesitated to shoot men who refused military service at such a time as the present. But the work remains incomplete so long as those whose consciences can only be satisfied by absolute exemption are kept in prison. The success of the agitation hitherto is an encouragement to persistence in it, and the sufferings of those still in prison (including many of my personal friends) make it quite impossible to withdraw from the agitation until they are set at liberty. Until that day comes, it is impossible for me honorably to enter into any compact with the Government.

What further developments may be in store I cannot tell, but I make no doubt that, as hitherto, they will do more damage to the Government than to their intended victims. And in the end it will have been established that belief in the brotherhood of man is not in itself a crime.

Cambridge, England

SIZING UP BOYS

WE measure everything nowadays, including our children—their stature, their spelling, their morals, their sense of humor. The physical measurements are valuable in that they give us definite information about the child's development, and stimulate the formation of right physical and mental habits, by drawing upon the child's own interest in his "record."



In order to derive any benefit from them, however, we must have standards. It has been customary to compare the measurements of a child from time to time, in order to discover the "gain." Thus, if a boy is four pounds heavier than he was a year ago, we are content to call this his gain. But we do not consider what the normal gain of this particular kind of boy should have been in one year. In spite of the four pounds, he may really have been better developed, relatively, last year than he is now.

Again, Dr. E. Hitchcock of Amherst has averaged large numbers of measurements, and has constructed a table showing a "standard" weight for each hight. This is on the assumption that for any given hight the average of many boys gives a "normal" weight. But it is a well known fact that for any given hight there may be people of widely varying weights who are all equally normal and healthy.

Dr. William H. Hastings, of the Springfield Y. M. C. A. College, goes a step farther. He sorted his hight and weight measurements by ages. Then he determined what he considers a normal range of weights for each hight at any given age. Thus according to these measurements, a boy of fifteen years who is five feet four inches tall ought to weigh about 119 pounds.

But according to Mr. Charles K. Taylor, who has been making experiments with growing boys in a number of large public and private schools, and in a large summer camp, for many years, the first conditions for establishment of worth-while standards in this field is the recognition of the fact that boys are of several distinct types. There are tall, "skinny" boys, and short, stocky boys, and several other types. All of these may be perfectly healthy, and all of them are equally "normal." Four of these types are illustrated below. These boys are all of the same age and range from four feet ten inches in hight to five feet four inches.

Mr. Taylor, instead of using averages, uses the "type" method for establishing his standards. He has sorted all of the boys into five main groups, the slender type, the slender-medium, the medium type, the medium-heavy type and the heavy type. Then he selected what he considers well developed representatives of each type for every hight. The measurements of these selected individuals are used to construct standards for their respective type groups. Mr. Taylor finds that about 10 per cent of the boys in any group conform very closely to this standard, and he claims that this standard is fair to all the boys, since it is within the possibilities of attainment.

	Hight	Weight	Shoulder Girth	Chest Girth	Chest Expansion	Hips	Thighs	Calves
Boy 1.....	64	103	35¼	29½	3	31	17	12
(Taylor)...	64	100	35⅝	27⅛	4	29¾	18¾	11¾
Boy 2.....	60¼	92	36	30	3¼	30½	18	12¼
(Taylor)...	60	92	35⅜	28⅛	3¾	30⅝	18⅝	12
Boy 3.....	58¾	91	35½	28	2	30½	19	12½
(Taylor)...	58	91	35⅞	28	3⅜	30⅝	18¾	12¾
Boy 4.....	61½	112	40½	31½	2½	33¼	20½	13⅜
(Taylor)...	61	112	38⅝	30⅜	4⅛	34	20⅛	13¼

In the table are given the actual measurements of the four boys shown in the picture, together with the measurements of the Taylor standards for the respective types which are arranged solely on a hight-weight basis irrespective of age. The close agreement between the measurements of these boys and the "standards" for their hight-weight combinations is very striking when we consider that these healthy, well developed boys would be noticeably "underweight" or "overweight" by Dr. Hastings' standards. According to Taylor's method, boy number 1 is 91 per cent standard, boy number 2, 100 per cent; boy number 3, 97 per cent, and boy number 4, 102 per cent.

MR. PURINTON

WHAT I HAVE LEARNED FROM YOU

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE prospects of life are the hills we climb from the valleys of retrospect. We see our great lessons by looking backward, we learn them by looking inward, we apply them by looking outward, we improve them by looking onward, we preserve them by looking upward.

I have been looking backward, over the two years in which my work has been done for the readers of The Independent. We should all take a little breathing-spell at the opening of a new year, depart from our accustomed haunts and habits, view ourselves as some one else, and gain a clear, new perspective to live by for a twelvemonth. A new year is not really a new year till it offers a new outlook.

To vary the monotony of being always a teacher, I will now consider myself the student, and you the teacher of modern efficiency. And I will repeat, gladly and gratefully, some of the lessons *you* have taught *me*. A teacher is as wise as he proves willing to learn from those he teaches. While some of the lessons to be recited here had been learned in the fourteen years of efficiency study preceding my work for The Independent, I will name the lessons all together, and tell what I know, as a young scholar who has studied hard always likes to do!

The recitation of a lesson should start with reflection, and end with action. The purpose of this recitation is to help us all *do* bigger and better things for our work, ourselves, and each other, in the year just opening.

1. *I have learned that almost everybody worth while has an unsolved problem.* It may be of work, or business, or health, or finance, or education, or vocation, or opportunity, or personality, or marriage, or home, or religion, or service. The wide range of these problems, and their complexity, you have doubtless observed in reading the Efficiency Question Box letters and replies. Now the great demand for our work lies in the great defect of the modern world, which I consider to be the elevation of the institution over the individual. Eighty per cent of the queries you have sent us should have been answered by some institution in your home town. But the majority of civilized institutions are not awake to the need or trend of the times, even in their own field, which is to study, help, train, evolve, express the individual. The five basic institutions of society are the home, the school, the church, the health resort, the business or professional concern. They all neglect the individual. Now, if a person happens to be dull, sleepy and lazy — as most persons do happen, he settles into a mold of life created by the institution, he asks no disturbing questions, he undertakes no perilous feats. He gets nowhere, and he dies regularly and safely, thirty years too soon. But when a man or woman really wakes up, and sets out to do something big, real and hard, questions arise that no established institution can solve, because the institution is made to fit commonplace folk—others are not wanted. Right here is the reason for our work, its aim being to locate the problem, difficulty or desire that seems to you most important, then to solve it, or help you solve it, or refer you to somebody who can help you solve it. We are delighted to see how many hundreds of school, church, business and home officials are now following the methods of The Independent Efficiency Service; and we hope for the time when a large proportion of our work as suggested here may be incorporated and exemplified in the institution, where it belongs.

2. *I have learned that everywhere human nature responds, freely and quickly, to the right sort of appeal.* Our work for the readers of The Independent was so new in character and scope that we looked for but a gradual response. Yet in the first two years several thousand queries and problems have been sent us for solution, from every state in the Union, also Canada, Greenland, South America, England, Australia, New Zealand, China, Japan, and other foreign countries. The ages of inquirers have run from nine to seventy-three years. Hundreds of occupations have been represented. The richest and the poorest have mingled happily in our mail; the sumptuous letter of a corporation president worth many millions has lain on our desk be-

side a pitiful scrawl from a day-laborer who sent his ungrammatical plea on a soiled scrap of waste paper. A remarkable feature has been the number of invitations to lecture on Efficiency topics before such gatherings as those of Chautauqua Institution, American Association for the Advancement of Science, National Cash Register Company, Merchants and Manufacturers Association, Vocational Guidance Association, New York Y. M. C. A., New York City Federation of Churches. This demand, altogether, is without parallel in Efficiency work. But we have only made a fair start on the road we have mapped out. The success of a man's work is the sum of the man's desire to know more and do better. By your wonderful expression of need, interest and appreciation, you have impelled us to enlarge the boundaries of knowledge and the activities of service for 1917. We thank you for your inspiration, we hope for your coöperation as the new developments are announced.

3. *I have learned that difficulties are the waymarks of destiny.* The largest natures have the largest needs. A rowboat has few problems—an ocean liner has many. Stay in the shallows of experience and life remains to you a child's puddle of safety; launch out on the sea of mental and spiritual adventure if you would know the rewards of life—and the risks that go before! The multiplicity of a man's problems are a fair measure of the capacity of his mind. If you have no struggle, anxiety or problem big enough to keep you awake nights, you should see a doctor —your mind is paralyzed or stunted. The time to worry is when you have nothing to worry about. For then you are stagnating. I write this to cheer and encourage the hosts of our readers who imagine their lot peculiarly hard. If I could tell you of the battles most great men have had to fight to a finish and without the help we are now trying to give you—I think you would all smile at your troubles. Not hardship is to be feared, but ignorance or weakness or idleness in the face of hardship.

WHAT TO LIVE FOR

4. *I have learned that the basic art of life is to analyze yourself, and the basic science to evolve yourself.* Many and pitiful are the examples of those in high places who do not know what they are living for. Teachers, ministers, doctors, parents, others of great influence, write and ask us to help them find and fill the purpose of their lives. They who should be teaching others have to be taught themselves. How long will our great schools of America tolerate such a condition? Recently, in talking before an assemblage of thinking men and women, I asked how many of them knew they had found, and were doing, the special work they had come here to do. In that large roomful of people, I was the only one to raise the hand. I am doing my work, and finding therein a joy, purpose and reward great enough to carry me over and beyond the many hard places in every human life. Are you doing your work? How do you know? How are you going to know? Have you analyzed yourself, deeply, honestly, bravely, and often? The test tables accompanying the Independent articles should serve you well, if used faithfully. A man's estimate of himself is the cornerstone of his future. Don't gamble on a cornerstone that crumbles. Make your cornerstone firm and true.

LACKING IN PERSPECTIVE?

5. *I have learned that some Independent readers are lacking in perspective.* Here is one who sternly demands, *Why* have we not answered his Question Box letter, that he wrote weeks ago, and that called for immediate reply? This brother fails to consider that he is only one of many thousand Independent readers, all of whom have equal chance in the Question Box; that we must answer letters in turn, and before his came hundreds may have been awaiting reply, and that, paying nothing, he has a right to demand nothing. Looking a gift horse in the mouth is a fine way to get yourself bitten or sneezed at. Here is another reader who sends a five-page letter in hieroglyphics of an unknown tongue, going back to the flood, on to the millennium, and down to the abysmal depths of emotional gore. It is human nature to put this document aside till all other letters shall be answered. This we proceed to do, and I have no idea when the dear sister will obtain her answer. Here is another letter.

This one has five knotty problems on a single page, with an urgent request that we solve each fully, then elaborate comments and furnish ideas of our own regarding the writer. If we said what we thought about the writer, he would not take any of our advice. Please, good friends, limit your Question Box letter to 100 words or less, and to three principal queries or problems; have letters typewritten if possible; and remember to exercize patience, if your answer should be somewhat delayed by the volume of our correspondence, and our desire to be fair to all.

6. *I have learned that a national weekly publication is the right medium for starting a work of real value among real people.* The monthly magazine is remote, leisurely, unconnected; the weekly periodical is vital, intimate, necessary, combining the speed of the newspaper with the dignity of the magazine. Dropping into metaphor, we may say that books are the meat of literature, magazines are the pastry, newspapers are the spice, weekly periodicals are the bread. In several thousand high schools and colleges, and many thousand more offices, homes and libraries, The Independent is now the bread of the people's intellectual diet. Because of this, our work has grown amazingly. We believe that any man or institution with a message, a service, or a product of universal appeal should focus on the weekly publication by some original method of reaching the heart and mind.

7. *I have learned that building a good foundation for a life work must be long, tedious, burdensome.* When a boy of twenty-five or thirty among our readers laments that he has not achieved great success, I have to smile at his youthful impatience. Twenty years ago, the work we have now fairly begun was the night-and-day dream of my heart. Fifteen years ago, it was the purpose, plan, schedule, of my life. Yet only now do results appear in a large way, to justify the hope and aim of so many years. What have I been doing all this time? Getting ready. What finally makes a man well known is what he first knows well. Fifteen years were devoted to special training, after nine years had been spent in college walls. Young fellows ask me how they can learn efficiency as a profession. I now answer them. "Put in twenty-four years getting ready; learn to do your maximum with minimum rewards; plan each day with your whole life work in view; cover the world in your scheme of preparation; conquer your own habits and temperament; see your goal as the one big thing in life; and laugh at a thousand obstacles mountain-high!"

CONSIDER THESE THINGS

8. *I have learned a few diverse things of possible interest.* Among them are the following: That sickness is unnecessary, poverty a disgrace, and worry a confession; that the unfortunate need not sympathy but science; that a man gets in life just what he is willing to pay for, and a big success calls for a big sacrifice; that leadership lies in the habit of giving the most and best service; that a new idea every day should be the rule of the man who wants to keep his brain alive; that reform should be constructive, entertaining, sympathetic and scientific; that last year's knowledge cannot meet this year's need; that to arrive anywhere you must harness fact and feeling together, and make Will the driver of them both; that failure is the surest road to success; that many college graduates have never been taught how to work, how to think, how to eat, how to save money, how to find themselves, how to become good citizens, how to do much of anything worth while; that, accordingly, the college system of America has to be improved if we are going to face like men the world-battle of industry and economy just ahead; that parents, in view of their responsibility, are the most ignorant members of a community, and need high-power education more than their children do; that preachers, teachers and doctors in the United States are poorly, feebly and fallaciously taught and equipped for their life work; that marriage, the most vital and subliminal experience on earth, is the most neglected and abused; that the real hero is the man willing to face the truth about himself, and eager and brave and strong enough to make himself over, at any cost to his pride or personal comfort; that happiness belongs to every one by the resource of Nature and the intent of God.

THE MADONNA AND CHILD

THE RETURN TO

MASTER

BY SYLVES

AUTHOR OF "THE QUE

THE great event of the year in American art has been the unveiling of the new mural paintings by John S. Sargent in the Boston Public Library. For some months now the artist has been engaged in finishing this work and providing an adequate setting. This substantially completes the great scheme for a consistent mural decoration of the library arranged for by the architects, Messrs. McKim, Mead & White, something like twenty-five years ago. It was in 1895 that the first decorations were put in place: a section of the Abbey frieze for the Delivery Room, "The Quest of the Holy Grail," and the first installment of the Sargent decorations. Some years later the Abbey work was completed, a second instalment of the Sargent decorations was put in place, and the great series for the staircase hall by Puvis de Chavannes was finished. Altho three panels yet remain to be filled by Mr. Sargent, the effect of his work in the large staircase hall of the Special Libraries floor is already one of completion.

In its dimensions, long, narrow and with a barrel-arch ceiling, the hall resembles one of the superbly decorated chapels often to be seen in European churches and palaces. The consistently carried out decorative scheme makes an impression of large and satisfying unity. Mr. Sargent's aim has been to depict the development of the religious motives underlying the Scriptural beliefs of our civilization, as exprest in the name chosen for the series: "Judaism and Christianity—a Sequence of Mural Decorations."

The series begins with the large composition filling the

THE MADONNA OF SORROWS

MURALS

ER BAXTER

OF THE HOLY GRAIL"

Old Testament end of the hall, the part first completed, showing the Jewish people turning away from the false gods of polytheism to Jehovah, the one true God. Facing this section the New Testament end of the hall contains the work next completed: "The Dogma of the Redemption." Byzantine in treatment, its main elements are the great Crucifix in relief, the three identical figures of the Godhead, and a beautiful frieze of angels balancing the celebrated "Frieze of the Prophets" at the opposite end. Since placing these paintings Mr. Sargent has for some years been at work on the remaining features of the series, the task involving much painstaking research.

This new work includes first the completion of the New Testament end with a series of panels depicting "the theme of the Virgin." This subject occupies the sides and ceiling of the arch, serving as a rich framework for "The Redemption." As in the former, the traditional conceptions are adhered to, but the dogma being of later date the treatment adopted is in the freer forms of the Renaissance. In opposite niches of the walls are two contrasting conceptions of the Virgin: "The Madonna and Child" and the "Mater Dolorosa," the Madonna of Sorrows. These important subjects by our American master should rank with the great Madonnas of the world.

Developed out of these two paintings, a series of ten panels occupies the arch together with a large gold medallion at the apex filled with low-reliefs. This series illustrates the Mysteries of the Rosary: the Five Joyful, the Five Sor-

rowful, and the Five Glorious Mysteries—the ecstasies of joy and of sorrow blending themselves in the transporting glorious mysteries of the medallion reliefs—this part of the decorative scheme culminating in the golden splendor of the Coronation of the Virgin. Paintings of related subsidiary figures and emblems fill the spaces of the arch outside the panels.

As the work progressed Mr. Sargent concluded that the sense of decorative unity demanded for the treatment of the hall called for a series of paintings in the six lunettes in the barrel-arch ceiling. Accordingly he has somewhat modified the architectural elements of the hall for the sake of an adequate setting. In this work he has entered upon the domains of architecture and ornamental design, as well as that of sculpture.

The two lunettes are occupied by two trilogies devoted respectively to Hebraic and Christian themes—the three Jewish subjects being "The Law," "Gog and Magog" and "The Messianic Era"; the three Christian, "The Judgment," "Hell," and "The Passing of Souls into Heaven." In the Christian trilogy there is a continuity of theme and a corresponding unity in composition; the Jewish trilogy is made up of three detached phases of tradition and doctrine, altho related by the fact that disregard of the Divine Law leads to the final destruction of the material world represented by "Gog and Magog" (a subject terribly suggestive of the present world conflict), while the return of the race to compliance with the Law brings the Messiah to lead it into the Golden Age of a restored Eden.

It seems safe to say that "The Law" will be recognized as the masterpiece of the whole decorative sequence, while for exquisite beauty "The Messianic Era" must rank high as an achievement. In the Christian trilogy, as in the work at the New Testament end, traditional conceptions have been followed with no attempt to modify historic theological tenets by modernistic interpretations. Mr. Sargent, however, has authorized the announcement that in the wall-paintings that remain to be done more freedom in treatment may be looked for.

This great sequence exhibits Mr. Sargent's genius in two ways that have not been so manifest in his fame as a painter of portraits: his passion for pure beauty in line, form, and color, released for ideal expression in the opportunity here given; and the mastery of decorative synthesis in his remarkable fulfilment of the diverse demands made by this undertaking. As a decorative scheme the primary requirement has been the coördination of the elements in form and color called for. On a groundwork of soft grays represented by the masonry of walls and ceiling we have dominant chords of red and green with splendid accentuations in gold, while the mural quality is conveyed by a plastic treatment that retains the stone-like values of the ground tones.

This plastic treatment is both actual and marvelously simulated, as in the abundance of mass and detail carried out in relief, and in the generally sculpturesque conception of the main figure-elements. Whoever has had the privilege of watching Mr. Sargent at work has had convincing testimony that genius is the capacity for taking infinite pains.

Boston, Massachusetts

FERRETS AND SKUNKS FOR SALE

BY ALBERT SIDNEY GREGG

WITHOUT waiting for me to make the request, he reached down into a pen of wriggling young ferrets, caught one by the tail, pulled it up, rested its forefeet on the edge of the cage, and slipt his hand along the ferret's body and got a firm grip back of its ears so it could not turn its head suddenly and bite.

Thus did C. M. Sackett, manager of a big ferret colony "somewhere in America" (near Ashland, Ohio) introduce me to one of his bloodthirsty little rat killers. The ferret was about twelve inches in length, slim, and muscular, with white fur, short legs, a tail five inches long, small ears, a pointed nose, pink eyes, and strong, sharp teeth set in powerful jaws.

"This barn," he said as we walked along, "is one of three in this colony, and is similar to others used in this part of the country. It is 200 feet long, 12 feet wide, with a 4 foot aisle, and has 200 pens, each pen being 4 feet long, 2 feet wide, and 30 inches high. The ends next the aisle, as you see, are covered with netting made of heavy wire. That accounts for the noise of the ferrets as we walk along. They spring into the netting as if they were trying to escape, but that is not the case. They merely want to see what is coming.

"We have capacity here for 4500 ferrets a season. We sell them to hunters and to hotel men. A ferret is utterly fearless, and will attack an animal many times its size. A rabbit hunter will carry a trained ferret in a bag, and when a rabbit runs into a hole the ferret is put into the hole to chase the rabbit out. As the rabbit leaves the hole it is either shot or caught. Ferrets are coming into general use in the West in hunting gophers, and prairie dogs. As rat catchers they have no equal. Rats are mortally afraid of ferrets, and as soon as a ferret is put in a barn, house or boat harboring rats, there is a quick exodus of rodents. Ferrets will also attack and kill big rats singly, but their chief value is in causing rats to leave a building in a drove. They are far better than rat poison, for when using ferrets there is no danger of dead rats lodging in the walls where they cannot be reached and removed. Ferret fur, commonly known as fitch, is slowly coming into use, and doubtless some day there will be a big market for ferret furs."

MANAGER OF THE FERRET COLONY

"Does it cost very much to start in the business of raising ferrets?"

"Not very much. A pair can be purchased for about $5, the price differing according to the season, and as they breed twice a year with litters ranging from four to six, they will increase rapidly. The trouble is that very few know just how to care for such animals. They are as sensitive as babies, and die off easily when they take sick. Ferret farms are always from three to five miles from town, so the town's dogs cannot spread distemper among the ferrets. There is a big and growing market for ferrets, but it takes long experience to know how to handle them. One year I had to send back $900 because I did not have enough ferrets in stock and could not buy enough from neighboring colonies to fill my orders."

After we had gone the rounds Sackett took me into a part of the barn not entirely devoted to rat killers.

"What do you think of those beauties," he asked with a twinkle in his eye, pointing to a pen. One glance was enough. I caught my nose and jumped back, while Sackett laughed heartily.

He had introduced me to a pen of skunks!

The pen was full of the restless little black and white animals, running to and fro. One of them, I remember, had a beautiful bushy black and white tail that curled up over his back like a plume.

"Don't be alarmed," said Sackett, encouragingly. "They can't shoot. They have been deodorized. You know there is a growing demand for skunk fur, and I am getting in line to supply the demand."

NEWS OF EFFICIENCY

Mr. Perley Morse's criticism of government methods in a recent issue of The Independent has called forth the following interesting rejoinder from Mr. E. Johannes, disbursing clerk, of the Department of Commerce:

The writer of the article reaches the conclusion that the Government is not getting a dollar's worth for every dollar expended. Sight is lost of the fact that the Government is not a profit making institution, and the writer of the article falls into the error common to many accountants that a business or an operation which does not show a dollar and cents profit in its accounting methods is a business which is not profitably conducted. Many Government activities deal with problems the solution of which brings large benefits to the people of the country which it represents, but no dollar and cents value to such profits can be set up because nowhere in Government accounting do they appear.

Scientific men in the Bureau of Standards after a careful analysis and study developed methods making available to the pottery maker American clays which before could not be used. The result is that American manufacturers have established factories for the use of American clays in making pottery heretofore exclusively purchased abroad, benefiting the manufacturer, the owner of the clay land and the purchaser. Where can the Government set up in a ledger a profit on this activity?

Each year millions of fish are hatched by the Bureau of Fisheries, and planted in the waters of the United States. These fish are produced at large cost and the debit side of the Government ledger shows this expense, but we cannot set up on the other side the value to the people of the United States of these fish. The lobster industry, prostrated and almost wiped out, on the New England coast, has been reëstablished by the Government. This activity cost money, a debit in the Government ledger, but you cannot show the benefit resulting to the people of the United States as a credit on the same ledger.

The tile fish industry established by the Bureau of Fisheries at a cost of approximately $1,200,000, has resulted in the hatching and marketing of fish whose value average from $500,000 to $600,000 each year, not on a Government ledger but to the people of the United States.

Criticism of the Government buying method is made, but sight is lost of the fact that the thing complained of as not existing does exist. There is a central contracting and purchasing agency, which was established by Congress June 17, 1910. This agency has standardized supplies and makes annual contracts for the whole service. The catalog of the articles purchased in this manner by the Government is a printed volume of 460 quarto pages, which contains a list of supplies ranging from pencils and pens to automobile trucks and hospital equipment. In many cases the Government buys more cheaply and more accurately than private concerns.

In the concluding statement in the article the inference is left that Government accounting methods are based upon slipshod and haphazard methods. This is not so. The Comptroller of the Treasury keeps books of general account of receipts and expenditures. and a controlling account with each Government department, which is kept in balance with the books of each department. Under his direction the Government accounts are being continually audited. It is true that the Government does not use the budget system, but that is due to our system of government which does not contemplate at the present time the use of a budget as the basis of expenditures. The law carefully defines the steps necessary to call to the attention of Congress the need for appropriations for the various activities of the Government, and it is Congress alone which determines the extent to which such recommendations for appropriations shall be accepted.

* * *

Mr. Henry Woodhouse, governor of the Aero Club of America, who was one of the delegates from the National Institute of Efficiency to the annual convention of the American Civic Association, held in Washington in December, said many things about aerial efficiency that would have sounded Wellsian from one less authoritative. "The time has come," he remarked, "when every city must establish aerodromes, terminals where aircraft passengers and merchandise can land. Considering that we have aeroplanes capable of traveling easily at a speed of 125 miles an hour, others capable of lifting fifteen tons and that the development in aeronautics proceeds at a tremendous pace, we must admit that the aerodrome is as logical an institution in a city as the railroad station. We are growing near to the time when we shall have air-liners. We have the engineers to build them, large reliable motors to drive them, instruments to operate them, the aviators to pilot them. There are also financiers ready to finance the establishing of air lines and operate scores of these big liners."

"Aerial transportation," added Mr. Woodhouse, "will lead to beautifying the tops of cities and towns. Elevated terminals will come with the employment of dirigibles first, and then with the advent of the hovering aeroplane, which does not yet exist but is sure to come. The present high frames of buildings, such as the Grand Central and Pennsylvania stations in New York, will be fitted as aero landing places." The convention, by the way, was so interested that Mr. Woodhouse was urged to "go on" when the regular time limit had been reached—and he obligingly did go on for some little time.

A CORPORATION PRESIDENT WHO PRACTISES EFFICIENCY

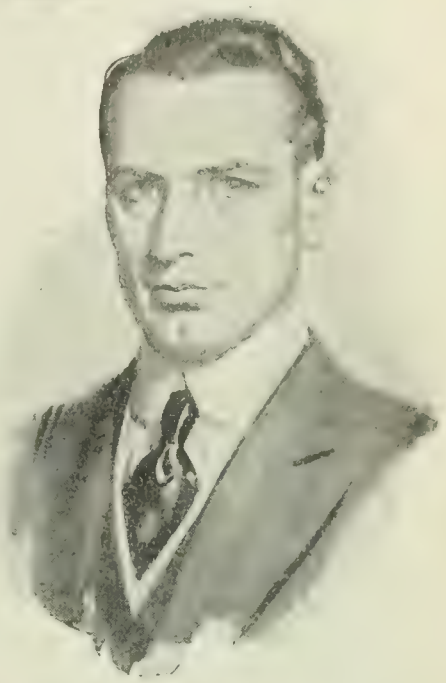
Alfred C. Bedford, just elected president of the Standard Oil Company of New Jersey

* * *

"He made it his business to know all about the job that was just ahead of his"—that is the secret, in the opinion of those who know him, of the rise of Joseph Dixon Lewis from the position of office boy to that of controller of three concerns with a total capitalization of $150,000,000. These concerns are the N. K. Fairbank Company, of Chicago, whose office he first entered thirty years ago and whose president he has just become; the American Cotton Oil Company, and the Union Seed and Fertilizer Company. Mr. Lewis is not so willing to attribute his success to a single principle. He has quite a number of business life maxims, such as: "Rise early, work late, play hard, be merry, don't worry and be good."

* * *

Mr. A. C. Bedford is another business man who attributes his success mainly to hard work. He was lately made president of the Standard Oil Company of New Jersey, the triumph of a career which began humbly thirty-four years ago with a clerkship in a dry goods store.



* * *

Among the delegates appointed by National Institute of Efficiency to the annual session of the American Mining Congress, held at Chicago during November last, was Dr. Henry S. Drinker, president of Lehigh University, and a member of the Institute's Board of Governors, who contributed to the proceedings an effective paper discussing the position of engineers toward the question of water power development in the West.

* * *

Another of the delegates, Rear-Admiral Robert E. Peary, who is also a member of the Board of Governors, was invited to address the Congress on the reservation of oil lands for the navy. In his own unavoidable absence, Rear-Admiral Peary very appropriately secured the attendance at the Congress of Assistant Secretary of the Navy Franklin D. Roosevelt, who gave a widely-quoted address on the subject upon which Rear-Admiral Peary was first invited to speak.

Enters a new business at $100,000 a year

The Board of Directors of a gigantic wholesale grocery concern had gathered to select a new president.

A keen, broad-minded director arose and said: "I know the man we want." He named the president of a great National Bank.

"What!" cried one astonished director, "what does a banker know about *our business?*"

"This man knows more than just banking," was the answer. "Banking, like wholesaling, is only one phase of business. This man is not limited to any one field. He knows all the departments of business—finance, economics, organization, selling, accounting." They discussed the matter from all standpoints. Finally they unanimously agreed to get him if they could.

The banker accepted the presidency of the wholesale grocery concern at a salary of $100,000.

In a surprisingly short time he had completely reorganized the whole concern.

New, well-planned office short cuts replaced the old, roundabout methods.

Means of shipment and distribution were completely revolutionized. And today this company is reaping the benefits of the changes made in the form of increased dividends amounting to hundreds of thousands of dollars.

The inspiring success of this banker, in a business totally new to him, was the result of his broad business training. His greatness lay in his knowledge of business fundamentals. Each move, each decision he made, was backed up by a clear, intelligent grasp of the *why* and the *how* of the problems he had to solve.

The problems this man had to face were far more complicated than those listed below. Yet these comparatively simple problems are the very rocks upon which business careers are smashed. Sooner or later, you too, will meet these questions. How will you answer them?

Do you know why most inexperienced promoters fail trying to raise money for a new business, and how to avoid their mistakes .....?

Do you know the vital difference to a business man between "getting a loan" and "discounting his note," and when each is necessary.....?

Can you answer a letter of complaint so as to satisfy the complainant and yet preserve the firm's prestige.....?

What are the essentials a business man should watch for and satisfy himself on before he signs his name to a business paper.....?

By comparison of a series of financial statements, can you tell whether the business is going as it should, and then put your finger on the weakness or strength shown.....?

Can you analyze the market of a proposition so as to tell accurately whether it will be cheaper to sell direct by mail, or thru usual trade channels ..... ?

The knowledge that carries men thru

You cannot catalog the answers to these broad questions. Circumstances vary. But the big underlying principles always remain the same. It is the knowledge of the basic principles that carries men thru to success.

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

The Modern Business Course and Service of the Alexander Hamilton Institute gives you a logical foundation on which to build your future business knowledge and experience. All departments of business are covered and presented to you in interesting, practical form.

The kind of men enrolled

Presidents of big corporations are often enrolled in the Alexander Hamilton Institute along with ambitious young clerks in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; Geo. M. Verity, President of the American Rolling Mills; Wm. H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co.—and scores of others equally prominent.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, the statistician and economist.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," copy of which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success *sure*. If you feel uncertain of yourself, if you long for bigger responsibilities, power, influence, money—this Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

THE NEW BOOKS

FAR SOUTH IN FICTION

Lovers of the old-fashioned leisurely novel rich in naïve descriptions of food and clothes and customs, the novel that takes time to reveal personalities and the interaction of many lives, should read *El Supremo*, A Romance of the Great Dictator of Paraguay, by Edward Lucas White. The dictator, called "El Supremo," was Don Jose Gaspar Rodriguez de Francia, who reigned over Paraguay from 1813 to 1840, one of the most remarkable men of the age in which he lived. Mr. White has enriched our literature by giving us this absorbing account of the man as history and legend show him, of his court and the plots and conspiracies that surrounded him. Poniards in the hands of temperamental gentlemen and ladies flash thru the story and punctuate the piquant and fascinating conversations of the dictator with his young American friend, William Hawthorne. This novel is one to read all day and all night until it is finished.

El Supremo, by E. L. White. E. P. Dutton & Co. $1.90.

DISRAELI

Without question Disraeli was the most interesting figure in the political life of England in the nineteenth century. Even his opponents admitted that he was everlastingly interesting, at no matter what stage of his quite unconventional and oftentimes audacious political, literary and social career. There can be few of Disraeli's political opponents now left in England; few men who faced him either in the House of Commons or the House of Lords. Those of his old opponents who do survive must admit after reading the fourth volume of the Monypenny-Buckle biography that Disraeli, in his long political life, did much more than merely make himself interesting.

In the years from 1846 to 1867 he, almost single-handed, created a national party out of the wreck of the old Tory party. A party that had a policy as well as numerical strength in the constituencies and in parliament was as necessary to the political well-being of Great Britain after 1846 as a king or a queen on the throne is necessary to the constitutional system of England as it has been developed since the revolution of 1688.

Disraeli furnished the old Tory party with a policy that appealed to the English people. Numerical strength in the constituencies came almost immediately in the train of a national policy; and history records that Disraeli was the creator of the modern Conservative party—the party that was in power for twenty-three out of the forty-seven years that now lie between the second reform of the parliamentary representation in 1867 and the outbreak of the war in August, 1914.

The old Tory party was a corpse until as late as 1857. The beginning of its new and larger life came in the next ten years. This is the period that is covered with much detail in Volume IV of the biography; and for this reason this volume is likely to prove both the most interesting and the most informing of the series. Disraeli's struggles were at an end when he became premier in 1868; and while he was still pushing forward in the political world, or still engaged in securing social recognition, there was a vivid interest in his career that is not so fully sustained after he had become premier, when he was the Queen's favorite prime minister, and in sight of an earldom.

Mrs. Disraeli was always interesting for reasons quite distinct from those that explain popular interest in Disraeli himself; and there is more of Mrs. Disraeli in Volume IV than in any of the preceding volumes.

Benjamin Disraeli, Earl of Beaconsfield, by W. F. Monypenny and G. E. Buckle. Vol. iv. The Macmillan Company. $3.

A BOOK OF BURLESQUES

The cleverness of H. L. Mencken, the barbed force of his satire and the keen thrusts of his wit are never-failing attributes of his writing. His is the criticism valuable for its stimulating expression of opinion rather than for any essential fairness of its judgments. In *A Book of Burlesques* is some of Mr. Mencken's most entertaining work, skilfully depicted fantasies of life "as is." One of the funniest is the burlesque "From the Programme of a Concert," with a translation of the German source of a symphonic poem after the manner of concert programs:

> How long brood you now
> On thy disaster?
> Give heed! You hatch me soon
> An egg,
> From your long lamentation out of.

"Litanies for the Overlooked," "Seeing the World," "A Genealogical Chart of the Uplift" are all smart fun. But perhaps the most dexterous satire of the collection is "The Artist—A Drama Without Words," in which the Great Pianist, several hundred women, six critics, the six other men and a jani-

WINTER IN THE MARSH

BY CLINTON SCOLLARD

I strode thru the depth of the marsh in the stark winter-tide of the year;
The pools were as glass, and the grass was umber and shriveled and sere;
And the trees waved their skeleton arms in the whirl and the swirl of the flaw,
While around there was never a sound save the crow with its ominous "caw";
The land seemed the land of the lost, of despair, desolation and dole,
And its gloom, like an evil at night, crept into the room of my soul.

Then a word, like a bird in the dusk, when the shadows have mantled the hill,
Made a song,—just a word,—but I felt the dead heart in me tremble and thrill,
Thrill to life, and my fibers and thews were as those of one ready to leap,
For I knew, on a sudden, the dolor was but as the blessing of sleep,
The slumber of sod and of rush and of fern and of leaf on the tree,
And they waited but only the word to burst from their bonds and be free.

And the word, it shall come on a day when the wind shall blow up from the south,
With the winnow of shimmering wings, and a slim pipe of gold at its mouth;
It may be at droop of the dusk, or it may be at lift of the sun,
But all of earth's tendrils shall quicken, and all of earth's waters shall run.
God molded the word, and He spake it to be a transfiguring thing,
A joy in man's ears and a symbol eternal, the magical "Spring!"

From "Ballads Patriotic and Romantic," by Clinton Scollard. Published by Laurence J. Gomme. $1.50.

tor give their unspoken meditations on an afternoon musicale.

These sketches have somewhat the flavor of Stephen Leacock's, but they are sharper, less good-humored and for the most part cynical.

A Book of Burlesques, by H. L. Mencken. John Lane Company. $1.25.

A POET'S POET

It is seldom that one meets a translation so full of the charm of words, the grace of phrase, as this putting into English by Adèle Lewisohn of an essay on *Edgar Allan Poe* by Hanns Heinz Ewers. The swift, delicate, precise sentences give no sense of translation, and it needs not the introduction to assure the reader that this German writer is artist in soul and poet in craft. His enthusiastic study, rather his pean in praise of Poe, is a distinct contribution to our growing critical literature on the poet, and the view of the tales as merely masterpieces of pot boilers is novel judgment to our ears.

Edgar Allan Poe, by H. H. Ewers, tr. Adèle Lewisohn. W. B. Huebsch. 60 cents.

HOW TO HELP

Mr. Philip Davis has collected and edited an admirable series of essays covering a large part of *The Field of Social Service*. The background of social work, community problems, social agencies, the relation of the community to the child, and a score of other topics are discussed by the best authorities and most experienced workers in their respective departments of labor. The volume well fulfills the double purpose of its editor, which was to throw some light on the larger social readjustments now taking place, and to sketch the many types of social service and agencies which are making these adjustments possible. While treating none of the subjects exhaustively, the book will furnish a broad introduction for the beginner, and will reveal to those desirous of sharing in some form of social service the opportunities and possibilities as well as the methods that may be followed. This is a valuable addition to the Welfare Series.

The Field of Social Service, by Philip Davis, Boston: Small, Maynard & Co. $1.50.

ABOVE THE BATTLE

The award of the Nobel prize in literature to Romain Rolland is peculiarly appropriate, since he is one of the few authors belonging to the belligerent nations who have retained a sense of internationalism thruout the terrible conflict. Before the war, in his famous novel of "Jean-Christophe," he tried to cultivate a better understanding between the French and German people, and since the war he has been in Switzerland engaged in promoting the exchange of wounded prisoners, and providing for the wants of the interned.

The volume *Au-dessus de la Mêlée*, which has just been translated as *Above the Battle*, consists of various articles and letters addrest to both sides, protesting against the unreasoning hatred that has sprung up in con-

There's winter sport too—in a

KODAK

Outdoors with skates and skis and coasting, when the trees are snow laden and great drifts tell the tale of last night's storm, there are pictures well worth taking.

And indoors there are group pictures and home portraits, by daylight or flashlight and in the long winter evenings, when rain and sleet make the outdoors impossible, there's good fun in developing and printing. Every step is simple by the Kodak system.

The Independent's
Third Annual Contest
For American Schools

Eight Great Short Stories

THE Short Story is now the most popular type of fiction. It appears in a variety of forms in the pages of our newspapers, magazines and books. It is read by all classes of people. It is universal in its appeal.

The influence of the Short Story, fortunately, is almost always directed toward that which is good—manliness, honor, self-sacrifice—idealism in some form.

From an educational point of view the Short Story is the most interesting type of literature that can be put in the hands of our high school students. It is direct, vivid, forceful, appealing, and without undue effort it can be mastered as a whole.

Our high school students should know the great American Short Stories. They should know something of the trend of American fiction. They should have some knowledge of the types into which Short Stories may be divided.

Above everything else, our high school students should be influenced toward reading the best Short Stories.

The most recent syllabi in English have recommended the reading of a number of Short Stories. In harmony, therefore, with present movements in the teaching of English, and in the interests of good education generally, THE INDEPENDENT, beginning with the number for March 5, 1917, will publish EIGHT REPRESENTATIVE AMERICAN SHORT STORIES—a different story every week for eight consecutive weeks. The stories to be published represent every period of American literature since the founding of the United States, and illustrate eight distinct types of the Short Story. Every story will be preceded by an introduction of several hundred words pointing out the characteristic excellence of the story, telling something concerning its relation to the general type, and giving information concerning the author and his work.

Teachers will find this series of Short Stories, and the comments upon them, an unparalleled help in awakening the interest of their pupils in the study of English. The eight stories are as follows:

1. The Legend of the Rose of the Alhambra, by Washington Irving.
   An old-world romance, delightful for its tenderness and charm and the richness of its word music—a beautiful example of the easy-going narrative that preceded the Short Story of today.
2. The Ambitious Guest, by Nathaniel Hawthorne.
   A story of New England meditation set against a background of familiar New England scenery. Of all American stories one of the most nearly perfect examples of development, proportion and suggestive effect. A precursor of the realism and the romance of today.
3. The Masque of the Red Death, by Edgar Allan Poe.
   A story of the picturesque and the symbolic, with words and thought so closely united that the whole story gives the effect of richly suggestive melancholy music. A story showing the influence of German romance.
4. The Outcasts of Poker Flat, by Francis Bret Harte.
   A strongly original American story, vivid in its realism, striking in its local color, and so deeply sympathetic in character revelation that it reaches the noblest elements in life.
5. The Lady or the Tiger, by Frank R. Stockton.
   A story of ingenious plot, cleverly devised, clearly and briefly presented, and founded ultimately upon character analysis.
6. The Gift of the Magi, by O. Henry.
   A story of humble life in a great city, revealing the humor and the pathos that lie in small events. Clever in construction and quick in character analysis. A type of the Short Story in one of its most recent forms.
7. A Wasted Day, by Richard Harding Davis.
   A story of modern city life, representing many sides of character, portraying outward realities, but turning most attention upon the inner life. An artistic example of the higher type of modern realism.
8. The Revolt of Mother, by Mary E. Wilkins Freeman.
   A story of rural New England life, exact in detail, full of humor and satire, kindly and sincere, and fundamental in its presentation of character types. An unusually good example of effective realism and well balanced construction.

THE INDEPENDENT offers a Short Story Medal for the best essay from any school in the United States on "The Development of the American Short Story," the essay to be based upon the eight introductory articles and the eight representative Short Stories printed in THE INDEPENDENT. Any American school, private or public, elementary or secondary, may take part in the contest, but the medal cannot be awarded unless ten pupils at least compete from that school. Every competitor must complete an original essay of from 500 to 2,500 words and hand it to the judges by May tenth.

In elementary schools the school authorities shall select three judges from the faculty, pupils or outsiders (including no contestants). In secondary schools the contestants themselves may select any three judges they may wish except a contestant.

This contest is open free to all schools. A subscription to THE INDEPENDENT is not obligatory. If 1,000 schools take part in this contest, 1,000 medals will be awarded. Your school does not have to compete with any other school.

THE INDEPENDENT, 119 West 40th Street, New York:

We wish to enter THE INDEPENDENT Short Story Contest for American Schools. Please reserve a medal for my pupils.

School .....City and State .....

sequence of the war. He is entirely French in his sympathies. He is not blind to German brutality and aggressiveness, but he does not believe that Germany has suddenly divested herself of all the virtues which formerly the world admired. A man who can write in the spirit of the following passage while immersed in the horrors of war is no ordinary person:

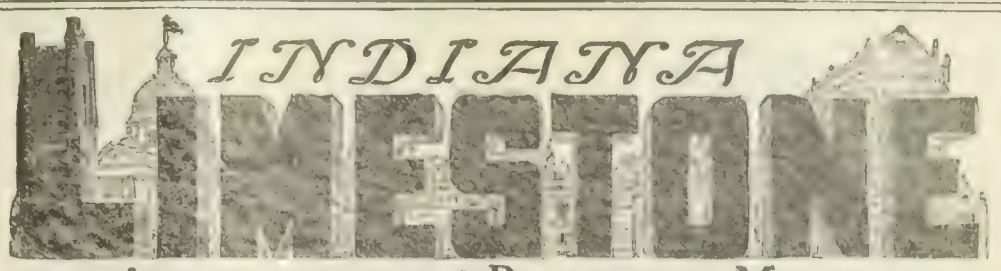
> For the finer spirits of Europe there are two dwelling-places: our earthly fatherland, and that other City of God. Of the one we are the guests, of the other the builders. To the one let us give our lives and our faithful hearts; but neither family, friend, nor fatherland, nor aught that we love has power over the spirit. The spirit is the light. It is our duty to lift it above tempests, and thrust aside the clouds which threaten to obscure it; to build higher and stronger, dominating the injustice and hatred of nations, the walls of that city wherein the souls of the whole world may assemble.

This volume is excluded from France by the censorship, but some day France will again be proud of Romain Rolland.

Above the Battle, by Romain Rolland. Open Court Publishing Company. $1.

THE COURSE OF A GREAT ADVENTURE

Paul the Dauntless, by Basil Mathews, contains the life of the great Apostle, told in story form. The writer incorporates the historical materials of the New Testament, and seeks to present only those phases of life and natural surroundings which Paul would most probably have met with during his career as a boy in Tarsus, a student of the law in Jerusalem, and an ardent promoter of the new cult of the Nazarene. Mr. Mathews prepared for writing his book not only by a careful study of the biblical literature and recent archeological investigations, but by extensive travel over the routes taken by the Apostle to the Gentiles. The volume is written in a spirited style and abounds in picturesque descriptions of scenery and thrilling adventure. A large number of illustrations in color as well as in black and white from drawings and photographs add interest to a very delightful and stimulating book. The life of Paul becomes more vivid and effective when presented in this way rather than in the historical theological manner.



Paul the Dauntless, by Basil Mathews. F. H. Revell & Co. $2.

FROM THE NEW TESTAMENT

The Manhood of the Master is a choice series of daily readings, meditations and discussions of qualities in Jesus' character. (Y. M. C. A. Press, 50 cents.)

The first attempt in English to analyze the self-consciousness of Jesus in its dual aspects, human and divine, comes from the pen of Anson Phelps Stokes, in an outline study entitled *What Jesus Christ Thought of Himself*. It combines reverent attitude of mind with acceptance of the main results of modern scholarship. (The Macmillan Company, $1.)

War among so many of the so-called Christian nations of the earth has naturally raised the question *What Is a Christian?* John W. Powell seeks to give a satisfying answer by an open-minded discussion of the Christian's fundamental faith, the ethics of Jesus and the relation of the

The ARISTOCRAT *of* BUILDING MATERIALS

Within your reach? YES!

The very same stone that has been used for many years in the finest buildings, both public and private, in every state in the Union—a natural stone so remarkable that if you are about to build or are interested in building, you should ***certainly*** know ***all*** about it. The U. S. Government is one of the biggest users of this "Aristocrat of Building Materials." Yet it is even more reasonable in price than artificial materials.

You are familiar with buildings built of Indiana Limestone, but probably do not know it by name. It probably never occurred to you that this beautiful material is quarried in such quantities that the price is within your easy reach.

You ***do*** know that nothing in the world gives the impression of dignity, costliness, refinement and beauty like ***natural*** stone, the genuine handiwork of nature, and we want you to know about Indiana Limestone, "The Aristocrat of Building Materials," to hold a piece in your hand, and to decide for yourself about the new building. (See FREE OFFER below).

FOR THE NEW

YES—of course. A list of the finest Indiana Limestone homes reads like a society blue-book. Indiana Limestone is a badge of distinguished taste, whether for cottage or mansion. The best architects use it also for the trimmings of brick houses and for porches even on wooden houses.

YES—for the very finest apartments use Indiana Limestone from sidewalk to roof, or one story Limestone and the rest brick. Natural Indiana Limestone trim, porches and doorways, add the final touch of elegance to the brick apartment, and in renting "class pays cash."

YES—where is the wonderful product of nature more appropriate than in a church? What is more certain to express the high function of the edifice than Indiana Limestone? Let us send a sample and book to each of the committee, pastor or others interested.

YES—the greatest architects have used ***millions of cubic feet*** in a host of the great buildings in America—for example, the Grand Central Terminal (N.Y.), and business, hotel, bank and public buildings, great and small—EVERYWHERE! By no means fail to investigate Indiana Limestone.

FREE—Handsome paperweight of Indiana Limestone showing several finishes with a handsomely illustrated interesting booklet

YOU HAVE A RIGHT TO INDEPENDENCE

You have a right to independence, but you must have an honest purpose to earn it. Many have purpose, ambition and energy, but thorough direction and intelligent help must be supplied. My instruction supplies the first and our Co-operation Bureau fulfills the second. Large numbers have availed themselves of both, succeeding to a remarkable degree. Investigate without prejudice, this opportunity to

LEARN THE COLLECTION BUSINESS

and escape salary drudgery for life. If you have an idea that the collection business as I teach it is not safe, sure and dignified as a bank, or any other profitable business, you are mistaken and I will prove it, if you earnestly desire to get ahead. No essential branch of business is so limitless, or less crowded. No business may be built so large without investment of capital. I will gladly send you for the asking

"POINTERS ON THE COLLECTION BUSINESS"

It may mean comfort for life, if not a great deal more. Write for it NOW.

W. A. SHRYER, Pres., AMERICAN COLLECTION SERVICE, 625 State St., Detroit, Mich.

Christian ideals to war, wealth and personal character A good book for the times. (The Macmillan Company, $1.)

"The Wayfarers Library" is a tastily made series of volumes, to which two worthy and valuable additions have just been made. *The Sermon on the Mount*, by Bishop Gore, and *Thoughts on Life and Religion*, by the late Prof. Max Müller. These are both classics of present-day interest. (E. P. Dutton & Co., 40 cents each.)

Edgar J. Goodspeed has performed a worthy service for instruction classes and beginners in the study of the New Testament books and writers by setting forth *The Story of the New Testament*. The volume will be of great value in giving to the layman a short and readable account of the modern view of the origin, purpose and place in Christian history of these sacred documents. (University of Chicago Press, $1.)

TRANSLATIONS

We may no longer study the classics in college, but the Loeb Classical Library is helping us to enjoy them afterward, which is as important. The new volumes are one of *Plutarch*, one of *Plautus* including five plays, Vol. II of *Ovid's Metamorphoses*, Vol. I of the prose translation of *Virgil* and *Marcus Aurelius*, this the ninth rendering into English. (G. P. Putnam's Sons, $1.50 each.)

The translation by Mumford Jones of Heine's poem, *The North Sea*, has resonance and value just as English verse. The German text accompanies the translation and in the introductory essay on the poet Dr. Jones comments that altho Heine was not the first German poet to sing the splendor of the sea, yet, "not until *Die Nordsee* does the salt breath of the ocean really sweep thru any German poet that I know." (Chicago: Open Court Publishing Co., $1.)

The Rime Nuove of Giosué Carducci has been translated into correctly metrical and careful English verse by Laura Fullerton Gilbert. A more magical and imaginative use of words would have given this book distinction and made it a more creditable achievement. (Boston: Richard G. Badger, $1.25.)

Heralded as the clearest voice in Scandinavian poetry, with the powers and beauty of Burns, Shelley, Heine and Kipling combined, comes Gustaf Fröding his *Poems*, translated by Charles Wharton Stork. Altho these must lose by translation, they are yet strong, colorful, and dramatic, not without the tragic note of Ibsen and Lagerlöf. (The Macmillan Company, $1.25.)

Dr. Arthur Gilchrist Brodeur has made a scholarly translation of *The Prose Edda* of Snorri Sturluson from the old Icelandic of the early thirteenth century. This should attract three classes of readers, students of Scandinavian history, myth and literature; lovers of folklore and the primitive simplicities in language and literature; and poets. (American-Scandinavian Foundation, $1.50.)

Translations of verse in verse are seldom satisfactory; too often they reproduce the exact meaning of the original at the expense of its art. The authorized translation of *Brand*, the dramatic poem which is said to have first made Henrik Ibsen famous, has something of this difficulty, tho Miles M. Dawson has translated it with remarkable care and at times with real inspiration. (Boston: Four Seas Company, $1.50.)

ESSAYS

John Webster and the Elizabethan Drama, the "dissertation" with which Rupert Brooke won his Fellowship at King's College, makes enquiry into the theater's meanings, Elizabethan drama origins, and shows an unusual understanding of Webster's means and methods. Concrete, convincing, more widely illuminating than its mere subject; but, in places, careless, contradictory, over-enthusiastic, too.

There are flashes of perhaps a greater genius than the one being studied. (John Lane Company, $1.50.)

Libraries, by John Cotton Dana, is a collection of suggestive articles and addresses by the wide-awake chief of the wide-awake Newark Library. The book has value for any one who in any way has to do with the management of public libraries, and it is interesting to other folk, even to the reviewers whose sins it catalogs. (White Plains, N. Y.: Wilson, $1.80.)

Personality in German Literature Before Luther, by Kuno Francke, discloses (very slowly, scholarly and dully) the gradual rise and spread of individualism in German character, as exprest in minnesong and epic, in mystic and religious fervors, in folksong, ballad and satire, in Easter and Passion plays, and finally in the Humanist movement. The treatment is concrete, but pro-German with its superlative praise for almost everything of German origin. (Harvard University Press, $1.25.)

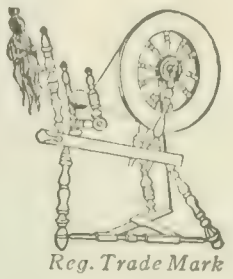
In *The Social Criticism of Literature*, Professor Buck, of Vassar, inquires into and extracts the good from the different forms of criticism to the end that critics may "heighten the reader's conscious life by increasing his capacity to read," and that each reader may gradually become his own critic. The book sees both literature and criticism as evolutionary, not static, and is a clarifying introduction to a new and larger method. (Yale University Press, $1.)

ESPECIALLY WOMEN

1000 Shorter Ways Around the House has the earmarks of the "Household Hint" column. It advises on every topic from how to get at the sardines to vaseline as a hair tonic. (G. P. Putnam's Sons, $1.50.)

In *Clothing for Women*, Laura A. Baldt has prepared a most useful book both to home workers and schools. It discusses and illustrates fabrics, laces, colors, designs as well as give directions and diagrams for economical and correct cutting, and for all sorts of stitching. (Philadelphia: J. B. Lippincott Company, $2.)

Plenty of practical information and some good advice is to be found in *The Ambitious Woman in Business*, by Eleanor Gilbert, who considers the general status of women in business and analyzes the possibilities of many of the fields in which they are employed. (Funk & Wagnalls Company, $1.50.)



The Hygiene of Infancy, by Dr. J. H. Kellogg, is especially to be commended for the simple, non-technical language used. It is a very practical little manual for young mothers and gives adequate directions for meeting most of the problems that are likely to arise during a baby's first years. (Good Health Publishing Company, $1.25.)

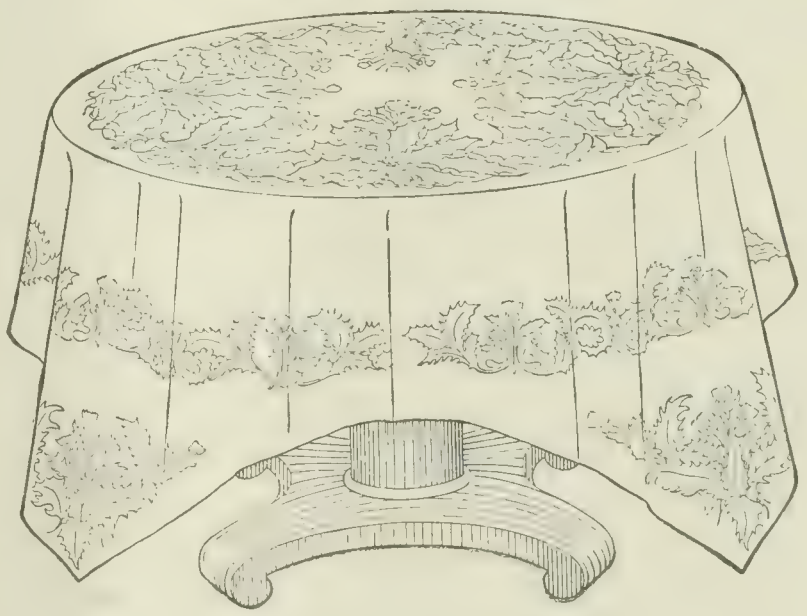
No golfer should be without it! The book of *Golf for Women*, by a Woman Golfer who combines a thorogoing knowledge of the game with the rare ability of explaining it. Its many commonsense suggestions for improving one's own playing are pointed by interesting illustrations of noted women golfers and their styles of play. (Moffat, Yard & Co., $2.50.)

The Long Road of Woman's Memory, by Jane Addams, considers in the light of the author's own reminiscences the theory of race memory, its function, aside from interpretation for the individual, "as a selective agency in social reorganization." Miss Addams takes up the question solely from woman's viewpoint and illustrates it abundantly with anecdotes. (The Macmillan Company, $1.25.)

Something of Thomas Mott Osborne's work for prison reform among men is being done by Madeleine Z. Doty for women and children. In *Society's Misfits* she gives a graphic sketch of her voluntary imprisonment as "Maggie Martin, 933," and tells some pathetically true stories of reformatory kids. The facts are convincing and the need of reform is appalling. (The Century Company, $1.35.)

Annual Sale Household Linens *at* McCutcheon's

Reg. Trade Mark



We consider ourselves fortunate in having most abundant stocks of Linens to offer for our Annual January Sale.

Nearly all of these goods are already marked considerably below present-day prices. This is made possible by the fact that most of our supplies were secured many months ago, when the cost was not so high as it is now.

From these relatively low current prices we propose to give during January

a discount of 10%

on all of our Table and Bed Linens, Towels and Bed Coverings; also on Lingerie, Corsets, Children's Wear, Ladies' Underwear and Hosiery.

1001 Thistle Round and Square

We also offer some special lots of Damask Table Linens purchased almost a year ago specifically for this January Sale, which we are able to offer at prices that are approximately

25% less than present-day values

Particular attention is directed to our wonderful stock of Pure Linen Towels of all kinds, as well as to Bed Linens and other Bed Coverings.

CHINESE HUMOR

Many people have but a vague idea of the demarkation line between satire, humor, wit and fun, and still fewer take Swift's word to heart that the same story which may sound very spirited after supper has an insipid taste before breakfast. A man without humor is like soup without salt, and the character of a nation can best be judged by the quality of its humor. Nobody has yet thought of the thankful task of building a comparative race psychology upon the study of the humoristic literatures of the various nations, but it would be worth while.

Isaac Taylor Headland has, therefore, rendered no small service to the Chinese people by showing us the smiling wrinkle upon the gloomy mask of the stern adepts of the teachings of the statesmen, philosophers, Lao-Tse and Confucius.

Most people think, indeed, that Chinese social life is as solemn as a funeral simply because the Chinaman, in all his associations with foreigners, seldom loses his demeanor of cold reserve. Even the Chinese kids, always remembering the lesson in their primer to "be dignified in walking and be orderly in gait; never lean against a doorpost, but in standing, stand up straight," make upon the Occidental traveler the impression of "little men" and "little women." Regarding the latter, the provocation must be a strong one, indeed, to induce a girl of good stock to laugh in the presence of company.

The first smile appears upon the countenance of the European or American in hearing the huckster of sweets recommend with a stentorian voice his wares, assuring those who will eat them in sufficient quantity that they will be swiftly cured of blindness, baldness, lameness, deafness, bad teeth, ignorance, and so on.

And since we are at the chapter of curing, let us not miss the following satirical nursery rime on the Chinese doctor:

My wife's little daughter once fell very ill,
And we called for a doctor to give her a pill.
He wrote a prescription which now we will give her,
In which he has ordered a mosquito's liver,
And then in addition the heart of a flea.
And a half-pound of flywings to make her some tea.

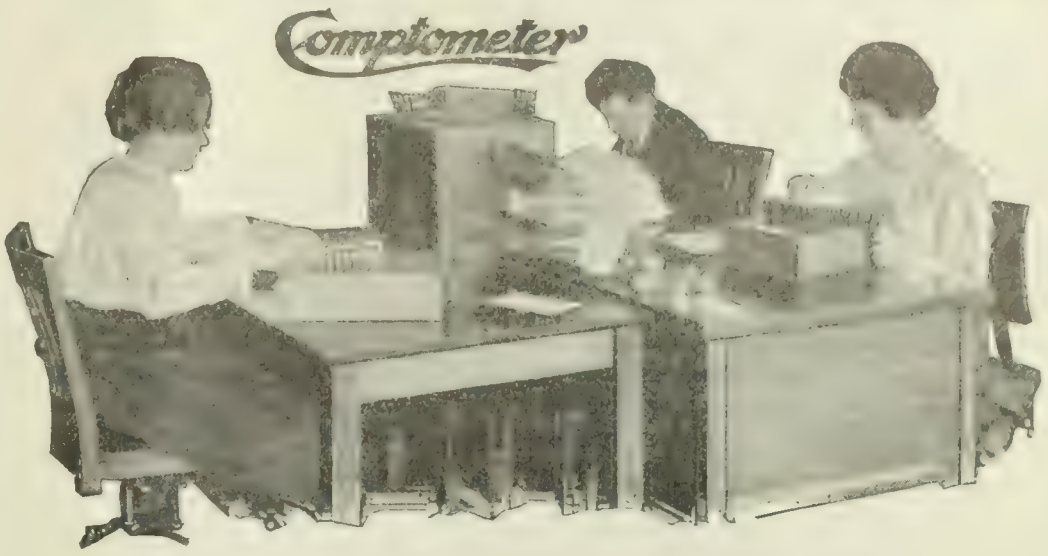
Proud of their traditional queues, the Chinese urchins, unconsciously following the example of the naughty boys of Jerusalem running after the bald prophet Elisha, pitilessly crack their most cruel jokes at the expense of the shiny domes, male and female.

There is a big jump from the nursery and street to the cemetery, but even there Chinese humor knows how to nestle in and between the tombs. Thus, an amusing story is told about the great Chinese philosopher, Chuang-Tzu, a contemporary of Aristotle. One day he saw a woman clad in widow's garb fanning a freshly dug grave. By a slight cough he attracted the woman's attention. "What are you doing, Madam, if I may be permitted to ask?" "It is my poor husband's grave. At his

deathbed I had solemnly to promise him not to marry again until the earth on his grave should be dry." The old philosopher, seeing the point, took the fan from the beautiful widow's hand, flicked it a few times for her, whereupon she modestly thanked him, returning to her home with unfeigned satisfaction.

We hardly think that Horace and his famous description of the bore of whom the poet could not get rid can be counted among the favorite authors of the people with the almond eyes. The following Chinese story is, therefore, worth repetition, showing as it does that, after all, the foibles of man defy space and time:

One day our bore honored with his interminable presence a gentleman who did not know how to get rid of him. So he got up and looked at the sky. "Clouds are gathering," he said suggestively, "it will soon rain." The importune visitor quickly replied: "If it is going to rain, I mustn't go; it might rain before I reach home." The unhappy host, after a while, rose and looked out again. "The clouds are scattering." "All right, then there is no need to hurry, I can stay on."



Let us terminate with the following trio of rather genuine chinoiseries: A family had just bought a new, large and ornamental bedstead with which it hoped to make a deep impression upon a household recently allied by marriage. The old lady of the house feigned illness. The female head of the allied family duly came to pay her sick visit. But having really come for the purpose of showing off her new pair of prettily embroidered shoes, she raised her foot to a correspondingly respectable hight. Then the following dialog followed: "House-mother, what illness are you suffering from?" "I am suffering, Madam, from the same disease of the heart as yourself."

A man sent a note to a rich neighbor to borrow an ox for a few hours. Happening to have with him an honored guest to whom he was loath to show his illiteracy, he opened the note, pretending to read it, and with an obliging smile turned to the messenger: "Tell your master I will come myself, presently."

A portrait painter, who had not received an order for a long time, was advised by a well-meaning friend to paint a likeness of himself and wife, sitting under the shade of a tree, and hang it up so that people might see and judge of his skill. He does so. One day his father-in-law came into the shop, and casting his eye about, spies the new picture. "Pray, son-in-law, who is this woman you have painted here?" "Why sir, that is your own, dear daughter." "What!" says the father with some indignation. "How do you dare paint my daughter sitting abroad with a stranger!"

Old Lady—Come in, my man. Don't be frightened of Tiny—his bark is worse than his bite.

The Man Outside—Then for Heaven's sake don't let 'im bark, Ma'am.—*Sydney (Australia) Bulletin.*

Comptometer Desk, Phoenix Knitting Works, Milwaukee, Wis.

How They Carried the Extra Load Without Extra Help

Bigger Business means more work for everyone.

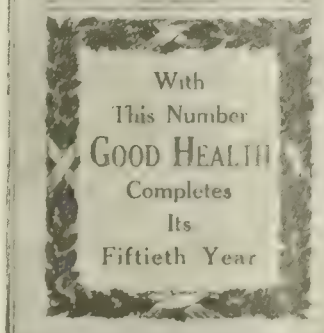
For the Phoenix Knitting Works of Milwaukee it meant a big factory addition—an enormous increase in output—a longer line of workers filing in for the pay envelope.

The General Office, of course, came in for its share of the extra load.

"Yet all I asked for," said Mr. O'Connell, Manager of Accounting, "was another Comptometer. We had one. Now, with the two, we easily keep up our end of the bigger load. Without them, we would have to put on at least three more clerks in this Department."

This is what these Comptometers are doing:

Adding Trial Balance
Balancing Accounts
Adding Voucher Check Book
Adding Daily Sales
Adding and Balancing Daily Sales Analysis
Adding Cash
Extending and Proving Bills
Figuring Inventory
Proving Cost Sheets
Extending, Adding & Proving Payroll.
Distributing Payroll by Departments to:
Total Day Work Hours
Piece Work
Overtime Earnings and Allowances
Percent of Piece Work Hours
Average Weekly Wage Per Hour
Average Piece Work Hour Wage
Average Wage by Departments
Average Hour's Work in Each Department.



If you could see the high speed and dependable accuracy with which every operation in this schedule is performed on the Comptometer—then you would understand how they were able to handle more work without extra help.

The time and labor saved by making all the arithmetic of accounting a machine job, is obvious enough. The question that naturally suggests itself to your mind is: "How would it work out in my case?"

The answer to that is a practical test on your own work. To get that, simply drop us a line saying: "Let a Comptometer man come in and show me. Without promising anything, I'll be the judge."

Copy of "Better Methods of Accounting" will be mailed on request.

Felt & Tarrant Mfg. Co., 1725 N. Paulina Ave., CHICAGO, ILL.

What Is "Eugenics"?

Do you wish to know some newly discovered and most intensely interesting facts—vital, almost startling—about a science which you can easily understand and make definitely and practically useful in your everyday life? The science is that of breeding *a new race*—of developing *an improved human species.* If you wish knowledge of it, write today for a copy of GOOD HEALTH—the health magazine which recommends, for the care of health, only scientific methods approved by leading medical authorities. Not "a crank's magazine." No "fads" or "fancies." No frills. Sane—sensible—practical—useful. Taken by over 12,000 sober-minded, clear-thinking business men who follow its instructions for the care of health in their lives and business. A new "Department of Eugenics" is edited by one of the greatest living biologists—head of the Department of Biology in one of the largest Universities in the world. Sample copy of GOOD HEALTH will be sent *FREE* to any reader of this magazine. Just your name and address on a postcard brings it. Address

GOOD HEALTH PUBLISHING CO., 301 W. Main St., Battle Creek, Mich.

LIFETIME VALET SERVICE — LESS THAN 1c A MONTH

TAKE a tip from West Point Cadets, the best turned out men in the world—*press your trousers by a Heatless method*, as they do. Don't let the tailor scorch your trousers with a hot iron while the wet steam rots the cloth. Get the famous West Point trouser crease, knifelike from belt to boot—by automatic heatless pressing. It's only $1.00 for

Leahey's HEATLESS Trouser Press

(Protected by U. S. letters patent)

No operating cost for this wonderful money-saver. First cost the last cost. No worry, no inconvenience, no loss of time, no skill required.

New Trousers for Old

every day of your life. Be spick and span—be envied for your appearance. Good appearance pays banker or clerk.

Less than a Penny a Month

Makes you the best-groomed man in your set for the rest of your life. It's a Creaser, a Presser, a Stretcher, and a Hanger, all combined in one.

Fold the HEATLESS press with trousers in it, in suitcase, closet—over back of chair—ANYWHERE! Your trousers last 50% longer.

Cut Out Tailor's Bills

Takes one minute to put trousers in Heatless Press. Automatically ready in the morning. This press pays for itself the first month in tailor's bills saved.

For Your Throat

When troubled with coughing, hoarseness, voice-strain, tickling in throat, or irritation in the bronchial tubes, place one of

BROWN'S Bronchial TROCHES

in the mouth—let it slowly dissolve, and get welcome relief. Irritation and tickling gradually lessen, cough ceases, voice clears—the vocal chords are eased and strengthened. Contain no opiates—safe to take. 25c, 50c and $1 at druggists.

New 10c Trial Size Box fits vest pocket.

If your dealer cannot supply you, we will mail any size upon receipt of price.

John I. Brown & Son, Boston, Mass.

THE ALLIES' REPLY TO THE GERMAN NOTE

Paris, Dec. 30.

The Allied Governments of Belgium, France, Great Britain, Italy, Japan, Montenegro, Portugal, Rumania, Russia and Serbia, united for the defense of the liberty of their peoples and faithful to engagements taken not to lay down their arms separately, have resolved to reply collectively to the pretended propositions of peace which were addrest to them on behalf of the enemy governments thru the intermediary of the United States, Spain, Switzerland and Holland.

Before making any reply, the Allied powers desire particularly to protest against the two essential assertions of the notes of the enemy powers that pretend to throw upon the Allies responsibility for the war and proclaim the victory of the Central powers. The Allied Governments cannot admit an affirmation doubly inexact and which suffices to render sterile all tentative negotiations. The Allied nations have sustained for thirty months a war they did everything to avoid. They have shown by their acts their attachment to peace. That attachment is as strong today as it was in 1914. But it is not upon the word of Germany, after the violation of its engagements, that the peace broken by her may be based.

A mere suggestion without a statement of terms, that negotiations should be opened, is not an offer of peace. The putting forward by the Imperial Government of a sham proposal lacking all substance and precision would appear to be less an offer of peace than a war maneuver. It is founded on calculated misinterpretation of the character of the struggle in the past, the present, and the future.

As for the past, the German note takes no account of the facts, dates and figures, which established that the war was desired, provoked, and declared by Germany and Austria-Hungary.

At The Hague Conference it was a German delegate who refused all proposals for disarmament. In July, 1914, it was Austria-Hungary, who, after having addrest to Serbia an unprecedented ultimatum, declared war upon her in spite of the satisfaction which had at once been accorded.

The Central Empires then rejected all attempts made by the Entente to bring about a pacific solution of a purely local conflict. Great Britain suggested a conference; France proposed an international commission; the Emperor of Russia asked the German Emperor to go to arbitration, and Russia and Austria-Hungary came to an understanding on the eve of the conflict. But to all these efforts Germany gave neither answer nor effect.

Belgium was invaded by an empire which had guaranteed her neutrality and which had the assurance to proclaim that treaties were "scraps of paper," and that "necessity knows no law."

At the present moment these sham offers on the part of Germany rest on the war map of Europe alone, which represents nothing more than a superficial and passing phase of the situation and not the real strength of the belligerents. A peace concluded upon these terms would be only to the advantage of the aggressors, who, after imagining that they would reach their goal in two months, discovered after two years that they could never attain it.

As for the future, the disasters caused by the German declaration of war and the innumerable outrages committed by Germany and her Allies against both belligerents and neutrals demand penalties, reparation and guarantees. Germany avoids mention of any of these.

In reality these overtures made by the Central Powers are nothing more than a calculated attempt to influence the future course of war and to end it by imposing a German peace. The object of these overtures is to create dissension in public opinion in the Allied countries. But that public opinion has, in spite of all the sacrifices endured by the Allies, already given its answer with admirable firmness, and has denounced the empty pretense of the declaration of the enemy powers.

They [the peace overtures] have the further object of stiffening public opinion in Germany and in the countries allied to her—one and all severely tried by their losses, worn out by economic pressure and crushed by the supreme effort which has been imposed upon their inhabitants.

They endeavor to deceive and intimidate public opinion in neutral countries, whose inhabitants have long since made up their minds where the initial responsibilities lie and are far too enlightened to favor the designs of Germany by abandoning the defense of human freedom.

Finally, these overtures attempt to justify in advance in the eyes of the world a new series of crimes—submarine warfare, deportations, forced labor and forced enlistment of the inhabitants against their own countries, and violations of neutrality.

Fully conscious of the gravity of this moment, but equally conscious of its requirements, the Allied Governments, closely united to one another and in perfect sympathy with their peoples, refuse to consider a proposal which is empty and insincere.

Once again the Allies declare that no peace is possible so long as they have not secured reparation for violated rights and liberties, the recognition of the principle of nationality and of the free existence of small states, so long as they have not brought about a settlement calculated to end once and for all forces which have constituted a perpetual menace to the nations, and to afford the only effective guarantee for the future security of the world.

In conclusion, the Allied Powers think it necessary to put forward the following considerations, which show the special situation of Belgium after two and a half years of war. In virtue of the international treaties signed by five great European powers, of which Germany was one, Belgium enjoyed before the war a special status, rendering her territory inviolable and placing her, under the guarantee of the powers, outside all European conflicts. She was, however, in spite of these treaties, the first to suffer the aggression of Germany. For this reason the Belgian Government think it necessary to define the aims which Belgium has never ceased to pursue while fighting side by side with the Entente Powers for right and justice.

Belgium has always scrupulously fulfilled the duties which her neutrality imposed upon her. She has taken up arms to defend her independence and her neutrality violated by Germany and to show that she remains faithful to her international obligations.

On the 4th of August, 1914, in the Reichstag the German Chancellor admitted that this aggression constituted an injustice, contrary to the laws of nations, and pledged himself in the name of Germany to repair it. During two and a half years this injustice has been cruelly aggravated by the proceedings of the occupying forces, which have exhausted the resources of the country, ruined its industries, devastated its towns and villages and have been responsible for innumerable massacres, executions and imprisonments.

At this very moment, while Germany is proclaiming peace and humanity to the world, she is deporting Belgian citizens by thousands and reducing them to slavery.

Belgium before the war asked for nothing but to live in harmony with her neighbors. Her King and her Government have but one aim—the reëstablishment of peace and justice. But they only desire peace which would assure to their country legitimate reparation, guarantees and safeguards for the future.

PEBBLES

The crystal, as a means of divination, is very popular just now. It is, of course, a transparent fraud.—*Every Week.*

Mother (at the dinner table)—You always ought to use your napkin, Georgie.

George—I'm using it, Maw. I've got the dog tied to the leg of the table with it.—*Awgwan.*

To his Hungarian subjects the new Emperor is "Charles the First." Those of them who know our English history will be anxiously watching for signs of a tendency on their monarch's part to lose his head in critical times.—*Bystander.*

"I tell you," said Pat, "the ould fri'nd is the best, after all, and, what's more, I can prove it."

"How are you goin' to prove it?"

"Where will you find a new fri'nd that has shtud by ye as long as the ould ones have?"—*Last Word.*

Counsel (to plaintiff)—At this final interview when you demanded payment by the defendant of this debt, what did he say to you?

Plaintiff—Go to the Devil.

Counsel—What did you do?

Plaintiff—I immediately consulted my solicitor.—*London Opinion.*

"Yes," said the cynical old sea captain, "when I was shipwrecked in South America, I came across a tribe of wild women who have no tongues."

"Good gracious!" exclaimed the listener, "how could they talk?"

"They couldn't," was the reply. "That was what made them wild."—*Awgwan.*

Willis—Going to the party?

Gillis—No. I haven't any lady.

Willis—Come with me. I've got two extras.

Gillis—Who are they?

Willis—Miss Oldbud and Miss Passé.

Gillis—They're not extras. They're early editions.—*Early Bird.*

"What do you suppose has come over my husband this morning, Sophia?" exclaimed a conscientious little bride to the new servant. "I never saw him start to the station so happy. He's whistling like a lark!"

"I'm afraid I'm to blame, mum. I got the packages mixed this morning and gave him birdseed instead of his regular breakfast food, mum."—*New Idea.*

I used to think good nature paid,
But now I have some doubt
When I perceive the progress made
By kickers all about.

The folks who say, "Oh let it go!
It isn't worth a fight,"
Are, as a rule, statistics show,
Not treated wholly right.

All men detest the kicker's ways
And blame him for his moods
Oh, yes, good nature gets the praise,
But kicking gets the goods.
W. G. Doty in New York Times.

The budding authoress had purchased a typewriter, and one morning the agent called and asked:

"How do you like your new typewriter, madam?"

"It's wonderful!" was the enthusiastic reply. "I wonder how I ever did my writing without it."

"Would you mind," asked the agent, "giving me a little testimonial to that effect?"

"Certainly not," she responded. "I'll do it gladly." Seating herself at the machine, she pounded out the following:

Aafteb Using thee Automatid Back-action atype write. er for thre emonth ⁄ an d Over. I unhesittattingly pronoun ce it tobe al ad more than th e Manufacturss claim! for it. Durinb the tim e been in myy possessio n $i thre month it had more th an paid paid for itse*f in thee saVing off tim e anD laborr?"—*Illustrated World.*

Your Office Problems

Is your mail out on time every day? Are you using up-to-date methods in all departments of your organization? Do you know all the time and labor saving qualities of loose-leaf and card devices? Are you acquainted with the remarkable figure work of the adding, computing, billing and bookkeeping machines?

Have you investigated the addressing machines, the inter-phone systems, metal office furnishings, duplicating machines, conveyor systems, envelope openers and sealers, payday machines, light-weight packing cases, lifting trucks, electric truck for the plant, concrete construction?

Are you familiar with results to be obtained from the use of time-recorders, ventilating systems, good lighting systems, vacuum cleaners, counting machines? Can you use to good effect the check protector, the telautograph, the productograph, or the wage table?

If you have any problems relating to the efficient management of your office, your building or your plant—use the coupon.

A requisition blank will be sent you on which you may indicate the kind of report you would like.

Our Efficiency Service is prepared and equipped to put you in the way of solving your problems. Other men have labored over just the things that are now confronting you and are finding their way out with our assistance. The coupon you send will receive prompt attention.

For the present this service is without charge to all readers of The Independent and to all members of The National Institute of Efficiency.

New First National Bank, Dept. 10, Columbus, O.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

DIVIDEND

THE FRANKLIN SAVINGS BANK
Corner 8th Avenue and 42d Street

112th consecutive semi-annual dividend has been declared at the rate of Three and One-half Per Cent per annum on all sums entitled thereto from $5 to $3,000, payable on and after January 15, 1917.

Deposits made on or before the 10th of January will draw interest from the 1st.

Amount due depositors.....$26,059,797.17
Surplus, market values..... 2,272,899.54

The Market Place

THE STOCK MARKET

After the New Year's holiday the stock market showed a revival of activity, but the price movement was erratic, as the governing influence was exerted by shifting opinions as to the effect of Germany's proposals and of our Government's action, upon the duration of the war. If peace is not far away, the profits of many companies whose shares are prominent in the transactions of the New York Stock Exchange must soon be greatly reduced, and their market values will naturally decline. On Tuesday, the 2d, prices advanced, owing to the response of the Entente Allies to Germany's overtures. This, it was thought, indicated that nothing would be done at present to stop the fighting. In a market of nearly 1,000,000 shares (Steel Corporation leading, with 302,000) there was an upward movement. The advance for war order stocks, copper shares included, was from 2 to 4 points. Steel's net gain was about 3½. Railroad stocks were firmly held, but with little change, their condition and value depending to some extent upon the attitude of the four railway labor unions and upon legislation pending in Congress. The Adamson eight-hour law was to go into effect on January 1, but no final decision has been reached by the courts in the suits to test the constitutionality of it. On the 3d there was a broader market, with signs of another series of million-share days. The upward movement continued, but there was a lack of exprest reasons to account for it. Some were saying that the comments of the German press upon our Government's action concerning the proposals for peace negotiations indicated that the war would be continued indefinitely. There were rumors that the dividend rate on Steel Corporation common stock would be increased, as it was said that the forthcoming report would show that net earnings for the last quarter of 1916 had been nearly $100,000,000. The average price of the company's eight most important finished products is now $72 a ton, against $31 in 1914, and its net earnings last year were at the rate of 60 per cent on its common stock of $508,000,000. More than one-fourth of the day's business was in Steel shares, for which the net gain was 5⅜ points. For railroad stocks there was a fractional addition, but considerable advances were recorded for copper, motor and war order com-

DIVIDENDS

WELLS FARGO & COMPANY
Regular Dividend

New York, December 28, 1916.

The Board of Directors have this day declared a dividend of $3.00 per share upon the capital stock of this Company, out of surplus earnings for the six months ending December 31, 1916, payable on January 20, 1917, at the office of the Company, 51 Broadway, New York City, to stockholders of record at the close of Business January 8, 1917. The Transfer Books will close at the close of business on January 8, 1917, and be reopened on January 22, 1917. Checks will be mailed.

C. H. GARDINER, Secretary.

WELLS FARGO & COMPANY
Special Dividend

New York, December 28, 1916.

The Board of Directors have this day declared a special dividend of $33 1-3 per share upon the capital stock of this Company, out of surplus funds of the Company, payable at the office of the Company, 51 Broadway, New York City, on January 20, 1917, to stockholders of record at the close of business on January 8, 1917. The Transfer Books will close at the close of business on January 8, 1917, and be reopened on January 22, 1917. Checks will be mailed.

The Company on June 30, 1916, showed a surplus of $10.195,883.63. It owned in investment securities $24,677,064.42. Its income from investment securities during the preceding seven years was $8,913,974.48 or nearly $1,000,000 in excess of the sum required for the payment of this special dividend.

C. H. GARDINER, Secretary.

DIVIDEND NOTICE OF THE

AMERICAN LIGHT & TRACTION COMPANY

The Board of Directors of the above Company at a meeting held January 2, 1917, declared a Cash Dividend of One and One-half (1½%) Per Cent. on the Preferred Stock, a Cash Dividend of Two and One-half (2½%) Per Cent. on the Common Stock, and a Dividend at the rate of Two and One-half (2½) Shares of Common Stock on every one hundred (100) shares of Common Stock outstanding, all payable February 1, 1917. The Transfer Books will close at three o'clock P. M. on January 15, 1917, and will reopen at ten o'clock A. M. on February 1, 1917.

C. N. JELLIFFE, Secretary.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Monday, January 15, 1917, to stockholders of record at the close of business on Saturday, December 30, 1916.

G. D. MILNE, Treasurer.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on January 1, 1917, at the office of the Treasurer in New York, will be paid by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

PACIFIC GAS AND ELECTRIC COMPANY,
COMMON STOCK DIVIDEND NO. 9.

A quarterly dividend of $1.25 per share, upon the Common Capital Stock of this Company, for the three months ending December 31, 1916, will be paid on January 15, 1917, to shareholders of record at 12:00 o'clock noon, December 30, 1916. The Transfer Books of the Company will not be closed. Checks for the dividend will be mailed.

PACIFIC GAS AND ELECTRIC COMPANY,
A. F. HOCKENBEAMER,
Vice-President and Treasurer.
San Francisco, Cal., December 29, 1916.

UNITED STATES REALTY AND IMPROVEMENT COMPANY,
115 Broadway,
New York, December 28, 1916.

The Coupons on this Company's Twenty-year Debenture 5 per cent. Bonds, due on January 1st next, will be paid on January 2nd, upon presentation at the Company's office, Room 415, U. S. Realty Building.

B. M. FELLOWS, Treasurer.

LIGGETT & MYERS TOBACCO COMPANY,
St. Louis, Mo., December 28, 1916.

The Transfer Books of the Registered 5 per cent. bonds of Liggett & Myers Tobacco Company will close at 3 o'clock, p. m., January 15, 1917, for the payment of interest on said bonds, due February 1, 1917, and will reopen at 10 o'clock, a. m., February 2, 1917.

T. T. ANDERSON, Treasurer.

panies. Little or no attention was paid to current reports that, owing to the Federal Reserve Board's warning against investment by the banks in British Treasury notes, the British Government had canceled several orders for war supplies.

On Thursday, the 4th, when 1,333,000 shares changed hands, there was a sharp reaction, caused in part by rumors that the Federal Reserve Board had repeated its warning, thus nullifying the favorable effect of the action of the New York Reserve Bank in making the Bank of England its correspondent. The only foundation for the rumor was the fact that the board had reprinted its original warning in a monthly bulletin. Prices declined. Transactions in Steel Corporation stock were 488,000 shares, with a loss of 3 points, the closing quotation being 112. The summit, in November, was 129¾. On Friday, the 5th, the downward movement was not checked, but transactions were only 926,000 shares. Steel Corporation (302,500 shares) was lower by 1½ points and the war order stocks showed losses, while railroad securities remained almost stationary. Additional extra dividends were announced. For the year 1916 the Scovill Manufacturing Company has paid 121 per cent in cash and 25 per cent in bonds. The Sloss Sheffield Steel and Iron Company's quarterly dividend of 1½ per cent is the first one paid by this corporation in six years.

FARM LOAN BANKS

It has been decided that the twelve new Federal farm loan banks will be in Springfield, Mass.; Baltimore, Md.; Columbia, S. C.; Louisville, Ky.; New Orleans, St. Louis, St. Paul, Omaha, Wichita, Kan.; Houston, Tex.; Berkeley, Cal., and Spokane, Wash. To each a district is assigned. The first district includes New York, New Jersey and the New England states. The law says that each bank shall have a capital of $750,000, and it limits the interest rate on loans to a maximum of 6 per cent. As fast as the loans are made, farm loan bonds will be issued to cover them, and the interest paid on these will be less by 1 per cent than the loan rate, which probably will not exceed 5½ per cent. The Farm Loan Board has already received many applications for loans.

WHEAT PRICES RISING

Persistent foreign demand and a growing belief that Germany's proposals for peace negotiations will not hasten the end of the war have brought the price of wheat up again from the low figures of two or three weeks ago. On the 2d it rose, at Chicago, from $1.74 to $1.80, and on the 3d to $1.86⅝ (with corn at 99¾), owing partly to a decrease of the visible supply in England, higher prices in Argentina, bad weather in Australia, and reports that the condition of our own winter-sown fields was not favorable. The price declined two days later to $1.81. Exporters' purchases are said to be limited only by the available ship

American School of Correspondence, Dept. P-9481 Chicago, U.S.A.

tonnage. Europe has been accustomed to import large quantities from Argentina. Reports of the failure of this year's crop in that country are now confirmed. The International Institute of Agriculture at Rome says the crop is only 77,394,000 bushels, or 45 per cent of last year's and 52 per cent of a five years' average. The exportable surplus is very small. The crop of oats there has suffered to about the same extent. Australia's wheat crop is larger than last year's and much above the average. The Institute's reports show that the world's crop of wheat last year was less by 25 per cent than that of 1915.

A Federal grand jury which has been inquiring in Chicago about charges that the prices of wheat and other food products had been raised by unlawful combinations or trusts recently finished its work and was discharged. There were no indictments, because no evidence on which they could be based had been found. The Department of Agriculture at Washington estimates the value of all our crops last year at $8,934,587,000, an increase of $2,165,989,000 over the value in 1915, and $2,867,206,000 in excess of the average for the four preceding years.

ORDERS FOR CANADA

A published report that the British Government had canceled $100,000,000 of war orders here and diverted $300,000,000 worth of new contracts to Canada since the Federal Reserve Board's warning against investment in British Treasury notes had no effect in the stock market on the 3d, when share prices were rising. New orders have recently been given to Canadian manufacturers, but the largest of them, the amount of which is reported to be $150,000,000, is held by the Montreal branch of the American Locomotive Company, whose main plant is in this country. It does not appear that what has been done in Canada, or any cancelation here, was due to resentment on account of the board's warning, for several orders have been given in the United States since the warning was published, and cancelations were expected because of the remarkable growth of the munitions industry in England. In Canada there are many new factories and shops for munition work, and the orders placed there since the beginning of the war amount to about $1,100,000,000. In some cases much of the work has been turned over to manufacturers on this side of the boundary.

NEW BRITISH LOAN

It is expected that the British Government will negotiate a new loan here before the end of the month, and that the amount will be $250,000,000, with collateral security such as was used for a similar loan some time ago. The bonds and stocks are now in this country. With this loan the borrowings of foreign governments, provinces and cities here since the beginning of the war will make a total of about $2,350,000,000.

Insurance

Conducted by

W. E. UNDERWOOD

CASUALTY COMPANY OF AMERICA QUITS

Policyholders in the Casualty Company of America, New York City, should understand that directly as the result of a heavy impairment of its capital, it has ceased doing business. All of its risks have either been assumed by another company or are amply protected by proper reserves. A committee appointed for the purpose has succeeded in restoring the capital deficit, and it is announced that the cooperation will be liquidated. All losses incurred by the failure will fall on the stockholders. About a year ago the people interested in the company, probably anticipating its end, organized the Bonding Company of America, which, it was believed, would take over the business of the Casualty Company. There is talk now of pushing the Bonding Company enterprise, confining its activities to surety and fidelity insurance.

A NOVEL PROPOSITION

A correspondent submits the following question:

"Tell me: Is there some company which writes such a 'proposition' as I will describe? On a group of from ten to fifteen men, 20-year endowments of such small amounts as $100, $200 or $300 apiece, policies to be kept up by individuals insured, having equal premiums, the ages varying between twenty and twenty-five, and all policies having a common beneficiary. Such policies would be more desirable if they did not require medical examination, but only a health certificate. I would like to hear suggestions as to such policies."

The proposition is new to me: I do not know of a company which writes it. It seems to be practicable. Life companies interested are invited to express their views on the subject, and any of them which are already issuing such or similar contracts, if they so desire, will be placed in communication with the correspondent quoted.

A. L. C., Forest Grove, Oregon.—Yes, the Western States Life Insurance Company of San Francisco is past the experimental stage, but when you ask me whether a company, comparatively new as to age and small as to assets and net surplus, has any future, I have to be circumspect. The record a life insurance company has made is a large part of its fortune when its goes before the public as a candidate for favor. That record must first be lived. The company you mention is on a par with scores of other stock companies writing non-participating insurance. It possesses enough quality to live forever; whether it will or not, who can say? Past experience tells us that, for some reason or other, the vast majority don't. You can't lose much, if anything, on a policy in it—except time, in the event it retires—for its contracts are secured by a proper reserve and its policies provide for no dividends, a reduction in rates partially offsetting that.

It's just as true of the one-stenographer office

MOTOR PROGRESS

Conducted by John Chapman Hilder

FREQUENTLY I hear it said that the motor truck is a most prosaic thing—a gross piece of steel which can be spoken of only in prosaic terms. It is not difficult to understand why so many people think thus of the motor truck, people who will become almost lyric at mention of a pleasure car.

After all, there are people who cannot seem to visualize the romance of commerce and if they can't do that, they can't be expected to romanticize the truck.

To me these modern beasts of burden are every bit as fascinating as ships. True, they lack the mystery of the sea, with which ships are ever clothed, but, nevertheless, they carry weird things into weird places. They are arteries of modern trade—and modern war. Whenever man wants something heavy carried to impossible places at impossible speed the truck carries it. Armies now fight on their trucks—without them they would be underfed, under-armed, under-supplied in general.

You have seen pictures from the French war zone showing great lines of motor lorries, as the English call them, winding along the shell-cratered roads transporting food and munitions and men. You have seen pictures of rows and rows of ambulances, and operating theaters, and soup kitchens, and armored cars, and ambulating stores, all mounted on truck chassis. You have seen that the French and English motor busses — commercial hacks plying the same streets day after day before the war—have been glorified by battle scars and honored by the praise of generals.

WHEN the war is over these commercial motor cars will go back to the old grind. Where they carried the implements and utensils of war they will carry those of reconstruction. They will help to repair roads, rebuild cities, reëstablish communications. It will be the most impressive sight seen for many a day and the beauty of it is that we shall see it in this country to the extent that we may help Europe rehabilitate herself. And the motor truck will be just as important, its part just as interesting here as it has been on the other side.

I have brought in this military side of the truck's usefulness to get you thinking about the truck and its work in a way that is probably strange to you. I want to get you thinking of a motor truck as you would of a man—an extraordinary man capable of doing well anything you ask him, within reason.

If you had such a man, the chances are you would think of him not as an efficient machine, but as a priceless human asset. You would be careful with him, see to it that he was kept in condition, give him what he needed, take an interest in him and study his peculiarities. You would do these things for two reasons, first because the man was an asset, and it would pay you to do them, second because you would find it intensely interesting.

GET rid of the notion—if you cherish it—that motor trucks are merely prosaic masses of machinery. They are not. They are beneficent agents that will save you money and work for you untiringly, provided you treat them properly. And interesting—have you read about the last Mt. Wilson episode?

A truck recently made its eighth trip to the summit of Mt. Wilson, carrying huge steel parts for the new telescope which will be the largest in the world, and is now being built by the Mt. Wilson Solar Observatory. The first seven trips up the 6000 foot mountain were made fairly easily, altho the road was steep, winding, treacherous and very narrow.

The eighth trip was a rather ghastly undertaking. The last piece to be transported was a tube some thirteen feet wide and fifteen feet high. Projecting over each side of the truck and towering in the air, it was horribly top-heavy. The roadway in many places was only just wide enough, and in many cases rock on the mountain side had to be battered away by rushing the tube at it in order to effect a passage. Time after time the outer truck wheels were running practically on the edge of the gravelly slope. The slightest mistake on the part of the driver would have precipitated the whole outfit down the mountain. Over eight miles were covered in safety.

Suddenly the tube began to tilt sideways and back. The driver jumped, expecting to see the truck and its load disappear. But the truck stopped when its rear axle touched the ground. The roadway had been crushed under the enormous weight and all that stood between the truck and demolition was its axle and all round sturdy construction. After seven hours of its strained position the machine was jacked up, inspected, and sent on its way.

A new chain of retail stores has just been started. The idea behind the stores is that they shall be very small, and carry a diversified but scant stock. They are to be supplied once or twice a day from one central warehouse. This will enable each store manager to carry enough to meet his needs—but no more than necessary. Also it insures fresh stock for the consumer.

The chain is already a success. And, mark this, it could never have been started with any hope of succeeding had it not been for the motor truck. The truck was the foundation stone of the whole plan. It is the cheapness of making deliveries by truck from the central warehouse to the individual stores that enables the company to operate at a profit. With horses they could never do it. For they sell their goods on the narrowest possible margin of profit.

IT has been said that automobiles carry many more passengers than the railroads do. So far the railroads are holding their own on the freight end of the business. In fact, they are not alone holding their own but holding everything given them for shipment. The railroad freight situation has been the subject of much bright discussion of late, and while the discussion has been proceeding in a more or less ineffectual way, the wise ones have bought motor trucks in which to make long haul shipments.

In spite of the somewhat general belief that trucks were good for only short haul work when heavy loads were to be carried, truck owners are proving that they are just as efficient in long distance work, when the roads are reasonably good.

Many motor manufacturers are using trucks for shipping pleasure cars cross country, and since delayed shipments are the bane of the motor trade it is probable that more and more of them will decide to adopt this means of delivering a large part of their output.

A large hauling job from New York City to Hartford, Connecticut, was accomplished in remarkably short time by a fleet of heavy duty trucks and trailers.

One of the biggest packing houses in Chicago recently demonstrated the feasibility of using trucks for intercity delivery by sending a two-ton truck loaded with hams addrest to the mayors of thirty-one cities between Chicago and New York. The success of the test has induced this concern to announce that it will shortly inaugurate an inter-city system of truck deliveries.

There are hundreds and hundreds of examples to be quoted all showing conclusively that the motor truck is to be the great transportation agent of the future. I cannot urge business men too strongly to invest in trucks. They are more to be desired than government bonds.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

The Allies' Answer 164

TO JACOB H. SCHIFF

A TRIBUTE ON HIS SEVENTIETH BIRTHDAY

BY ANNETTE KOHN

When Jacob woke up from his dream,
He took a stone and vowed to build
An altar to The Most High God,
And lay upon it sacrifice.

Another age, another land—
Again did Jacob dream a dream
And vow an altar he would build
And bring unto it sacrifice.

This time the altar was not stone,
But was his human living heart;
His sacrifice he brought to man,
And so unto The Most High God.

—*From the New York Times.*

JUST A WORD

Is it the high cost of living or the cost of high living that troubles the American public now; where does the money go; and how can it be made to go farther: these are some of the questions discussed by Secretary of Labor William B. Wilson in an article which he has just written for The Independent. His conclusions are based on a wide statistical study of expense accounts kept by "normal" American families and they offer many interesting suggestions for the household budget.

She helped to start the modern craze for interpretative dancing—in fact she not only admits her responsibility, but is rather proud of it! And in an early issue of The Independent, Mrs. Mary Cerry King, founder of the Uni-trinitarian School of Personal Harmonizing, Interpretative Motion and Speech, will tell you why she believes in the humanizing and cultural influence of modern dancing, and what its future may be.

"PATENTS PENDING"

The seismograph, originally designed to detect earthquakes, is being used in Europe to locate the enemy's big guns. A trained observer can distinguish accurately between the disturbance caused by a falling projectile and by gunfiring and can tell the number, position and caliber of the guns.

An air-propelled automobile—cost $3, speed 22 miles an hour—was recently built by a Kansas City boy. It has a 5 H. P. motorcycle engine which turns a big wooden propeller. The mechanism works equally well on a canoe or a sled.

From Troy, New York, comes the latest labor-saving device for a laundry—a conical roller over which fits a hollow steam-heated plate of just the same shape. A skirt slipped over the roller can be ironed in one continuous motion.

The "combination" golf club has been invented by a Philadelphian. By means of a ratchet in the heel of the club it can be transformed into a driver, a mashie, a putter, a mid-iron or a niblick. The club can also be adapted for right-handed or left-handed players.

In Porto Rico the ingenious negro peddlers carry real shops with them from town to town. The goods in these miniature houses on wheels are much better protected than in an ordinary pushcart.

A simple, but hardly humane, trap for wild animals can be made by cutting two diagonal gashes in the top of a five-gallon gasoline can and bending the edges in slightly. The natural curiosity of the animal gets his head in there and the sharp edges of the tin keep him from getting it out.

REMARKABLE REMARKS

CHAMP CLARK—Mush is good.

REAR-ADMIRAL FISKE—Prepare or perish.

THEODORE ROOSEVELT—I am for righteousness.

ALGERNON CASSIN—A muckraker is a moralist who specifies.

GEORGE BERNARD SHAW—I am now elderly and doddering.

ED. HOWE—Rabindranath Tagore is not a prophet; he is an ass.

HENRY FORD—A soldier today is the gamecock of unbridled plutocracy.

PRESIDENT JOHN GREER HIBBEN—America faces its most momentous year.

B. F. REED, JR.—The war is no longer being waged with the jawbones of asses.

W. J. BRYAN—The Democratic party can not afford to become the champion of the brewery.

AMBASSADOR GERARD—New York seems to be one round of pleasure for those who possess wealth.

GENERAL CARRANZA—I advocate a divorce law which will place the family on a basis of love.

ROBERT GOLDSMITH—The League to Enforce Peace is not a cross between militarism and pacificism.

PROF. R. J. SPRAGUE—The barbaric birth rate of ambitious Germany made the Great War inevitable.

HEALTH COMMISSIONER ROBERTSON—I recommend New England boiled dinners with mush and milk.

MICHAEL MONAHAN—'Tis strange how Rudyard Kipling persists in belonging to the nineteenth century.

DR. SIMON FLEXNER—I am inclined to think that infantile paralysis will be more widespread next summer.

THOMAS W. LAWSON—The good old capitol has been wallowing in Wall Street leak graft for forty years.

LORD NORTHCLIFFE—Lloyd George is one of the few British statesmen who understand the United States.

EDWIN L. TURNBULL—Our politicians know nothing and care nothing about the educational value of music.

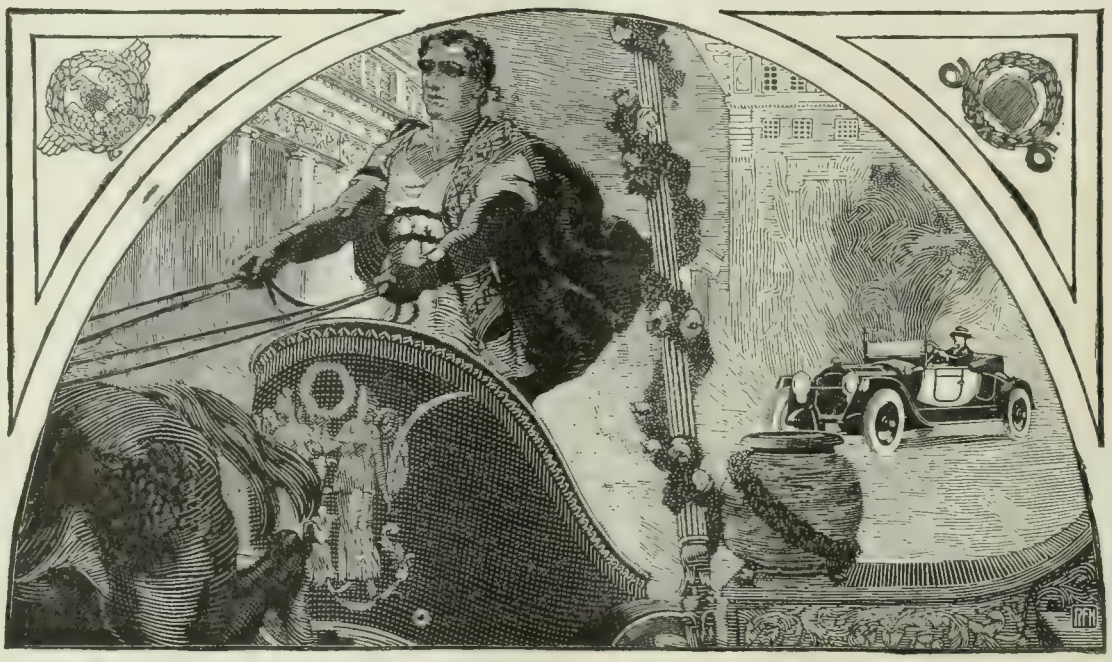
CORRA HARRIS—I'm a firm believer in infant baptism. It never hurts the child and sometimes helps the parents.

DR. J. B. CRANFILL—My motto has been to be kinder to everybody than anybody can be to me and to do it first.

IVY L. LEE—The United States this winter faces the most acute railway congestion this country has ever known.

PRINCE MAHIDOL OF SIAM—Your American chorus girl is very beautiful, but the show girl of Siam is far more beautiful.

BISHOP DAVID H. GREER—Christianity has not failed, but the Church has failed miserably and lost its great opportunity.



ELLEN LANE SPENCER—No one has any right to accept a salary of $12 a week and then come into the office as tho he or she received but $6 a week.

DEAN BRIGGS, of Harvard—There is no more reason why the teacher of football should curse his pupils than why the teacher of civics should curse his.

H. G. WELLS—More people and more intelligence is concentrated upon the manufacture of cigarets and hair pins than upon the establishment of world peace.

ELIZA B. GAMBLE—All the facts which have been observed relative to the acquirement of the social instinct and the moral sense prove them to have originated in the female constitution.

AVIATOR TOMMY BRENNAN—A flaming onion! Well, that looks for all the world like an eight candle power electric light bulb coming at you. Then all of a sudden it breaks into nice little ribbons of fire that dart and float thru the air like so many blazing serpents.

Dominant! The car of *the master* —from Roman to Packard days—has proclaimed the character of the man

Strong men express themselves in the type of their personal equipment.

And the stronger the personality the more dominant that expression is apt to be.

Patrician!

Utility, fashioned in refinement's mould—and *fitness*, down to the smallest detail—have always been equipment demands of those who lead in the world's modes.

The unstinted power of the Twin-six motor makes the most luxurious Packard boss of the highway. And this disciplined, economical, unlabored *mightiness* allows the widest margin of safety in construction and beauty—convenience and comfort.

That fine standard of fitness—the demand of the patrician everywhere—more than ever before is now satisfied by the masterful Twin-six.

Ask the man who owns one

Twenty distinctive styles of Twin-sixes. Prices, open cars, $3050 and $3500, at Detroit. Packard dealers in all important cities

THE ALLIES' TERMS

THE Allies hold the position of moral advantage. Their reply to President Wilson's note is a noble document, frankly stating purposes that mankind must approve, now and thru coming generations.

These purposes are those which sympathizers with the Allied nations in this and other neutral lands have from the beginning believed were the real objects for which those nations have poured forth blood and treasure. But hitherto they have been stated in general terms only. Now, they are set forth in concrete specification. The reply properly says that many details must be left for statement and consideration when peace negotiations begin, but no advantage is taken of this necessity. The chief and essential questions that President Wilson, speaking for the American people, asked, are answered, definitely and without equivocation.

Two things stand out in compelling moral clearness. The Allies ask for themselves nothing but security. They desire no vengeance. The specific, definite things demanded are things, or belong to categories of things, that all right-thinking human beings since history began have insisted upon as requisites of a moral civilization. There must be desistance from wrongdoing. There must be restoration and restitution so far as these are possible. The small nations no less than the great ones must enjoy independence and dwell in security. So far as possible peoples must be permitted to consort with their ethnic kindred in political organization. Germany must not be crushed nor vindictively punished; but the assassin Turk must go. Finally, to prevent recurrence of the appalling calamity of general war, the Allied nations pledge themselves to participate in creating an organization of nations to achieve that end.

These are demands not of the Allied nations only, but of civilization and enlightenment. To them Germany must surrender. Failing to meet them, she will once more place herself, as in her invasion of Belgium, definitely in the wrong. Was her suggestion of peace sincere or false? Her decision now will tell.

THE NEW MAP OF EUROPE ACCORDING TO THE ALLIES

TO the Allies belongs the honor of being the first to give an open answer to the vital question, "What are you fighting for?" The insistence of President Wilson has at last elicited a statement from one side such as should have been made voluntarily by both sides two and a half years ago. The single paragraph in which the Allied Governments have stated their aims is worth more to the world than the hundreds of volumes that have been published on the causes of the war. It does not matter much whether any man living knows the causes of the war or not, for the causes of the war are in the past and no man living can alter them. But the results of the war are in the hands of living men and they should understand clearly what they intend them to be.

In our issue of January 1 we ventured to draw up in parallel what we surmized to be the demands of the Entente Allies and of the Central Powers from such hints as had then been allowed to leak out. Now we have a more authoritative tho less definite statement to put into the column headed the "Allies' Demands." Comparing the Paris note as printed on another page of this issue with our forecast it will be seen that they are much the same, altho more sweeping than we anticipated. We thought then that we were making liberal allowance for the ambitions of the Allies, but we must confess that we did not expect that they would insist upon so complete a dismemberment of the Austro-Hungarian and Ottoman empires as they have, altho the note says that "the civilized world" knew already, from the statements of the chiefs of the divers governments, that the points specified were among the primary and necessary objects of the war. Let us briefly consider these points in order.

First is the restoration of Belgium, Serbia and Montenegro with due indemnities. As for Belgium that may be regarded as settled, for the German Government has never laid claim to it, in spite of the agitation in favor of annexation by the pan-German jingoes. Serbia and Montenegro are more difficult. Austria has her own notion of solving the Balkan puzzle. This is said to be to unite Serbia and Montenegro with, presumably, other territory, in a single Slav state, with Prince Mirko of Montenegro as ruler. The Serbs and Montenegrins being of this race would not object to a union, altho they would not want it under Austrian suzerainty. The chief obstacle to the Allies' proposal is that Bulgaria would strongly resist ceding to Serbia the Macedonia

WHEN THE RAILROAD STRIKE BILL BECOMES A LAW

Drawn for The Independent by W. C. Morris

UNCLE SAM: "YOU JUST WAIT A MINUTE TILL I LOOK INTO THIS SCRAP"

territory to which, as it contains many Bulgars and few Serbs, she may well lay claim on the principle of nationalities that the Allies profess.

The second clause, the evacuation of France, Russia and Rumania with just reparation, is like the first. Germany will evacuate France, but desires to have the Russian frontier provinces made into the buffer states of Lithuania and Poland, while Bulgaria will cling to the Dobrudja, which Rumania took from her three years ago and which she has just regained by force of arms.

It should be noted that a distinction is made between the three countries completely conquered and the three countries invaded. Belgium, Serbia and Montenegro are to be restored with the indemnities due them. France, Russia and Rumania are to be evacuated with just reparation. Doubtless this implies that the Central Powers are to be to some extent penalized for attacking the three countries in the first group, while the other three, which entered the war voluntarily, will claim only actual damages. The difference, however, is not so great as it appears. Germany and Austria can never be made to pay for all the damage they have done, no matter how thoroly they may be beaten, and the more thoroly they are beaten the less they will be able to pay.

The next clause is an admirable statement of principles for the reorganization of Europe. If the coming conference, whenever it comes, will draw boundaries with regard not only to past treaties but to nationalities, safe frontiers and freedom of economic development as well, then indeed we may hope for a more stable régime.

But since these principles are unquestioned and no cases of their application are specified we pass on to "the restitution of provinces or territories wrested in the past from the Allies by force or against the will of their populations." The scope of this clause is hard to determine. Does it mean more than Alsace-Lorraine? If so, what? Schleswig-Holstein was forcibly annexed by Germany, but Denmark is not one of the Allies. Bosnia-Herzegovina was illegally annexed by Austria against the will of a large part of its population, but it was wrested from Turkey rather than from Serbia.

The most drastic of the demands of the Allies is that for "the liberation of Italians, of Slavs, of Rumanians and of Czecho-Slovaks from foreign domination." This, carried out literally, would mean practically the partition of the Austro-Hungarian empire, leaving, if anything, only that part of Austria inhabited solely by Germans and that part of Hungary inhabited solely by Magyars. But even this would not satisfy the demand. There are, for instance, a million Rumanians in Russia and half a million in Serbia and Greece. Are these also to be freed from "foreign domination" as well as the Rumanians in Hungary? Apparently the Allies plan to set up an independent Kingdom of Bohemia composed of the kindred races of the Czechs and Slovaks. But a third of the inhabitants of Bohemia are Germans and a quarter of the Czechs live outside of Bohemia, some them in Russia. As for the Slovaks, they are coming to America as fast as they can anyway and the cost of the war for a single day, $100,000,000, would pay the steamer fare for the entire race to emigrate to a free country. So long as statesmen persist in regarding races as rooted such problems as the Balkans will be insoluble. Yet migrations of peoples in mass have been familiar from prehistoric times and never were so easy to accomplish as now and the Balkan people are especially mobile.

Italy lays claim to Triest because there are 170,000 Italians living there. But there are twice as many Italians living in New York City as in Triest. Nor can it be said that Triest was wrested from Italy by Austria, for that city petitioned the Emperor of Austria to become its ruler in 1382, and it has remained under the Austrian crown ever since, except for a few years during the Napoleonic régime.

It is surprizing to find the "Slavs" are mentioned separately from the "Czecho-Slovaks," altho the latter are Slavs. In so carefully worded a document such a violation of grammatical or ethnological rules can hardly be accidental, and we may surmise that its purpose was to emphasize the recognition of Bohemian nationalism which—we venture to say in contradiction to the note—has not hitherto been generally understood to be one of the main objects of the Allies. The other Slavic races referred to include the Ruthenians of Galicia, who would in the partition of the Dual Monarchy be taken over by Russia; the Serbo-Croats, who would be taken over by Serbia, and the Slovenes, who would be taken over by Italy or Serbia. Possibly the reason why the Allies have displayed this unexpected interest in the liberation of the Slavic races is because of their desire to get ahead of the new Emperor-King Charles, who is rumored to have in mind a plan for the organization of a Slavic state to form, with Austria and Hungary, a Triple Monarchy. So whichever side wins we may expect to see some sort of a Jugoslavia, or federation of the southern Slavs, to arise after the war, tho whether it shall be under Austrian or Russian hegemony remains to be decided.

Much the same is true of the northern Slavs, at least of the Poles. They also are promised by both sides a certain measure of autonomy, altho in the one case it would be an "independent Polish kingdom" under the joint hegemony of Germany and Austria, and in the other case a "free Poland" ruled by the Czar. It will be noticed that the Allies avoid committing themselves to a Polish program, but, regarding it as a matter of internal policy, refer instead to the Czar's proclamation to his army. If, however, the reader takes the trouble to look up this proclamation, which we published January 8, he will note the curious fact that the Allies make no mention of what the Czar made more prominent than the question of Poland, that is, acquisition of Constantinople and the Dardanelles by Russia. It was announced by Premier Trepov to the Duma that the other Allied Powers had promised Constantinople and the Straits to Russia, and the British Ambassador at Petrograd recently confirmed this. Yet the Allied note avoids any reference to Russia and merely calls for "the expulsion from Europe of the Ottoman Empire." This leaves it possible to make Constantinople a free city under some sort of international control. It is interesting to observe that, if the Ottoman Empire is expelled from Constantinople, Europe will be, for the first time in history, a Christian continent, for the Turks entered Europe from the east before the Moors were driven out in the west.

The demand for "the enfranchisement of populations subject to the bloody tyranny of the Turks" means the complete dismemberment of the Ottoman Empire. If

Armenians, Syrians, Arabians, Jews, Greeks, Italians and other subject populations were withdrawn there would be little territory left to the Turks except a part of the interior of Anatolia.

But in America there would be few mourners at the funeral of "the Sick Man of the East," nor would many of us lament the dissolution of that heterogeneous and accidental complex known as the Dual Monarchy. The Allies appeal strongly to American sympathies when they announce their intention of reconstructing the map of Europe on the basis of nationality, security and free economic development. The Germans retort that the Allies should themselves recognize the principle of nationality and that England should free Ireland, Egypt and India; that France should free Morocco and Algeria; that Italy should free Tripoli; that Belgium should free the Congo; that Russia should free Finland, Lithuania, Poland and the Ukraine, and that Japan should free Korea. But such a retort, tho it may be in some of these cases justified, cannot alter the fact that, for instance, the Poles ought to be freed from Prussian oppression and the Rumanians from Magyar oppression.

We still believe, as we said in the leading editorial of December 25, that peace would come sooner and be more secure if both parties would renounce all intention of conquest and leave questions of any necessary territorial changes to be settled in cold blood by impartial tribunals. But the Allies insist upon the partition of their enemies' territory and no doubt the Central Powers will do the same.

The peace terms specified in the note are of course the maximum, not the minimum, of the Allies. They are what the Allies would impose if they were in possession of Berlin and Vienna. The Central Powers will not accept such terms until they are completely exhausted.

The omissions of the note are as striking as its statements. There is not a word about some of the most important issues of the war, such as the partition of Africa, the German islands in the Pacific, the evacuation of the Shantung peninsula by Japan, the freedom of the seas, or equality of commercial rights after the war. The German colonies, now almost entirely in Allied hands, are apparently held in reserve as trading stock when the time comes for bargaining. The note is, as we have seen, so vaguely worded in places as to be capable of meaning almost anything that may be desired, and some of its demands are quite impossible of execution if literally construed, but considered as a whole it makes a favorable impression, and it is, at any rate, much more definite and satisfactory than anything that has come from the Teuton side. We welcome the assurance that the Allies do not design to accomplish the political destruction of the German peoples. Perhaps "it goes without saying"—to follow Mr. Sharp in his use of the French idiom—but since it "has been alleged" by such British organs as *The National Review* and *The Morning Post* that such was the intent of the Allies, it is well to have it authoritatively denied.

A NEW PHASE OF CHRISTIAN UNITY

ONE momentous consequence of the present war may prove to be that the national churches of England and Russia will find it easy to understand each other and to arrange some kind of coöperative union. At least the fear of this has apparently penetrated the Vatican and stirred the Pope to action. A statement made this past week by Dr. Palmieri, of the Library of Congress, and based, so the press reports indicate, on private advices from the Vatican, runs to this effect: That the Roman See, disturbed by the rapprochement between the Anglican Communion and the Orthodox Church of Russia, is about to launch under its own egis a movement for Christian unity.

A contributing factor in disclosing the progress of this parley between Russia and English-speaking Episcopacy is the cordial reception given by the Russian hierarchy to the proposal of a World Conference on Faith and Order, planned by American Episcopalians. Clearly the prestige of Rome would suffer an incalculable loss if there should be formed, apart from her, a union of all the other churches which claim apostolic orthodoxy and catholicity. One can imagine a confederacy of the Russian, Greek, Anglican and American Episcopalian churches, involving such a mutual recognition of each other's orders and beliefs, and such a common refusal to recognize the primacy of the Roman See, as would present to Rome a far more disheartening situation than the defection of all the multiplying sects of Protestantism. "Of course Rome cannot see with indifference," Dr. Palmieri is quoted as saying, "the growing friendship between Anglicanism and Orthodoxy."

One who studies this movement for Christian unity with an eye for the social forces working thru it must perceive that this is a highly favorable time for such a coalescing of the churches. Social solidarity and individual liberty are the two poles between which all social life, ecclesiastical or not, is lived. In the history of the church Protestantism represented the movement away from solidarity to individualism. Milton's words in "Areopagitica" reveal with what ardent joy the privilege of forming separate sects was welcomed by an independent mind:

"What some lament of we rather should rejoice at, should rather praise this pious forwardness among men to reassume the ill-deputed care of their religion into their own hands again. I fear that this iron yoke of outward conformity has left a slavish print upon our necks —the ghost of a linen decency yet haunts us. We stumble and are impatient at the least dividing of one visible congregation from another."

But the swing back to solidarity is here at last. Many old differences between the churches have been outgrown until they seem as unimportant as the boundaries of ancient Indian tribes in a modern American commonwealth; the open avenues of intercommunication around the world are breaking thru provincialism and are forcing a cosmopolitan spirit on the churches; the call for efficiency thru coöperation is in the air and even the bigoted begin to see that agreement in purpose and fraternity in service may be hearty while identity of opinion lags behind.

Within Protestantism the resulting movement toward mutual understanding and coöperation is pronounced and vigorous, and now with Anglican and American Churchmen making overtures, not unwelcome, to Russian orthodoxy, and with the Pope determining to join the movement lest unity be wrought apart from him, how interesting the situation grows! What if the next stage, in part effected by the war, should be a confederacy of the English and Russian churches and the Protestant Episcopal Church in America, with the Greek Orthodox Communion, it may be, a member, too, while

an increasingly united body of Protestant denominations, aloof but sympathetic, watches the confederacy grow, and the Papal Church stands alone, insisting on the primacy of Peter's See?

THE PROMISE OF WORLD FEDERATION

WHEN President Wilson sent his note of inquiry to the belligerents he had two ends in view. First, he wanted "an avowal of their respective views as to the terms upon which the war might be concluded." Second, he desired to know "the arrangement which would be deemed satisfactory as a guarantee against its renewal or the kindling of any similar conflict in the future." To these two requests the Allies have now answered. In this and previous editorials we discuss their terms. The Allies say that "they associate themselves with all their hopes with the project for the creation of a league of nations to insure peace and justice thruout the world. They recognize all the advantages for the cause of humanity and civilization which the institution of international agreements destined to avoid violent conflict between nations would prevent—agreements which must imply the sanction necessary to insure their execution lest an illusory security serve merely to facilitate fresh acts of aggression."

Thus Great Britain, France, Russia, Italy, Japan, Belgium, Portugal, Serbia, Rumania and Montenegro have agreed, after the war is over, to join a league to enforce peace.

President Wilson, as spokesman for the United States, said in his note to them: "In the measures to be taken to secure the future peace of the world the people and government of the United States are as vitally and directly interested as the governments now at war—they stand ready and even eager to coöperate in the accomplishment of these ends when the war is over with every influence and resource at their command."

Last week China, thru her foreign minister, exprest to the American minister at Peking, her desire to join a league to enforce peace.

Germany, as leader of the Central Powers, has said that not only would she join a league to enforce peace, but she would be glad to lead in such a movement.

May we not at last say, therefore, that a league to enforce peace will somehow, some way, be created when this war is over? If the American people will only back our President in this there can be no doubt of its accomplishment.

Thus the little group of men who met at Independence Hall, Philadelphia, June 17, 1915, have started a movement that will eventually lead to the formation of the United Nations, just as some of their forefathers, a hundred and thirty-nine years before, in the same place, started a movement that led to the formation of the United States. The nations are evidently now approaching a period similar to that in America preceding the signing of the articles of confederation. And as our first confederation was inadequate for the needs of our fathers and they had to develop it into "a more perfect union," so any league of peace, to be established now, will be inadequate to our needs, and we shall have to develop it into that final world state which the historian Freeman has said when it comes into existence will be "the most finished and most artificial production of political ingenuity."

If from the Great War comes a first step toward a world state, the ten million men whose blood reddens the clay of Europe will not have died in vain.

"WITH MY OWN BODY!"

LYNCHING is a cowardly business. In almost every case it is the work of a mob; and the essence of the mob spirit is cowardice. Time and again it has been shown that the antidote for mob cowardice is individual courage. A single fearless man, inspired with a sense of duty and justice, is more than a match for any but the most delirious mob of lawless and reckless men.

When Governor Stanley, of Kentucky, speeding across the state in a special train to the town of Murray, where a mob was threatening to lynch a judge and prosecuting officer for the heinous offense of postponing the trial of a negro charged with murder, said simply: "They will have a chance to lynch the Governor of Kentucky first," he displayed the spirit before which mob bravado runs up its true colors. He had only to face the mob and declare, "I am here to uphold the law and to protect this court, with my own body if necessary," to have the mob quail and slink away.

It took courage. For accidents sometimes happen when the mob spirit is aflame; and the crowd's lust for blood is a dangerous explosive which it requires but a spark to ignite. Governor Stanley took his life in his hand. He won precisely because he held his life cheap beside his duty and his oath.

The Murray mob was ready to splash an indelible stain upon the state's fair name. But the bravery and self-forgetfulness of its Governor saved it from the disgrace. He has deserved well of the commonwealth. Kentucky owes him a debt of gratitude it will not find it easy to pay.

What Is the Best Thing in Your House?

OF course you—a reader of The Independent—are not thing-minded. But when you stop to think of it, you realize that somewhere between the foundation and the roof-tree of that house of yours, or between the hall-door and the fire-escape, if it's an apartment, there is one thing which is so completely beautiful, or so appropriate, or so efficient, or so convenient, or so amusing—or all of them together—that you get more solid satisfaction out of it than out of anything else in the house. It may be a vase or a vacuum cleaner, a clock or a closet, a table or a teapot. Whatever it is, the editors of The Countryside want to hear about it.

Fifty dollars is the first prize, twenty-five the second, for 200-word letters on The Best Thing in Your House, with a photograph to match, mailed to The Countryside before February 1. Live Best Things are barred. Otherwise all comers are welcome.

There's not much time left; this is the final announcement.

THE STORY OF THE WEEK

The Capture of Fokchani

The new Russo-Rumanian line of defense was, as we explained last week, established in the best possible position, one that had been tested in the wars of two thousand years and had been fortified at an expense of millions of dollars, tho with the view of protection against the Russians instead of the Germans. The western end of this line rested on the Transylvanian Alps and the eastern on the Danube River. At the eastern end was the fortress of Galatz and in the middle the fortress of Fokchani.

Here, if anywhere, the Rumanians and their Russian allies would be expected to make a stand, but in a single week the line has been broken in the center and driven back. The Fokchani fortress was captured in a day by enveloping it on both sides and 4000 prisoners taken. The retreating troops were closely pursued as they fell back to the Sereth River, behind which they have established their new line of defense.

The key position of this line, as of the other, is the fortified city of Galatz, at the junction of the Sereth with the Danube. If this is taken the Teutonic Powers will have control of the Danube from its source to its mouth, 1800 miles, and will be able to ship by water all the way from the Rhine to the Dardanelles. Galatz is also the only fortress on the Russian frontier in this region, and if this obstacle were removed the Germans could, if their ambitions carried them so far, invade Bessarabia and make an effort to take Odessa. Consequently, Field-Marshal von Mackensen is directing his strongest efforts toward the capture of Galatz, which already lies under his guns on the other side of the Sereth River.

The western or mountain end of the Russian line is being attacked by the Archduke Joseph, who entered Rumania from Hungary thru the Oitoz Pass and other canyons. The crossing of the Alps in the dead of winter when the forests and defiles were filled with snow and the thermometer fell at times to fifteen degrees below zero was an arduous undertaking, but accomplished with remarkable celerity. Cannon had to be lowered into gorges by ropes and hoisted in the same way up the other side. The ammunition and food had to be carried over the mountains mostly on the backs of the soldiers. Once on the eastern side of the Alps, the German and Austro-Hungarian forces made more rapid progress and the Russian right was rolled up and forced back toward the Sereth.

SMASHING THE RUSSIAN LINE

The heavy dotted line stretching between the Transylvanian Alps and the Danube River shows where the Russians and Rumanians established their line for the defense of northern Rumania. The shorter arrows and the extension of the shaded area show how this line was forced back during the past two weeks. In the middle the fortress of Fokchani was captured. On the right or eastern end the troops of Field Marshal von Mackensen have been brought up to the Sereth, just across from the fortress of Galatz. On the left or western end the troops of Archduke Joseph, entering Rumania thru the mountain passes, have driven the Russians out of the foothills and back toward the Sereth River. As may be seen from the map the capture of the city of Galatz would give the Central Powers complete command of the Danube and access to the Russian province of Bessarabia.

THE GREAT WAR

January 8—Mackensen's army takes Rumanian fortress of Fokchani.

January 9—British warship "Cornwallis" sunk by submarine in Mediterranean. British attack German trenches at Serre, north of Ancre Creek.

January 10—Prince Golitzin becomes Premier of Russia in place of Trepov. Allies reply to President's request for peace terms.

January 11—British gain and lose Turk trenches east of Kut-el-Amara.

January 12—Italian Government admits loss of battleship "Regina Margherita" by mine on December 11.

January 13—Kaiser issues proclamation in reply to Allies' note. Russians gaining in swamps south of Riga.

January 14—Japanese battle cruiser "Tsukuba" burned in Yokosuka harbor. Germans within six miles of Galatz.

The German Reply

We publish in full on another page the note which the Allies sent from Paris in response to the request of President Wilson for definite statement of aims and we discuss the note editorially in this issue. A formal reply to the Allies' note has been given out at Berlin to the representatives of the neutral nations and sent to the American press by wireless to Sayville. In this Germany and their allies reaffirm the sincerity of this proffer of peace and of their readiness to enter at once upon a conference. It was "an honest attempt to terminate the war and open a road for an understanding among the belligerents. The hostile governments have declined to accept that road. Upon them falls the full responsibility for the continuation of the bloodshed."

The German note declines to enter into a discussion of the origin of the war but appeals, instead, to the verdict of history:

> History's verdict will as little pass over the encircling policy of England, the revengeful policy of France, and the endeavor of Russia to gain Constantinople as over the instigation of the Serbian assassination in Sarayevo and the complete mobilization of Russia, which meant war against Germany.
>
> Germany and her Allies, who had to take up arms for defense of their liberty and their existence, consider this, their aim of war, as obtained.
>
> On the other hand, the hostile powers always went further away from the realization of their plans, which, according to the declarations of their responsible statesmen, were, among others, directed toward the conquest of Alsace-Lorraine and several Prussian provinces, the humiliation and diminution of the Austro-Hungarian monarchy, the partition of Turkey, and the mutilation of Bulgaria.

The note questions the sincerity of the Allies in claiming the championship of the principle of nationalities in view of "the fate of the Irish people, the destruction of the liberty and independence of the Boer Republic, the sub-

jugation of Northern Africa by England, France and Italy, the suppression of alien nations by Russia, and also the violation of Greece, which is without precedent in history."

In reply to the accusation of violations of international law by the Teutonic Powers the note which was given out at Berlin makes the following counter charges:

England already during the first weeks of the war repudiated the London Declaration, the content of which had been recognized by her own delegates as a valid law of nations, and in the further course of the war violated in the most severe fashion also the Paris Declaration, so that by her arbitrary measures for warfare a condition of lawlessness has been created.

The war of starvation against Germany and the pressure exercized in England's interest against neutrals are not less scandalously in conflict with the rules of the laws of nations than with the commands of humanity.

Likewise, contrary to the laws of nations and incompatible with the usages of civilization are the use of colored troops in Europe and the extension of the war into Africa, which was done by a breach of existing treaties and which undermines the prestige of the white race on that continent. The barbarous treatment of prisoners, especially in Africa and Russia, and the deportation of the civilian population from Eastern Prussia, Alsace-Lorraine, Galicia and Bukovina, are further proof of how our adversaries respect justice and civilization.

The Kaiser's View of It

The German reaction to the communication of the Allies to the President found expression not only in the press and in the note to neutrals summarized above, but also in a proclamation by the Emperor William to his people. We quote the first half of the proclamation:

Our enemies have dropt the mask. After refusing with scorn and hypocritical words of love for peace and humanity our honest peace offer they have now, in their reply to the United States, gone beyond that and admitted their lust for conquest, the baseness of which is further enhanced by their calumnious assertions.

Their aim is the crushing of Germany, the dismemberment of the powers allied with us and the enslavement of the freedom of Europe and the seas under the same yoke that Greece, with gnashing of teeth, is now enduring. But what they could not achieve in thirty months of the bloodiest fighting and unscrupulous economic war they will also fail to accomplish in the future.

A LONDON IDEA OF GERMAN VICTORY

Mackensen Hubbard, she opened a cupboard
To get her starved dog some food.
But when she got there, the cupboard was bare,
And so the starved dog—
Was told to grin and bear it, bark *Deutschland über Alles* at the top f its voice and try to continue being good.

© *American Press*

DID GERMANY GET THEM?

The oil wells of Rumania, said to be the real objective of von Mackensen's drive, were destroyed by the retreating army, according to the Allies' report. But at any rate Germany holds the property and the possibility of getting fuel enough from it to run her war machine for some time longer

The Belgian Reply

Ambassador Sharp transmitted, along with the joint reply of the Allied Powers, a separate note from Belgium. The Belgian Government expresses its appreciation of the President's motives and remarks, somewhat sarcastically, that "it desires as much as Mr. Woodrow Wilson to see the present war ended as early as possible." Like most of the European press the Belgian Government ignores the qualifying words of the President's note, "as stated in general terms to their own people and to the world," and says, "the President seems to believe that the statesmen of the two opposing camps pursue the same object of war." So the Belgian Government thinks it necessary to assure the President that Belgium, unlike Germany, has never aimed at conquest, but was the victim of an unprovoked attack and is now suffering from the ruin of its industries, the draining of its resources and the enslavement of its workingmen. The note contains this generous appreciation of American sympathy and aid:

The American people, since the beginning of the war, has manifested for the opprest Belgian nation most ardent sympathy. It is an American committee, the Commission for Relief in Belgium, which, in close union with the Government of the King and the National Committee, displays an untiring devotion and marvelous activity in revictualing Belgium. The Government of the King is happy to avail itself of this opportunity to express its profound gratitude to the Commission for Relief as well as to the generous Americans eager to relieve the misery of the Belgian population. Finally, nowhere more than in the United States have the abductions and deportations of Belgian civilians provoked such a spontaneous movement of protestation and indignant reproof.

Autocracy Triumphant in Russia

The friends of Russian freedom rejoiced at the overthrow of Premier Stürmer last November because it had been accomplished by the Duma, and this was the first time that the Russian Government had submitted to the will of the parliament. The speeches in the Duma on that occasion were of unprecedented boldness, and what was more remarkable, the Minister of War and other members of the cabinet took the side of the Duma, because they suspected Stürmer of pro-German proclivities.

The successor of Stürmer as Premier, Alexander Trepov, was also a conservative, in fact his father and his brother were notorious for their tyranny, but since he came into power with the support of the Duma it was hoped that his advent meant the beginning of a constitutional regime, as well as a more efficient management of the war. Premier Trepov created a sensation by announcing in his first speech to the Duma that at the time when Turkey entered the war: "We concluded an agreement with our allies which establishes in the most definite manner the right of Russia to the Straits and Constantinople. Russians should know for what they are shedding blood and, *in accord with our allies*, announcement of this agreement is made today from this tribune." Considering the phrase we have italicized above it is curious that the note stating the peace terms of the Allies makes no mention of Russia in connection with Constantinople. A discussion of this will be found in the editorial pages of this issue.

But the Trepov regime lasted less than two months. Last week we told how a band of well known gentlemen in Petrograd shot the mystic monk, Rasputin, and threw his body into the Neva. This open assassination of his favorite adviser is said to have so incensed the Czar that he determined to put an end to parliamentary government. So he appointed Protopopov as Minister of the Interior without con-

WILSON BEGINS IN EARNEST

The bombardment of belligerents by a storm of diplomatic notes

sulting the Premier, and when the Premier remonstrated the Czar dismissed him and put Prince Golitzin at the head of the government.

Prince Golitzin is a reactionary and at once made public announcement of his belief that the Ministry was responsible solely to the Emperor and not to the Duma. He was kind enough to add that "this, however, does not exclude the legislative chambers from taking an interest in the Government." He declared that his watchword would be "everything for the war; everything for victory," and "being occupied with this aim we cannot now think of internal reforms. After victory we can begin the reorganization of our internal life."

Congressional Business The Senate adopted, on January 8, the conference report on the immigration bill by a vote of 56 to 10. The House and the Senate agreed as to the main features of the bill, including the literacy test, so that the conferees had little to do beyond adjusting details of the wording. Nevertheless eight Democratic and two Republican Senators voted against the conference report in order to put on record their opposition to any immigration bill which excluded illiterates from coming to the United States. Senator Stone of Missouri and Senator Martine of New Jersey spoke at some length against the immigration bill as a departure from the hospitable traditions of this country. The immigration bill, so long as the literacy test is an integral part of it, is certain to be vetoed by President Wilson but it may be passed over his veto if there is opportunity for Congress to do so before the end of the session. The exclusion of Japanese is not specifically provided for in the bill, but remains a "gentlemen's agreement" between the two governments concerned.

On January 9 the House of Representatives passed the Hughes-Smith Vocational Education Bill providing funds for coöperation with the states in training and paying teachers and directors of agricultural, commercial, industrial and domestic science subjects. This bill is important as an indication of the widening of the influence of the Federal Government from agricultural instruction only to other vocational fields as well.

The House of Representatives is not taking kindly to the changes recommended by the Postmaster General and endorsed by the House Committee on Postoffices. By a vote of 152 to 104 the House restored the appropriation for pneumatic tube service in the cities of New York, Chicago, St. Louis, Philadelphia and Boston, in spite of the Postmaster General's recommendation that it be discontinued except in New York and much reduced there. Points of order were made successfully against the proposed reduction of postage on drop letters, the adoption of a zone system of postal rates for periodicals, and nearly all the other "riders" on the appropriation bill. Some of these special provisions may be added again in the Senate.

LOOKING FOR TROUBLE

One of the few picturesque phases of war photography in these days of trenches and concealed artillery is the lookout, who can't help posing for his photograph, on a windmill, in a tower, or up a tree. These are French military observers sniping at the enemy in Macedonia

Lawson and the Leak Thomas W. Lawson, subpoenaed as a witness before the Committee on Rules of the House of Representatives, has given testimony in his most sensational vein regarding the alleged "leak" of advance information that President Wilson was about to prepare a peace note to the European belligerents. Mr. Lawson proved to be a most intractable witness, refusing to answer questions and promising vast revelations in the future should a general investigation of the "leak" be undertaken by Congress or the administration. He pledged himself to give the names of a banker, a cabinet member and a "great official" involved in the case, and to mention the sum of money won by manipulating the stock exchange with the aid of advance information about the President's note. Lawson's unmannerly conduct as a witness, and his mysterious hints of the vast scandals which he could reveal at will, incensed the Rules Committee, and unanimous consent was granted by the House of Representatives to the Committee to summon Mr. Lawson again as witness and compel him to testify. Should he again refuse to tell what he knows, Mr. Lawson will probably be prosecuted for contempt of court. A number of other witnesses were summoned, such as Bernard Baruch, the financier accused of profiting by secret information; R. W. Bolling, President Wilson's brother-in-law; William A. Crawford, manager of the Central News Association, and others. Nothing of importance was elicited.

Supreme Court Sustains Prohibitionists On January 8 the Supreme Court affirmed the constitutionality of the Webb-Kenyon act forbidding the shipment of intoxicating liquors into any state which prohibits their sale, manufacture or use. The same decision sustained the West Virginia law prohibiting the importation into that state of

intoxicants for personal use. Chief Justice White gave the majority opinion, which was opposed in principle only by Justice Holmes and Van Devanter, altho Justice McReynolds did not concur in the opinion as it was given.

Thus ends a long contest over the right of Congress or of any state to prevent the importation of intoxicants into "dry" territory. Many lawyers had contended that the Webb-Kenyon act must be unconstitutional, since it surrendered the control of interstate commerce, vested in the Federal Government by the constitution, to the states, by giving them the power to exclude or admit a certain class of goods from their boundaries by legislation. President Taft, who was of this opinion, vetoed the Webb-Kenyon act as probably unconstitutional, but Congress repassed the law over his veto.

The verdict of the Supreme Court is admitted to be of the most far-reaching importance, and both friends and enemies of prohibition are endeavoring to extract comfort from it. It enables prohibitionists to make their anti-liquor laws completely effective, to wipe out the reproach that the consumption of intoxicants in some prohibition states is almost as high as if there were no law at all, and to make the Federal Government the ally instead of the enemy of state authority. On the other hand, liquor men call the Webb-Kenyon act a "test of sincerity" and prophesy that many persons who voted for prohibition, knowing that they could import as much liquor as they desired for their personal use, will hereafter vote against all prohibitory laws. Unless the liquor men are right in this opinion, the 8th of January, 1917, will go down in history as the most memorable date in the whole course of the fight against the saloon in this country.

On the following day, the cause of prohibition won another important victory. The Sheppard Bill for prohibition in the District of Columbia passed the Senate on January 9 by a vote of 55 to 32. The real test came earlier in the day when the Senate rejected by a tie vote of 43 to 43 the Underwood amendment, which would have required a referendum of the residents of the district before the bill could become law. Vice-President Marshall was not present to break the tie by casting his vote.

Neither the vote on the referendum amendment nor that on the bill itself followed party lines. The Democrats favored the referendum by the narrow margin of 26 votes to 22, but they approved the bill by a vote of 28 to 22. The Republicans opposed the referendum by a vote of 17 to 21 and accepted the bill by a majority of 27 to 10. All the "progressive" Republicans supported the Sheppard bill. The measure has still to pass the House of Representatives and to secure the President's signature, but if the House has time to consider it before the end of a crowded session, there is little doubt of its passage.

A NEW U. S. ADMIRAL

The head of the Naval War College, Rear-Admiral Austin M. Knight, has been appointed by President Wilson to command the Asiatic squadron, with the rank of Admiral. He succeeds Admiral Winterhalter, who is assigned to the General Board

The High Cost of Warships Secretary Daniels of the Navy Department is experiencing no little difficulty in carrying out the will of Congress in the matter of naval construction. He was authorized to secure the building of four battle cruisers at a maximum cost of $16,500,000 apiece, but no private shipbuilding company would undertake such a contract. Bids were received from four companies but they were all too high. The Navy Department has the right to add twenty per cent to the building appropriations as a bonus for speedy construction, but no one of the four companies would promise to complete the work in less than forty-eight months. Mr. Daniels also reported that the bids made for the construction of scout cruisers were unsatisfactory.

In order to eliminate the element of profit, which he considers responsible for the failure of private shipbuilders to bring their estimates within the limits authorized by law, Mr. Daniels favors construction by the government. In a recent letter to Chairman Padgett of the House of Representatives Naval Committee he urged an appropriation of twelve million dollars for fitting up federal navy yards so that the national government could itself construct the needed cruisers without delay. He declared that the existing shipbuilding facilities of the navy yards were being utilized to their full capacity and that without this additional appropriation the government would have to await the pleasure of private companies for the completion of its preparedness program.

The Railroad Situation Hearings before the Supreme Court on the question of the constitutionality of the Adamson eight-hour railroad law opened on January 8 and a decision is expected within a few weeks. Solicitor-General Davis spoke on behalf of the Department of Justice in favor of the law, and urged that the decision of the lower courts in the test case of the Missouri, Oklahoma and Gulf Railroad, which held the law void, be set aside. Mr. Davis went so far as to claim for the Federal Government the same power of fixing wages in interstate commerce that it has of fixing rates. He did not admit, however, that the Adamson law was really a minimum wage law for railroad men rather than a limitation of hours of service. On January 9, Walker D. Hines and John G. Johnson, attorneys for the railroads, attacked the law as wage legislation, which they asserted to be beyond the power of Congress, as class legislation for the profit of four railroad labor unions, as unrelated to the public service, and as confiscatory and unjust. Frank Hagerman, of Kansas City, closed the argument for the Department of Justice on the following day. He contented that the Adamson law was constitutional because it was the only way to prevent the threatened railroad strike, and thus Congress acted in the interest of the whole public and did not exceed its constitutional power of regulating interstate commerce.

Samuel Gompers, speaking before the Senate Committee on Interstate Commerce, protested against President Wilson's recommendation, now embodied in a bill introduced into Congress by Senator Newlands, that railroad strikes be made illegal pending the investigation of a railroad strike by the government. He prophesied that such a law, introducing the principle of compulsion into industrial life, could not endure and would certainly be wiped out in time, "it might be by a revolt." Other labor leaders, appearing before the committee, exprest similar sentiments. With the labor unions united in their opposition to further railroad legislation of the kind desired by the administration, it is very doubtful if the Newlands bill can pass this session of Congress. On January 9, however, the friends of the administration program of railroad legislation won a hard-fought victory, when the House of Representatives adopted the Senate joint resolution extending till next December the life of the Newlands committee for the investigation of interstate commerce conditions and needs. The vote stood 146 to 61.

Senate Confirms Daniels' Appointment An interesting chapter in the long railroad controversy was concluded on January 10, when the Senate confirmed the reappointment of Winthrop M. Daniels as a member of the Interstate Com-

FRIGHTFULNESS IN NEW JERSEY

A spark in the ammunition plant of the Canadian Car and Foundry Company, near Kingsland, N. J., started a fire which destroyed $5,000,000 worth of property and bombarded the surrounding country with exploding shells for nearly four hours. The heroism of a telephone girl saved the lives of most of the workmen.

merce Commission. Mr. Daniels was at one time associated with President Wilson in the faculty of Princeton University, and the President believed that his recognized ability and knowledge of economics would be of service to the Federal Government in the regulation of interstate commerce. But on several occasions since his original appointment in 1914 Mr. Daniels has favored the grant of increased freight rates to the railroads, and this attitude offended a number of senators, especially those representing agricultural constituencies, who thought that a member of the Interstate Commerce Commission who had shown himself so friendly to the railroad companies was not a safe man to reappoint. Forty-two senators voted to confirm the President's nomination, but fifteen senators opposed it. Five of the objecting minority were of the President's own party, and with them voted nearly all of the "progressive" wing of the Republican party.

Senator Cummins, of Iowa, who led the opposition to Mr. Daniels, declared that if the Interstate Commerce Commission were to be composed of men of such capitalistic sympathies the whole system of government regulation should be forthwith abandoned. "For one," declared the senator, "I have no hesitation in declaring that if his views are to prevail I am for absolute and immediate government ownership and operation of our transportation facilities." Thus the cause of government ownership of railroads seems to have gained another distinguished recruit.

Kentucky Governor Prevents Lynching

A lynching mob in Murray, Kentucky, balked of its desire to put to death a negro accused of murder, attempted to revenge itself by killing Judge Bush and Commonwealth Attorney Smith. A force of deputy sheriffs called out for the emergency was barely able to prevent the mob from dynamiting the hotel at which the judge and the prosecutor were staying. Popular anger was directed against these two men for permitting a postponement of the murder trial and for taking the accused negro out of town to prevent a lynching. Finding that the local authorities had such difficulty in maintaining order, Governor Stanley chartered a special train and reached Murray on January 11. He spent the morning in appeals to the citizens to respect the law. He reminded them that his oath of office required him to support the laws of the state and see to their orderly execution, and he declared that he would uphold the authority of the court with his own life if necessary. By noon he had quieted the town and compelled even the mob to recognize his courage and his sincerity After averting the lynching in Murray, Governor Stanley left the town in company with the judge and the prosecutor by the train which he had chartered for the emergency.

WATCHFUL WAITING—A POLICY THAT WORKS BOTH WAYS?

The silent influence of women, an attribute mostly mentioned in anti-suffrage speeches, has been adopted as the latest campaign device of the Congressional Union, working in Washington for the passage of the Federal Amendment for Woman Suffrage. Pickets have been stationed at the White House entrance with instructions not to talk, but simply to display their banner: "Mr. President, What Will You Do for Woman Suffrage?"

Montana Lands Opened Up

On January 2 approximately 110,000 acres of Indian lands within the Crow Indian reservation were opened to settlement. These lands are located in the fertile Big Horn and Little Horn Valleys, midway between Billings, Montana, and Sheridan, Wyoming. Most of the land is productive; some of it being good grazing land, a good deal of it available for dry farming purposes, and the lowland soil suitable for raising wheat, oats, alfalfa, clover, timothy and sugar beets. The lands are listed as inherited and noncompetent Indian lands by the Interior Department, and are sold to the public under the auspices of the department at a basic appraisal of twenty dollars an acre. This will bring their Indian owners at least $220,000; which sum will be divided among fewer than three hundred persons.

New Jersey Munitions Plants Blow Up

At four o'clock on Thursday, January 11, the Canadian Car and Foundry Company's plant near Kingsland, New Jersey, was almost wholly demolished by the explosion of several hundred thousand three-inch shells. The cause of the explosion is wholly a mystery and the full extent of the damage it caused cannot as yet be accurately estimated. No lives appear to have been lost, but the company believes that it has sustained a financial loss of about $16,750,000. Some of this loss will prob-

THE WAR PROFITS OF A NEUTRAL

For several days after this explosion occurred fire smoldered thruout the munition works and the ruins of neighboring houses. Only the hill shown in this photograph, and a lucky wind, saved the towns of Kingsland and Rutherford. The Canadian Car and Foundry Company has been working for two years on a contract of over $80,000,000 worth of shells for the Russian Government.

ably have to be borne by the Russian Government, which had placed with the company an order for 5,000,000 rounds of three-inch ammunition, half shrapnel and half high explosive shells. The value of the contract with the Russian Government is placed at no less than $85,000,000. Of course, the fact that the Canadian Car and Foundry Company was virtually a munitions factory for belligerent powers makes it easy to understand how an enemy of the Entente Allies might desire the destruction of the company's plant, but there is no positive proof that the explosion was other than an accident. There was, however, one incident which has given rise to much speculation—the discovery of a shell marked with the initials of the United States Navy among the scattered projectiles.

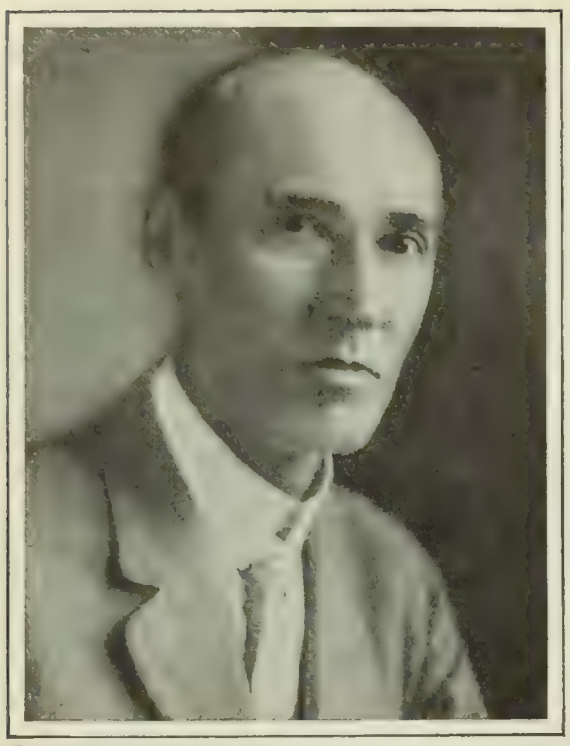
The destruction of the Canadian Car and Foundry Company plant began with a fire in building 30, the cleaning room of the factory, which swept thru the factory and within ten minutes blew up a building stored with loaded shells. The workmen fled in panic from the factory grounds and scattered in every direction. As the explosions continued during the night, the little town of Kingsland became the target of shell and shrapnel and its residents were forced to stay indoors for safety. Several private houses were destroyed; two miles of the Delaware, Lackawanna & Western Railroad were damaged, delaying thousands of travelers; shade trees were knocked down as if by cannon fire, and the ground was covered with shell splinters and furrowed by the fall of unexploded shells. The flames were plainly visible from New York City, ten miles away. Fortunately the company magazines escaped destruction.

Another disaster on a similar scale occurred the following evening at Haskell, New Jersey. The Du Pont powder mill at Haskell suffered the loss of twelve buildings in a series of explosions which followed an accident in the barrel mixing house, where the raw powder is blended with graphite. The two men at work in this part of the plant were killed, the other workmen escaped, most of them without injury. The shock of the explosion was felt even in Connecticut and Massachusetts.

These two gigantic catastrophies, which occurred within less than thirty-six hours of each other, have aroused public sentiment in New Jersey, and it is probable that either the state legislature or Congress will be compelled to take some action placing new restrictions upon wholesale manufacturers of explosives. Mayor Clay of Kingsland has threatened to prevent any attempt to rebuild the Canadian plant by getting out an injunction against any such rebuilding until a new building code has been adopted. It is probable that in the cases of both the Kingsland and the Haskell explosions the companies concerned will be indicted for criminal negligence.

Cheap Radium

With a general rise in the price of such commodities as meat, bread, paper, leather, coal and so on, the announcement of the Bureau of Mines that the United States Government, working in coöperation with the National Radium Institute, has just completed the extraction of eight and one-half grams of radium at a gross cost of less than forty thousand dollars a gram comes as a welcome surprize. The market selling price for a gram of radium has hitherto been from two and one-half to three times as much as this. The National Radium Institute furnished the mineral bearing lands, plant and machinery, and received the greater part of the radium produced for use in cancer hospitals. The Bureau of Mines undertook the work of extraction and will receive about a hundred thousand dollars worth of radium for purposes of scientific experiment and for research.



The annual report of the director of the Bureau of Mines relates many other achievements of equal importance and interest. The director lays particular stress upon new economies introduced into industry, with the aid of the bureau. For example, the introduction of more careful methods of drilling oil wells in one instance prevented the loss of twenty million dollars worth of natural gas; economies in the purchase and use of the coal used by the national government saved the taxpayer fifty thousand dollars, the development of the Rittman furnace for the manufacture of gasolene made available for internal combustion engines large quantities of otherwise unavailable petroleum.

MR. GARRETSON KNOWS THE MEN

BOTH SIDES OF THE

AUSTIN B. GARRETSON, PRESIDENT OF THE ORDER OF RAILWAY CONDUCTORS, SPEAKS FOR THE MEN

THE RIGHT TO STRIKE

THE President desires the enactment of a law, not for the compulsory investigation of strikes, as many suppose, but for the investigation of the conditions that have brought the possibility or the probability of a strike, before it can take place. He desires the enactment of a law containing provisions similar to those in the Canadian Industrial Disputes Act, which make it illegal for a strike or lockout to be ordered by either employee or employer before the causes leading to it have been investigated by the Government. At its last annual meeting the Canadian Trade and Labor Congress—the A. F. of L. of Canada—passed a resolution, almost unanimously condemning it for the reason that it pinches only one foot, binds only one side of the industrial struggle.

As such legislation actually works out, as is evidenced under the Canadian act, the employer invariably utilizes the period of delay that is specified for investigation to make preparations for a strike, hiring strike breakers, even importing them, in defiance of alien laws, so that when the period of involuntary service required under the act has elapsed he is in position, if the finding of the tribunal that has done the investigating upholds the contentions of the men to any degree, to repudiate the award, and to replace the forces of the men. In other words the act wholly and absolutely disposes of the tactical advantage that may lie with the employee, who is, of course, in the very nature of a strike, the attacking party. Almost any strike illustrates the fact that there is a psychological moment for striking—one that is just as important in industrial warfare as in international warfare; just as important to a strike, often, as Japan's attack upon the Russian fleet was to the Russo-Japanese War. An act of this kind renders valueless the greater part of the weapons of the laboring man. It is on that account, primarily, that there is such widespread opposition to the enactment of laws of this character. In a word, it gives the employing side a great advantage.

Strategically, this advantage works to the good of the other side in railroad strikes especially. In the first place this is true because the railroads are adept at providing on short notice a mass of statistical evidence that often overwhelms investigators who are dealing with matters as complex as the compensation given railroad employees, and the conditions under which they serve. This evidence, moreover, is often so skillfully presented that it is deceptive. In the second place, the railroad brotherhoods have always gone forward on the theory and practise of compromise. In dealing with their employers they have been content with almost any appreciable proportion of that which was demanded. The willingness of the brotherhoods to compromise in this manner (growing out of the quasi-public character of the service) has often brought upon them the criticism of other crafts, some of whom condemn such willingness to exert every means toward settlement before appealing to the strike. This situation is reflected also in the fact that the experience of the railroad brotherhoods in strikes is very limited. The two great strikes in America, in 1893 and 1877, were not conducted under the auspices of the brotherhoods. There has been nothing approaching a general tie-up since.

The influence of every combination of men in this country who are employers of labor and of men who are in the conduct of enterprises commercial in their character, from which profit is derived, is lent to the enactment of a measure which will permit the continuance of profits without actually interesting themselves as to the facts of whether or not the welfare of the worker is safeguarded thereby. To such men the acme of success is the continuance of profits or the increasing of them. And as what may be described as "the master class" is in control of most of the journals thru which public opinion is exprest and by which public opinion is formed, it becomes readily apparent that the real will, the real desire and the real purpose of the great majority of the citizens of the republic rarely come to the surface at all and then only in fragmentary form. When industrial strife creates suffering and hardship, complaints as to these hardships seldom originate with those who suffer real hardship, but almost wholly from those who suffer nothing but diminution of profit. When there is a cessation of street car service in a great city the demand for resumption of peace, regardless of the terms of settlement upon which resumption may be founded, comes not from the working people who are compelled to walk or avail themselves of makeshift transportation, altho they make up nine-tenths of those who supply the revenue of the street car companies, but almost wholly from those whose profit suffers by the inability of the purchasing class to continue to contribute to the endless chain of merchandizing or manufacturing. It is significant, in other words, that in these cases and in most other cases where the public interest is at stake a cry is always made in the name of the suffering public, when in fact the actual suffering public voices no protest and accepts the hardship as part of the heritage of men who labor.

This cry on behalf of the suffering public has been raised by the employing class in behalf of the enactment of the President's proposed bill.

WHAT labor men resent in this proposed bill is the utilization of forces of any character whatsoever as weapons by one side or the other in a strike because labor has learned that the interest of the government is in peace and in profits. The police forces and the military, both state and national, instead of being utilized only for the purpose of seeing that each of the combatants in industrial strife uses only legitimate means, are almost invariably used as weapons for the purpose of furthering the interest of the employing class at the expense of the employee. Out of this long established practise grows the feeling on the part of the laboring man against the expansion of military power either upon the part of the state or nation. Experience has taught the laboring man that military power is more often directed against him, to break down his resistance to oppressive conditions than against any outside foe. He therefore regards any legislation that makes possible any greater measure of oppression as directly inequitable, as, in fact, the worst form of preparedness. The correctness or incorrectness of this view on the part of labor is easily tested by one rule—by an examination of the arrests and convictions made in strikes for a class of offenses that if no strike was in existence would not be considered as offenses. This examination will show you how the peace

RAILROAD PROBLEM

ELISHA LEE, ASSISTANT GENERAL MANAGER OF THE PENNSYLVANIA RAILROAD, SPEAKS FOR THE RAILROADS

TRIAL BY JURY

Photograph by Dreyer

MR. LEE IS AN EMPLOYER

SEVERAL years ago, when we had to adjust a wage controversy with the engineers on our eastern roads, a very distinguished board of arbitrators, in settling our differences, pointed out the dangers inherent in attempting to settle railroad industrial disputes by resort to the strike.

This board said: "From the point of view of the public it is an intolerable situation when any group of men, whether employees or employers, whether large or small, have the power to decide that a great section of the country shall undergo a great loss of life, unspeakable suffering and loss of property beyond the power of description thru the stoppage of a necessary public service. This, however, is the situation that confronts us as a nation."

It was the opinion of this board that "the public utilities of the nation are of such fundamental importance to the whole people that their operation must not be interrupted, and means must be worked out which will guarantee this result."

That situation, so vividly portrayed, still confronts us as a nation. It confronted us in that crucial week in August when the President told the country "This situation must never be allowed to arise again."

The remedy proposed by the President is that "a full public investigation of the merits of every dispute shall be instituted and completed before a strike or lockout may lawfully be attempted."

This, in essence, is compulsory investigation rather than compulsory arbitration—restricting the right to strike or lockout pending an investigation, but in no way restricting the right of the parties in the controversy to fight it out afterward should they refuse to accept the recommendations of the board.

It seems clear to me that a differentiation between private industrial warfare and public industrial warfare such as a railroad strike is essential to any intelligent understanding of the question at issue. Private industrial warfare, in other words, need not here be considered at all. The situation is different. The premises are different. The conclusions must be different. This fact is reflected, of course, in the very law proposed by the President in that it is concerned only with interstate commerce.

When we were in Washington, we heard the chief spokesmen for several million organized workers warn Congress that any law restricting the right to strike would be fought by the workers he represented. Mr. Gompers, in speaking before the Senate Committee, placed in the record, as the view of organized labor, the dissenting opinion of the late Justice Harlan in an admiralty case, in which the principles of human liberty as guaranteed by the constitution were most clearly and forcibly laid down. "The supreme law of the land," said the Justice, "now declares that involuntary servitude, except as a punishment for a crime, shall not exist anywhere in the land."

But Justice Harlan, in the same opinion, pointed out that "involuntary service rendered for the public, pursuant as well to the requirements of a statute as to a previous voluntary engagement, is not in any legal sense, either slavery or involuntary servitude." He was referring particularly to service in the army and navy. But is not service rendered in interstate commerce likewise a public service? Has not the nation the right to say to the railroad workers, as suggested by the President, "You must not interrupt the national life without consulting us?"

The threat of a nation-wide stoppage of railroad traffic, that would strike at the very heart of our national existence, found the country unprepared to defend itself, and it brought home to everybody the necessity of finding a means of safeguarding the economic life of the whole country against the possibility of internal industrial warfare.

This is a problem that must be solved, and in its solution we must keep clearly in mind the rights and duties of all the parties at interest. The problem, it seems to me, is but another phase of the centuries-old conflict between private rights and public duties.

RAILROAD regulation has been an evolution. Our railroads grew up in an age when enterprise, initiative and energetic business ability had unrestricted opportunity for development. Unlike the railroads of Europe, they preceded population and took the risks of pioneers in developing the country and settling it. In the early days we were too busy building the railroads to think much about regulation. But when the whole country became gridironed with steel rails and steam transportation became an integral part of the life of the nation, there developed our modern conception of the public character of these arteries of commerce and of the need of constructive regulation in the public interest.

The mandate of the people, thru acts of Congress and decisions of the courts, is that the railroads must be continuously operated in the public interest—the public interest is greater than that of the individuals who own these properties, or of the individuals who earn their livelihood in the operation of them. And when the private rights of the railroads have come into conflict with their public duties, the public, thru the courts, has declared that public duties are greater than private rights. To the railroads the public says: "You must operate continuously, under such regulation as we provide, and under such tariffs as we approve." Yet, to the two million of our citizens who are actually engaged in this public service—and without whom it could not be conducted—the public has neglected to issue any instructions. It has failed, in other words, to mark the difference between the private rights and the public duties of the employees.

The unfortunate controversy of last August brought vividly before the country the weakness of a system of public regulation of railroads, which fails to provide insurance against a paralysis of the internal commerce of the nation. The crisis came. The President felt compelled to intervene in the public interest. And when he attempted to intervene he found that the existing machinery of voluntary arbitration was inadequate to avert the threatened trouble.

It may, indeed, fairly be asked, Is not this unrestricted right of the railroad employees to quit work in a body a menace to the public welfare? Does not the individual who chooses to earn his livelihood in the public service of transportation assume a duty to help keep open these vital arteries of commerce—a duty greater than the private right to strike?

A member of the Interstate Commerce Commission, Judge Clements, recently exprest the opinion that railroad employees are affected with a public interest that they can no more ignore than can the carriers, and he suggested that there should be a legally established obligation upon these employees not to interrupt the service by strike

(*Continued on page* 144.)

THE RIGHT TO STRIKE

BY AUSTIN B. GARRETSON

(*Continued from page* 142.)

power of state and city are prest into industrial conflict against the weaker side. The same use of the supposed peace power is indicated by the existence of a large number of agencies which veil their real purpose under the name of detective associations, yet draw the larger part of their revenue from and find their principal field of activity in the furnishing of either professional strike breakers or armed guards, all of whom usually carry arms in utter defiance of the statutes of the various states in which their activities are exercized and against whom no legal action is taken.

Taking these facts in conjunction with those previously referred to, one need not seek further to find causes for the hostility of laboring men generally, both union and non-union, to the enactment of further legislation formulated for the purpose, as they believe, of further limiting the abilities of the working man to better his own condition.

The greatest difficulty that confronts final disposition of the strife between the man who has and the man who has not lies in our methods in dealing with it, and in our refusal to look issues squarely in the face. Indisputable evidence of the existence of that fundamental error is found in the fact that now, at a period of unprecedented prosperity in this very metropolis, one-twelfth of the funerals end at the potter's field. That almost unbelievable thing is fact.

It is needless to go further than this grewsome fact to establish the reason for the existence in the minds of men from the paths of labor as to the inadequacy of the present method of the distribution of the results of labor, and it is not difficult to understand that the mass of men who realize that they have not received what they believe to be a fair recognition for their work will hold that democracy as exemplified in our government has been a failure. To men seeing things from this point of view it is inevitable that the theory of direct action would have great appeal in the face of the enactment of laws such as the President recommends, or of any law that adds to the machinery by which they believe that their rights are disavowed, their efforts nullified and their reward for toil made non-existent.

Much has been said and written about the surrender of government to an oligarchy of labor.

Capital has been made of the fact that Congress passed the Adamson law in the interest of a little group of 400,000 men, yet in the years gone by, legislation of the character of special privilege has been passed by the supreme legislative body at the behest and in the interests of groups of men composed of not one-one-hundredth part as many as are represented here. Millions of acres of land, the world's supply of standing timber, water rights, charters for utilities, deposits of coal, a supply of oil to serve the world, have been exploited by these very self-elected spokesmen of a long suffering public, now raising their voices in denunciation of an act humanitarian in its character, secured, it is true, thru the efforts of 400,000 men, but inuring to the benefit of untold millions who now labor hours still out of all proportion to the stipend paid.

This proposed law is a step backward. The Adamson law was a step forward even tho it has brought forth, as all laws do that are passed in the interest of others than the chosen few, a plentiful crop of criticism as to its unfairness, its injustice and its impracticability. It seems inevitable that in the future there must be more legislation of similar character, and less of the kind that guarantees to Shylock his pound of flesh. For the tendency of the age is toward recognition of the rights, not the privileges, of the common man, regardless of the powers of either invisible government or entrenched privilege, and the coming years surely will see the enactment of laws which will make impossible the condition that in a period of unrivaled prosperity contributes its benefits to the privileged few while the great body of citizens are in a more depressing condition because of high prices than they were in preceding periods of depression. The Adamson law is such a law. Any law that deprives either side of the opportunity to exercize to the fullest every legitimate energy it possesses is not.

Cedar Rapids, Iowa

TRIAL BY JURY

BY ELISHA LEE

(*Continued from page* 143.)

until the justice of their demands has been determined by some public tribunal. Such a definition by law of the public duties of railroad employees must have been in the mind of the President when he told a gathering of business men recently that "the business of government is to see that no other organization is as strong as itself; to see that no body or group of men, no matter what their individual interest is, may come into competition with the authority of society itself."

"America is never going to say to any individual," the President declared, "'You must work whether you want to or not,' but it is privileged to say to an organization of persons 'You must not interrupt the national life without consulting us.'"

If the all-embracing commerce power under the Constitution covers railroad wages as well as railroad rates, then the way is open for Congress to turn the whole problem of railroad wages over to the Interstate Commerce Commission, or, as has been proposed by eminent publicists, to an Interstate Wage Commission, working in coöperation with the Commerce Commission. It may be that something such as this will be the ultimate solution of the railroad wage problem—regulation of wages by the same government commission, or an ancillary one, that regulates railroad rates.

When it is considered that nearly two-thirds of the cost of railroad operation is the wage bill, it is seen how closely related are the considerations of railroad rates and the amount of the wages which the company must pay to its employees.

No matter what remedy is finally adopted by Congress for safeguarding the nation against the sudden interruption of interstate commerce, there are many strong advocates of a plan for continuous oversight of railroad labor conditions by a permanent body of expert commissioners—men of the same high attainments and integrity as the men who make up the Interstate Commerce Commission.

We are at the parting of the ways. One road before us is a continuation of the system of unrestricted private wage bargaining that eventually leads to settlement by force. The other road is a restriction and regulation of private wage bargaining in order to give fuller protection to the rights of the public—trial by jury instead of trial by brute force.

This is a problem in which all of us, as American citizens, have a vital interest. I have endeavored to state the facts without prejudice. I am not an advocate of any particular plan, but I am an advocate of industrial peace—not peace at any price, but peace that will insure the best possible wages and working conditions for our employees together with the highest efficiency in the operation of our transportation systems.

There must be, as President Wilson has so well said, "a full and scrupulous regard for the interest and liberties of all concerned."

I am in favor of an investigation, rather than an inquest. I believe there should be an inquiry by some properly constituted tribunal into the facts of a wage dispute before there is any resort to force, rather than an inquest after the trouble has been made and the damage done, to learn the causes of the disaster.

I am not prepared to say that all wage problems on the railroads should be placed unreservedly in the control of a public commission, but I do believe that when a controversy between the managements and the men reaches a stage where the interests of the public are imperiled, that then there should be a peaceful settlement and a judicial settlement, that will conserve the public interest as well as the rights of the parties to the controversy, and if it is finally determined that any body of men be required in the public interest to subordinate their private rights to their public duties, it should be with the full understanding that their private rights must be in every way safeguarded by the public.

THE END OF THE OPIUM TRAFFIC

BY NATHANIEL PFEFFER

THE last wisps of smoke are curling from the opium pipes of China. On March 31 the last ounce of the poppy will be sold, on June 30 the last pipe will be lit, and China will be free of opium. In ten years it will have thrown off the most terrible bondage that has ever enslaved a nation and at the same time will have consummated one of the finest achievements in the history of any people.

The last effort to prolong the life of the drug has been frustrated under circumstances that provide a fitting climax to the sweeping surge of idealism that has characterized the fight of a decade. For the last three years all China has been closed to the traffic in opium except the three provinces in which, ironically enough, the foreign interests have dominated: Kiangsu, in which is Shanghai; Kuantung, in which is Canton, and Kiangsi, in which is Kiukiang. While the Chinese themselves have sacrificed whatever property interests they had in the traffic, the British importers who make up the Shanghai opium combine, forced an agreement three years ago allowing them to sell the drug in those three provinces until they disposed of their accumulated stocks. The expiration of that agreement was fixed at March 31, 1917, the date originally set by the Chinese Government for the end of the evil thruout the country.

A few months ago the combine, finding it could not dispose of its stock by that time, asked the Government for an extension of that agreement until January 1, 1918, offering $16,000,000 for the privilege. That offer the Government has refused. In financial straits as it is, its treasury depleted by revolution, forced even for a time to suspend specie payments, and negotiating — almost begging — for $5,000,000 loans in America, it has refused. Strong political pressure has been brought to bear; the combine has even threatened to withhold $5,000,000 of the duty on its last months of operation. Still it has stood firm, a magnificent stand for a principle. Backward, material China! How many of the "civilized" powers, similarly situated, would have done the same? How many governments, hanging by so tenuous a thread, would have balked at so small a compromise for so large a stake? For remember, chiefly on its ability to raise money will the new republican government of Li Yuan-hung stand or fall.

It has been with just that splendid disregard for the pressure of the pocket nerve that the whole war on the drug has been carried on.

Mr. Pfeffer is a young journalist, recently returned from the Far East, where he made an extended study of the commercial problems of the Pacific and economic conditions thruout China.—THE EDITOR.

To realize what this has meant, financially at least, to China, you must compare it with the effect on the United States if the Government were suddenly to forbid the cultivation of wheat and corn. Then imagine the people of those states not only submitting, but burning with elaborate ceremonies all agricultural implements.

Opium has been for nearly a century the largest vested interest in China, an interest in which thousands had their entire wealth and from which millions drew their living. There were provinces in which there was virtually no other crop, for opium has always commanded a much higher price than any other product. In addition, the customs revenue on the poppy imported from India and the internal tax on the native product have represented a large proportion of the entire revenue of the country, more than $30,000,000. And on the personal side at least half the 400,000,000 people of the country have been addicted to the drug.

Is it any wonder then that when, in 1906, the Empress Dowager promulgated her decree ordering the suppression of the drug within ten years, the world looked for the tongue in her cheek? Or that when the Chinese asked Great Britain to stop the opium imports from India and urged the opium merchants in China to curtail their sales, a British official publicly said: "It is impossible not to be skeptical of the intentions of the Chinese Government, with regard to this matter."

It was not possible to be skeptical long. Two months after the Empress' decree the Government council had framed a definite program for its execution—the immediate closing of the dens for smoking and the reduction of the area under poppy cultivation by one-tenth each year. With savage, relentless strokes, without any regard for financial loss, that program was carried out. In six months the closing of the dens had begun. After three years American consuls reported that the production of the poppy had been reduced fifty per cent and that two million dens had been shut. In 1912 five of the eighteen provinces had been closed to the traffic and in 1913 five more. By 1914 fifteen were free from the drug.

The amazing feature of the whole fight has been its overwhelming popular support. Seldom have there been such spectacles as the public burning of huge quantities of opium worth thousands of dollars, rich furnishings of dens, pipes and all the paraphernalia of smoking. These have been held from time to time in various parts of the country with official and religious ceremonies.

The one ugly fact has been the part played by foreigners, as it has been thru the whole history of opium in China. Forcing it originally on the Chinese at the point of guns, they have resisted to the last its passing. Officially China has been given coöperation, tho not ungrudgingly, in its effort to free itself from the curse.

But the attitude of the foreigners living in China who have had an interest in the traffic has been an ugly commentary on western morals. So far from making any sacrifice, they have made capital out of the suppression of the drug. In cities like Shanghai, Tientsin, Hankow, where the foreigners have concessions or the privilege of extra-territoriality, opium dens have been open years after they were closed in the adjoining districts under native jurisdiction.

The only places in the country where a Chinese can get the drug that has been the curse of his people are those ruled by the civilized white man. And even to the last the opium merchants have made their abortive effort, by bribe and threat, to prolong the life of those shops. But it has been abortive, and before the snow falls again China will have won its liberty from the sinister tyranny that bound it to decay.

A BONFIRE OF OPIUM PIPES IN SHANGHAI

IS THE TIME RIPE?

COMMENT ON THE GERMAN PROPOSAL FOR DISCUSSION OF PEACE, THE PRESIDENT'S NOTE AND THE ALLIES' REPLY

The attempt of the German Government to secure a discussion of peace, the suggestion of President Wilson to the belligerents that they make known their terms of peace, and the uncompromising reply of the Allies to Germany, have led to spirited debate. Opinions run from stern demands that the war go on till Germany is crushed to appeals that the killing cease at whatever cost. Even on the question whether the time is ripe for the belligerents to confer on the subject there are all shades of opinion. The President is sharply criticized, and warmly commended, for his peace note. The Allies are assailed, and praised, for the inflexibility of their position. In all the cross-currents of discussion, the question which crops up most insistently is this, Is the time ripe for the discussion of peace? We have asked the individual trustees of the Church Peace Union and other publicists who are keenly interested in the problems of international relations, to discuss this question in The Independent. They approach it from many angles, and by no means do they agree in their conclusions. — THE EDITOR.

DANGER IN HASTY PEACE

BY SHAILER MATTHEWS

PRESIDENT OF THE FEDERAL COUNCIL OF CHURCHES OF CHRIST IN AMERICA

I APPROVE heartily President Wilson's note to the belligerent powers. It would, however, be unwise to push peace negotiations until Germany makes it beyond question that her peace proposals are not an element of her military program. Any proposal for further peace negotiations should assure reparation to Belgium, organization of a league of nations to enforce peace, policies leading to a reduction of armament, participation of neutral nations in a peace conference and an avoidance of boycott in international trade.

A hasty peace might prove a collossal danger to the future of civilization. The issues the world faces are vastly more extensive than the military or other interests of the belligerent powers.

Chicago

END ALL WAR

BY CHARLES S. MACFARLAND

GENERAL SECRETARY OF THE FEDERAL COUNCIL OF CHURCHES OF CHRIST IN AMERICA

WHILE I realize the difficulties which are at the immediate moment in the way of negotiation, I cannot see that those difficulties are likely to be decreased, and it seems to me that there is at least as good a chance to secure justice by negotiation as there will be by continued conflict. I do not feel at all sure that militarism itself can be put out of existence by military methods.

The more important matter, however, is that the negotiations which put an end to this war shall also put an end to war itself. Therefore, the primary and ultimate end of any conference of the nations should be provision for the process of disarmament by means of a league of nations, including a world court or any other similar provision. If a conference should come together for this purpose and with the high moral purpose of relief, reconstruction and reconciliation, it seems to me that this would engender such a spirit on the part of the participants in the conference as would lead them, first of all, to consider their questions of territory and compensation upon the basis of righteousness and not on the basis of military advantage, whether past, present or prospective.

Secondly, if such a conference kept clearly in view its primary and ultimate purposes, it would engender a spirit which would make possible the submission of disputed questions to the Hague tribunal or to some specially constituted court.

On such conditions as these, I could wish the war stopt tomorrow, or rather, today.

New York City

THE RIGHT DIRECTION

BY FRANCIS E. CLARK

PRESIDENT OF THE WORLD'S CHRISTIAN ENDEAVOR UNION

IT seems to me that the international skies have been distinctly cleared by President Wilson's so-called peace note. The President expresses no opinion of his own as to the right or wrong of the conflict or the blame to be apportioned to either combatant. If he had done so, such an opinion would, of course, at once have rendered the message negatory and would have prevented the nations against which he sided from giving any attention to it. He simply stated what was true: That each set of allies professed to be fighting for the same great objects. If the minds of the combatants can be centered first on the suggestion of a possible permanent peace and how to secure it by partial or total disarmament, by an international league to enforce peace, or by a world court with sufficient sanctions, I believe that terms consistent with justice and equity which should end the present war could be agreed upon without great delay. Vastly important as it is to bring about immediate peace, it is still more important to prevent all future wars.

Boston, Massachusetts

STAND BY THE PRESIDENT

BY SIMEON E. BALDWIN

RECENTLY GOVERNOR OF CONNECTICUT

THE close of 1916 brought into being what, it is to be hoped, is only the beginning of two sets of international correspondence. One is between the two great international alliances now at war with each other. Ten nations belong to one alliance, and four to the other. The smaller opened the way by proposing to the larger "to enter forthwith into peace negotiations." The letter stated that its object was to secure such a guarantee of the existence, honor, and liberty of evolution of the four nations as may be the basis of the establishment of a lasting peace. Its tone is one of self-confidence, but courtesy.

To this the ten nations have responded, as it seems to me, in a letter exprest in a tone of self-confidence and discourtesy. The offer made is denounced as a sham, deceitfully put forward to affect public opinion in neutral countries, by a calculated misrepresentation of the character of the struggle. It is added that there can be no peace based on the word of Germany.

Meanwhile the President of the United States has exercized, in behalf of this country, its right as explicitly agreed to by all the nations now at war, in the Hague Convention of 1907 (Article I) to approach them all with what is virtually a tender of his good offices towards arranging peace.

Apparently, as the President has intimated, both sets of belligerents are looking towards two things—peace, and peace on a basis which will guarantee a lasting peace. This must mean that it will be a peace providing for the

future by stipulations, especially as to the law of the sea, as to which neutral powers will be consulted, and to which their consent is likely ultimately to be asked.

It seems to me that American public sentiment ought to declare itself strongly in favor of maintaining the President in his stand. It is the second set of correspondence, rather than the first, that seems now likely to bring peace to the world, and lasting peace.

New Haven, Connecticut

THE TEST OF CHRISTIANITY

BY PETER AINSLIE

MINISTER OF THE BALTIMORE CHRISTIAN TEMPLE

GERMANY'S proposals for peace should be taken in sincerity until her conditions of peace reveal her insincerity. Then is the time for protests for there are wrongs to be righted—wrongs that Germany must right without which there can be no peace—but has the time not come when this can be done by force of reason rather than by force of steel?

If the church followed more closely after the teachings of Jesus it might become a factor in hastening the end. The world must come to know that the one moral equivalent for war is the religion of Jesus Christ, and these days test men's faith in Him.

Baltimore, Maryland

OUR PRESIDENT IS RIGHT

BY CHARLES E. JEFFERSON

PASTOR OF THE BROADWAY TABERNACLE

PRESIDENT WILSON'S note to the belligerent nations was, in my judgment, one of the bravest and noblest things he has yet done. It is the only thing which at the end of fifty years from now is likely to shine like a star. His request was timely. It is always timely to be sensible. It was wise. It may not lead to a speedy ending of the war, but it was wise nevertheless. It is always wise to do a rational and humane thing, no matter what comes of it. The sputtering caused by the note shows how many minds are now hysterical and unbalanced. Many men can no longer think straight: some of them cannot even read straight. Many critics showed by their speech that they had not read what the President said.

Mr. Wilson did nothing rash. He was amazingly conservative. He made a low bow, and spoke in a tone exceedingly gentle. He plainly stated that he was not proposing peace. Those critics who hurl their lances at "a patched up peace which would lead to another war" fight the creation of a feverish imagination. The President suggested no peace either "patched up" or otherwise. He clearly confest that he was not even offering mediation. Mediation he had a right to offer. International law gives him that privilege. But he did not care to avail himself of all his rights. He chose the humbler part. He offered neither peace nor mediation. He proposed no terms. He suggested no concessions. He was content simply to ask both sides to avow their views as to the terms upon which the war might be concluded. Things have come to a pretty pass, if in the presence of a conflagration which is burning up billions of dollars of wealth, and millions of human lives, a Christian man at the head of the greatest republic on the earth cannot with propriety lift a little finger or even utter a whisper in the hope of releasing forces which may, in ways now not clearly seen, bring about the beginning of a process which will end in peace. The President suggested that the time has come when light on this matter is desirable. He is right. No matter what the statesmen of Europe may think or say, our President is right. He deserves the gratitude and support of us all.

New York City

A CHANCE FOR THE NEUTRALS

BY EUGENE R. HENDRIX

SENIOR BISHOP OF THE METHODIST EPISCOPAL CHURCH, SOUTH

EVEN tho the German peace offer be regarded as tentative, the President was justified in receiving it as the leading neutral, and, in transmitting it properly asked for a full expression from all the belligerents in order to secure an intelligent basis of action. The change of government in Great Britain made it an inopportune time to secure a favorable response from the Allies, but President Wilson would have been held responsible for not doing his part.

Surely the combatants, in seeking the good opinion of the neutral nations, owe a full statement of the ends sought by the war and the conditions on which peace may be had even tho the conditions may be subject to negotiations in the final adjustment. Campaigns of frightfulness by both land and sea are to be feared from now on unless the neutral nations can still call out such expression as may lead to negotiations for an early peace. With other neutrals coöperating, the United States need not consider the door closed to later negotiations if diplomatically made in the interest of humanity.

Kansas City, Missouri

THE PRESIDENT KNOWS BEST

BY ARTHUR J. BROWN

SECRETARY OF THE PRESBYTERIAN BOARD OF FOREIGN MISSIONS

IN this critical hour when the President of the United States has publicly initiated a movement for peace and is being vociferously denounced in some quarters for doing so, I feel that he should have the support of every friend of humanity and justice. Whatever differences of opinion may exist as to occasion or form, wherever our sympathies may lie as between the belligerent nations, the outstanding fact remains that, after nearly two and a half years of a war that is ruining Europe and endangering the rest of the world, the man whose knowledge of the real situation is most accurate and who acts under the most solemn sense of responsibility as the representative of the American people, has officially suggested that the time has come to consider the steps toward peace and that four other neutral governments have concurred.

No one wants peace at any price, much less at the cost of righteousness. But neither do we want war at any price or at the cost of righteousness. I believe that the nations concerned should now consider whether righteousness is being attained or is likely to be attained by the continuance of war and whether it cannot be attained by other means. I say nothing of methods or terms, for I realize that the governments of Europe are not looking to us for opinions as to the specific forms which a final adjustment should take. The one person in America who can exert the most influence in these matters is the President; and his influence will depend, in some degree at least, upon the extent to which he is regarded as voicing the sentiment of the nation. I therefore believe that the most effective aid which our countrymen can render is to support him.

New York City

WE MUST LEAD

BY JENKIN LLOYD JONES, D. D.

EDITOR OF "UNITY"

THE situation is international. The interests of all the political powers of the world are profoundly concerned. The belligerent powers are necessarily maneuvering in front of the enemy. They may be seeking strategic advantages, but the neutral powers are free to take peace propositions coming from any source at their face value. They should speak for those who cannot speak for themselves. The war weary men in the trenches, the broken homes, with their exhausted treasuries and empty larders.

The decisive victory sought for is as impossible as it is undesirable. To further pursue the killing is simply fruitless murder, and for the neutral nations to mutely stand by is to become accessories before the fact. The solution must eventually come not on battlefields, but round a table as the result of conference and arbitration.

Upon the United States, by virtue of its independence, eminence and remoteness, rests the solemn responsibilities of leadership. The initiative taken by the President should be supported by all the political, economical and religious forces of the nation.

Chicago

THE OPPORTUNE HOUR

BY JUNIUS B. REMENSNYDER

PASTOR OF ST. JAMES LUTHERAN CHURCH

IF we are to act in accordance with the principles and teachings for which the church professedly stands, then when an opportunity like the present arises, we should suppress all sympathies and all prejudices and remember that all Christian nations are linked together by the tie of brotherhood, and be dominated by a spirit of internationalism, which sees that each belligerent has its point of view.

That is, we should seize the hour when it comes, strike when the iron is

hot, keep the door that is open from being closed.

When secular powers and governments are advocating peace and encouraging each other to help to achieve it, should Christians—especially should the church, which calls her Head the Prince of Peace—decline to speak on grounds of mere policy? This has not been the character which has won the church such unique authority as a universal teacher in the ages of history. I think the policy which suggests silence now, one of weakness and moral cowardice. If we see two combatants fighting each other to the death, how absurd to say "O, let us wait until one has finished the other before we try to stop them." The moment to act is when opportunity offers to stop the war, to save civilization and to redeem imperiled Christianity. That opportune hour is the present, and when so famous a thinker as the Englishman, Bertrand Russell, tells us that if the war keeps up, after years we will be no nearer a just and lasting peace than now, why protract it further?

New York City

PEACE AND GOOD WILL

BY DAVID H. GREER

BISHOP OF THE PROTESTANT EPISCOPAL CHURCH OF NEW YORK

ABSENCE from the city has prevented me from replying sooner to your request for a statement on the international situation, and it is now too late, I fear, to send you anything for your current issue except to say that while the outlook at present does not seem very encouraging, I am not without hope that the long distance parleying between the belligerents may lead to a conference of a more intimate and personal character, and that a peace, not at any price, but based on righteousness, may ultimately result therefrom. It should be remembered, however, that if a permanent peace is to be secured it must be reached not simply by putting an end to fighting among the peoples, but by such dissemination of good will among the peoples as will put an end to the disposition to fight.

New York City

FORM A LEAGUE OF NATIONS

BY GEORGE A. PLIMPTON

PRESIDENT OF THE WORLD PEACE FOUNDATION

THE peace question is with us whether we wish it or not. The German note, President Wilson's note, the endorsement of President Wilson's note by several of the neutral nations, and its endorsement or its censure by various gatherings of our citizens—makes the matter of peace a real issue. The important point is, when shall peace be brought about? Both parties want a peace that is permanent, both parties wish this to be the last war. Both parties ought to be convinced by this time that the settlement of international disputes by war is not only a barbarous custom which should be abolished forever, but is also futile.

Is not the time ripe, then, for them to agree at once to form a league of nations to settle all international questions either by judicial process or by methods of conciliation with a world police force as a last resort? How can future wars be prevented without establishing an organization of this character? Hence, it seems to me that preliminary to all peace discussions should be the formation of this league of nations. This is of vital importance to the neutrals as well as to the belligerents. You cannot have war in one part of the world now without every other part being affected. Therefore, it is the world's business to put a stop to wars. The question of millions of lives, not only in this present war, but in future wars, will be determined by the way the world solves this problem. Settle the league of nations first, and peace will follow.

New York City

A MOMENTOUS DOCUMENT

BY FREDERICK LYNCH

SECRETARY OF THE CHURCH PEACE UNION

I BELIEVE that the President's note will go down into history as one of the few momentous state documents of the ages. It is not so much what is in the note, but it is what it may accomplish that makes it significant. The note simply asks the nations if it is not time that they state the terms on which they will talk peace. But it has opened a door that I do not believe will be closed.

I admire the President for doing this brave thing and before many years everybody will see that he has voiced the real feeling of all peoples. It was the act of one who believes in the people

Perhaps certain members of governments and the Tory reactionary groups in all nations will criticize, but the people will sustain him. Already the Allies have complied with the President's request and stated their terms. Already the neutral nations have endorsed his act. Already the Senate of the United States has endorsed it. To my mind it is one of the most hopeful signs for the future of real democracy that the President should have chosen to voice the people's wishes rather than that of their government, and the people of all nations will respond.

New York City

WE MUST HAVE GUARANTEES

BY WILLIAM I. HULL

PROFESSOR OF HISTORY AND INTERNATIONAL RELATIONS AT SWARTHMORE COLLEGE

THE demands of the Allies have reference to the past, the present, and the future—namely, restitution, reparation and guarantees. As is intimated in The Independent's cogent editorial, the greatest of these is guarantees. These guarantees must undoubtedly include both a limitation or reduction of armaments and the further development of the international organization; without one of these the other would inevitably fail, and without both of them no other guarantees for the future peace of the world would avail.

Fortunately for the future reduction of national armaments and for the future peace of the world, it is not necessary that the development of the international organization shall assume the form or the motive power advocated by the League to Enforce Peace. The World Court, the Council of Conciliation, and successive meetings of The Hague Conference, as advocated by that League, together with an enlightened and organized public opinion, will be as sufficient for the judicial settlement of international disputes as is the Supreme Court of the United States for the settlement of disputes between the forty-eight commonwealths of the American Union.

The Independent is to be heartily congratulated upon its timely and statesmanlike editorial. May law and justice arise out of the present international anarchy and, incorporated in an adequate international organization, prevent any more armageddons!

Swarthmore, Pennsylvania

PLAIN PEOPLE WANT PEACE

BY WILLIAM PIERSON MERRILL

PASTOR OF THE BRICK PRESBYTERIAN CHURCH

I AM in hearty accord with the position of The Independent, as indicated in its editorials addrest to Germany. Germany must agree to the basic conditions of durable peace before peace can be seriously considered. Those conditions certainly include the three mentioned in your editorial of January 1.

Germany's peace offer was offensively blatant in tone. President Wilson's note was coldly neutral. Naturally the first impression in many minds was unfavorable. But sober thought finds some excuse for the tone of each, as one considers the audience to be reached.

The President has at least rendered this invaluable service: that the liberals in every nation—the plain people who want peace and not war, international justice and good will rather than vengeance and domination—have been encouraged to speak out and act. He has also made it more difficult for either side to fight with good conscience, unless it clearly avow the aims and objects for which it is fighting. Every true American should be glad of this great service rendered, and should sustain the President in his attempt to clear up the vital issues of the war.

New York City

END THE SLAUGHTER

BY MARCUS M. MARKS

PRESIDENT OF THE BOROUGH OF MANHATTAN

IT seems to me that in this country we do not fully realize that the best life blood of Europe is flowing away in deep streams, and that anything that can properly be done to end this terrible disaster is worthy of great sacrifice on our part. We cannot pass with full intelligence upon the wisdom of President Wilson's acts without being in possession of all the facts, but we can unite in a universal appeal to end justly the slaughter of the young men of

Europe, who, whether they be German or English or French or Russian, are our brothers, and whose fortune or misfortune reflects sympathetically upon our own lives.

The war, in my judgment, can be ended only by the establishment of an international court of justice, the nations agreeing to leave all their differences to arbitrament by such court, and the establishment of an international police to see to it that the edicts of this court are carried into effect. It is not an easy problem, but it is well worth while puzzling out for the salvation of humanity. The difficulties are not insurmountable. Civilization has reached a stage where individuals leave their differences to the courts, having abandoned the duel and the fortification of the home. Nations being simply combinations of the same individuals can arrive at the same happy conclusion if the "psychology of the mass" is overcome.

All of us have occasion to blush at the fact that only thru trials of brute force can differences between nations be adjusted. This should cease, and if we all concentrate with wise and self-sacrificing efforts, we can be helpful in hastening the end of this frightful war.

New York City

SPEAK THE TRUTH

BY WILLIAM H. P. FAUNCE

PRESIDENT OF BROWN UNIVERSITY

PRESIDENT WILSON'S note—unfortunately, because ambiguously exprest—has nevertheless opened a new act in the tragedy—the era of willingness to think and talk of peace. He is fully justified in asking each side to state to the world the objects which must be attained before fighting can cease. The nation which is unwilling to be explicit must be concealing its aim, or else must be changing it. The supreme danger is that the fighting will continue after the motives have wholly changed. Millions who went to war for a principle, for self-defense, for justice, may continue war from motives of pride, of greed, of hatred, of lust for territory.

Self-examination is good for a nation as for a person. Do the belligerent governments know what they want? Then let them speak out as "gentlemen unafraid." A merely military solution of the international quarrel can never be a permanent solution. Such a peace will be only a breathing space. The real solution must be based on reasons that can be stated, and can be approved by civilization.

I cannot pretend to be a neutral. If any deity approved the violation of Belgium, he is not my God, and his worship is not my religion. The ambition for "world power or downfall" either must be surrendered or must end in downfall. But the ambition to crush seventy millions will be equally futile. Let the bleeding nations now say: "We know why we went in; but do we know why we stay in? If so, why not tell the world?" The highest strategy now is to speak the truth.

Providence, Rhode Island

WHO CARES FOR DIPLOMACY

BY JAMES S. SLAYDEN

MEMBER OF UNITED STATES CONGRESS SINCE 1897

I'M sure I don't know whether the President violated diplomatic convention in his note suggesting that the belligerent countries in Europe and Asia say upon what terms they will consider making peace, and I'm equally certain that the people most concerned, the sufferers in the trenches and their inadequately nourished families at home, don't care, if peace can only be made. Humanity is still more important in the balance sheet of life than the ways of diplomats or the schemes of ambitious politicians.

To me the President's inquiry seems a reasonable thing and the prompting of a sympathy that does him credit. One of his severest critics, a metropolitan newspaper, doubts his sincerity and says that he sent the note because he saw the opportunity to associate his name with the restoration of peace slipping away and feared that he would never have another. What of it? Is it not a laudable ambition?

The great outstanding fact of the peace correspondence so far is the amazing and unexpected declaration of Germany, confirmed by the German Ambassador, that the Teutonic Governments are ready to discuss disarmament, arbitration and a league to enforce peace.

That, in substance, is what the peace organizations demand. Decreased armaments may not mean the end of wars, but it will mitigate their horrors and make an opportunity for industrial development. These were evidently the aims of the President and he did the world a service when he sent the note.

Washington, D. C.

USE PEACEFUL PRESSURE

BY FRANK OLIVER HALL, D. D.

PASTOR OF THE CHURCH OF THE DIVINE PATERNITY

IN my opinion the note of President Wilson, addrest to the belligerent nations, was admirable and opportune. The time has now come for the United States to go even further, and to definitely urge a conference between the belligerent nations. Nothing is to be gained by postponement. France may bleed to death. Germany may starve to death, more millions of women and children may die of want, and all Europe may be dragged down to bankruptcy, but in the end a conference, and a conference alone, will achieve peace. For it ought to be obvious by this time that neither side can "crush" the other. I believe it would be disastrous to the whole world if either side should "crush" the other. But while both are trying to accomplish this the whole world suffers, the rights of neutrals are being trespassed and their interests jeopardized. America, therefore, has a right to demand that an attempt at least shall be made to bring about a conference looking toward peace. In such a conference many things should be considered besides the mere reëstablishment of armed peace between the belligerent nations, such as the organization of a world court clothed with authority to enforce its decrees, and the reduction of armament on the part of all the nations of the world. In all such questions neutral nations have an equal interest with the ones now at war and should, therefore, have an equal place in the conference.

New York City

NOT YET

BY JAMES J. WALSH, M. D.

AUTHOR OF "MODERN PROGRESS AND HISTORY"

I CANNOT help but think that the situation raised by the German peace proffer is very similar to that which developed after the rather thoro beating of the Northern troops during the first half of the Civil War. Well-meaning European nations felt it incumbent on them to suggest that it was utterly barbarous for Americans to go on killing each other in the awful way in which we were doing it. Of course we did not take their suggestion.

We know now that it would have been a very serious mistake to have made peace. A peace in '63 either before or after Gettysburg, which represents very nearly the same length of war as the states of Europe have had up to this time, would only have been the prelude to constant bickerings and a very unfortunate state of affairs on this continent.

Personally I have the feeling that while Mr. Wilson is not only within his rights in suggesting peace, but also it is an actual duty for him to do so, any urging in the matter is quite unwarranted. I do not look for any nation or set of nations being beaten in this war in Europe, but I think that there must be further fighting before there will be willingness on either side to submit to the conditions that must be submitted to if we are to have, as has been so well suggested, not merely *a peace, but peace.*

New York City

A WISE QUESTION

BY J. G. SCHMIDLAPP

DIRECTOR OF THE CARNEGIE PEACE FUND

WHILE a large majority of the people of this country hold only one of the belligerents, and I may say one man, responsible for beginning the war, there are some with whom it is yet a debatable question. But it seems to me that if the Allies do not consider seriously the overtures for a conference made by the Central powers, then it will not be debatable who is responsible for the continuation of the war.

I am entirely in accord with the President in his note to the belligerents, and feel that he was perfectly justified in asking the question of the belligerents, to state specifically what they are fighting for, in which the whole world shares his ignorance. If by any effort the President could shorten the war only by one day, he would receive the thanks of the whole world, and I dare say the thanks of those who are now engaged in battle.

Cincinnati, Ohio

THE NEW BOOKS

BETWEEN ASIA AND EUROPE

It would be an underestimate of *The Gate of Asia,* by William Warfield, to state merely that it is an exceptionally interesting book of travel. In the region traversed, Mesopotamia, Kurdistan, Armenia, and the western part of Persia —the future occupation of which is one of the main causes of the Great War— the author unfolds instructive pictures of the country and its present tenants. In the light of personal contact with the latter he reviews their racial characteristics, and such aims as crop to the surface. For the theological student, a careful study of the Christian churches in Asia Minor, their relations toward each other historically and dogmatically, should win for the book a place in the college library.

But it contains also the spice of adventure, particularly when Mr. Warfield journeys into the stronghold territory of the half civilized if not half savage Kurds. A glimpse of Kut-el-Amara, now of siege fame, is but one of the many impressive incidents in the narrative.

The Gate of Asia, by William Warfield. G. P. Putnam's Sons. $2.50

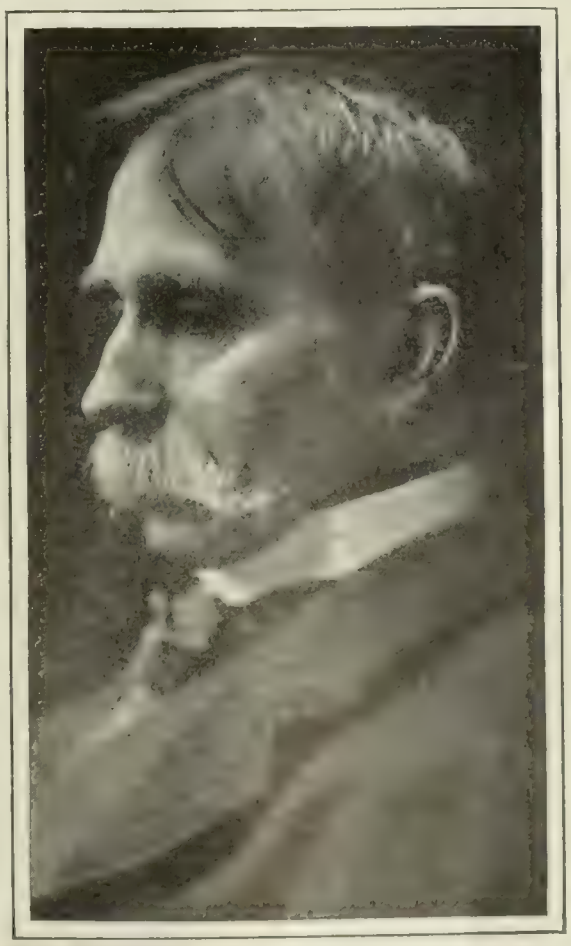
TWO MEN OF LETTERS

Two books of reminiscence showing widely differing pictures of American life have recently been published, *The Years of My Youth,* by William Dean Howells, and the *Letters of Richard Watson Gilder.* Mr. Gilder came early to New York. His first work was on *Scribner's Monthly,* under Dr. Holland, and he remained on the staff when *Scribner's* became the *Century.* He succeeded Dr. Holland as editor-in-chief, a position he held till his death, twenty-eight years later. Thus he was brought at once into literary and art circles of New York, which, as time went on, simply broadened till they included the writers, painters and musicians of all over this land and of foreign countries.

His letters, however, are not interesting alone for the folk of note they mention and the topics of importance. They have the fine qualities that were the qualities of their writer. They are eager, sincere, swift, full of the joyous zest of living, and of never-fading enthusiasm for art, and, later, for public service.

The friendship with Grover Cleveland is one of the interesting features in these records, and, with the same precise and beautiful phrasing that made his inscriptions at the Buffalo fair notable, reads the farewell sentence which Mr. Gilder set in the Cleveland guest book:

> To this house on this day came a guest long dreaded, but whom we saw at last, thru eyes of grief, to be the Angel of Peace and Rest, of Victory and Everlasting Life.



Mr. Howell's book stops short of the consulship at Venice. To that time about the only person of prominence with whom he had been thrown was Whitelaw Reid, then, like Howells himself, a struggling newspaperman of the middle west. The Howells stock was on the one side Pennsylvania German and Irish, on the other Welsh. Plain living and high thinking, almost Utopian high thinking, made the program of that Swedenborgian household.

School ended for the boy at twelve and thereafter his father's newspaper office took the main care of his education. This unpretentious record of the growing up of an Ohio lad, poor in money but rich in ideals, is one of the most convincing descriptions we have ever read of what we trust is in some regions still typical American life. Written with Mr. Howell's skill and clarity, here is a book of real charm, and, as well, a valuable addition to our social history.

Letters of Richard Watson Gilder, Rosamond Gilder, ed. Houghton, Mifflin Company. $3.50. *The Years of My Youth,* by William Dean Howells. Harper and Brothers. $2.

HISTORY AT THE SOURCE

In The Independent of January 3, 1916, we called attention to the launching of an ambitious enterprise, the translation of the leading source books of the world's history. The first of these records of civilization appeared last year and dealt with Greece. The second and third volumes take us into a very different atmosphere, that of the mediæval church. One of the two, *The Book of the Popes,* has never before been translated into any language, and will not attract many readers now, for it consists of a very barren chronicle of the popes from Peter to Gregory. The other, the *History of the Franks,* by Gregory of Tours, has more human interest, for the gossipy bishop tells of miracles and battles, of intrigues in court and church, of scandals and quarrels, altogether giving a curious picture of France as it was in the sixth century, when life was even more perilous than it is there now.

Press Illustrating
RICHARD WATSON GILDER

Here for instance is what happened at Verdun:

> Now Deoteria saw that her daughter was quite grown up, and was afraid that the king would desire and take her. She placed her in a litter to which wild oxen were yoked, and sent her headlong over a bridge; and she lost her life in the river. This happened in the city of Verdun.
>
> In this year a severe famine opprest almost all of the Gauls. Many dried and ground into powder grape seeds and oat chaff and fern roots and mixt a little flour with it and made bread; many cut straw and did the same. Many who had no flour ate different herbs which they gathered, and in consequence swelled up and died. Many, too, wasted away and died of starvation. At that time the traders plundered the people greatly, selling scarcely a peck of grain or half measure of wine for the third of a gold piece. They subjected the poor to slavery in return for a little food.

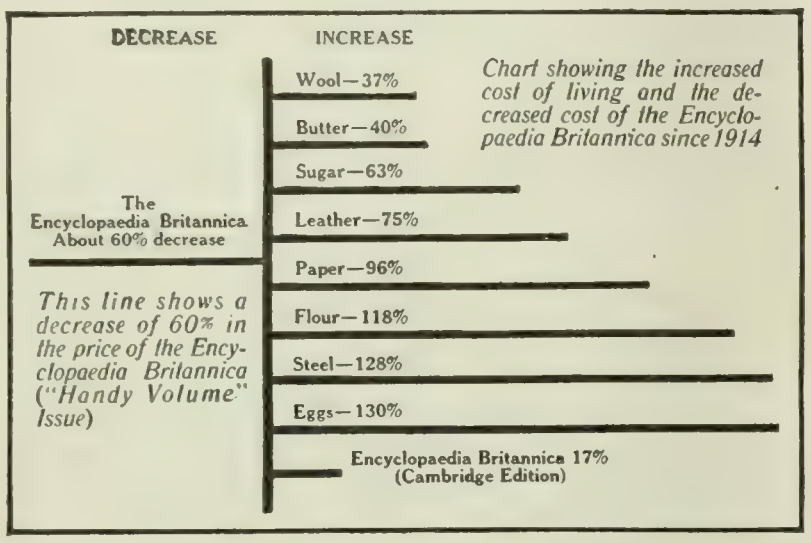
Getting history at first hand, as these "Records of Civilization" now enable us to do, is a very different thing from getting it warmed over and cooked up according to some modern's notion of what should have happened.

Book of the Popes, tr. by L. R. Loomis. $2. *History of the Franks,* by Gregory, Bishop of Tours. Columbia University Press. $2.50 each.

AN OLD AND A NEW POET

It is a pleasure to turn the pages of Edna Dean Proctor's new volume, *The Glory of Toil,* and find her, after many years of sincere work in American letters, still full of vigor and keen as to what the world is doing. "Abdallah of Cairo" reflecting on the war, comments:

> By the Prophet, if these be Christians where shall we find the Heathen?
> If this be their Gospel of Love, where shall we look for Hate?



"The Woman of Paris," included in this collection, is one of the most touching little poems that the war has brought forth.

Irene Rutherford McLeod's first book was simply youth singing. Her second book, *Swords for Life,* has not achieved artistic maturity, and the least successful poems in it suggest that she is making a transition from spontaneous youth to artistic and conscious mastery, for they are too conscious, too "literary." But in this book are lines and poems better than those she gave us a year ago. It is not bad poetry to call Beethoven "a spirit rocked in silence, nourished of the sun" and to say of him,

> His are thunder and sleep.
> Calvary, and the silver rain
> Of peace.

The Glory of Toil, by Edna Dean Proctor. Houghton, Mifflin Co. 75 cents. *Swords for Life,* by I. R. McLeod. B. W. Huebsch. $1.

Education Comes Down in Price While Living Goes Up

This chart shows the enormous advance in the price of leading staples since 1914 compared to the 60% net decrease in the price of education, as represented by the Encyclopaedia Britannica, through the publishing of the "Handy Volume" Issue. The Cambridge issue of the Britannica (the big and expensive issue) has increased 17% in price. In view of the impossibility of buying any more India paper, the present prices at which the Britannica is offered are certainly bargain prices. But to get the Britannica *you must act quickly*—the supply of India paper sets is *limited*.

WHEN his salary stands still while the cost of living shoots up, the average man simply grits his teeth and gets along with less. The resourceful man realizes the necessity of improving himself and his salary. Education is the basis of all improvement—the more you know, the more you earn—and the less you do physically. Education means comfort, pleasure, luxury, power. Napoleon said, **"Show me a family of readers and I will show you the people who rule the world."**

The Encyclopaedia Britannica means education. From no other source can a man or woman beyond school age secure such a complete, superb *and economical* education as from this mighty fount of knowledge.

Read the Britannica a few hours a week (it is as interesting as a story) and you will soon have a substitute for a college education—no matter how old or young you are—and at a fraction of the cost of a college course.

Will you pay 10c a day (for a limited period) for a better education? Just think. For only one dollar you can bring this great work into your home and share the knowledge and inspiration of the world's master minds. It will help you to meet the needs for earning more money with which most men are face to face.

It is a remarkable fact that while education, as represented by the Britannica, should be the last thing to deny yourself, the price of it has actually *decreased* 60% at a time when most everything else is soaring in price. See chart above.

There is every reason for raising the present bargain prices of the Britannica. But while the prices in other lines are being advanced because of the growing scarcity of materials, we will continue to give you the benefit of our former purchases made at a time when prices were lower. As long as our remaining supply of the Britannica lasts the prices will not be advanced. But the limited supply of sets requires that you ACT AT ONCE. See next page for details of offer.

"The most successful man in life is the man who has the most information."
—Disraeli.

Complete your education with the Britannica as your teacher

SUCCESS is not a matter of luck. Salaries are not increased by chance. Men are not picked out for big jobs through favoritism, or if they are, they do not last. Employers nowadays ask what you *know*—not what you think you can do.

You must ACT AT ONCE to Profit by this Special Offer

With this advertisement we give you *timely warning.* There are left but a few sets of the new Encyclopaedia Britannica, "Handy Volume" Issue, printed on genuine India paper. These are the *last* that can be offered on this beautiful paper—*because* the war has cut off the supply of Europe-grown flax out of which India paper is manufactured.

This fact is a sound business reason for raising the price of the remaining India-paper sets of the Britannica 20 or 25 per cent. This is being done right and left with other commodities on less justifiable grounds.

But in the present sale of the Britannica, *you get the advantage* of the publishers' foresight. For the same reason, however (because the present low price will not be increased if we can possibly avoid it), it is imperative that you buy your set in a very short time. Send coupon for full information and prices *now.*

Send now for the interesting free "Book of 100 Wonders." This book—128 pages, printed on the famous India paper—gives you interesting information on a hundred subjects; it has 200 illustrations; it tells three clever stories that appeal to women and it gives full information about the Britannica. Fill in and mail the coupon now.

Before long this sale will be history. But if you act promptly, you can still secure this wonderful library of knowledge in its most convenient form—"Handy Volume" size, printed on genuine India paper—for only $1 down and a limited number of monthly payments of $3 to $4.50, according to binding.

MARK AND MAIL NOW

SEARS, ROEBUCK AND CO., Chicago., Ill.

Please send me, free, **"The Book of 100 Wonders,"** illustrated, giving interesting information on a hundred subjects and full information about the Encyclopaedia Britannica. Also tell me what I will have to pay for one of the remaining sets of the "Handy Volume" Issue of the Britannica printed on genuine India paper.

A Warm House in the Morning for YOU

A delightfully warm house has announced that it is time to get up. The little Draft-Man does it.—

The Draft-Man is fastened to the wall directly above the present furnace regulating chains in your house. The installation is very simple and can be accomplished by anyone in a short time with the aid of a screwdriver.

It will work on any kind of a furnace—steam heat, hot air, hot water or vacuum.

The workmanship throughout is the highest grade. Price $10.00. Sold by hardware stores and furnace manufacturers, but we will ship direct by express prepaid

ON 10 DAYS' FREE TRIAL

and absolutely guarantee satisfaction or refund your money promptly.

Highest bank references as to our responsibility.

The Stalker Furnace Regulator Co.
615-625 Detroit Street Ann Arbor, Mich.

GOOD HEALTH PUBLISHING CO.
301 W. Main St., Battle Creek, Mich.
For attached $2, send me "Colon Hygiene" with privilege of return in five days.
(Write your name and address in the margin)

Common Sense for Indigestion

Why treat your insides as tho they were an enemy? Why "blast them out?" It's dangerous. And—unnecessary. A little common sense will secure the same effect—you will be a lot more comfortable and—*results will be lasting.* You will be rid of indigestion, constipation, and more serious ills to which they lead, for all time. Not difficult but easy. No drugs. No tiresome routine. Just plain common sense about food you eat—a little exercise—and proper rest and sleep. Simple—sensible—natural—effective. You will find full and complete instructions for this effective method in a new book called "Colon Hygiene" written by the greatest living authority on foods, feeding and digestion. Over 400 pages. Only $2. Write for it today. You take absolutely no risk. For—if you are not entirely satisfied with this book—if you do not find "Colon Hygiene" one of the most sensible, practical, useful and valuable books you have ever read—return it at once and we will at once refund every penny sent us. Is this fair? Then order "Colon Hygiene" NOW. Be rid of constipation, indigestion and all their discomforts and dangers.

Use the Coupon, or—Ask at any High Class Bookshop

What 15c Will Bring You from the Nation's Capital

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published **at the Nation's Center,** for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would apprecia e a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new Friends. **The Pathfinder, Box** 39, **Washington, D. C.**

PAPER PLANTING

BY F. F. ROCKWELL.

> Bring pencils, fine pointed,
> For our writing must be infinitesimal;
> And bring sheets of paper—
> We will scatter little words
> Like seeds—so that the brown earth
> Shall never show between our flowers.
> —*"The Paper Garden," by Amy Lowell.*

THE rainbow was placed in the sky as a sign that there would be no more floods. But that was before the days of seedhouse catalogs. The perennial down-pouring, or out-pouring, of these bearers of glad tidings is always the first indication that Spring is about to play her long anticipated reëngagement.

There is no doubt that the annual issue of seed catalogs, which runs into the millions, is eagerly devoured by a garden hungry population. The best seller, or the latest magazine will remain on the table unopened until the seed catalog, with a breath of spring and gardens blowing thru its pages, has been thumbed from cover to cover. There should, however, be some method in the mad reading of these seductive annuals.

If you want to plan your garden for the coming season in a rational way, lock the catalog up in the cupboard and sit down with your back to it, and a pencil and paper in front of you.

If you will stop to think a minute the reason for this will be obvious. If you go thru the catalogs *first,* you are bound to get so many conflicting suggestions, ideas and "inspirations" that you cannot possibly harmonize and digest them all; and your order, if it is made out on the spot, will be a hodge-podge of items. Each thing ordered, perhaps, may be desirable in itself, but half of them you will not know where to put when you receive them. On the other hand, if you make a *general* plan of your vegetable garden, your flower garden, and such shrubs, or roses, as you may expect to plant this spring, and *then* go thru the catalogs, picking out the things which will best meet your requirements, the result will be a great deal more satisfactory.

In planning your vegetable garden, you should decide, first, just what vegetables you want to grow, and if your garden area is limited, the exact amount of space you will be able to devote to each. This can be done readily by drawing out a rough plan to scale. Most good seed catalogs mention the amount of space or distance between rows which each kind of vegetable requires, so information on that point is easily to be had, if you do not happen to know it from experience.

There are some vegetables, such as bush beans, early beets, early carrots, onion sets, early peas, radish, early spinach and early turnips, which will be used and out of the way by June or July, so that the space they occupy can be used again for succession plantings of the same things, or for late

NEW-YORK LIFE

INSURANCE COMPANY

346 & 348 BROADWAY . . NEW YORK CITY

TO THE POLICY-HOLDERS AND THE PUBLIC:

A brief of the chief activities of this Company during 1916 runs as follows:

Represented by 1,228,601 policies.

The actual mortality of the Company expressed in the per cent. which it bears to the expected death losses according to the tables of mortality adopted by the State for valuation purposes through a period of years is as follows:

1912 Actual death losses 76% of the "expected"
1913 Actual death losses 73% of the "expected"
1914 Actual death losses 73% of the "expected" (5 mos. of war)
1915 Actual death losses 73% of the "expected" (12 mos. of war)
1916 Actual death losses 71% of the "expected" (12 mos. of war)

Significant Facts:

Mortality Rate reduced; Expense Rate reduced; Interest Rate increased; New Business increased.

The Seventy-Second Annual Statement of the Company will be filed at once with the Department of Commerce in Washington and with each State of the United States and each country where we do business. A brief of that statement will be sent gratis to any person asking for it.

DARWIN P. KINGSLEY,
President

Why We Advertise in The Independent

Copy of an Article by the Advertising Manager of

The Alexander Hamilton Institute

The greatest institution in the United States for teaching efficient business administration, its appeal being to business men and executives

WHY WE ADVERTISE IN THE INDEPENDENT

"Doesn't it all come down to this: Mr. Hughes violated the first principles of salesmanship by running down his competitor's goods?"

This little paragraph headed "The Essence" follows the leading editorial "The Election and a Look Ahead" in The Independent for November 20. It is typical of many choice expressions that appear in this weekly magazine regularly. And this one little quotation shows well the spirit of progressiveness that pervades each and every issue.

Speaking of progressiveness, it is interesting to note that back in 1848 The Independent came into being as a champion of the Anti-Slavery Movement. For 68 years this magazine has prospered and in that time has built up what is recognized as the most distinguished roll-call of contributors of any periodical ever published in America.

The present management of The Independent announced in October, 1913, that it would double the circulation within a year, and it did. Then it began a campaign to again double the circulation, and it has succeeded. Over 100,000 people now receive this publication every week.

The Independent is much more than a "Review Magazine." It has a definite personality and editorial influence which result in a high percentage of reader confidence. It may be sharply distinguished from other magazines of its class through the fact that it flashes its news, editorial comments, articles and pictures of world events more swiftly, by from one to five weeks, than does any other American periodical.

This publication is the official organ of the National Institute of Efficiency. You have doubtless observed the Efficiency Service which it has conducted for more than a year under the direction of Mr. Edward Earle Purinton. The response to this service from every state in the Union has been remarkable. The excellent results we have secured from this medium are due, in part at least, to the favorable position we have had opposite these articles by Mr. Purinton.

To summarize briefly:

1. The Independent has grown swiftly and solidly.
2. Buying space in The Independent now is buying on a rising market.
3. It presents the swiftest periodical news, picture, and advertising service in America.
4. It is preëminently a periodical of service.
5. Its circulation has high potential and long reach.
6. It takes our message into homes of refinement and intelligence.
7. That its readers are those who appreciate high grade merchandise is proved by the character of its contents coupled with the natural growth of its circulation.

Watch your leads and see.

B. LICHTENBERG
[Advertising Manager]

Reprinted by kind permission from "The Institute Wire" of November 18, 1916, the Official Organ of The Alexander Hamilton Institute, New York City.

The Independent-Harper's Weekly

planted vegetables like winter cabbage, celery, endive and winter turnips. In making the plan of your garden these vegetables should be grouped together, while those requiring practically the whole season, such as corn, cucumbers, eggplant, melons, onions, parsnips, salsify, squash and tomatoes, should be assigned another section of the garden where they will not be in the way of the second plantings.

The cultivation of your vegetable garden will be made much more easy if vegetables which are similar in their habits of growth, such as onions, parsnips and salsify, which are planted close together in continuous drills, are grouped together. The same is true of the vine crops, corn and tomatoes, and others which are planted in "hills."

In making your selections of varieties of vegetables from the catalogs, to meet the requirements of your garden plan, be guided by the *type* rather than by names. In picking out peas, for instance, you will want an early maturing variety, and a medium, and a late, so that they will not all be ready for use at one time; and this holds true of corn, beans and other things.

In planting your flower garden, one of the most necessary things to remember is that solid masses or groups of plants of one kind, or even of one variety, are much more artistic, and more striking in effect, than the indiscriminate mixture of plants which one so frequently sees. Often the flower effect which arrests one's attention and causes a long second look has been achieved with one of the most common flowers, used in a bed or border, or along a fence, by itself. Be sure that the plants which you plan to use in the center of large beds, or along the backs of borders, are sufficiently tall so as not to be "drowned out" by those in front of them. The varieties chosen should make a pleasant color contrast or else harmonize.

In planning improvements of or additions to plantings about the grounds, take care first of all to keep an open center. A sweep of good smooth lawn is almost invariably the prime requisite in getting beautiful grounds. Shrubs should be grouped along the boundaries. About the house, especially if it has a stone or brick foundation, there should be low shrubs or dwarf evergreens.

Be careful to mark upon your plan points at which there are unsightly objects, either on your own grounds or in the "off-scape," which would be conspicuously beautiful by their absence. Such may easily be covered up or blotted from the view by the use of quick growing vines, tall flowers, such as sunflowers and hollyhocks, tall perennials, or shrubs. On the other hand, even a small tree, or group of shrubs planted near the house, may cut off a very desirable vista. In ordering a number of shrubs get the proper proportion of tall and low growing ones, so that they may be grouped artistically, with the latter in the foreground.

"What's the Matter, Robert?"

"You hardly said a word the whole time the Petersons were here. It was quite noticeable. I'm afraid they think you don't like them."

"Noticeable! I should say it was. But I was more uncomfortable over it than anybody else was. I *like* them well enough, but *I couldn't think of anything worth saying,* and you can't talk nothings to people like the Petersons. I'm beginning to dread having people in. I haven't the time to do the *reading* necessary to be a good conversationalist, and——"

"Oh, I know the very thing for you. Mrs. Peterson told me about it this evening—a way *they've* found to learn at least one interesting, worth-while thing every day. It is by joining

The Mentor Association

and we must join." The Mentor Association numbers among its members 100,000 folks who know that to be interesting to others one must constantly be absorbing interesting information—information, for instance, about art, nature, music, travel, and other good things that the world has to offer. They are obtaining this information in the most delightful form in "The Mentor."

"The Mentor" comes to them the first and fifteenth of every month—twenty-four times during the year. Each time a special topic is discussed with absorbing interest by a recognized authority who is also a gifted writer. And with each issue of "The Mentor" are six exquisite gravures or color pictures, reproduced on heavy paper, which, added to the illustrations throughout the text, and the text itself, leave a graphic and vivid recollection of the subject.

The Mentor Discussed

and illustrated, at various times during the last several years, for instance, the following topics (note the scope of its interests and activities): Travel, Fine Art, History, Biography, Literature, Music, Domestic Art, Nature and Popular Science.

Beauty Spots in India; the Mediterranean; Switzerland; London; Romantic Ireland; China; Japan; Mexico; The Philippines; Alaska; Grand Canyon of Arizona; Shakespeare's Country; Beautiful Children in Art; Beautiful Women in Art; Etchers and Etching; Pictures We Love to Live With; Great Galleries of the World; Michelangelo; Raphael; The War of 1812; Story of the French Revolution; Story of America in Pictures; The Golden Age of Greece.

Joan of Arc; Oliver Cromwell; Napoleon; Milton; Thackeray; Dickens; Shakespeare; Walter Scott; George Washington; Abraham Lincoln; American Poets of the Soil; American Pioneer Prose Writers; Famous Women Writers of England; Famous English Poets; American Novelists; Makers of American Humor; Masters of the Violin; Famous Composers; Masters of Music.

Old Silver; Gothic Architecture; Chinese Rugs; Architecture in American Country Homes; Furniture and its Makers; Natural Wonders of America; American Birds of Beauty; Sporting Vacations; Game Birds of America; Game Animals of America; Favorite Trees; The Weather; Story of the American Railroad.

This is but a partial list of the subjects which "The Mentor" has been discussing, twice each month, with the members of The Mentor Association. It will give you, though, an idea of the delightful excursions they have been taking into realms where their desires would lead them. Yet it is only a part of

What Membership Means

Briefly, membership in The Mentor Association gives you these five things:

First. 24 issues of "The Mentor," bringing a beautifully printed and illustrated story every two weeks, all about one subject written by a leading authority upon that subject—300 pages during the year.

Second. 600 beautiful illustrations, distributed during the year through the text of the 24 issues of "The Mentor."

Third. 144 gravure or color pictures, reproduced on heavy paper, all ready for framing, in deep, rich tones that bring out all the beauty of the originals. On the back of each picture is a crisp five-minute description of the subject that is portrayed.

Fourth. Answers to any question on art, travel, literature, history, nature or architecture, each answered by an authority.

Fifth. Authoritative Club Programs. Any program you may want for a club, a reading circle, a literary afternoon or evening—each made for you by an expert.

How to Become a Member

The Mentor Association wants among its members only those people who love the finer things of life, and yearn for them—music, art, nature and travel—who seek for self-improvement; who realize that to be interesting to others one must absorb worthwhile knowledge; who believe that education is only commenced in school and should be followed through life.

If you believe as we believe, if you desire as we desire, then we warmly invite you to our membership.

But you want to know even more about The Mentor Association before you decide. So we make this suggestion: write your name and address on the coupon below, tear it off and mail it to us. Send no money; you will receive a copy of "The Mentor." If you like it, and want to join The Mentor Association, send $1 on receipt of a bill from us and $1 each month for but two months thereafter until a total of only $3 has been paid.

A membership in The Mentor Association is yours for but $3 a year; 12½ cents for each issue of "The Mentor."

You are placed under no obligation by signing the coupon. This is a special offer. Don't let it pass. Tear out the coupon *now*, while it's on your mind.

Indep.

THE MENTOR ASSOCIATION 1-22-17
52 E. 19th St., New York, N. Y.

Please send me one issue of "The Mentor." If, after reading it, I decide to become a member of The Mentor Association, with all privileges as advertised, I will send you $1 on receipt of bill and $1 a month thereafter until $3 has been paid.

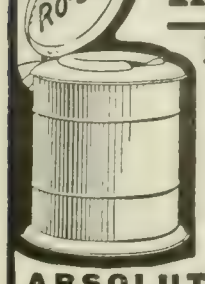
The Wonders of Deep Breathing

By O. HARRELL, M.D.

OXYGEN is the basis of life. It is oxygen that gives the blood its sparkling redness. It is oxygen that gives the body its warmth and energy. It is oxygen that makes it possible for the food we eat to be transformed into bone, muscle and tissue. Oxygen is to the body what draught is to the steam boiler. Cut off the draught to the furnace and you will smother the fire. Cut off the free supply of oxygen to the human boiler, through shallow breathing, and you will smother the vital fire, which means that every muscle and nerve cell will become weak, sluggish and paralyzed.

The foregoing truths are recognized the world over, which is proved by the fact that deep breathing is taught in every school, every institution of physical training, and in the army and navy of every country.

The point is simply this: You cannot run a one horse power engine with a one cat power boiler. Yet this is exactly what most of us try to do. Few persons have strong lungs and those who have strong lungs do not use them. We are shallow breathers; sufferers from oxygen starvation, and still we wonder why we are depressed, nervous, underweight, and why our vital organs fail in their duty.



Breathe, Breathe, Breathe, if you want Health, Strength and Endurance. Have a competent instructor teach you how to breathe. I recommend especially Paul von Boeckmann, the foremost authority of breathing in America. In order to give wide publicity to his teachings and discoveries, he will send his book, "Super-Conscious Deep Breathing and Nerve Building," *free* to anyone who will write to him, Studio 22, 110 West Fortieth street, New York. This offer bears with it no obligations, but when you have read the book you will feel that you owe him a debt of gratitude for having unfolded to you the startling facts he presents. It contains more real information than most books sold at a high price. —*Advertisement.*

WOULD YOU

show this standard high grade 42 key fully visible typewriter to your friends and let them see wherein it excels any $100 typewriter, if by doing this and other small assistance, you could easily have one to keep as your own? Then by post card or letter simply say, "*Mail Particulars.*"

PEBBLES

Shoes are made nowadays from all kinds of skins. Even banana skins make slippers. —*New Idea.*

"It is sometimes forgotten," says a contemporary, "that a telephone operator is a civil servant." It is. Even by the telephone operator.—*Passing Show.*

"Your wife seems busy these days."
"Yes; she is to address a woman's club."
"Ah, working on her address?"
"No; on her dress."—*Time Keeper.*

Insurance Examiner—What did you say your grandfather died of?

The Subject—Well, sir, I can't remember rightly, but I know it was nothing serious.—*Evening Sun.*

"You shouldn't have spun your top again, Bobbie. Mollie can't say her prayers with it humming away like that."

"That's all right, mother. It's humming a hymn."—*London Opinion.*

"My son says that next to him in the hospital is a case of pyrexia."

"My dear! I didn't think they were allowed to have those fancy wines; and a whole case, too!"—*Passing Show.*

The pupils in a certain class in hygiene were told to set down on paper the reasons why, in their opinion cremation was superior to burial.

"Cremation is good," wrote one little boy, "because the person might be in a swoon, and if he is burned he cannot recover."—*New York Times.*

Miss Green—You sing in the Wesley Street Church, don't you?

Miss Crochet—Yes.

Miss Green—Then you must know the gentleman over opposite. I have seen him going there Sunday after Sunday.

Miss Crochet—Oh, yes; he fills intermissions when the choir isn't singing. He is the pastor.—*Boston Transcript.*

While walking along the street an epileptic dropt in a fit and was quickly rushed to a hospital. Upon removing his coat one of the nurses found a piece of paper pinned to the lining, on which was written:

"This is to inform the house surgeon that this is just a plain fit—not appendicitis. My appendix has already been removed twice."—*New York Times.*

A gallant sergeant was walking down the street the other day when a recruit approached him from the opposite direction, and, as he got to within three paces of the brave three-striper, he gave a most regimental salute.

Sergeant—Why did you salute me? I'm not an officer!

Recruit—No, I know you're not; but anything will do to practise on!—*The Direct Hit.*

A farm hand saved a train from being wrecked, and at a splendid banquet was presented by the railway company with a gold watch in a red morocco case.

The company's chairman, at the end of an eloquent speech, handed the watch to the heroic farm hand, and waited expectantly to hear the yokel's thanks.

The farm hand opened the morocco case, took the watch from its rich satin bed, turned it over and over, and then looked up and said:

"And where's the chain?"—*Home Again.*

A motor car was held up in a busy street by a wagon drawn by two horses. The driver seemed in no hurry to get out of the way, and at length one of the occupants of the motor car exclaimed sarcastically:

"Here, I say, my man! What are those things you are driving? What are they for, I should like to know?"

"These 'ere, guv'nor?" answered the carter, flicking the horses with his whip. "Oh, these is wot is commonly called 'orses, an' they're sometimes used fer to take motorists to the 'orspital!"—*Tit-Bits.*

The Market Place

ON THE STOCK EXCHANGE

The market for securities on the New York Stock Exchange was narrow and comparatively dull during the week that ended on the 13th, the average daily transactions amounting to only a little more than 700,000 shares. On the week's first business day the number was 589,000, the lowest on record since August. At the end the net result was an average loss. Controlling influences were the current opinions as to the effect of Government utterances in response to Germany's proposals for peace negotiations and the note of President Wilson. Any definite advance in the direction of peace must cause a reduction of the profits of many American manufacturers and a decline of share values. In a restricted market on the 8th the price changes, as a rule, were slight. Railroad stocks showed fractional gains or were stationary. More than one-fourth of the business was in Steel Corporation shares, with a net addition of only ⅛. On the following day the market appeared to be waiting for the reply of the Allies to the American note. Only 600,000 shares were sold, and the movement was controlled by professional traders. The new General Motors stock lost 11 points, altho the dividend declared was equivalent to the last one on the old stock.

There had been rumors that the Atchison Railroad dividend would be increased, and when the old rate was retained, a decline of 2 points was caused by sales. A report from the Interstate Commerce Commission showed that while the railroads' gross revenue in November was greater by $23,750,000 than in the corresponding month one year earlier, the gain of net revenue was only $161,000. This pointed to a considerable increase of the cost of operation, due mainly to higher prices for everything a railroad company must buy.

Prices fell on the 10th, altho there was no news to account for a decline. The loss for Steel was 3⅞ points. A report showing that 488,744 tons had been added to the company's unfilled orders did not check the downward movement. General Motors lost 14 points, selling at 106½, a price which may be compared with 140 in the preceding week. Money could be had on easy terms, for the rate on call loans was reduced to 1½ per cent. There was recovery in a broader market (988,000 shares) on the 11th, owing to the

Cuts Building Costs -Builds Better

Any type of building involves two items of expense—*material* and *labor*. HY-RIB effects savings in both.

HY-RIB is a steel-meshed sheathing with deep stiffening ribs. Its use eliminates forms, studs, stiffening channels and all special equipment. Labor cost, too, is lowered, for the operation is simplicity itself. The easily handled sheets are quickly set in place and the concrete or plaster applied.

Besides reducing labor and material cost, HY-RIB provides a better building. Unnecessary weight is eliminated, valuable floor space saved. Such a building, being permanent and fireproof, is more valuable from a sales and rental viewpoint.

HY-RIB is used inside for partitions, floors, ceilings, etc.—outside for roofs, sidings, stucco work, etc. Suitable for the smallest residence or the largest factory. HY-RIB Products also include Rib Lath, Diamond Lath, Channels, Studs, Corner Beads, Base Screeds, etc.

Valuable HY-RIB Handbook sent free to prospective builders

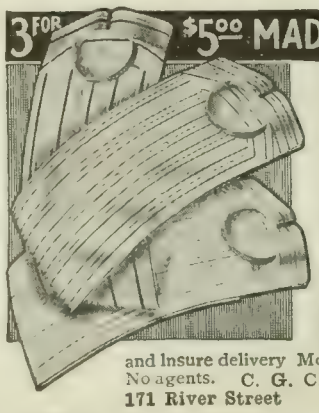
Address the Company at its Home Office, No. 277 Broadway, New York City.

speech of Premier Lloyd George, which, it was thought, indicated the character of the coming reply to Mr. Wilson's note. Nearly one-third of the day's transactions were in Steel shares, with an advance of 1⅛. But the average addition was small. On the last of the week's full days the market was narrow again, and prices showed no well-defined response to the published reply of the Allies, which probably had been discounted. In the curb, or outside market, the shares of the Canadian Car and Foundry Company, whose works in New Jersey were destroyed in the preceding night by explosions and fire, suffered a marked decline. The loss was said to be $4,000,000, but the company was insured and it has four other factories in Canada. For a long time it has been working on an order from Russia for $83,000,000 worth of shells.



There is evidence in the course and character of the stock market that what is called "the public" has been drawn away from it by recent disappointment and losses. Some explain the decline of motor company shares, at a time when the output of machines is very large, by saying that the cost of the manufacturers' raw material has been greatly increased and that their orders for it are filled only after long delay.

THE METALS

In the steel industry prices are still rising and the demand is so great that it cannot be satisfied. The Steel Corporation's orders are far ahead of shipments, the unfilled contracts on December 31 showing an increase of 488,744 tons and a total of 11,547,286, a quantity not far from one-third of the country's annual output of steel a few years ago. These orders prove that the return to normal conditions would be gradual and much delayed if the war should end in the near future. A remarkable demand for ship plates, even with delivery in the third quarter of next year, is causing a sharp advance of prices. Italy and France are bidding for pig iron. Our railroad companies gave large orders for cars, locomotives and rails in December and they are competing closely with foreign buyers.

Foreign demand caused a very large increase of the country's output of metals last year, and among the gains were the following: Pig iron, 32 per cent; copper, 41; spelter, 36. Owing to higher prices, values were increased in even greater proportion. For example, the value of the copper produced was $520,000,000, while that of the preceding year's output was $242,000,000. The mining companies of Arizona, Utah, Montana, Nevada and Idaho paid more than $100,000,000 in dividends. Gold was an exception, for the value, $92,316,000, was less by $8,719,000 than that of the product in 1915. But $685,000,000 in gold came to us from abroad. Imports of gold are growing. In December they were $157,000,000, and about $50,000,000 was received last week.

3 FOR $5.00 MADE TO MEASURE

I will make to your measure shirts of perfect fit, smooth around the neck, no wrinkles and of correct sleeve length. These shirts will stand more trips to the laundry and give better service than any ready-made shirt you ever bought at twice the price. Made plain front, with ocean pearl buttons and cuffs attached.

Send for 200 samples of 1917 designs, with colors that will not fade, and self measuring blank. It is easy to fill in—at my risk. I pay the postage and insure delivery. Money refunded if not satisfied. No agents. C. G. CLEMINSHAW

Insurance

Conducted by

W. E. UNDERWOOD

PHYSICAL REEXAMINATIONS

In a paper read by Dr. Eugene Lyman Fisk, medical director of the Life Extension Institute, before section I of the American Association for the Advancement of Science, he asks: "Which is the greater public service for a life insurance company to perform; to pay a $10,000 claim to a widow and children, or to keep alive a $100,000 husband and father." It is a pertinent question and a thought-provoking question.

Of course, it is not the business of a life insurance company to keep its members alive; but, obviously, it is profitable to all the members that it do so if it can; and individual members, whose longevity may be thus extended, must be duly grateful.

The proposition of the Life Extension Institute is a sound and practicable one. Not only does it seem of value that life companies extend to all policyholders the privilege of periodical physical examinations, but to me it seems desirable that every human creature in an apparent state of good health should submit himself to the inspection of a medical man annually or biennially. Observation prompts me to express the belief that this custom would be of inestimable value among the children of a family.

But getting back to Dr. Fisk's question: In ninety-nine and nine-tenths per cent of all cases, it would be a much greater public service by a life insurance company to keep alive a $100,000 husband and father than to pay a $10,000 claim on him; but I might leave the remaining one-tenth of one per cent to shift for themselves.

L. H. B., Cascilla, Miss.—Answering your questions, the National Life Association of Des Moines, Iowa, is neither an old line company nor a fraternal order; it is an assessment association. Organized in 1899 as the World Mutual Life Association, it changed to the present name in 1905. Its rates provide no mathematical reserves in support of the future demands under its certificates; and until it does, it is but a matter of time when its members will be called upon to pay the deficits created. As to the Woodmen, Omaha jurisdiction: some of its rates are probably adequate; others, especially those of old members, are not so regarded. The order has a large surplus, but it does not equal the amount of an adequate reserve. In 1916 the order was twenty-five years old. Compare its surplus and total outstanding insurance with the Equitable of New York which was twenty-five years old in 1884. At the end of twenty-five years the Woodmen had $1,007,932,400 insurance in force, supported by $25,421,814 of surplus; in 1884 the Equitable had $309,409,171 insurance in force, backed by $43,754,881 of reserves, plus a surplus of $13,452,242—an aggregate of $57,207,123 of security behind its policies. The difference is obvious.

Stenographers—make this Salary-Raising test

How fast can you typewrite the 584 words in this advertisement of the wonderful New Way in Typewriting? The average operator writes about 30 to 40 words a minute—and earns only $8 to $15 weekly. The Tulloss "New Way" operator easily writes 80 to 100 words a minute—receives $25 to $40 a week. Employers pay for one thing only—**for finished work.** Any stenographer earning $25 or more a week will tell you that **quantity and quality of typewritten work** are the secret of bigger salaries! Employers gladly pay greatly increased wages to those who become expert on the typewriter, as shown by the striking salary-increases of "New Way" operators everywhere.

Read What People Say

Doubled Salary
Salary is **exactly double** what it was when I took up the study of the Tulloss Method. ANNA S CUBBISON, 109 Hoerner St., Harrisburg, Pa.

Two Increases
Since writing the letter you saw, telling of a 40 per cent. increase; I have had another increase of 20 per cent. C. E. VERRALL, 66 Olney St., Providence, R. I.

Earns $150 a Month
From $70 a month when I took up the study, I was soon drawing $150-salary more than doubled. There is no comparison whatever between the Tulloss Method and the ordinary system. A. H. GARDINER, 429 Hawthorne Place, Madison, Wis.

100 Words a Minute
Formerly I never exceeded 50 words a minute, but since taking up the Tulloss Method have written as high as 100. R. R. MASTIN, Norval Bros., Law Office, Seward, Nebraska.

80 to 100 Words a Minute—Entirely New Method

Mastery of the New Way in Typewriting is the most startling, most productive and most profitable acquirement a stenographer can secure. The New Way is different, unique, yet sensible and simple and amazingly resultful. It is a wholly new idea, as applied to typewriting, yet centuries old in another vocation. Special gymnastic finger-training **away from the machine** brings results in days that no other method can ever produce. Though comparatively new, thousands have by it already increased their speed from 30 to 40 words a minute to 80, 90 or 100 or even more. With this infinitely greater speed has come great accuracy. Their work is errorless, neat, clean. And this increased speed and accuracy has boosted salaries to $25, $30 and even $40 a week. Moreover, the work is done easier, with less fatigue.

Bigger Pay for YOU

Read the letters printed at the left. These men and women and thousands of others have, through the New Way in Typewriting, increased their salaries. Thousands of "touch operators" have doubled and trebled their speed and salaries after taking up the New Way. What others have done you can do, even if you are now very slow, or even if you write fairly fast.

Get This New FREE Book

The secrets of the New Way in Typewriting, the **salary-raising** way, are explained in full in this 32-page book. It is free to those interested. Do not miss your copy. It will awaken you to new possibilities of your work—it will surprise you with its proof of the increased money you can earn, every week, as so many others have done. THE ALLIES' ANSWER

A Translation of the French Text of the Note Handed to Ambassador Sharp at Paris.

AMERICAN EMBASSY,
Paris, Jan. 10, 1917.

The Allied Governments have received the note which was delivered to them in the name of the Government of the United States on the 19th of December, 1916. They have studied it with the care imposed upon them both by the exact realization which they have of the gravity of the hour and by the sincere friendship which attaches them to the American people.

In a general way they wish to declare that they pay tribute to the lofty sentiments with which the American note is inspired and that they associate themselves, with all their hopes, with the project for the creation of a league of nations to insure peace and justice thruout the world. They recognize all the advantages for the cause of humanity and civilization which the institution of international agreements, destined to avoid violent conflicts between nations, would prevent—agreements which must imply the sanctions necessary to insure their execution, lest an illusory security serve merely to facilitate fresh acts of aggression.

But a discussion of future arrangements destined to insure an enduring peace presupposes a satisfactory settlement of the actual conflict. The Allies have as profound a desire as the Government of the United States to terminate as soon as possible a war for which the Central Empires are responsible and which inflicts such cruel sufferings upon humanity. But they believe that it is impossible at the present moment to attain a peace which will assure them reparation, restitution and the guarantees to which they are entitled by the aggression for which the responsibility rests with the Central Powers, and of which the principle itself tended to ruin the security of Europe—a peace which would, on the other hand, permit the establishment of the future of European nations on a solid basis. The Allied nations are conscious that they are not fighting for selfish interests, but, above all, to safeguard the independence of peoples, of right and of humanity.

The Allies are fully aware of the losses and suffering which the war causes to neutrals as well as to belligerents, and they deplore them, but they do not hold themselves responsible for them, having in no way either willed or provoked this war; and they strive to reduce these damages in the measure compatible with the inexorable exigencies of their defense against the violence and the wiles of the enemy.

It is with satisfaction, therefore, that they take note of the declaration that the American communication is in nowise associated in its origin with that of the Central Powers transmitted on the 18th of December by the Government of the United States. They did not doubt, moreover, the resolution of that Government to avoid even the appearance of a support, even moral, of the authors responsible for the war.

The Allied Governments believe that they must protest in the most friendly but in the most specific manner against the analogy drawn in the American note, between the two groups of belligerents. This analogy, based upon public declarations by the Central Powers, is in direct opposition to the evidence, both as regards responsibility for the past and guarantees for the future. President Wilson, in mentioning it, certainly had no intention of associating himself with it.

If there is a historical fact established at the present date, it is the willful aggression of Germany and Austria-Hungary to insure their hegemony over Europe and their economic domination over the world. Germany proved by her declaration of war, by the immediate violation of Belgium and Luxemburg, and by her manner of conducting the war her systematic contempt for all principles of humanity and all respect for small states. As the conflict developed, the attitude of the Central Powers and their allies has been a continual defiance of humanity and civilization.

Is it necessary to recall the horrors which accompanied the invasion of Belgium and of Serbia, the atrocious régime imposed upon the invaded countries, the massacre of hundreds of thousands of inoffensive Armenians, the barbarities perpetrated against the populations of Syria, the raids of Zeppelins on open towns, the destruction by submarines of passenger steamers and of merchantmen even under neutral flags, the cruel treatment inflicted upon prisoners of war, the judicial murders of Miss Cavell and Captain Fryatt, the deportation and the reduction to slavery of civil populations, et cetera? The execution of such a series of crimes, perpetrated without any regard for universal reprobation, fully explains to President Wilson the protest of the Allies.

They consider that the note which they sent to the United States in reply to the German note will be a response to the questions put by the American Government, and, according to the exact words of the latter, "constitute a public declaration as to the conditions upon which the war could be terminated."

President Wilson desires more. He desires that the belligerent powers openly affirm the objects which they seek by continuing the war. The Allies experience no difficulty in replying to this request. Their objects in the war are well known; they have been formulated on many occasions by the chiefs of their divers governments. Their objects will not be made known in detail with all the equitable compensations and indemnities for damages suffered until the hour of negotiations. But the civilized world knows that they imply, in all necessity and in the first instance, the restoration of Belgium, of Serbia, and of Montenegro, and the indemnities which are due them; the evacuation of the invaded territories of France, of Russia, and of Rumania, with just reparation; the reorganization of Europe, guaranteed by a stable régime and founded as much upon respect of nationalities and full security and liberty of economic development, which all nations, great or small, possess, as upon territorial conventions and international agreements, suitable to guarantee land and maritime frontiers against unjustified attacks; the restitution of provinces or territories wrested in the past from the Allies by force or against the will of their populations; the liberation of Italians, of Slavs, of Rumanians, and of Czecho-Slovaks from foreign domination; the enfranchisement of populations subject to the bloody tyranny of the Turks; the expulsion from Europe of the Ottoman Empire, so radically alien to Western civilization. The intentions of His Majesty, the Emperor of Russia, regarding Poland have been clearly indicated in the proclamation which he has just addrest to his armies.

It goes without saying that if the Allies wish to liberate Europe from the brutal covetousness of Prussian militarism it never has been their design, as has been alleged, to encompass the extermination of the German peoples and their political disappearance. That which they desire above all is to insure a peace upon the principles of liberty and justice, upon the inviolable fidelity to international obligations with which the Government of the United States has never ceased to be inspired.

United in the pursuit of this supreme object, the Allies are determined, individually and collectively, to act with all their power and to consent to all sacrifices to bring to a victorious close a conflict upon which, they are convinced, not only their own safety and prosperity depend, but also the future of civilization itself.

JUST A WORD

"The remedy for the evils of alliance is more alliance," says Dr. Charles F. Aked in an article advocating a world-alliance instead of the group-alliances existing today. Dr. Aked is a pacifist of prominence, the founder of the Passive Resistance League in England and one of the organizers of the peace party which Mr. Ford sent to Europe a year or more ago. His article will be published in an early issue of The Independent.

A TIME TO TALK

From *Mountain Interval*, by Robert Frost, which was reviewed in The Independent for December 25, 1916, we take this poem, particularly expressive of the New England neighborliness and outdoor flavor of Mr. Frost's work:

When a friend calls to me from the road
And slows his horse to a meaning walk,
I don't stand still and look around
On all the hills I haven't hoed,
And shout from where I am, What is it?
No, not as there is a time to talk.
I thrust my hoe in the mellow ground,
Blade-end up and five feet tall,
And plod: I go up to the stone wall
For a friendly visit.

—*From Mountain Interval, published by Henry Holt and Company*

REMARKABLE REMARKS

MICHAEL MONAHAN—Life is more cruel than death.

WILLIAM ALLEN WHITE—We need a town spanker.

CHAUNCEY M. DEPEW—Don't retire at sixty or seventy.

EMPEROR WILLIAM—Our enemies have dropt the mask.

FRANK A. VANDERLIP—The outlook for business is excellent.

THOMAS W. LAWSON—I am sorry I ever wrote "Frenzied Finance."

PROF. FRANKLIN H. GIDDINGS—Prussia is the Harry Thaw of nations.

MAXIMILIAN HARDEN—Russia's resources cannot be exhausted.

WOODROW WILSON—A court of law is not necessarily a court of justice.

DR. CHRISTINE MANN—The American girl is a rotten physical specimen.

STATE'S ATTORNEY ROBERT E. HOGAN—Cabarets are modern dynamite.

HELEN ROWLAND—The most dramatic things always happen on Saturday evening.

MRS. ANNA SCHOFIELD—Marriage brands a man as plain as a hot iron on a cow's hip.

JOSEF HOFMANN—There is no piano music of any composer that forbids the use of the pedal.

SPEAKER CLARK—Any time that the galleries are full orators on the floor are posing and wasting time.

EDWARD BOK—Do you realize that with the approach of spring each year scores of girls "run away"?

ED. HOWE—She married a Polish count—which is about equal to contracting the morphine habit.

FRANK A. MUNSEY—I have already done vastly more work than most workers in the world are willing to do.

ANNE MORGAN—Is it only in our monuments and graveyards that the true American spirit can be found?

LILLIAN RUSSELL—Nothing is more repulsive to correct taste than rotundity of form and bullet-headedness.

GENERAL CARRANZA—The best argument against a parliamentary régime is the object lesson of the United States.

PRESIDENT JOHN GREER HIBBEN—The danger of industrial strife hangs as an ominous cloud over the country.

"BUGS" BAER—The high cost of living has caused everything to go up, including large sections of New Jersey.

PROPHET VOLIVA of Zion City—The vice trust will run things in Chicago until Christ comes back to reign on earth.

CONGRESSMAN GARDNER—President Wilson would send the Kaiser to Sunday school. I would send him to St. Helena.

DR. KARL MUCK—We are polluting the stream of musical art at the source by feeding our young people on the "poison of ragtime."

EDWARD S. MARTIN—The pith of much of the dissatisfaction with our President is that he has not laid us on the altar of sacrifice.

THEODORE ROOSEVELT—It would be difficult to overestimate the harm done to this country by the pacifist movement financed by Mr. Carnegie.

JOHN D. ROCKEFELLER, JR.—There should be no stifling of labor by capital, or of capital by labor, or of labor by labor, or of capital by capital.

H. G. WELLS—The peace that will restore competitive armaments has now become an almost less desirable project than a continuation of the war.

AVIATOR B. TYLIE—My only thought was I would never shoot a pheasant again. I know exactly now how a bird must feel when a hunter opens fire.

W. J. BRYAN—Five hundred years from now little children will be born in Europe with their necks under a yoke of debt that this generation has fastened on posterity.

GEORGE BERNARD SHAW—I never yet met an American who had any notion of the institutions of his native land beyond a general and mostly erroneous idea that they were glorious.

MAURICE MAETERLINCK—It is time that the Germans be made to feel that there is an abyss between them and humanity which cannot be crost except after long years of penitent suffering and humiliation.

DR. JACQUES LOEB—The biology of which the war enthusiasts make use is essentially antiquated, and the statement that a nation by not going to war will lose its virile virtues is not supported by our present knowledge.

THE NEW PLAYS

The leading lady of *In For the Night* is Genevieve, a menagerie tigress thirsting for human blood. Her roars are the most convincing moments in the play. (Fulton Theater.)

Love o' Mike is a "comedy with music," that is, you get two shows in one: a play with real plot and intelligible conversation, plus tuneful songs and better dancing than most musical shows offer. (Shubert Theater.)

The return of Julia Arthur gives Broadway a new sort of play, *Seremonda*, a tragic romance of old France, written in true poetry and well played, particularly in the less emotional situations. (Criterion Theater.)

Dozens of stars, including Elsie Janis and Hazel Dawn and Frank Tinney and Sam Bernard, and lots of pep in music and dancing and sets—*The Century Girl* deserves the success it is having. (Century Theater.)

After the War—What?

The President of the . . . . National Bank Advises a Big Manufacturer

A large manufacturer who wanted to adjust his business to anticipate after-the-war conditions, called on the President of the . . . . . National Bank, one of the ablest bankers in the East. This dialogue followed:

Banker—"You ask me what I think will happen to your manufacturing business after the war? You can imagine that all bankers are keenly interested in that question these days. Naturally, I've given considerable thought to it, and my judgment is that when the present war orders cease, we'll still be shipping abroad vast quantities of manufactured goods of all kinds. Every manufacturing country in Europe is today manufacturing nothing but what will help along the war. Therefore, when the war ends, Europe simply has to keep on coming here to buy. And she'll buy not only raw materials, but manufactured articles."

Manufacturer—"Yes, but how will they pay for what they get?"

Banker—"Well, we'll have to accept payment in the form of some kind of interest-bearing bonds. You wonder if these government securities will be good. I reply: Of course they will. Take the case of the French Government, which illustrates the situation very well. In the 75 years from the time the Directorate was overthrown and Napoleon became the First Consul, to the establishment of the French Republic, about 1870, there were nine different governments, accompanied with or followed by as many revolutions. Each of these governments borrowed money and spent it to prevent or promote revolution, yet not one of the succeeding governments repudiated the debts of the previous one.

"Take England, which has had one of the most trying financial experiences of any nation. As a result of the Civil War in the 17th Century, and the later Napoleonic campaign, England's resources were strained to the utmost, and it was necessary for her to resort to what was called 'whip-and-spur' taxation. Along with taxation debt increased, and at the close of the war period, in 1815, the national debt exceeded $4,375,000,000. Yet so wonderfully did her statesmen handle the fiscal problems, that this indebtness was greatly reduced, and at the same time, especially in Queen Victoria's reign, England had an unexampled period of material prosperity and progress. As a result of her experiences, England entered the present war the ablest by far of all the nations in dealing with the financial side."

Manufacturer—"Where do you get all this information?"

Banker—"I got every iota of what I've just told you out of the new Encyclopaedia Britannica. You can only be sure the sun will rise tomorrow because it has risen every day in the past—for thousands of years. So with human affairs, it is by knowing what has happened in the past that we are able to form reasonably correct judgment as to the probabilities of the future."

You, Mr. Manufacturer and Mr. Merchant, have access to the same complete and authoritative information as the President of the . . . . National Bank—in the new Encyclopaedia Britannica

This wonderful work, which surveys all human knowledge, not only discusses your own business, but every other business. That is one of the main reasons why more than 110,000 business men out of its 160,000 present owners bought it.

What the banker must know about business, or about political and economic conditions, every business man should know. These are crucial times—the future of giant industries and all business is woven into the European situation. Those who are able to discern "the signs of the times," who are qualified to anticipate the future, are the men who know the significance of past events in their relation to and effect upon business, industry, commerce and every other phase of human activity. This is precisely the kind of information the new Britannica gives you.

Can you afford *not* to own it? You can not. Then *act at once* to get a set printed on the *last genuine India paper* available.

Sears, Roebuck and Co., Chicago, Illinois

Gentlemen:—Please send me, free, **"The Book of 100 Wonders,"** illustrated, giving interesting information on a hundred subjects and full information about The Encyclopaedia Britannica. Also tell me what I will have to pay for one of the remaining sets of the "Handy Volume" Issue of the Britannica printed on genuine India paper.

THE INSIDE OF THE ATOM

THE biggest and the liveliest session of the American Association for the Advancement of Science was that devoted to a question which not many years before would have been thought not worth talking about, because nobody could know anything about it, that is the internal structure of the atom. All day long Columbia's largest lecture room was packed to "standing room only" with an excited throng, for this was not a lecture but a fight, and scientists are human enough to enjoy a fight. It was a contest between the physicists and chemists over the atom. Both need the atom in their business but they want a different kind of atom.

Formerly the provinces of the two sciences, tho coterminous, were separated by a fairly well defined boundary line. The physicists claimed the molecules and everything bigger up to the stars. The chemists claimed the atoms that make up the molecules, and if they neglected to lay claim to everything smaller than the atom it was because they did not suppose there was anything smaller, for the atom was held to be, as its name implied, the least possible particle of matter. This amicable partition of territory served satisfactorily up to a dozen years ago, when a bold band of physicists, led by Thomson and Rutherford, made a raid into the unclaimed hinterland and explored the interior of the atom. They discovered these corpuscles charged with negative electricity, or let us say rather corpuscles of negative electricity, moving with a speed almost equal to that of light. Since it would take 1800 of these corpuscles or electrons to weigh as much as a hydrogen atom, they belonged naturally to the chemists, but the physicists claim them by right of discovery, and they are using them to construct atoms of the most fantastic form imaginable. They are not only robbing the chemist of his atom, but they are upsetting the fundamental principles of their own science with reckless disregard of the consequences. They show no more reverence for Newton than they do for Dalton. Even Euclid is not safe from their iconoclastic hands. The whole is no longer equal to the sum of its parts. An atom may weigh less than its components. Mass is made dependent upon motion. Action does not always vary inversely as the square of the distance. Time is purely relative. Length depends upon velocity. The second law of thermodynamics is declared unconstitutional. Action and reaction may be neither equal nor opposite. Energy does not flow out continuously but is emitted in atoms. Such are some of the subversive heresies now being openly profest and preached even in orthodox circles. No wonder the timid and conservative show signs of panic.

The latest model in atoms is that invented by a young Dane named Bohr, who seems to have got it patented in all countries including the Scandinavian. The Bohr atom, duly magnified, would look something like the solar system. In the place of the sun would be the central nucleus of closely packed positive and negative electrons, but predominantly positive, and containing most of the weight of the whole atomic system. Then revolving around this nucleus are several negative electrons, exceedingly small, swift, and relatively remote. The hydrogen nucleus has one such satellite; oxygen has eight, and so on. So long as they revolve evenly in fixt orbits they give no indications of their presence, but when they are shaken out of their orbits they emit atoms of light. When two or more such atomic systems get so close as to jostle one another their satellites are apt to get entangled and we have the molecule of a compound.

Now this sort of astronomical atom does not suit the chemist at all. He wants something solid with a few fixt points. Given these, he can draw you pictures of structural formulas that correspond most marvelously with the hundreds of thousands of compounds he has made. He builds up out of his bonded atoms various chains and rings and mirror images as a child constructs buildings and bridges out of his blocks or strips of steel. Then, having set up a model of a new dye or explosive, he will turn to his laboratory table and make it according to these specifications. A carbon atom shaped like a caltrop he can handle, but what is he going to do with an atom that looks like a pumpkin in the middle of a ten acre lot with half a dozen peas scattered over this area or flying around like mosquitoes in the air above? Then again the chemist is disconcerted at being told by one of these new fangled physicists that the atomic weights which he has been laboring to establish are not fixt but determined by the past history of the particular piece of element in question; that two different elements may have the same atomic weights or the same element have different weights; that lead for instance may weigh 208.5 if it can trace its ancestry back to thorium, or 206 if it is descended from radium. The chemist feels a repugnance against introducing heredity into his science and being obliged to look into the past of elements that he has hitherto accepted at their face value.

This in brief is the cause of the controversy, tho of course no reputable scientist could approve of our loose

© Brown & Dawson

NEW NEPHEWS OF UNCLE SAM

THEY LIVE IN CHARLOTTE AMALIA, THE CHIEF CITY OF THE DANISH WEST INDIES, JUST PURCHASED BY THE UNITED STATES. THE CITY IS BANKED ON A SEMICIRCLE OF HILLS ABOUT THE BEAUTIFUL BAY AND THE RADIATING STREETS RUN DOWN TO THE SEA LIKE THE AISLES OF AN AMPHITHEATER

language and frivolous way of stating the case. Both sides are certainly somehow right, tho nobody can just see how. Each side can prove its theory in the only way that anything can be proved, that is, by how it works. The chemist finds his static atom helps him in explaining the constitution of compounds. The physicist finds his dynamic atom helps him in explaining the spectrum. Some day they will find that they are really talking the same language, tho now they are in a sad state of Babelment.

GERMANY'S MOVE NEXT

GERMANY first proposed peace. For that she received just acclaim. The neutrals transmitted her offer to the Allies. The Allies responded, leaving the door open for further negotiations. Germany has said nothing since.

The President of the United States asked each side to say what they were fighting for. The Allies made a frank reply, stating their terms. These were probably not the lowest terms the Allies were prepared to make, but they were explicit and not unjust.

In her reply to the United States Germany made no attempts to state her terms. She proposed instead a peace conference on neutral ground, tho Lloyd George had previously declared that England would never put her head in such a "noose."

If Germany wants peace it is now incumbent on her to state her terms. If she will not state her terms it is evident that her peace move was in reality a war move and that she has been trying to make a catspaw of the United States. We confess the Emperor's recent diatribes and the inspired utterances of the semi-official Berlin press lend color to the gloomiest views in these respects.

If Germany, then, does not now offer—and quickly—genuine peace terms, she will have completely forfeited whatever little was left of her reputation in neutral lands.

A NEW HAND AT THE PEN

WHEN in the recent shake-up of the British Cabinet Arthur Balfour was made Minister of Foreign Affairs, there were many who protested that the times demanded a man of action and energy rather than an elderly philosopher and skilful debater. That may be —altho Mr. Balfour is not likely to make any worse blunders in diplomacy than Sir Edward Grey did in his last two years—but at any rate readers will rejoice at the turn which puts such a master of English to writing the official correspondence. The recent joint note of the Allies was so clumsily constructed, or at least so poorly translated as to be quite unintelligible in places, but now we get from London an elaboration of two of the points of that note, the questions of Turkey and of a peace league, which it is a joy to read merely for its wording:

> These methods of calculated brutality were designed by the Central Powers, not merely to crush to the dust those with whom they were at war, but to intimidate those with whom they were still at peace. Belgium was still at peace. Belgium was not only a victim, it was an example.
>
> The war staffs of the Central Powers are well content to horrify the world if at the same time they can terrorize it.
>
> If existing treaties are no more than scraps of paper, can fresh treaties help us? . . . None will profit by their rules but powers who break them. It is those who keep them that will suffer.

Whether this note be credited to Balfour or to Lloyd George, who is equally gifted as a phrasemaker, it is a neat piece of work and will carry conviction where a dull state paper would remain unread. We must recognize also the skilfulness of its silences as well as of its wording. It is hardly necessary to argue before Americans that the Turk has forfeited all right to Constantinople, but we should like to know who is to get it. Russia has publicly announced that Great Britain has promised it to her. Great Britain declines either to affirm or to deny this, and Mr. Balfour's note, especially devoted to this question, makes no mention of Russia. Americans would like to see the Sultan ousted from Constantinople. But Americans are very doubtful about the advantages of installing the Czar in his place.

"BLESSED ARE THE MEEK"

HIS IMPERIAL MAJESTY the German Emperor to the Imperial German Chancellor:

> What is wanted is a moral deed to free the world, including neutrals, from the pressure which weighs upon all. For such a deed it is necessary to find a ruler who has a conscience, who feels that he is responsible to God, who has a heart for his own people and for those who are his enemies, who is indifferent to any possible wilful misinterpretation of his act, and possesses the will to free the world from its sufferings.
>
> I have the courage. Trusting in God, I shall dare to take this step.
>
> "For they shall inherit the earth."

WELCOME THE THREE SUNNY SAINTS

THE ratification of the treaty between Denmark and the United States this week brings to a successful conclusion the negotiations that have been carried on intermittently for over fifty years. What Lincoln and Grant and Roosevelt tried in vain to do Wilson has at last accomplished. Henceforth and forever Old Glory will float over the palms and ceibas of St. Thomas, St. Croix and St. John. The islands are joined to the continent to which they naturally belong, but from which they have long been separated by political accident.

Was there ever a transfer of territory accomplished under more favorable auspices? The Danish West Indies were not obtained by conquest. Our Caribbean fleet is visiting them on a peaceful mission. It was not primarily a "purchase," as it is commonly called. The $25,000,000 which the United States Government has promised to pay is merely compensation for the sacrifice which the Danish Government is making in withdrawing from the Caribbean and letting the islanders have their own way. The money offer, tho liberal, alone was not sufficient to induce the Danes to surrender the islands, and it was not until the islanders assured them thru their local councils, their mass meetings and their delegates that they desired a separation that the Danish people voted by a large majority to consent to it.

All three of the parties concerned are satisfied with the change. The islanders part from Denmark with no hard feelings against their former rulers. They look forward to the American administration with an eagerness and confidence which should impress us with a sense of the responsibility we have assumed. We should immediately undertake the development of the islands, as the Danish West India companies and the Hamburg-American line proposed to do, but were not able to accomplish. An agricultural experiment station like that

at Porto Rico should be established on St. Croix. St. Thomas should be allowed to retain its free port privileges, for its harbor is its chief asset. A number of bright boys and girls should be picked out and sent at public expense to Tuskegee and other good American schools to be educated on condition that they return afterward to the islands, at least for a certain number of years, in order to teach their people the practical methods of agriculture and mechanic arts that they have learned. The land laws should be revised so that small holdings can be purchased on easy terms by those who want to work them. The officials appointed should be men of tact and experience, men who will respect the self-respect that is characteristic of the negroes of the Danish islands. We must not betray the trust and faith which they have put in us, nor give them any occasion to regret the change of allegiance.

TIME TO COME HOME

IT is high time the American army came out of Mexico. It is doing nothing there but costing money. When it went into Mexico it had a purpose, to catch Villa. That purpose has long since gone by the board. Villa pursues his lawless way unperturbed by the presence of the Pershing column. Indeed, it is asserted that its presence furnishes actual aid and comfort to him in his plans.

It looks as tho the only possible reason for keeping our soldiers down there longer was that Carranza does not want us to do it. This is unworthy of a self-respecting nation.

Let us come back from Chihuahua as we came back from Vera Cruz, admitting that we accomplished nothing by our impulsive act of quasi-war. It is clear that Carranza is not to be driven, by the continued presence of our soldiers, into signing a protocol he does not like.

We must try another tack. Those we have tried thus far have failed.

THE RELATIVE VALUE OF OUR RACIAL CONSTITUENTS

NATIONAL psychology is a fascinating but fallacious topic of discussion. None of us can resist the temptation to generalize on racial characteristics, but all of us can see the absurdity of some of the sweeping theories we hear. Professor Woolston, of the College of the City of New York, is trying to reduce these more or less vague impressions to a statistical basis and in the November number of the *American Journal of Sociology* has presented some interesting tables. He asked ten persons familiar with the ethnic elements of our population to arrange them in order according to their relative superiority in certain significant qualities, namely, physical vigor, intellectual ability, self-control, moral integrity, sympathy, coöperation, leadership, perseverance, efficiency and aspiration.

Summing up the ten ratings of these ten traits the rank of the racial groups comes out as follows: (1) Native White Americans, (2) Germans, (3) English, (4) Polish and Russian Hebrews, (5) Scandinavians, (6) Irish, (7) French Canadians, (8) Austrian Slavs, (9) South Italians, (10) Negroes. The native Americans stand first in intellectual ability, coöperation, leadership and efficiency; Germans first in self-control, moral integrity, and perseverance; Hebrews in aspiration; Scandinavians in physical vigor; and Irish in sympathy. If these ratings are accepted it can be calculated from the census figures of the racial constituents that the population of New York City stands lower than Chicago and that both have been lowered by recent immigration.

It is doubtful, of course, how much confidence should be placed in such subjective estimates. The result must be taken for just what it is, the consensus of well qualified opinion. The ten persons whose ratings are recorded are specified as "sociologists, psychologists, journalists and social workers," not all of the same race. Their agreement is tolerably close. As it works out mathematically it appears that the rank assigned by any individual to any race in regard to any of these traits is not likely to be much more than one unit above or below the average. The observers are more nearly unanimous about moral and intellectual qualities than about physical and social traits and they classed Italians and native white Americans more exactly than negroes and Irish. The reader may be interested to compare his own impressions with these.

THE ARTIST-NOVELIST

IT is barely ten years since we heard how Joe Vance's father "crocked the hinseck" with his thumbnail on the bar, and since then William De Morgan has introduced us to hundreds of individuals, equally interesting, and doing things quite as remarkable. His dramas are not enacted in front of a curtain of painted canvas like the interludes of a variety show. They have a background, filled with figures, all alive and in action, like the big scenes in the cinema. No human being is without interest to him. The cabman, the ticket seller, the errand boy, the waitress, Tuppenny Tube guard, we see them but a moment thru his eyes, but we would know them again anywhere. In his seven novels he has made us acquainted with a large part of the population of England, with some from India, America and the eighteenth century thrown in.

William De Morgan deserves a monument as the man who rescued the English novel from becoming merely a short story long drawn out. It was the day of thru-train fiction. Readers rushed thru a book to see how it came out, not what it contained. The end was what they wanted. When one is reading De Morgan the end is the last thing he wants. The novels of De Morgan are always long, but never too long.

De Morgan had made a high reputation as a potter. Then all of a sudden, at the age of sixty-seven, he set out and made a new and wider reputation as a writer. It is very encouraging to all of us who feel ourselves "getting along in years." In one passage in "Alice-for-Short" he seems to refer to his own experience. When Charley Heath complains that he had failed in life as an artist Alice says to him:

> How can you know whether you are successful or not at forty-one? How do you know you won't have a tremendous success all of a sudden? Yes—after another ten years, perhaps—but some time! And then twenty years of real, happy work. It has all been before, this sort of thing. Why not you?

Is there something about the artist's life that serves as training for novel writing? Du Maurier had reached the end of his career as a cartoonist when he astonished the world by his "Trilby." Du Maurier could never equal

"Trilby," while of De Morgan's later novels "Somehow Good," "Alice-for-Short," and "It Never Can Happen Again" at least are equal to "Joseph Vance." But they are all of them good, all of them full of wholesome human nature, and we are sorry that he did not live to be a hundred and keep on writing.

LEST WE FORGET

THE reading of old magazines is one of the best ways of acquiring an understanding of the events of today. We live swiftly, and our memories are short. It is difficult for us to realize what we were thinking, fearing, hoping and believing a few years ago unless we are reminded by a reference to the files. This is especially true now, for the appalling catastrophe of the Great War seems to have wiped clean the slate of our minds, and the wildest statements of ante-bellum sentiment pass unchallenged.

For instance, writers of apparent sincerity will nowadays tell us that before 1914 France had quite abandoned her hopes of wresting Alsace-Lorraine from Germany, that the Anglo-Franco-Russian *entente* was not provocative toward Germany, and that England did not apprehend a war with Germany and was not prepared for it. Now anyone who will look over the volumes of the European reviews at any time during the last ten years will see what an absurd misrepresentation this is. We happened the other day upon a stray copy of *The English Review*, that of June, 1910, which in itself contains explicit refutations of these three common assumptions. The issue is chiefly devoted to eulogies of King Edward VII, then just deceased. The leading article, in French, by Paul Bourget, is filled with contempt of everything German—including the German city of Chicago—and with praises of the late King for strengthening France against her natural enemy. We translate a few lines:

> We belong to a country that can neither genuinely accept an agreement to which she has been forced to consent in an hour of tragic necessity—nor tear it up. This is of course the treaty of Frankfort. . . . No courtesies extended from Berlin can prevail against the evidence written in our history and on our map. A France that does not have the Rhine for her frontier lives in a state of perpetual invasion. She does not hold the key to her own house. . . . The logic of such a situation is war.

Next comes an admirable article by Sidney Low, author of "The Governance of England," on "Kingship in England." In the midst of his eulogy of King Edward "the Peacemaker" he interjects, quite incongruously, his misgiving lest the cordial understanding that the late King had promoted between England and the Latin countries of the continent might after all lead to war rather than peace. Speaking of the way in which "the first gentleman in Europe, the glass of fashion and the recognized arbiter of taste, brought home to the general intelligence the idea that perpetual bickering was really bad form," he says:

> This was the King Edward atmosphere, the atmosphere in which it was possible for Lord Lansdowne, Sir Edward Grey and M. Delcassé to work and produce their effects. Whether those effects were always well directed, history will decide; there are two sides to the question, and it has yet to be seen whether it was the hight of wisdom to convey to the German people the impression that we were endeavoring to ring them in with a hostile network of alliances and understandings thru which they could only break *vi et armis*.

The next article in this copy of *The English Review*, an anonymous editorial on "The King," deals frankly with the German menace which England, ever since the beginning of the century, had been straining every nerve to meet. A few sentences show the viewpoint:

> For a decade now the growth of the German navy has been the decisive factor in our diplomacy and so upon the diplomacy of Europe. . . . So long as that force increases, so, automatically, no matter what it costs us, must our fleet increase, too. . . . Our income tax stands at the war level today, while in Germany taxation, direct and indirect, is even more intense. The good of mankind is sacrificed to the god of the prospective battle. We are haunted by its idea. It is the Moloch of civilization.

These three quotations taken from a single issue of a representative British review show us what was the state of public opinion prevailing in France and England four years before the war. They contain nothing which their authors would now be ashamed to have recalled to mind. On the contrary they may well take pride in having so fairly forecasted the trend of events. It is not a compliment to England to imply, as some of her present apologists do, that she was blind to the dangers of German power and that she took no precautions to meet it. The Great War did not come as a surprize to any reader of periodicals, altho up to the last moment many hoped it would be averted. It was not, as some say, "inevitable," nor was it, as others say, "unexpected."

THE PROGRESS OF PROHIBITION

IN affirming the constitutionality of the Webb-Kenyon law the United States Supreme Court has put into the hands of the prohibition forces a powerful weapon. To speak more exactly, the court has stripped from the liquor traffic its last defense against the will of the state. The Webb law is not a prohibition law. It prohibits nothing; it establishes no penalty for its violation. It merely declares unlawful the transportation of liquor in interstate commerce in violation of the laws of any state.

But that "merely" is much. The best defense of the liquor interests from the legal attack of state governments has been the plea of "interstate commerce." That broad defense was used with telling effect to nullify the power of the state's laws.

It can be so used no more. Congress has said it; the Supreme Court has confirmed it. Each state shall have precisely the measure of prohibition that it wants. No other state, of laxer moral fiber, shall be used as a strategic base for assaults upon the integrity of its laws.

The Supreme Court at the same time upheld the constitutionality of the West Virginia law prohibiting the importation of liquor for personal use. Backed by the Webb law—and supported by a sincere public purpose—such a law should establish prohibition that prohibits.

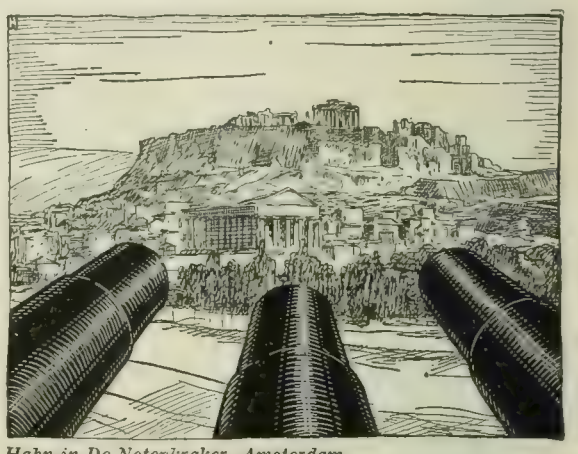
This dual action of the Supreme Court sweeps from the path of prohibition the last legal obstacle. Nothing remains to check its onward sweep but the residuum of unenlightened public opinion; and the public is rapidly achieving enlightenment.

Twenty-three states now have prohibition laws. Three more have elected state administrations pledged to prohibition legislation. Six more are ripe for the adoption of the reform.

Meanwhile, the resolution providing for a prohibition amendment to the Federal Constitution has been favorably reported in both houses of Congress. With more than half the states of the Union committed to the principle, even the miracle of national prohibition seems just beyond the horizon. The world does move.

THE STORY OF THE WEEK

Another German Raider



For the past month there has been much uneasiness over the failure of several steamers on South Atlantic routes to arrive at their destined ports, and it was suspected that a new German cruiser had run the British blockade and was preying on vessels in these waters. This suspicion was confirmed when the Japanese steamer "Hudson Maru" appeared at Pernambuco on January 15 with 237 men on board who had been taken from ships sunk or captured by a German raider. Of these 54 are Frenchmen, 13 Americans and 170 Englishmen. The name of the cruiser is not known, but she is thought to be the "Möwe," which last year made a similar raid on Atlantic shipping and sent the "Appam" into Norfolk as a prize. She is said to have her guns concealed by false works so she looks like an ordinary freighter. She ordinarily flies the British flag, but breaks out the German colors, in accordance with the rules of sea war, before opening the attack. The survivors report that the captain treated them with fairness and courtesy, and their only complaint is of poor food and close confinement below whenever the raider was overhauling another vessel. The captain told them that he did not intend to sink passenger ships, as he did not want to kill women and children. The raider is said to be armed with small cannon and torpedo tubes, and to carry on board three small submarines. She also carries a motion picture camera with which photographs were taken of the capture and sinking of her victims.

The Raider's Captures

The new German commerce destroyer is supposed to have disposed of about twenty ships so far, two of them French, one Norwegian and the rest British. The largest are the "Voltaire" of 8618 tons, which used to run on the Lamport and Holt line between New York and Buenos Aires, and the White Star freighter "Georgic" of 10,077 tons. Most, if not all, the ships sunk were carrying munitions or other contraband.

The British steamer "St. Theodore" was used as a prison ship to hold the crews of other captured vessels until the "Hudson Maru" was taken, when the prisoners were transferred to her and sent without any German guards to the Brazilian port. Later, it is said, the "St. Theodore" or some other vessel was converted into an auxiliary cruiser.

When the news from Pernambuco was received the British Admiralty announced that besides the crews landed at Pernambuco about 400 other seamen had been sent to parts unknown on board the British steamer "Yarrowdale." Whereupon the German Admiralty stated that the "Yarrowdale" had been in the German port of Swinemünde ever since December 31. She had run the British blockade in charge of a prize crew of sixteen Germans and she carried 469 prisoners, of whom 103 were of neutral nationality. These are also held as prisoners of war on the ground that "they had taken pay on armed enemy vessels." As three of them are Americans the United States may challenge the right of the Germans to hold them, even tho they were in foreign service. The "Yarrowdale" is worth about two million dollars and her cargo as much more. She was loaded chiefly with motor trucks, barbed wire, cartridges and meat. According to her owners, she was unarmed.

Hahn in De Notenkraker, Amsterdam

CIVILIZATION, OLD AND NEW

Balfour's Note

The new British Minister for Foreign Affairs, Arthur J. Balfour, has sent to the United States Government a note amplifying certain points of the recent joint note of the Allies. We call attention to the admirable wording of the communication in our editorial pages. Mr. Balfour first considers the question of why the Allies now demand the expulsion of the Turks from Europe, altho formerly the maintenance of the Turkish Empire was regarded as essential to the peace of Europe:

> The answer is that circumstances have completely changed. It is unnecessary to consider now whether the creation of a reformed Turkey, mediating between hostile races in the Near East, was a scheme which, had the Sultan been sincere and the powers united, could ever have been realized. It certainly cannot be realized now. The Turkey of "Union and Progress" is at least as barbarous and is far more aggressive than the Turkey of Sultan Abdul Hamid. In the hands of Germany it has ceased even in appearance to be a bulwark of peace, and is openly used as an instrument of conquest. Under German officers Turkish soldiers are now fighting in lands from which they had long been expelled, and a Turkish Government controlled, subsidized, and supported by Germany has been guilty of massacres in Armenia and Syria more horrible than any recorded in the history even of those unhappy countries. Evidently the interests of peace and the claims of nationality alike require that Turkish rule over alien races shall, if possible, be brought to an end, and we may hope that the expulsion of Turkey from Europe will contribute as much to the cause of peace as the restoration of Alsace-Lorraine to France, or Italia Irredenta to Italy, or any of the territorial changes indicated in the Allied note.

He then argues that a triumph of Germany would mean an encouragement of aggression and of treaty-breaking.

Other nations might be attacked and terrorized as Belgium was, and he adds, evidently as a warning to America, "lest the nations happily protected

SHORT RATIONS IN PARIS

Berlin invented the food cards and coal cards and various other cards for the necessities of life. But the other nations are following her example; the working people of Paris depend upon government orders for their food and fuel now

either by British fleets or by their own from German armies, should suppose themselves safe from German methods, the submarine has (within its limits) assiduously imitated the barbarous practises of the sister service." He then concludes:

Tho, therefore, the people of this country share to the full the desire of the President for peace, they do not believe peace can be durable if it be not based on the success of the Allied cause. For a durable peace can hardly be expected unless three conditions are fulfilled: The first is that existing causes of international unrest should be as far as possible removed or weakened; the second is that the aggressive aims and the unscrupulous methods of the Central Powers should fall into disrepute among their own peoples; the third is that behind international law and behind all treaty arrangements for preventing or limiting hostilities some form of international sanction should be devised which would give pause to the hardiest aggressor.

On the Sereth Line For the first time in many weeks no progress of the Teutonic forces is to be reported. The invading armies have for the present at least met with a definite check on the new line along the Sereth River. The Russians have been heavily reinforced by troops withdrawn from Galicia, so they are not only holding their own but have taken the offensive at several points and driven back the German outposts. The key point to their new position is, as we have previously explained, the fortress of Galatz, which stands in the angle between the Sereth and the Danube. A force of Turks advancing up the railroad from Braila took the station of Vadeni, six miles south of Galatz and on the other side of the Sereth from that city. This threatened to compel the evacuation of Galatz, for the German artillery placed here could throw their shells into its fortifications. But a sortie of the Russians from Galatz expelled the Turks and so relieved the danger from this quarter. At the other end of the line, however, the troops of the Archduke Joseph, debouching from the Carpathians thru the Oitoz Pass, have made some gains and now threaten the railroad from Galatz thru the Gyimes Pass into Hungary.

Mr. Vopicka, who occupies the peculiar position of American Minister to Bulgaria as well as Serbia and Rumania, was in Bucharest when the city was attacked by the Germans and Austrians. Most of the diplomatic corps withdrew with the court to Jassy, but he remained, together with the Dutch and Greek ministers, to take care of the extensive American interests in Rumania as well as those of the other neutrals which had been placed in his care. When the German authorities took charge of Bucharest they requested that he be transferred to another post on the ground of unneutral conduct. Mr. Vopicka, however, went to Berlin and made such a satisfactory explanation of his acts that the charges were withdrawn. But the German Government objects to his going at once to Jassy, as he has gained military information in his trip to Berlin. Minister Vopicka is a Czech and was born an Austrian subject.

The American Vice-Consul at Ploesti, Mr. Sadler, is accused of a more serious infraction of neutrality. He is the technical director of the Romano-America Works, belonging to the Standard Oil interests, and in this capacity assisted the British engineers in the destruction of the refineries and the firing of the tanks and wells in order to prevent the Germans from profiting by the conquest of the Ploesti district.

THE GREAT WAR

January 15—Japanese steamer "Hudson Maru" lands German prisoners at Pernambuco. Canadian volunteers number 380,000 since war began.

January 16—Greek Government finally concedes all demands of Allies. Swiss mobilize troops on frontier to meet threatened German invasion.

January 17—Balfour note of January 13 published. British gain on both sides of Ancre Creek.

January 18—Prince Niemoyovski appointed Viceroy of Poland.

January 19—Big munitions plant in London blows up, killing 300. "Yarrowdale" reported in German port.

January 20—Indecisive fighting about Riga. British fleet scouring Atlantic for German raider.

January 21—Germans take Nanesti on Sereth River. Heavy firing at Verdun.

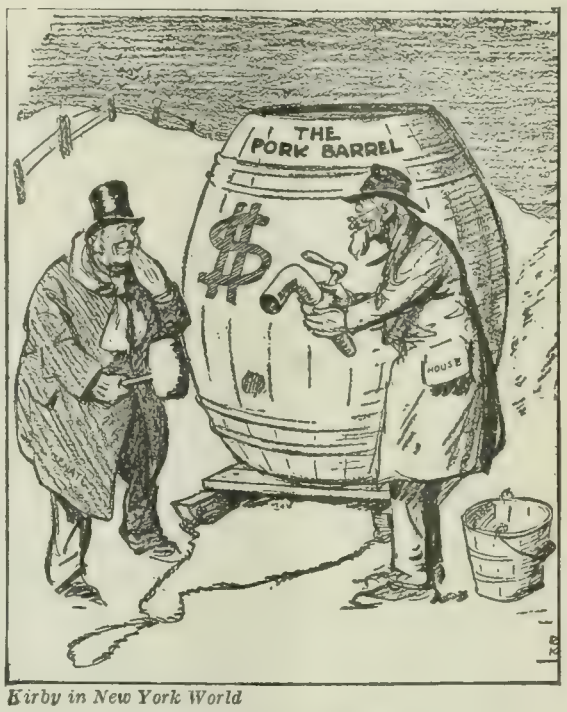
A BELGIAN BASIS OF GERMAN INDUSTRY

Under German direction the coke ovens of Belgium are being worked to their full capacity to make coal tar, a chemical necessity in Germany

Is Germany Starving? The prospect for peace and the probable course of the campaign depend less upon the military situation than upon the staying power of the belligerents and especially of Germany. But upon this last point we can find out little, for the British confiscate German newspapers and periodicals, including scientific reports, and even such as get smuggled thru contain only what the German censorship permits to be said. We are therefore dependent upon what the English papers are allowed to print of what little they are able to learn. Last winter they were full of rumors of a shortage of food in Germany, but as we now know these were grossly exaggerated, partly because of the natural desire to believe the enemy near the end of his rope, partly because Germany encouraged the spread of this impression in order that the British might think that the war was nearly over and so it was not necessary to volunteer.

But we cannot assume that this winter's reports of Germany's extremity are to be discounted on the same scale. The outside world is less credulous than it was in 1916, and now that England has conscription it is no longer in the interest of Germany to give the impression that she is nearing the end of her resources, but quite the contrary. It cannot, therefore, be doubted that Germany and Austria are seriously short of food and other necessities, such as leather, cotton, copper, rubber and coal, tho whether this shortage is so great as to interfere with the continuance of the campaign cannot be told. In a recent speech in the Prussian Diet urging the Government to make full use of the U-boats against British commerce regardless of American protests, Dr. Heydebrand said:



The town population are suffering grievously. It is sad to see how long women have to wait for a couple of potatoes and how they must pay absolutely exorbitant prices for the simplest of necessities.

Germany was carried thru last year on her potatoes, but this summer the crop was a failure. Instead of the fifty million tons of potatoes usually raised the harvest only yielded twenty million tons. Consequently, the Government has reduced the daily potato ration from one and a half pounds to three-quarters of a pound per person. The butter allowance is two ounces a week and hard to get. The allowance of war

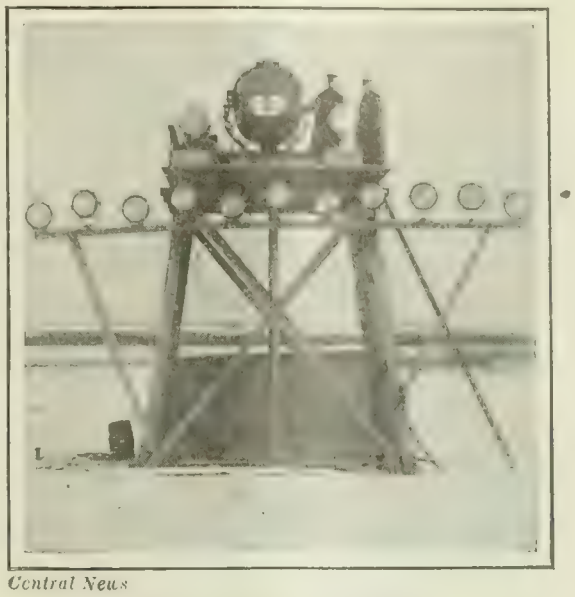
bread (wheat mixt with other grains or potatoes) is four pounds a week. Infants in most places are kept supplied with milk, but there is little left for others. The city of Mainz, which used to consume 40,000 quarts of milk a day, now has only 4000. Meat and eggs when obtainable are four times the ordinary price. Imported foods, such as rice, coffee and tea, are limited and expensive. Sugar is scarce, and in place of it coffee is sweetened with saccharine, a coal-tar product several hundred times sweeter than sugar, but of no nutritive value.

The expectation that the appointment last fall of Herr von Batocki as food dictator with almost unlimited powers would settle the difficulty has not been realized. His plan for the control of the food supply of the empire as a whole in order to secure an equitable distribution did not work out well, and he is now endeavoring to establish a regional system by which the farmers of a given locality shall be responsible for feeding the towns dependent upon them.

Danish Islands Now Ours On January 17, with the formal exchange of ratifications of the treaty of purchase between Secretary Lansing and the Danish Minister Constantin Brun, the Danish West Indies ceased to exist. But, while legal sovereignty over the islands is already ours, the United States will not enter into actual possession until the purchase price of $25,000,000 has been appropriated by Congress and paid to the Danish Government. In the meantime the present Danish Government will continue to manage the affairs of the islands, and a committee consisting of one representative from each country will work out the details of the transfer. The sale marks the end of half a century of negotiations between the United States and Denmark over the possession of the islands.

The form of government to be enjoyed by the recently acquired colonies has not yet been determined. The islanders desire home rule and full American citizenship. The Navy Department would like to have such a measure of control over the islands as it now enjoys over Guam, since the chief importance of the Danish West Indies to us is their strategic position as a naval base. The War Department may administer the islands thru the Insular Bureau, which has played an important part in the government of the Philippines. The form of government may be patterned after that of Porto Rico, Hawaii, the Philippines or the Canal Zone. Congress must discover not only the local constitution best adapted to the new colonies, but also an appropriate name for them. They can, of course, no longer bear the name "Danish" West Indies, and "American West Indies" would include Porto Rico. "Dewey Islands" has been suggested, altho the most famous exploits of the great American Admiral lay half a world distant from the Caribbean. Others propose the name "Lincoln Islands." If what is desired is to commemorate the Americans most active in attempts to purchase the islands they should bear the names of Grant, Seward, Roosevelt or Wilson.

What Congress Is Doing In order to meet the large deficit which the appropriations of Congress have made inevitable, the Democratic majority in the House of Representatives will introduce a new tax on excess profits. Private corporations and partnerships earning more than eight per cent of their capitalization in one year will be subject to the tax. Concerns whose annual profits are not more than five thousand dollars, incomes from personal professional services and agricultural profits will all be exempt. This tax is expected to yield the national government at least two hundred million dollars, and the balance of the deficit from ordinary expenditures will be met by an increase in the federal inheritance tax. Extraordinary expenditures, such as the Alaskan railroad, the purchase of the Danish West Indies, the cost of policing the Mexican border and the like, will be covered by a bond issue of $289,000,000. The new or increased taxes and the sale of bonds should bring in a total income of half a billion dollars or more.



By a vote of 234 to 92 the House of Representatives has approved the appropriation of $38,000,000 for public buildings thruout the country. Many Republicans supported the measure in spite of the criticism which has been directed against it as a piece of untimely extravagance. In the Senate the public buildings appropriation will encounter more opposition and delay, and it is believed that President Wilson will veto it if it should pass Congress in anything like its present form. Another measure that will probably receive the veto of the President is the immigration bill which passed the House of Representatives on January 16. The Senate Interstate Commerce Committee has decided by a vote of seven to three not to recommend any legislation forbidding strikes or lockouts during the investigation of a railroad labor dispute. This decision endangers an important part of the administration's railroad program.

Lawson Mentions Names Thomas W. Lawson, the leading witness in the present investigation into the alleged "leak" of diplomatic news into Wall Street, consented after much urging to mention some of the men whom he accuses of profiting by private information of President Wilson's peace move. He asked the Rules Committee of the House of Representatives which is conducting the investigation for permission to give his information to them secretly, but this was refused him. Among the men implicated by Lawson in the leak scandal are two members of the Cabinet, Secretary of State Robert Lansing and Secretary of the

Treasury William G. McAdoo; Secretary McAdoo's brother, Malcolm McAdoo; Joseph Tumulty, the President's personal secretary; Paul Warburg, of the Federal Reserve Board; Johann von Bernstorff, the German ambassador to the United States: W. W. Price, of *The Washington Star;* and certain bankers and business men, such as Archibald White, H. Pliny Fisk, Bernard Baruch, Stuart Gibboney and C. D. Barney & Co. Mr. Lawson also referred to a "Senator O" whose name he professed not to know. Most of the accused men have denied everything that Mr. Lawson has testified in regard to them. The House Rules Committee has retained Sherman L. Whipple, of Boston, as its counsel and will conduct public hearings at the New York Custom House.

Military Affairs The special commission of naval officers appointed by President Wilson to make recommendations to Congress has issued a preliminary report. The report advocates the retention of every existing navy yard and naval station on the ground that an inadequate number of naval bases in time of war might endanger the safety of the nation. New submarine bases and aviation stations are recommended and Congress is urged to remedy the present lack of facilities for building and handling ships in the navy yards. The report points out that any attempt to save money by reducing the effectiveness of any branch of the naval service at the present time would make impossible the preparedness policy of the administration. Corroborative testimony on this point was laid before the Naval Committee of the House of Representatives by the great shipbuilding companies with whom the Navy Department has been negotiating for the construction of battle cruisers. They all agreed that neither the Government nor any private builder could construct the ships within the limits of the appropriations made by Congress.

The Senate is expecting a hot contest over the confirmation of Dr. Cary T. Grayson as Medical Director of the Navy with the rank of Rear Admiral. Dr. Grayson's personal ability to fill the position for which the President nominated him is generally conceded, but the fact that he has for some time been President Wilson's personal physician and naval aid has given rise to

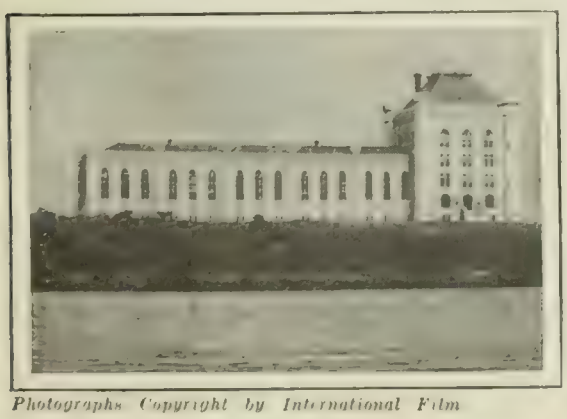
OUR COAST DEFENSE



Nowadays you've got to find the enemy first. Wherefore this monster searchlight of five hundred million candlepower, which the U. S. army board is testing at Hempstead, Long Island. Its purpose is to point out for attack any aeroplane within a radius of four miles

charges of undue favoritism, especially since there are many medical men in the service better entitled to the position on the ground of seniority. Critics of the proposed appointment say that there is no precedent for promoting a naval officer over the heads of so many officers outranking him in service.

The friends of universal military service are staking their hopes upon the bill fathered by Senator Chamberlain which provides for the military training of the young men of the entire nation and preliminary training for boys of school age. The bill may be favorably reported by the Senate Military Committee and even reach a discussion on the floor of the Senate before the end of the session, but the House of Representatives will probably have neither the time nor the inclination to consider it before March 4. A number of college men, pacifist propagandists and physicians have gone to Washington and spoken before the Senate Committee against the Chamberlain bill, either on the ground that universal service means militarism or else that military training is physically injurious to young boys.

Mexican Developments The Mexican-American Joint Commission has at last adjourned. As a result of its deliberations the American Commissioners, Secretary Lane, Judge Grey and John R. Mott, decided to recommend to President Wilson the withdrawal of the American army of occupation from Mexico, the sending of Henry P. Fletcher to Mexico City as duly accredited ambassador from this country, and that further negotiations with Mexico be carried on thru regular diplomatic channels. From some points of view the work of the Joint Commission was a total failure. The Mexican government failed to ratify the protocol which was the sole result of months of discussion on the part of the commissioners; no plan was secured for safeguarding the American border, and the internal problems of Mexico, which President Wilson desired to have considered by the commissioners, were left untouched. On the other hand, the Joint Commission tided over a dangerous crisis, and increased the confidence and good feeling of the two governments towards each other. Carranza appears to be now more friendly to the United States than he has been at any time since he established his de facto government and broke with Villa. The appointment of Juan Sanchez Azcona, a warm friend of the United States, as Carranza's minister of foreign affairs, is regarded as a happy omen for the future. Arrangements are already under way for withdrawing General Pershing's force from Mexico, and for greatly reducing the number of militia regiments now guarding the American frontier.

In spite of several reported defeats, Villa is again in the neighborhood of Chihuahua City, perhaps with a view to its recapture. Many believe that the rebels will make a simultaneous attack upon Chihuahua City and Juarez. Whether Villa is gaining or losing on the whole is absolutely impossible to determine, since the reports of recent battles and skirmishes are quite contradictory. Two thousand armed guards of the Guerrero district of the State of Chihuahua have volunteered for the

HE'S IN AGAIN

The former warden of Sing Sing Prison, Thomas Mott Osborne—alias Tom Brown, voluntary convict in the New York State prison—is now trying out conditions in the U. S. Naval prisons. At present he is serving in the prison ship "Southery," at the Portsmouth, New Hampshire, Navy Yard. Later he will be transferred to the Yard prison (the photograph at the left above). He is to advise the Secretary of the Navy as to advisable changes in the prison conditions

federal service under General Murguia. A relief party has rescued Lieutenant Colonel Harry G. Bishop and Lieutenant W. A. Robertson, aviators of the American army, who were lost for nine days in the inhospitable deserts of Sonora.

The constitutional convention at Queretaro is remaking the fundamental law of Mexico in a spirit of intense nationalism. Only native born Mexicans are to be permitted to serve in the Mexican congress. The oil lands of Mexico will probably be nationalized. Other land reforms proposed, but not as yet approved, would annul land purchases made during the Diaz regime, limit individual land holdings to 200 acres, restore old tribal lands which have been taken over by private individuals and companies, and permit the confiscation of unused agricultural lands. A beginning of political faction has appeared among the Constitutionalists. General Obregon and more than a hundred other civil and military officials of the present government have issued a proclamation against "the persistent continuation in office of public officials." This is interpreted as a move to bar First Chief Carranza from appearing as a candidate for President of Mexico at the coming elections.

The Bull Moose Rampant

The political alliance between the orthodox Republicans and the greater part of the National Progressive party, which came within a few votes of electing the Republican candidate for President last November, received its rudest shock with the recent selection of John T. Adams as vice-chairman of the Republican National Committee. It has been the custom in the Republican party for the chairman of the National Committee to appoint his own vice-chairman; but the majority of the executive committee, having no confidence in Chairman Willcox and considering him to blame for mismanaging the recent presidential campaign, decided to depart from precedent and choose the vice-chairman themselves. The committee also forced thru a rule that all bills of the National Committee must be approved by the vice-chairman and the treasurer. Mr. Adams, a conservative Republican from Iowa, received the vice-chairmanship, much to the disgust of George W. Perkins and Everett Colby, Progressive leaders allied with the Republican party. Mr. Perkins and Mr. Colby thereupon issued a public statement bitterly denouncing the Republican machine for its latest attempt to override Progressive sentiment. Colonel Roosevelt and other Progressive leaders exprest their approval of this protest. Some of the insurgent Republicans in Congress, however, dissent from the opinion that Mr. Adams can be considered in any way reactionary and express surprize at the attitude of Mr. Perkins and Mr. Colby. In the meantime, the "middle-of-the-road" Progressives who refused to support Mr. Hughes are planning a convention to reorganize the National Progressive party. The leaders in this movement

A REAL LIVE HEROINE

Tessie McNamara, telephone operator at the munition works of the Canadian Car and Foundry Company, saved the lives of nearly 1500 men by sticking to her job when the explosion last week set fire to the plant. Her warnings gave the employees time to get out of the sheds before the explosions spread, tho her own office was bombarded in the meantime

are John M. Parker, who ran for Vice-President on the anti-fusion Progressive ticket last autumn, Victor Murdock and Matthew Hale. The followers of these men are not at present numerous, but they will receive many recruits if dissatisfaction grows among the Progressive Republicans.

The North Dakota Revolution

In its issue of December 25, 1916, The Independent described the victory of the Farmers' Non-Partizan Political League in the North Dakota state election. Now that the new administration has taken office the plans of the league are being rapidly pushed to completion. Since so much of the legislation desired by the farmers is impossible under the present state constitution, the majority leaders in the legislature favor making the present legislature into a constitutional convention to enact and submit to the people a revised constitution without going to the expense and delay of a special election of delegates to a convention. It is not certain that this plan can secure the approval of the state Senate. Among the proposals emphasized in Governor Frazier's message were state owned terminal elevators, flour mills, packing plants, and cold storage plants. state hail insurance, exemption of farm improvements from taxation, and state inspection of rural credit banks. Politically the league favors the short ballot, four year terms for state officers, equal suffrage and the initiative, referendum and recall. The legislature has passed a presidential suffrage law, similar to that now existing in Illinois, giving women the vote for all offices not subject to the state constitution, and also a constitutional amendment to be submitted to the people giving women equal suffrage at all elections.

Rockefeller's Modern School

The General Education Board has decided to establish this fall a new experimental school under the auspices of Teachers' College, Columbia University. The new school will cover both the elementary and secondary grades, and will be supported in part by the Rockefeller Foundation and in part by moderate tuition fees. The policies and fundamental principles of the school have been largely worked out by Dr. Abraham Flexner, secretary of the Education Board. The curriculum is to be thoroly modernized; no subject which has no bearing upon the problems of modern life is to be retained for its own sake or because of its traditional prestige. Latin and Greek will be wholly left out, altho translations from the classics may find a place. Mathematics will be taught as an aid to business and vocational training, and to the study of the natural sciences, but not as an isolated subject, and the formal study of English grammar and similar abstract disciplines will be reduced to a minimum. On the other hand, much time will be given to concrete science, to the training of observation and manual skill, and to the practical mastery of modern languages. The founders and organizers of the school hope that it will not only be a success in itself, but become a model for the public school systems of America.

Prison Reform in New Jersey

The report of the Prison Labor Commission submitted to Governor Edge of New Jersey forecasts important reforms in the prison system of the state. The New Jersey penal system has for some time been subject to a good deal of public criticism, and charges of mismanagement and inadequate accommodation for prisoners have been freely made. The report asserted that contract labor existed in the state prison, in spite of the fact that this was illegal, and placed the blame for this evasion of the law upon the Board of Prison Inspectors. It was also discovered that the prison farm has been so inefficiently conducted that much of the food supply of the prisoners had to be bought in the market. The report recommended that prison labor be wholly for state use, that the same principle be applied to all charitable institutions supported by the state, that sufficient funds be appropriated to purchase raw materials cheaply for prison manufactures, and that prison industries be limited to the production of a few articles, and that more land be purchased for the prison farm. The warden of the state prison has also suggested many improvements in the management of the prison building, such as enlarged hospital accommodations, the segregation of mentally defective prisoners and an auditorium for religious services and general assemblies.

ADMIRAL DEWEY

OUR DEBT TO DEWEY

SIXTY-TWO years of faithful service. One day of world-famous achievement. Such was the career of George Dewey. The American people gave instant acclamation and all due honors for what he did upon the first of May, 1898, but it can never fully appreciate the quieter periods of thinking and working that preceded and succeeded that spectacular triumph. The life which ended in Washington on January 16 connected the United States that we know with a country which bore the same name but which is so different from ours that we can hardly conceive of it. Admiral Dewey's "Autobiography" might almost serve for a history of the American navy. As he says:

> My memory stretches from an apprenticeship under the veterans of the War of 1812, those heroes of the old sailing-frigates and ships of the line; from the earlier days of the steam-frigates thru the Civil War; from the period of inertia in the seventies, when our obsolete ships were the byword of the navies of the world, to the building of the ships of our new navy, which I was to give its first baptism of fire; and, finally, to my service as head of the general board of the navy since the Spanish war. . . . When I entered the Navy Academy, in 1854, Commodore Perry was just opening Japan to civilization; it was only six years since California had become United States territory; while there was as yet no transcontinental railroad.

He was born in Montpelier, Vermont, December 26, 1837, a descendant of old Huguenot stock, which has given to the United States an astonishingly large proportion of its scientists, authors, artists, philosophers and other men of note. He came of a fighting family. His great-grandfather fought at Lexington and a brother of his took part in the capture of Ticonderoga. At the age of twenty-four we find George Dewey on the hurricane deck of the "Mississippi," guiding that vessel in the dark up the river from which it was named, under the shells of the Confederate fleet and forts. Service under Farragut in the battle of New Orleans was good training for the man who was thirty-six years later to take his fleet, by night, into Manila Bay in the face of what the British officers in Hong Kong thought almost certain destruction.

It was an easy and a bloodless victory, but it was the result of long planning and careful preparation. As Hindenburg had studied the Mazurian swamps so Dewey had studied the Philippines. Twenty-five years before, when we came near to a war with Spain over the "Virginius," he was in command of the "Narragansett" in the Gulf of California. The other officers were wondering what would happen. Dewey knew. "If war with Spain is declared," he said, "the 'Narragansett' will take Manila."

In 1897, when again war was threatened with Spain, he secured, thru the aid of Roosevelt, then Assistant Secretary of the Navy, the command of the Asiatic squadron. Then he set to work to get his ships together, to get coal and food and to get ammunition, even half enough for one filling of his magazines. But finally, by persistence and push, he got them and reached Hong Kong in the nick of time, just one day after the "Maine" was blown up.

Dewey was ready. Who else was? Four months later our soldiers in Cuba and the United States were dying like flies for lack of adequate preparation and competent control. But during those anxious days when the cable was cut and Dewey had to handle single-handed Admiral Montojo, General Jaudenes, Admiral von Diedrich and Emilio Aguinaldo, he did it so skilfully as not to embarrass the future policy of the Washington Government. It was one of the critical periods in the history of the world. The islands of the Pacific were being divided up between the great European Powers and this was the last chance for America to acquire a foothold in the Far East. The integrity of China was threatened. Germany had just seized Kiao-Chau. England had just seized Wei-hai-wei. Russia was fortifying Port Arthur. In a few years the oldest and largest nation of the world would probably have been destroyed. But the advent of the Americans changed all that in an instant. The islands on which Spain was losing her grip fell mostly into our hands. Germany had to be content with our leavings, the Ladrones, which Japan has since wrested from her. China was saved, at least for a time, from further dismemberment and our open door policy accepted, at least verbally, by all the powers. The Filipinos were given a more beneficent administration than they had ever known before, and the United States acquired a land overflowing with oil and sweetness on the sunny side of the world. The old side-wheeler "Mississippi," with which Dewey ran the blockade at New Orleans, was the same as bore the first American flag into Japanese waters. The foundation of American power in the Pacific was laid when Commodore Perry entered the Gulf of Yeddo in 1854. It was established when Commodore Dewey entered Manila Bay in 1898.

ELBERT H. GARY

THE REPAIR OF HUMAN WASTAGE

BY DAVID STARR JORDAN

CHANCELLOR OF LELAND STANFORD JR. UNIVERSITY

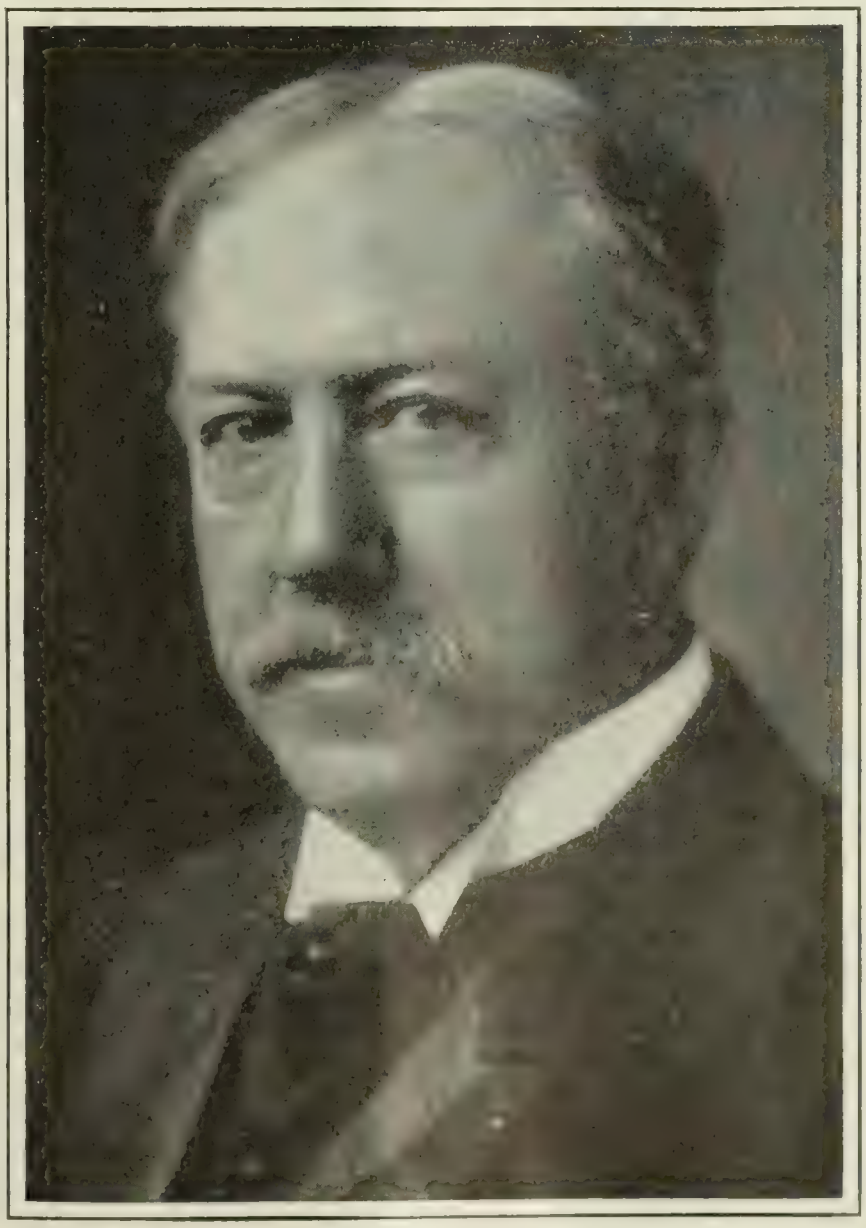
WE do not yet know how many human beings, men, women and children, have been destroyed or ruined in the Great War. The number runs high, into the millions already, ten, fifteen, twenty, and it may reach any maximum estimate we may make before the carnage is over.

To replace these losses is a problem of the statesmanship of the future. Replacement in quantity, restoration of numbers, is a matter relatively simple; renewal in quality is impossible. For the purposes of our discussion we may record all human destruction as wastage, waiving all question as to whether some part of the loss may be balanced by ultimate advantage to humanity in accession of harmony, happiness or efficiency to the people of Europe.

The malady of war attacks first the young men, chosen first for strength and endurance, those without blemish so far as may be, "the best that the nation can bring." The destruction and mutilation of the "picked and chosen" has no precedent in human history. And with each man who falls perishes also the great widening wedge, reaching forward thru history, of those who should have been his descendants. When a man "gives his life for his country," as the undiscriminating phrase goes, he gives far more than that, he contributes his share to the "slain unnumbered," the last and greatest loss of every war.

Besides the soldiers counted in millions, the war takes its quota of civilians, men and women slain along the road, refugees of every class and description, and with these it takes also those noble souls, men and women, unable to bear the awful strain of a topsy-turvy world. To these we may add those slain in barbarian massacres and thru the more discriminating torture which civilized nations apply to those who stand aloof from the mob. And war takes its toll of children, too, abandoned, trampled, starved in the rush of armies, or perishing thru lack of care.

We are told that in the war-swept districts of Poland there is scarcely a child left under eight years save the unwelcomed nurslings begotten by the lawless hosts.



And behind all this, and after the passing of the armies, over the womanhood of Europe spreads the dark shadow of enforced celibacy. It is a most unnatural world in which women hopelessly outnumber the men. This condition does not mean the freedom of women nor their release from any servitude men have thrust upon them. It involves loveless lonesomeness of great classes with no wholesome means of escape. It means that millions of women created for love and motherhood are debarred from the richest joys of life because their natural mates no longer exist.

For these forms of wastage there is no instant remedy. The dead cannot return, the living must fill the gaps as well as they can.

What of the future?

Here our problem divides the replacement in quality and the restoration in quantity. The wastage in mere numbers need not be permanent. In time of peace "to be fruitful and multiply" is the way of the human race. The growth of needs and luxuries, the relative emancipation, the increased care of the individual,—these and other influences, good and bad, tend to lower the civilized birth-rate.

But, as Benjamin Franklin once observed, "the hen-coop will always be full whatever the number or kind of the hens." In a generation or two a great nation will produce the requisite amount of "cannon fodder" if food for cannon be a national aim. In the character of the race,

DR. JORDAN

stocked by this primary aim, we have quite another problem.

The universal law of heredity is this: "Like the seed is the harvest." The weak, the infirm, the diseased, the feeble-minded, the majority of those that war cannot use, are on the whole less fertile, less enduring, than the type of men chosen for the work of the soldier.

But most nations hope to get immediate results. All war is lapse into barbarism, and the wastage of war invites the nations to lapse a little farther. Why not conscription of women for reproduction as well as of men for destruction?

There is certainly no moral difference, and perhaps no legal difference, between the two propositions.

If the conscription of women's bodies is an assault on individual freedom, so is the conscription of men's bodies, and of like degree and nature. In a state which holds its citizens by divine authority there can be no limit to conscription. The recent establishment of the "Home Army" in Germany establishes this principle.

And in some form or another, glossed over by religion or patriotism, some form of conscription of women is sure to appear. It may be disguised by rendering "legitimate" all children born out of wedlock, and their support thru "mothers' pensions." Wedlock as a secular function is merely the record by the state of the fact of union, and where regular marriage is impossible the state may satisfy itself with records of liaison with a pension adequate to ward off social ostracism. This would be semi-legalized concubinage and merely a device to conceal polygamy. But in an emasculated society some form of polygamy is the only resort as against the barrenness of a generation.

But the high-minded will refuse this resort, and the children born will demonstrate that "like the seed is the harvest." Yet the ranks will be filled in one way or another. The Germans will meet the facts as they are and systematize what they cannot avoid. In France the bars, never too high, will be quietly lowered, while England will be shocked and let Nature "muddle on," after her usual fashion.

The common run of people look to the state to set the moral pace and ask no deeper sanction than the state's tacit approval.

But by the prevalence of polygamy in whatever form "sweet love is slain," and womanly virtue is placed in jeopardy. As Emerson once observed, "Even the angels must respect conventionalities." And the conventions by which society has guarded its most precious jewel, the chastity of women, cannot be blindly discarded without a far-reaching heritage of evil.

Whatever the action of the state, the real problem of celibacy remains. The best of women, fitted for holy wifehood and motherhood, will not find refuge in concubinage, nor, for the most part, can they wed with those war leaves behind, nor with the wreckage war returns to society. The problem of enforced celibacy, largely insoluble in times of peace, becomes hopeless in the aftermath of war.

The expedient of "war brides" in temporary and loveless "war marriages" tried at the beginning of the war, yields little to the solution of the problem. A few thousand children, a few thousand mothers with unstable husbands or with none at all, add nothing to a nation's social balance.

The factor of immigration must not be overlooked. Wherever vacancies occur in the ranks of labor there are always people from countries still more oppressed who will come in to fill the vacancies. The ranks of unskilled labor in Germany have for years been swollen by immigrants from Poland and from Italy. If conscripts "in shining armor" continue to be the chief demand of European nations they can replenish the stock in a generation or two and governments will wink at any irregularity which contributes toward this happy achievement.

BUT if values, moral, mental and physical, are considered, the restoration in kind will be a long and wearisome process. Mr. Stead used to address the university students of Britain as "the picked half million," "those who command while the world must obey."

This class, the men of brains and power in Europe, have been destroyed in all the warring nations as never before. This deficiency will appear with the coming of the next generation, and will then be evident for a century. The slums of great cities are a product of war.

Those whom war cannot use slide down the line of least resistance into those centers of vice, alcoholism, disease and weakness we call the slums. The young men of the slums are wanted in no army. They are left in London to become the fathers of the future today as their fathers were held back from the Boer war to beget them, and as their grandfathers were kept out of the wars in India to build up these London slums.

Statistics of the armies of France and of Japan, and so far as available in other countries, show that twenty years after a war fertility falls off, stature is lowered, and there is a great increase in the number of those rejected from the service thru chronic or hereditary defects.

There is no truth in the common belief that the moral exaltation of wartime reappears in the heredity of children born in such periods of exaltation. Moreover there is no such exaltation so far as society in general is concerned. No doubt individuals are raised above themselves thru losses sustained in faith or hope. But the war periods as a whole are times of intolerance, greed, prejudice and hate. The words quoted by Kant from an unnamed Greek author still holds, "War creates more rascals than it kills," and in any event its incidents do not color the stream of heredity.

The effect of the reversal of selection produced by war, in lowering the physical standards of the people concerned, is so well understood and so well authenticated that it needs no further discussion here.

As in the long run the strong and the intelligent tend to outlast, in times of peace, the weak, the dissipated, and the lawless, we may expect after this war, as after other wars, a slow recovery.

But for a century to come the history of Europe will disclose its failure to conserve the best members of its population. If the British authorities were looking forward to intellectual and social supremacy fifty years hence instead of rushing the "picked half million" to slaughter in France and Flanders they would have said: "Not a scholar, not an athlete, not a university man, not a skilled laborer for the army. We need these men for home consumption. We are willing to accept a temporary political defeat for the sake of intellectual triumph in the future."

But governments are not run along biological lines, nor usually with an eye to any long future. Some day common sense, with its extension, human science, will expel medieval superstition in international affairs. With the passing of war we shall fear no more grotesque and brutal interference by the sanction of the state with the natural relations of men and women.

Stanford University, California

THE SEEKER AFTER GOD

BY HARRY KEMP

There was a dreamer, once, whose spirit trod
Unnumbered ways in thwarted search for God:
He stirred the dust on ancient books; he sought
For certain light in what the teachers taught;
He took his staff and went unto the Wise,
And deeper darkness fell about his eyes;
He lived a hermit and forebore his food,
And God left visitless his solitude;
He wrapped himself in prayer night after night,
And mocking demons danced across his sight:

Resigned at last to Him he could not find,
He turned again to live among mankind,—
And when from man he no more stood apart
God, on that instant, visited his heart!

BRITISH SOLDIERS WITH MACHINE GUNS PUT DOWN THE DUBLIN REBELLION

CONSCRIPTION IN IRELAND?

BY HANNA SHEEHY SKEFFINGTON

IRELAND, in the words of Viscount Grey at the beginning of the war, was the "one bright spot" in the British situation. Today it is the darkest. The reason of the change is obvious. Great Britain, instead of at the beginning of the war putting the Home Rule Act into operation, hung up the measure, thereby sowing the seeds of distrust which were to spring up later in the form of an armed rebellion. Since 1800, when our native Irish Parliament was taken away and we were incorporated with Great Britain by the Act of Union, the population of Ireland has steadily diminished. In 1800 we had 8,000,000, in 1900 we had slightly over 4,000,000 inhabitants; on the basis of the natural increase in population, we should now have 17,000,000. In the United States today there are over 16,000,000 of Irish descent and over 2,000,000 born Irish. In Canada, in Australia, in South Africa, in every country under the sun Irish men and women are found who were driven by economic pressure to leave their own land.

This policy up to the war in 1914 was actively encouraged by Great Britain, and if she suffers today from a shortage of Irishmen, whom the War Office admit to be the best "missile troops" in the world, her own policy is primarily to blame. It is estimated that 150,000 Irishmen have fought on the side of Great Britain in this war. About an equal number, 150,000 of eligible young men, still remain who could be available for military service. Great Britain, realizing the importance of this fighting material, now for the first time in history, instead of encouraging emigration as heretofore, actually refuses to allow Irishmen of military age to leave our shores.

Hitherto the compulsory Military Service Act has not been applied to Ireland. Other methods, economic and social pressure, have been resorted to in order to induce men to join the army "voluntarily," and at the beginning of the war the response from Ireland was, considering her history, surprizing. But, as the war went on, voluntary enlistment dwindled and now, since the rising in Easter Week, followed by the savage methods of repression, and by the various atrocities proved against the military, voluntary enlistment has come to a standstill, and England is getting no more men from Ireland.

Mrs. Skeffington writes with knowledge and with feeling about the troubles in Ireland, for her husband, F. Sheehy Skeffington, was one of the victims. Altho he took no part in the Dublin rising and, in fact, had tried to prevent it, he was taken prisoner and afterward shot without even a court-martial. The commission which investigated the case found his execution illegal and unjustifiable, but the British officer who ordered it was let off on the ground of mental incompetency. Mrs. Skeffington is now in this country lecturing. — THE EDITOR.

Bain

MRS. SKEFFINGTON AND HER SON

The Irish Volunteers and the Irish Citizen Army (miscalled "Sinn Fein"), who took up arms against the British, were not more than 1000 men all told, as against 20,000 troops (reinforced later by about 20,000 more), the proportion being 20 to 1 or later 40 to 1. Thruout the country, except in Enniscorthy (County Wexford) and in Galway there was no organized rising, owing to the fact that at the last moment word reached the local leaders that no rising would take place in Dublin, a message that caused them to abandon their plans. In South Africa, under De Wet, a serious uprising has taken place during the present war, yet De Wet and the various other insurgent leaders were spared and no executions took place, while the rank and file of those in arms were pardoned.

In Ireland sixteen men were tried by secret tribunals, the legality of which has since been questioned, and were shot forthwith. Thousands of men and hundreds of women who had no part in the rising from various districts thru the country—from Limerick, Cork, Wicklow, Westmeath, Donegal, Connemara—were arrested on "suspicion," and sent in cattle boats to England (one man from Kilkenny died on the way), where some of them still remain, never having been given even the pretense of a trial. Other leaders of public opinion in Ireland received life sentences—among them Professor John McNeill, who had actually taken steps to prevent the rising.

In addition to the number deported wholesale on flimsy police evidence, numbers of unarmed civilians and disarmed prisoners (who had surrendered) were murdered in Dublin by the military. Evidence of fourteen men so murdered and buried in the cellars of their homes in North King street, was testified to by a coroner's jury later, and men of the North Staffordshire regiment were proved to be responsible. But General Maxwell re-

fused to have the men identified or punished, and they are still in command in Dublin.

Ireland is at present under martial law, held by a very large military force, estimated at 80,000 and, tho Sir Bryan Mahon, a Catholic, has succeeded to General Maxwell, the military regime still supersedes the civil, and a system of military and police terrorism prevails. All meetings, excursions, football matches and public assemblies of every kind are forbidden, the censorship of the press is rigid, public opinion gagged and bound. The feeling of bitterness and resentment is strong thruout the land, and many people who had no sympathy with the rising have since become definitely hostile to the government.

Ireland, unlike Great Britain, has made no material gains by the war. There are but few munition factories in Dublin, Cork and Belfast, and these are trifling in size and give but little employment. The farmer, it is true, gets high prices for his cattle, but, as the cost of living and the price of feeding-stuffs have trebled, he cannot be considered prosperous. The high rates earned at munition and other war-works in Britain do not obtain in Ireland. Coal is so dear that the poor can no longer buy. Milk has risen by one-third in a few months, sugar is not only quadrupled in price, but is short in quantity (and sold only with tea in same amounts), while potatoes, the staple food of the population in the West and Northwest, owing to the shortage of crop and inflated prices, can no longer be obtained by the very poor. A potato riot occurred a few weeks ago in County Tipperary.

Ireland is, therefore, threatened with famine on the one hand and conscription on the other, death at home by starvation or in the trenches.

In addition, Ireland is paying an enormous war tax, out of all proportion to her capacity. In normal times she pays over 3,000,000 pounds sterling in excessive taxation. Since the war that sum has increased by nearly six and a half million pounds. The Irish people in the recent war budgets have had to pay extra on tea, sugar, beer, spirits, tobacco, etc., in addition to an income tax. In 1896 the taxation per head of the population amounted to one pound, fifteen shillings, in 1916 to four pounds, four shillings. Compared with other small nations, Ireland exceeds in revenue the independent kingdoms and republic of Bolivia, Bulgaria, Denmark, Greece, Norway, Rumania, Serbia, Switzerland. Ireland, therefore, instead of being a bankrupt country, dependent on Great Britain, is actually a loser financially by her connection with the Empire.

It is probable that Premier Lloyd George will at the opening of Parliament, as a result of a "deal," propose a settlement of the Irish "misunderstanding," as he calls it, by which in return for a scheme of self-government (which will include Ulster), Irishmen will be asked to submit to conscription. One of the measures in the general "reconciliation" will be a general amnesty of prisoners and other palliative proposals of the kind, such as, for instance, an Irish Lord Lieutenant, the establishment of a Royal Residence in Dublin and the discontinuance of martial law. Sir Edward Carson, after a well-played pretense of reluctance, will agree to the inclusion of Ulster, and the Irish Party will accept the measure as an answer to their demands.

But as far as the majority of the Irish people are concerned, the measure will have come, as usual, just too late. Ireland will not have conscription at any price, and the remnant of our people will rightly argue that, even in return for full Colonial Home Rule, the already depleted manhood of the country must not be sacrificed. If, therefore, conscription is imposed, the men of Ireland will resist both actively and passively, and will be shot at home rather than compelled to fight for England.

The alternative? The party that stands for Irish independence demands that Ireland be represented at the Peace Conference and that, when the claim of other small nations is being considered, that of Ireland should not be forgotten. True, there are many obstacles to the carrying thru of this proposal, but no suggested solution of the Irish difficulty is free from difficulty and peril. Over 800 years the British have tried in vain to govern or to eliminate the "native Irish." It hasn't yet occurred to them that a free and independent Ireland might, like Norway, be a better working proposition than a discontented, disaffected dependency, administered by martial law and armed force.

New York City

THE EXHAUSTION OF CHECKERS

BY WINTHROP D. LANE

CHECKERS has been played for hundreds if not thousands of years, yet today it is a science approaching exhaustion. Checkers is a science in the sense that any intellectual occupation, involving analysis, collection and arrangement of facts, and formulation of laws, is a science. Analysis takes the form of solving problems or ascertaining completely the effect of any given move. Checker facts are collected by tabulating the results of analysis and showing the consequences of variations. Laws are discovered by demonstrating such universal truths as this: *Three kings can always beat two kings if each of the two occupies a double corner.*

Many people, of course, suppose checkers to be a child's game. They do not know that men have given their lives to its study, as they have to the study of chess and whist, and that over two hundred books have been published upon it. The great Samuel Johnson wrote the dedication to the first book on checkers printed in English. Edgar Allan Poe has paid a tribute to the analytical power required by the game and has declared that "the higher powers of the reflective intellect are more decidedly and more usefully tasked by the unostentatious game of draughts than by all the elaborate frivolity of chess."

Nevertheless, as a science checkers is on its deathbed. This means that before long every situation capable of arising will have been studied to its conclusion and that the results will have been set down in black and white. No variation will remain unanalyzed, no problem unsolved. He who masters all this knowledge will be unbeatable.

The process of exhaustion has already overtaken, or nearly overtaken, a few of the standard openings. Today experts play the "Glasgow," "Old Fourteenth," "Single Corner" and other openings arising from the initial move 11 to 15, merely for a rest; they know practically all there is to know about them; when such an opening is started a draw is the inevitable result.

To put a stop to this the two-move restriction was introduced. Players were compelled to ballot for openings and each played the black side of whatever opening was drawn.

By this device players were forced away from old familiar ground. They had to master lines hitherto unknown. Analysis took new leads and the literature of the game increased. Now many of the new lines are becoming as well-known as the old. A player in England has proposed the three-move restriction, thereby increasing the number of openings from 47 to 218.

Obviously the process here described can have but one end—sheer exhaustion. The attainment of that goal is being hastened by the constant publication of checker analysis and games. At least a score of papers in this country alone carry checker columns. One or two magazines are devoted exclusively to the game.

Exhaustion will not mean, of course, that checkers will cease to be played. Even when all is known, years will be required to master it. Persons who play only for fun will be unaffected by the vast body of knowledge that has been acquired.

Even experts, too, will find a way out. Some one will undoubtedly come along with a change in the fundamental rules to propose, such as increasing the size of the board or giving different values to the pieces. The whole process will then begin over again.

The inventions of John Hayes Hammond for wireless control of boats and torpedoes have added much to the coast defense plans of the United States. The latest is a torpedo control from an aeroplane, instead of from the shore. Just behind the operator's seat is a mechanism by which he can direct the course of a torpedo sent from a fort or a distant ship

COMMERCE AND OUR FARMS

BY ARCHER WALL DOUGLAS

VICE-PRESIDENT OF THE SIMMONS HARDWARE COMPANY OF ST. LOUIS

THERE was never a time in the commercial history of this country when the business world needed more foresight into the future; and likewise, never a time when such prophetic vision was so difficult. The whole trouble is summed up in the statement that we are facing unknown conditions, with neither precedent nor analogy to guide us. What will be the industrial and social conditions of Europe after the war, and what will be their reactions upon us are most vital and portentous matters, but speculation concerning them is at best merely interesting mental exercize, with no further tangible value. There are, however, one or two things of which we may be reasonably sure. The present time is marked by abnormally high prices in all commodities, caused in large measure, both directly and indirectly, by an equally abnormal demand from abroad, not alone from Europe, but from other countries of the world, too, because of the temporary withdrawal from the export trade of practically all European countries. We also know that the story of the peace which followed the Napoleonic wars, and our own Civil War, was a sudden cessation of the unnatural demand created by these wars, and equally by a steady decline in those inflated prices which in turn were caused by this same abnormal demand.

THERE is a prevailing delusion perpetuated in many text books, that great and extended wars, because of their unprecedented cost, naturally inflate the currency and thus cause a great rise in prices. Any student who has investigated the subject knows that this is only a partial truth at best, and distinctly untrue at this particular moment. There is no inflation today in regular business, whatever there may be in a gambling Wall Street market, and all the vast store of gold we have accumulated will be utterly unable to prevent that decline in prices which seems one of the unavoidable events that will mark the coming of peace in Europe. One has only to travel among merchants, wholesale and retail, to realize how firmly fixed is this conviction in the general mind. Other than the usual exercize of common sense and caution, there is practically nothing that the American world of business can do to overcome and neutralize that readjustment crisis which awaits us, so far as regards our reactions to European results.

There are, however, two sources of demand where much can be done to provide sustaining strength and support in the future. One, our foreign trade, is in a large measure a comparatively new and untried field in many countries, despite the long time we have been endeavoring to exploit it. That we have made great headway since the beginning of the European war is largely due to that stress of necessity which is usually the forerunner and cause of great economic movements. We have gained much trade since the first day of August, 1914, simply because Europe was withdrawn as a source of supply. But in that brief space we have done more constructive work in export ways than ever before in a similar period. We have realized first of all more keenly than ever before the things that we lack to make our export business an enduring proposition. We know now full well that we must do business with foreign people largely according to their ways and methods, and not altogether after our own fashion. We are conscious that we must give them the goods in the patterns and designs they desire, and not as we think they should have them. We are adapting our credit methods, as far as safe, to those to which they have always been accustomed. Most important of all we are making it possible for them to deal with us in American instead of European exchange. We have not yet done that other equally indispensable thing of arranging to take largely of their staple exports in principal payment of the manufactured articles we send them. Not yet have we necessary carrying sea bottoms, sure and regular, for exchange of commodities. We are in effect in the process of solving the various somewhat complex problems, which always attend the preliminary steps of a permanent exchange of commodities between countries far apart.

WHATEVER may be the difficulties which await us in our foreign trade, there can be but little question but that we are entering into a period of steadily growing expansion in that great field of commercial endeavor. Nor shall we depend principally upon manufacturing for the needed volume of exports. There is a general impression, fostered by those who should know better, that our exports of agricultural products are on the wane, and that we shall need them all more and more in the future for our own consumption. This belief is distinctly erroneous, since it finds no support in facts. An intelligent and careful analysis of the statistics for the last half century, too lengthy for setting forth here, indicates clearly that as a whole there are no tendencies which can be said to cover the entire field of agricultural products, that they vary much with individual articles and classes, but there is no reason to believe that our exports of food products will not continue as one of the important factors in our foreign trade.

Our chief support is the fast spreading realization that agriculture is the most important and fundamental business in all the world, and the source and foundation of any enduring prosperity. Because of this conviction, there goes on slowly but ceaselessly a steady addition to the permanent wealth of the nation in the growth and progress of agricultural development. In the digging of ore from our mines, in the deforestation of our timbered lands, and in the exhaustion of our fisheries, we are but depleting our capital, while in agriculture each year we actually create new wealth from the elements of the earth and the air that before were not available for man's uses. Each development in agriculture marks a new source of wealth to our prosperity and permanent well being. In the semi-arid regions of the Great Plains States, especially in Western Kansas, Western Nebraska, Western Oklahoma and Northern Texas, man has finally learned to adapt himself to hostile climatic conditions by means of dry farming methods, and the planting of drought resisting plants. In such sections there is now permanent farming and steady commercial life, where formerly all ventures were mere gambles with fate in the shape of nature that was by turns cruel and kind. Further westward in the almost rainless districts, where once was only the hopeless and forbidding desert, there is growing up an empire of irrigation, in products and in wealth like unto the ancient civilizations of Egypt and Assyria.

THE Imperial Valley of Southern California, not so long ago, knew only cactus and sage bush, tarantulas and rattlesnakes, as its products. In 1916 it shipped away 100,000 bales of cotton, 10,000 carloads of cantaloupes, and many other products beside. Each new irrigation project, such as the Great Salt River Dam near Phoenix, Arizona, which irrigates 200,000 acres, adds to the sum of our naturally productive resources. Less than a score of years ago, South Texas, in the Brownsville and Laredo districts, was a wilderness of chapparal thickets. Today there goes North each year many thousand carloads of early vegetables from these redeemed waste lands.

All down the Mississippi River Valley and thruout the South are millions of acres of malaria-breeding swamps covering the richest alluvial lands in the world. Each year their area is being circumscribed and malaria banished by drainage reclamation projects. In Southeast Missouri the Little River drainage project will soon place upon the market for homeseekers and farmers over half a million acres of drained swamp lands that formerly were not only worthless but an actual menace to the public health. Much of extreme Southeast Missouri was once merely

marsh lands, while today it is the home of a thriving, healthy, wealth producing population. Equal in importance with these new wealth creating factors is the growing productiveness of the farms and fields, which have been tilled for many generations. Slowly, but surely, the endless experience of ages of agriculture is adding the results of modern science study and experimentation to its daily practises. The younger generations of trained and thinking students, who go from the State Agricultural Colleges back to the farm, carry with them the promise of farming methods which will be equal to all the demands which we may make upon them. These same students, both boys and girls, have a broader vision of sane and progressive rural life than was vouchsafed to their forbears.

The dealers in bath room fixtures, plumbing supplies, gasoline engines and wire fly screens testify alike to the increasing demands by the farmers for the things of sanitation and of comfort. The automobile is everywhere, and it carries with it a new social feeling and contact between the small town and the countryside.

So the story of rural community life is spreading thruout the nation as the great problem, whose solution means increased attractiveness and productiveness in the countryside. Extended definite results are already showing. There is slowly increasing production per acre in many sections. Diversification of crops is already nation-wide. Fruit culture and truck gardens for commercial purpose are businesslike propositions, not only of production, but of marketing. There is growing control of those epidemics of animal diseases, which cost the farmer so many millions of dollars. In general, the live stock of the country is increasing after many years of steady declines.

Beyond the wealth productive enterprises in our own country lie the cause and inspiration of it all; the growing intelligence and initiative of the people. Local ambition and local pride in the small towns and farms of the country are more widespread than ever before. There is a growing desire for all those things of opportunity and advancement, which make life worth while. Thruout the country districts there is insistent demand for more and better schools and for constant and reliable means of communication. In the last analysis, intelligence and education are even greater commercial assets than material resources. It is upon this awakened spirit of desire for the better and progressive things of life that we must chiefly rely in the uncertain days which await us. Nor shall we lean upon a broken reed, for the future commercial conflicts between nations will be decided not by low wages and antiquated methods, but by that effcient and constructive enterprise which is the highest expression of intelligent, educated democracy.

St. Louis, Missouri

New Dress Cottons and Linens for Season 1917

Our collection of imported fabrics equals if it does not surpass anything heretofore shown in this country, being the result of a remarkably successful buying trip in Europe last summer.

We will also show a choice range of American-made materials of the finer grades.

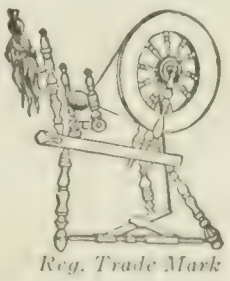
The following will be favorites:

Imported Swiss and French Organdy—for Waists or entire Dresses. Organdies will play a most important part. They come in plain shades, Stripes, Checks, Plaids and Dots.

Handkerchief Linens, in plain colors, Checks, Spots of various sizes, novelties in Stripes, etc., will be very desirable.

French and English Novelty Cottons. Sheer, filmy fabrics, printed or woven Voiles, Marquisettes, in Stripes, Checks and Plaids in an almost endless variety. Voiles and Batiste in plain shades.

White Fabrics. New weaves in Skirtings, Piques, Corduroy, Gabardines, Voiles, Swisses, Dimities, Oxfords and Shirtings, as well as Voiles, Transparent Organdies, French Lawns and Batiste.



Dress Linens, White and colors. Linen will be most popular for Dresses and Suits. A large variety, in all the popular shades, of "Non-Krush," "Cossack Linen," "Linen Eponge," "Crepe Linen" and French and Irish Linens.

Samples of any of these lines except bordered materials, mailed upon request

THAT PLAGIARIZED POEM

Our worst suspicions are confirmed. The poem entitled "A Leap Year Tragedy," which we published in our last leap year issue, December 25, 1916, is not in the least original. Somehow we suspected that as soon as we read the first stanza:

Up from the meadows, rich with corn,
A lady stepped with golden hair,
This was the maiden all forlorn
(A pagan nurtured in a creed outworn)
But the fool, he called her his Lady Fair.

Our readers were quick to respond to our appeal for aid in the identification of the purloined property and spent many laborious, but we trust not unprofitable hours in the search for the original owners. The contributor of this composite poem, Miss Sophie G. Keenan, has, without the least contrition, supplied us with a complete list of the authors of the borrowed lines.

A LEAP YEAR TRAGEDY.

Line.	Author.	Poem.
1.	Whittier	Barbara Frietchie
2.	Tasso	Jerusalem Delivered
3.	Mother Goose	The House That Jack Built
4.	Wordsworth,	The World Is Too Much with Us
5.	Kipling	The Vampire
6.	T. O. Davis	The Battle of Fontenoy
7.	Tennyson	Lady Clare
8.	Percy's Reliques	The Friar of Orders Gray
9.	Lewis Carroll	Jabberwocky
10.	Shakespeare	Song from As You Like It
11.	Longfellow	Courtship of Miles Standish
12.	Longfellow	Saga of King Olaf

28.	Coleridge	The Ancient Mariner
29.	Mother Goose	Tom, Tom, the Piper's Son
30.	Blessed Thomas of Celano	Dies Iræ. (From Scott's Lay of the Last Minstrel.)

With this list our readers can compare their own and credit themselves with the proper grade. The best paper we have received comes, as we might have expected, from Chautauqua, New York, and was written by Miss Eddice Barrett. She correctly identified 24 out of the 30 lines. Next to her as a literary detective stands Miss Leila T. Johnson of Baraboo, Wisconsin, who guessed 21 of the lines. Evidently these ladies are fond of reading poetry and have good memories.

It is interesting to note that nobody got line fifteen, from Montgomery, and everybody got line one from Whittier. One correspondent sent in that line and no other because he had learned "Barbara Frietchie" when he was a boy over fifty years ago. Looking over the papers we are struck by the influence of the old Friday afternoon literary exercizes and we wonder if there is anything in the modern school so effective in giving the rising generation a knowledge of poetry.

We have no space to quote from the letters, but we will let North Dakota and Pennsylvania speak for the rest:

Dies irae, dies illa!
When we capture Sophie G.
Who stole the maiden all forlorn,
Who milked the cow with the crumpled horn.

Let us then be up and doing;
Let us lead her to her fate;
Let us follow, still pursuing,
Catch her ere she pulls her freight.
Yours in the name of Justice,
N. B. DEXTER

Food control in our restaurants will be a matter of "course."—*London Opinion.*

Hackney Workhouse officers are to be allowed to have half a crown's worth of extra rations. They have practically decided to club together and buy an egg.—*Punch.*

News that the "Deutschland" brought a cargo worth $10,000,000 indicates that the Germans must have sunk a lot of money in the "Bremen."—*Philadelphia North American.*

"I cannot entertain the idea of marrying you," she replied coldly. "My heart is with our brave boys at the front."
"It's a good thing for the boys," he replied, drawing himself up. "They need all the ice they can get on the Mexican border."—*New York Times.*

The girl was seated at dinner next to a gentleman whose name she had not caught: and the conversation after a while reached this stage:
"Do you ever talk in your sleep?" asked the girl.
"No," was the reply, "but I often talk in other people's. I am the vicar of a London church, you know."—*London Opinion.*

Once upon a time there was a little boy who asked his father if Nero was a bad man.
"Thoroly bad," said his father.
Once upon a time, many years later, there was another little boy who asked *his* father if Nero was a bad man.
"I don't know that one should exactly say that," replied his father; "we ought not to be quite so sweeping. But he certainly had his less felicitous moments."—*Cloud and Silver.*

A professor at a Western engineering college says that but for the occasional innovations in the applications of learning, such as the following, for instance, he would find it difficult to judge of his usefulness.
"What steps would you take in determining the hight of a building, using an aneroid barometer?" was the question asked upon an examination paper.
One youthful aspirant answered, "I would lower the barometer by a string and measure the string."—*Illustrated World.*

The banning by *Blighty* of Rudyard Kipling's new poem, "The Sons of the Suburbs," because of a reference therein to a clergyman's daughter who takes to gin, recalls what, to my mind, is the best of all the stories told of Kipling. The other character in it is Edward Bok, the editor of *The Ladies' Home Journal.* Kipling's "Just-So Stories" were written for this periodical, one of whose rather pernickity but absolutely adamantine rules is that there shall be no reference to alcoholic liquors in its columns. In one of the "Just-So Stories" there was a mention of wine! Of course, this could not pass, and Bok cabled to Kipling, mentioning the rule, and asking what he should substitute for "wine." Kipling's reply was characteristic. It was "Substitute Mellin's Food!" — *London Opinion.*

Safety for Over Half a Billion Passengers

PENNSYLVANIA SYSTEM

The Steel Car Route

For years the Pennsylvania Railroad System has been conducting an energetic campaign of safety.

Only all-steel cars have been built. Efficiency tests have been established; safety-first expositions have been held for the education and instruction of trainmen; safety committees have been organized; and over 120,000 safety text-books have been distributed to employees.

It is the logical result of this safety movement that during the past three years over half a billion passengers—553,890,063—more than five times the total population of the United States—have been carried over the lines of the Pennsylvania Railroad System without the loss of the life of a single passenger in a train accident. On the Pennsylvania Railroad east of Pittsburgh a perfect record for four years has been made, during which a total of 616,626,957 passengers were safely carried.

With the continued co-operation of our faithful employees, to whom great credit is due, we hope to maintain the record we have established.

PENNSYLVANIA RAILROAD

The Standard Railroad of the World

A New Book on Headaches

Headaches are "only symptoms" but—they may indicate serious internal conditions This is why they should have attention. You should not neglect your headaches—nor try to get rid of them by temporary means. If you do, results may be serious. This is fully explained in a new book "Headaches and Their Prevention," written by an eminent Neurologist, after nearly forty years' experience in observing, treating and prescribing for cases in which headaches have been important symptoms. In this book you will find full and complete information about all kinds of headaches, what causes them and how such causes may be removed. In plain, simple, understandable language, the basic conditions which lead to headaches are set forth and you are informed as to how you may rid yourself of headache annoyances and the dangers they may indicate. The measures recommended are easy to adopt—understandable, rational, scientific and effective. No drugs. A little exercise but no tiresome regime. A little care about diet but few restrictions. Care about rest, sleep and divisions of your working hours. Not a large book but *worth its weight in gold to the headache sufferer.* Price only $1.25—postage 15c. additional. You take no risk, for, if you are not entirely satisfied with the book, it may be returned in five days for prompt refund. Send your order today and learn how to rid yourself forever of headache suffering. Address—

GOOD HEALTH PUBLISHING COMPANY, 301 W. Main Street, Battle Creek, Mich.

Bring the Blue-Birds

$5 —*for Happiness!*

$5. For This 4-Room Blue-Bird House

Solid Oak Cypress Shingles, Copper Coping. Blue birds raise 2 or 3 broods a year—but never in the same nest. They move from room to room in this 4-room Dodson House. [10]

A Dodson House, built by the "man the birds love" will bring a family of these "happiness" birds to live in your yard. Mr. Dodson has spent 22 years learning how to build houses that the *birds like*. Bird Lodge, his beautiful home, is thronged with native birds. Wrens, bluebirds, martins, each must have a special style house. Prices range from $1.50 to $12. Buy now and let your houses "weather." The birds like them better.

BIRD BOOK FREE

—Send for Mr. Dodson's book which tells how to win bird friends to your garden. Describes houses, bird baths, winter feeding devices, with prices. All are patented. Sent free with a beautiful bird picture in colors, worthy of framing. Write to

JOSEPH H. DODSON, of Bird Lodge

Director, American Audubon Society

762 Harrison Avenue KANKAKEE, ILL.

Insurance

Conducted by

W. E. UNDERWOOD

FIRE INSURANCE RATE-MAKING IN IOWA

There comes from the Iowa Insurance Department a novel official document. Insurance people are accustomed to reports of investigations and financial examinations of insurance companies and of practises indulged in by them collectively or individually; but here we have an exposition of the workings of a fire insurance rate-making organization. And, what should be gratifying as well to the premium-payers of Iowa as to the companies with which they do business, the Insurance Department, as the result of its investigation of the operations of the Iowa Rating Bureau, feels thoroly warranted in approving its work.

By way of explanation, it is necessary for the reader to understand that the legislature of Iowa settled the agitation for rate-making by the state, or under its supervision, by providing for the organization of rating bureaus and requiring every fire insurance company transacting business there to be a member of one or more; and endowing the Insurance Department with power to supervise such bureaus. The bureau just reported on is one of twelve in the state, all conducted on what the Insurance Commissioner describes as the mutual plan, which means that each company pays its just share of the expense as calculated against premium receipts.

The report contains a brief but easily understood description of the system used in inspecting and rating risks which, if space permitted, would be reproduced here. As should be the case with all such systems, "a commendable feature of this one," says the Insurance Commissioner, "lies in the fact that each property, by its own construction determines its own rate and that by the charge for defective conditions found and the removal of such charge when the conditions are remedied." Continuing, the Insurance Commissioner justly observes: "The incentive to better construction is not limited alone to that of greater individual and public safety, but means a reduction in the cost of insurance."

One is struck on reading this report with the accord existing between the premium payers of Iowa, its government and the companies and, by contrast, with the conditions in South Carolina, where the foolish attempt to deprive the companies of all their rights resulted in their withdrawal last April. In Iowa a plan has been adopted which makes coöperation between all interests possible. One feature of this is reflected from the following paragraph which

appeared in the Iowa Commissioner's report:

"The correspondence file of the bureau discloses that property owners of the state have sought advice and assistance with respect to procedure necessary to reduce a rate. There is evidence that some has been given in unstinted measure. Pamphlets and literature setting forth standards of construction and methods of reducing hazards are on hand for distribution and expert advice and criticism are frequently given the insured with the publication of a rate. This feature of the bureau's work cannot be too highly commended and encouraged, as it forms a direct means to reduce the existing fire hazard of the state and the consequent large amount of losses."

A. Z. D., Wahoo, Neb.—The Postal Life Insurance Company of New York is an old line legal reserve company, with $100,000 capital, and, on January 1, 1916 (which are the latest figures available), assets of $9,449,689; liabilities, $9,211,521, and a surplus, including the capital of $238,168. This company employs no agents, soliciting its business through advertising and the mails. The bulk of its assets and outstanding insurance were acquired from the Provident Savings Life Assurance Society of New York, which retired from business late in 1910. An idea of the amounts taken over by the Postal under this arrangement may be gained by comparing its assets and insurance on January 1, 1910, with the same items one year later. The figures at the beginning of 1910 were: Assets, $548,233; insurance in force, $4,170,254. At the end of the year, after the Provident business was assumed, the figures were: Assets, $10,854,272; insurance in force, $62,708,961. From which it would appear that the gains due to the acquisition of the Provident holdings were, in round numbers: Assets, $10,000,000; insurance, $58,000,000. These figures have steadily declined every year since, the assets, as already noted, being $9,211,521 at the beginning of 1916; the total insurance in force on that date being $41,093,655.

Altho the Postal is not at any expense for the services of agents, an examination of its premium charges and dividend abatements to policyholders does not demonstrate that its net cost to the latter is favorably affected thereby. I find that the net cost per $1000 or Ordinary Life, at age 35, in the Postal for five years is $121.42. The same policy, amount, age and period in the following agency companies, taken at random, was, respectively: Mutual Life, $111.56; Equitable of New York, $116.74; New York Life, $118.28; Northwestern Mutual, $107.19; Massachusetts Mutual, $109.64; Mutual Benefit, $107.47; Connecticut Mutual, $112.81; Penn Mutual, $110.11. The Presbyterian Ministers' Fund, like the Postal, employs no agents. Its net cost during the same five-year period, for the same policy and age, was $101.23. I have quoted these figures from an impartial independent source: "Best's Policy Analyses and Dividend Illustration" (edition of 1916).

R. S. C., Grove City, Pa.—The Pacific Mutual is fifty years old, is in fine financial condition, has a good reputation for ability of management and treatment of policyholders. For persons desiring the combination protection of life, accident and sickness insurance, its Multiple Protection policy is an excellent contract. This is all in one policy. Your second question includes the purchase of two policies: one granting accident and sickness in the Travelers; the other, life insurance in the Presbyterian Ministers. Both of the last named companies are excellent. It now becomes a matter of cost. As to the accident and sickness end you can get that at varying expense and you must decide the point. I think the net cost of the life insurance will be a little lower in the Presbyterian Ministers than in the Pacific Mutual. It is not true that the Travelers drops a policyholder arbitrarily, altho all accident contracts are written for a year only, and the companies, generally, which write that business exercize their right of refusing to renew whenever they think it wise.

Six Important New Books

SIR OLIVER LODGE

Raymond: Or Life and Death

As a defender of "Spiritualism," Sir Oliver Lodge has added the weight of a great scientific reputation to a movement which has won some of the most brilliant minds of his generation. In this remarkable new book the great British scientist presents a coherent body of carefully-weighed evidence to the effect that his son, Raymond Lodge (killed in Flanders a little over a year ago), has been, ever since, and still is, in personal and intimate communication with those whom he knew and loved in terrestrial life. The volume is a most important contribution to the literature of psychical research. Illustrated. Octavo. **Net $3.00**

ALLAN McLANE HAMILTON

Recollections of An Alienist

Much curious, out-of-the-usual information on criminal insanity, the mistakes of capital punishment, and the fallacy of the electric chair, is contained in these entertaining reminiscences by a distinguished alienist, who was summoned to testify at the trials of the murderers of Garfield and McKinley—and who has appeared in recent years as expert witness in many other famous legal battles. "Few men in this country represent so broad a part of American life as this grandson of Alexander Hamilton. His book is one long panorama of interesting figures. Delightfully spirited."—*Philadelphia Public Ledger.* Illustrated. Octavo. **Net $3.50**

SIR ARTHUR CONAN DOYLE

A HISTORY OF THE GREAT WAR—VOLUME ONE

The British Campaign in France & Flanders, 1914

Not only accurate—precisely correct. When the dean of English critics, Sir W. Robertson Nicoll, pronounced this history "sure to be permanent—never to be superseded," he recognized that Conan Doyle had the genius to separate himself from immediate events and attain a true perspective. Other volumes will follow shortly. With maps, diagrams and plans. Octavo. **Net $2.00**

LORD NORTHCLIFFE

At the War: A Record of Events and Experiences

Next to Lloyd George and the Kaiser, there is probably no figure in Europe as compelling as Lord Northcliffe—one of the real rulers of his generation, without portfolio. "Second only to the vivid impression this book gives of the Allied operations, is its impression of the energy and ceaseless activity of this man."—*New York Times.* **Net $2.00**

THE COUNTESS OF WARWICK

A Woman and the War

Lady Warwick's very advanced opinions gain piquancy from her former popularity with royalties, many of whom have been her guests in the past. A leader of democracy among women, the Countess writes brilliantly of the future of her sex. **Net $2.00**

MONTAVILLE FLOWERS

The Japanese Conquest of American Opinion

The "yellow peril" is not, says Mr. Flowers, what many people think it is. This revelation of the forces—open and secret—working to create public opinion in favor of the Japanese, treats the problem from an entirely new angle. A book of genuine importance to every student of national affairs. **Net $1.50**

HERSCHELL-SPILLMAN CO., Park Amusement Outfitters

627 Sweeney Street, North Tonawanda, New York

MR. PURINTON'S EFFICIENCY QUESTION BOX

381. Young Woman from Ohio. "Could you tell me where I can get in touch with what might be called community extension work—volunteer or otherwise, in the southern mountains? I am a reader, amateur kindergartner, student of sociology. Want to spend a summer in welfare work among the mountaineers, together with a friend equally interested. How shall we find our opportunity?"

A man of unusual experience in helping mountaineers is President Burns of Oneida Institute, Oneida, Kentucky. Ask his advice. Consult the pastor of your church on social service work done by national headquarters of your denomination in Southern states. Write Social Service Commission of the Federal Council, 105 East Twenty-second street, New York; also School of Philanthropy, same address; also Social Service Exchange, same address; procure World Almanac (35 cents by mail) from The Press Publishing Company, Pulitzer Building, New York; look up colleges in desired locality. Write the professor of sociology or economics for addresses of community centers and organizations nearby.

---

382. Rev. T. A. S., Minnesota. "I follow your Question Box answers with great interest and profit. A lady of my congregation has a blind niece living in England, who has written short stories, appearing in English ladies' magazines, and bringing the authoress $5 to $10 each. The family is in straitened circumstances owing to the war, and the girl's aunt here wants to find publishers in Canada or the United States who would be likely to accept English stories by an English writer very talented, but not known to American magazines. Where may I secure information?"

Consult the authors' agents mentioned in these columns since your letter came. Ask advice from Secretary of Anglo-American Authors' Association, 225 Fifth avenue; also from Secretary of Society of Authors and Editors, 33 West Forty-second street; also from Secretary of Authors' Service Bureau, 33 West Forty-second street; also from Editor of *The Writers' Magazine*, 32 Union Square, all of New York. Why could not the blind girl train herself to do profitable manual work, to increase the home revenues? Apply for data and suggestions to the famous institution for the blind called "Light House Number One," at 111 East Fifty-ninth street, New York.

---

383. Mr. A. W. G., New Hampshire. "I hold a position where the hours are too long to permit my studying in regular classes, even at a night school. From reading biographies of successful men I conclude that a private secretary has the best chance to climb in the world. Do you know of any way that I can learn at home?"

A number of institutions claim to teach stenography quickly, by mail methods. Write for particulars to Chicago Home Study Schools, Reaper Block, Chicago; to Paragon Institute, Coliseum street, New Orleans; to Byrne Publishing Company, East Monroe street, Chicago; to Van Duzee Publishing Company, Hamburg, New York.

Have you tried to arrange with a local stenographer—preferably a teacher in a commercial school or a court reporter—to give you lessons at hours mutually convenient? This plan sometimes proves very satisfactory.

---

384. Miss K. T., Alabama. "I am a college graduate, have taught in high school for five years. Am trying to write for publication—stories, sketches and essays. Have had letters of encouragement, but nothing accepted. Am financially able to spend a year in New York. Would you advise me to take a course in journalism, or go into newspaper or other journalistic work?"

Better learn technique before coming to New York, unless you come deliberately to take a course, for instance, at the Columbia School of Journalism. Take some such mail course as that in short-story writing from Home Correspondence School, Springfield, Massachusetts; that in advertisement writing from Page-Davis Company.

DEAF ?

I Have 265,000 DEAF FRIENDS!

As President of the General Acoustic Company since its organization 16 years ago, I have made these friends by sparing no expense in producing the most powerful and most efficient hearing devices possible—by urging every person to try the Acousticon in his home and business without a penny of cost—and finally by convincing every purchaser that my interest in him is just as strong after a sale as before—that I am never too busy to take a personal interest in his case so long as he remains hard of hearing. We now announce a new model, stronger, smaller, better than ever in every detail, and I again invite every person hard of hearing to try the

1917 Acousticon

No Deposit FREE No Expense

After you have given it any test that you choose, it is entirely for you to say whether you will keep or return it—at least you will know whether you are among the hundreds of thousands of fortunate ones to whom it does restore normal hearing. And it will have cost you nothing to try—not a cent.

WARNING! There is no good reason why everyone should not make as liberal a trial offer as we do. So do not send any money for any instrument for the deaf until you have tried it.

The ACOUSTICON has improvements and patented features which cannot be duplicated. So no matter what you have tried in the past, send for free trial of the ACOUSTICON today and convince yourself--you alone to decide. Address me personally if you prefer. K. M. TURNER, Pres.,

Get your work published in a local paper, and ask your friends to criticize. Take several magazines featuring contributions most like yours, and find by comparison where your weakness lies. New York doesn't want you till you have a reputation; hunt for a journalistic position in a smaller city—any one of 100,000 population or over. Make a superlative record, then come to New York.

---

385. College Junior. "To complete my college course, I must make a part of the expenses for next year by summer work. I intend to be what you might call a teacher of Efficiency in college or university; that is, with a professorship of psychology as a starting point, I shall work at man-building, helping college men to be masters of themselves and their world; in short, doing personally and intensively much the same kind of work that you are doing on a larger scale. I want my summer occupation to be in line with this purpose. Have you anything to suggest?"

Obtain from one of your professors a list of private schools nearby, attended chiefly by sons of rich men. Prepare a letter to each principal, stating your qualifications and purposes, with references among your professors, and asking for an opening as tutor of one or more boys who may need to make up back studies in vacation time. Get a psychology or advertising expert to help you write this letter.

Also investigate summer camps for boys—look up advertisements in last summer files of The Independent and other weeklies—*Literary Digest*, *Outlook*, etc. Write *Hearst's Magazine*, 119 West Fortieth street, New York, and Curtis Publishing Company, Philadelphia, for openings in subscription agency field. Consult your college Y. M. C. A. Secretary about chances in summer Y. M. C. A. work under national auspices. Prof. Irving Fisher, of Yale University, might offer suggestions.

---

386. Mr. F. D., Tennessee. "I would greatly appreciate your view of the eight-hour day; also please give me the name of any industry where it has been tried and failed."

Experiments in factories have shown that the eight-hour day, properly managed, will yield a larger output, and a higher grade of work, than a ten hour day produces. Workers are healthier and happier, mistakes fewer, profits greater, in the shorter day. See books on scientific management and industrial efficiency by Taylor, Gilbreth, Emerson and others—list obtainable from Efficiency Publishing Company, Woolworth Building, New York. We do not know of any case where the eight-hour day failed of results, when adapted *scientifically*.

The law may be stated thus: Work hours are inversely proportional to mind powers. Eight hours of scientific action with perfect mental concentration may achieve more than twelve hours of listless, orderless, brainless movements. As you put your heart and head in your work, you do more work but have less work to do.

---

387. Mr. H. G., New York City. "I am twenty-nine years of age, doing night work at the New York Post Office, but anxious to study farming during the day. Please tell me (a) if you would encourage the idea; and (b) if there is any school in New York that teaches farming?"

(a) Idea is good. But you should be careful not to assume obligations of study or recitation that would rob you of necessary sleep, or otherwise cripple your work for the Government. You can learn the rudiments of farming by home study of farm journals and mail courses and meanwhile save money for a residence course at an agricultural college later.

(b) Apply to Farm Efficiency Bureau, 320 Fifth avenue; Columbia University, Morningside Heights; New York University, East Washington Square. Instruction by mail may be had from American Farmers' School, Laird Building, Minneapolis, Minnesota; or from agricultural experiment stations of state universities. Write Cornell University, Ithaca, New York, and also University of Chicago, Chicago, for particulars of any mail courses.

Saves On His Coal Bill Half

Same big Saving guaranteed to you!

Nine rooms heated with an UNDERFEED at one-half the former cost. Not a mere hap-hazard saving; but a guaranteed saving—a saving that you, too, can enjoy. Read the letter:

The UNDERFEED is heating nine rooms and gives very successful results with about ten tons of soft coal per season. You can always rely on my putting in a good word for the UNDERFEED as it is saving me at least 50% in my fuel bills each season." (Signed)
Herman W. Koch, 723 Chestnut St. Burlington, Wis.

WILLIAMSON NEW-FEED UNDERFEED Furnaces and Boilers CUT COAL BILLS ½ to ⅔

The burning principle of the UNDERFEED is that of a candle held right end up. The fuel supply is always below the clean, efficient flame. Fire is never smothered or chilled. Smoke, soot and gas—all valuable heat elements—are consumed as they pass up through the flame.

Because of this scientific principle, the UNDERFEED burns the cheaper grades of coal cleanly and effectively—to a white ash—no clinkers or partly burned coals. Clean, uniform, ample heat throughout the house.

Helpful Book Free

It is called "From Overfed to UNDERFEED." Pictures and describes it all. Explains how easily operated by a boy. Whether you heat with warm air, hot water, steam or vapor this free book will save you money—for coal cost is actually reduced ½ to ⅔, guaranteed with the UNDERFEED. Send coupon for it today—NOW.

Make Ready NOW for Your Bird Neighbors

Have you ever enjoyed having the friendly Wrens and Bluebirds for neighbors? The little fellows will gladly live near you if you will provide homes for them. And they are such jolly neighbors, singing their songs, keeping your garden and trees free from destructive bugs and worms, raising their hungry families and generally enjoying life. You will find much pleasure in watching these friendly birds. The children, too, will take a keen interest in these Nature folk, unconsciously learning the lessons of gentleness, consideration and the love and appreciation of all things in Nature.

Help save the birds by putting up, about your home,

"Dad" Hubbard's Bird Houses

These are the houses the birds like. Made according to the U. S. Dept. of Agriculture specifications, of Cypress, "the wood everlasting." Natural green color. Easy to clean. Hang from any tree or roof. This special house can be used for either Wrens or Bluebirds; there is a hole for each size. The hole not in use is closed.

Special Bargain Offer To enlist your aid in helping the birds I make this special bargain offer. I will send you two of my bird houses, express paid, for only $3, and I guarantee you'll be satisfied. If you are not, return the houses at my expense and I will refund the $3. NOW is the time to put the houses up so that they will get a little weather-beaten before the birds come.

I have about 100 houses I have made this winter. They will be gone soon, so send your order *Now*.

San Francisco, California, January 10, 1917.

UNITED STATES STEAMSHIP COMPANY.
January 17, 1917.

A regular dividend of one per cent and an extra dividend of one-half of one per cent has been declared on the capital stock of this Company, payable March 1, 1917, to Stockholders of record on the books of this Company at the close of business on February 15, 1917.

H. H. CAMPBELL, Treasurer.

MORE ABOUT PEACE

COMMENT ON THE PRESIDENT'S NOTE, THE SENATE'S RESOLUTION AND THE ALLIES' REPLY

ON OUR OWN ACCOUNT

BY WILLIAM J. STONE
CHAIRMAN OF THE SENATE COMMITTEE ON FOREIGN RELATIONS

SINCE the war has, almost from the beginning, resulted in continuing offensive attacks on the rights and dignity of this sovereignty and in inflicting incalculable injury to our national interests—all of which we have borne with patience because of our friendship for the nations involved, it seems to me that after enduring these attacks and suffering these losses for nearly two and a half years, with no end yet in sight, we have a right, without regard to any question of sympathy for humanity, but solely on our own account and to safeguard our own interests, to approach the combatants as a mutual friend and open negotiations with a view to the reëstablishment of normal international conditions, so far as this is possible.

Washington, D. C.

WE CANNOT ENFORCE PEACE

BY WILLIAM J. BRYAN
FORMER SECRETARY OF STATE

THE editorial in The Independent of January 8 is not at all in harmony with my idea of our nation's duty. I do not conceive it to be our place to suggest terms; we shall do enough if we persuade the belligerents to state terms to each other. Any attempt to state terms could hardly fail to indicate a bias that would weaken, if not entirely destroy, our ability to serve both parties as neutral.

The proposition of a League to Enforce Peace is one which I regard as impossible from an American standpoint. If either side is willing to enter into such an arrangement, it must be led to do so by faith in its ability to use the army and navy of the United States to gain an advantage over the opposition.

I think the President has done exactly the right thing in asking the belligerents to state terms, but his suggestion of an agreement to enforce peace not only did not strengthen his proposition, but was immediately rejected by the Senate.

Miami, Florida

FORM A WORLD LEAGUE NOW

BY THOMAS RAEBURN WHITE
DIRECTOR OF THE PENNSYLVANIA ARBITRATION AND PEACE SOCIETY

EACH side has declared the main object of the war to be security against future wars. This cannot be attained by a military success. Even if one antagonist could completely crush the other, and this is now seen to be impossible, the final result would be not security, but more war.

If all belligerents desire a guarantee against future wars, let them do the only thing possible to get it—join with each other and the neutral world in a league to suppress disorder. The spokesmen of both sides have exprest themselves as favorable to this plan, and it is certain ultimately to be adopted. Why not now, rather than after more lives have been destroyed?

But there are other questions—restitution and reparation! These can be referred to a tribunal of belligerents and neutrals. The side which lost would lose more by winning after six months more of war. Such a tribunal could be trusted to do justice, and the whole world would be pledged to the enforcement of its decree.

If one side should propose these terms, the other could not refuse.

Philadelphia

THE SOONER THE BETTER

BY GILBERT M. HITCHCOCK
SENATOR FROM NEBRASKA

THERE is no complication involved in this issue. The nations may be far apart; we suppose they are; but some day, at some time, they must state what the possible terms of peace may be, and the sooner that step is taken the better. The importance, to my mind, of having the Senate, as the coördinate authority with the President, go on record in expressing the American desire that the terms of peace be stated, lies in the fact that in all these countries there is a growing sentiment in favor of action looking to peace.

Washington, D. C.

A PRUSSIAN PEACE?

BY AMOS S. HERSHEY
PROFESSOR OF POLITICAL SCIENCE AT THE UNIVERSITY OF INDIANA

A EUROPEAN peace at the present time would mean a triumph of the principles of Prussian autocracy and militarism, just as a peace with the Confederates during the Civil War would have meant a victory for the forces of slavery and disunion. Any treaty at the close of the present war which failed to aim at a removal of its fundamental causes would be a mere armed truce and would, in all likelihood, involve an early renewal of the struggle.

The Allies are entitled to choose the favorable moment for negotiation since the Central powers felt free to choose the hour for attack. Moreover, failure to provide adequate guarantees for the future, as also to exact ample reparation for the past, would be placing a premium on wanton aggression, conscienceless diplomacy, illegal modes of warfare, and gross inhumanities of all sorts. To reward the aggressor or the criminal, instead of punishing him, is contrary to all ideas of human justice.

There is but one alternative, and that is to convert him if possible to

saner mode, human and pacific ideals of conduct.

A pax Germanica would constitute a fearful menace to the liberties of smaller or unprepared states and might result either in perpetual warfare or in the virtual enslavement of weaker nations.

Unless the Allies deem themselves hopelessly beaten it would be for them a serious, perhaps fatal mistake to enter into a peace conference now.

Bloomington, Indiana

THE WRONG TIME

BY PHILIP STAFFORD MOXOM

PASTOR OF THE SPRINGFIELD FIRST CONGREGATIONAL CHURCH

THE proposals which you make in The Independent are reasonable and just. Acceptance of them by the Central powers would clear the air, lessen distrust and open the door to peace.

President Wilson's note appeared to me wanting in definiteness and also in fitness of time. Everyone knows what the Entente Allies are fighting for; Germany's aim in forcing the war is scarcely less apparent. There seems to have been no change in the mind of the former as to general aim; what change, if any, has taken place in the mind of the latter is not clear.

The suggestions of the American Neutral Conference Committee are quite to the point. A frank statement to all the world by the belligerents of "the basis upon which they would be willing to begin peace negotiations" would not be in accordance with the diplomatic methods of the past, but would be in accordance with reason and righteousness, and would have a most beneficent effect on the minds of both neutrals and belligerents.

Springfield, Massachusetts

A SURPRIZE AND A SHOCK

BY SAMUEL T. DUTTON

GENERAL SECRETARY OF THE WORLD'S COURT LEAGUE

THE President's note came as a surprize in this country and as a shock to the governments of the Entente. Here again there are many opinions as to the wisdom and timeliness of the note. Two things should, however, be kept in mind. First, the President is in a far better position than any one else to know when and how to act in bringing about peace. Second, he has been watching for months for the moment to come when he could act, and the pressure brought to bear upon him to do so has been enormous.

The response of the Allies gave a thrill of exultation to all those who wish to see the overthrow of militarism and a settlement that shall permit a new order in Europe based upon justice, with such provisions and guarantees as shall insure peace. The three great constructive propositions of the League to Enforce Peace and of The World's Court League should, if made effective, assure peace and give free play to those civilizing forces which are still the hope of the world.

THE NEW BOOKS

AN IRISH ANTHOLOGY

The profits from the sale of *A Little Book of Irish Verse* are destined to add to the comfort of Irish troops, wounded or in the field. Tho this collection cannot bear comparison with that in Yeats's "Book of Irish Verse," it still contains verses by some of the best Irish poets of the day. Irish war poems are in evidence, but not less so lyrics on themes quite unconnected with the present conflict. In the former class may be mentioned stirring or tragic pieces from Stephen Gwynn, and from Patrick McGill, who sent his contributions from the trenches; in the latter, verses from James H. Cousins, John Denvir, Arthur Conan Doyle, Katharine Tynan, and W. B. Yeats.

A Little Book of Irish Verse, ed. by A. C. White. E. P. Dutton & Co. 60 cents.

STUDIES IN IRISH LITERATURE

Thomas Macdonagh, in his *Literature in Ireland,* is concerned with two streams of literature—the one a literature in the Irish language, Gaelic; the other a literature in English, but only in that particular kind of English which is called Anglo-Irish, and which has resulted from the influence of the Gaelic idiom and the pressure of Irish habits of thought, feeling, and expression upon the alien tongue. The stream of Gaelic literature that flows today is the slender one that had its source in the Gaelic movement inaugurated some two decades since by Dr. Douglas Hyde. The Anglo-Irish stream is broader and deeper.

These limitations exclude authors of Irish birth whose style, inspiration, and point of view are English—a limitation which bars such distinguished names as Swift, Sterne, Goldsmith, Sheridan, Wilde, and Shaw. On the other hand such poets as Mangan, Ferguson, Callanan, Yeats, and Padraic Colum receive due recognition. For our part, we would have been well pleased, if attention like that accorded the poets had been extended to the novelists from Maria Edgeworth, thru Griffin, the Banims, and Carleton to the present day writers of Anglo-Irish fiction, and also to the dramatists who are national in inspiration and manner. This book is interesting and serviceable, within its range, as a study in Anglo-Irish literature from the purely Irish standpoint and in the new Gaelic literature. Mr. Macdonagh was one of those leaders of the Irish revolution of a few months since who paid tragically with their lives for their part in that uprising.

The common quality which bound the writers of the Irish literary revival together and gave the band its solidarity was the spirit of nationality. The possession of this spirit is the touchstone which Ernest A. Boyd applies to all Irish writers who come within his ken, and all who fail to meet this test are put beyond the pale of his critical attention. Beyond question, *Ireland's Literary Renaissance* is the most comprehensive, the most authoritative, and altogether the best book on its subject. Its author shows himself an accomplished critic. His history of the Revival carries a reader from its origins thru its growth to its full bloom. From Martyn to Synge and Lord Dunsany, and from Yeats to Padraic Colum, the ground is covered as circumstantially as the generous limits of this substantial volume permit. The reader who wishes to acquaint himself with the entire Irish Renaissance can not do better than read this friendly critic. Those who look for a reference book, however, have a grievance. There is no index—a lack for which we see no sufficient excuse.

Literature in Ireland, by Thomas Macdonagh. F. A. Stokes Company. $2.75. *Ireland's Literary Renaissance,* by E. A. Boyd. John Lane Company. $2.50.

WHAT BERTRAND RUSSELL REALLY SAID

The treatment to which the Hon. Bertrand Russell has been subjected arouses curiosity in this country to know what are the opinions which England deems so dangerous that he is not allowed to continue teaching logic at Cambridge University, not allowed to lecture in Scotland or the English coast cities and not allowed to accept the call to Harvard. This curiosity may now be gratified by the publication in America of some of his recent writings in the volume *Justice in War Time,* but it raises a new puzzle, why such opinions are deemed dangerous to the British Government. His aversion to big armies and navies may be thought extreme, but there are many who still share them even in England and Germany. His hopes of permanent peace and international good will may be regarded as impracticable, but they are neither novel nor seditious. His critical analysis of European diplomacy, tho searching and severe, does not reveal much that was not known even before the war.

For instance, we Americans knew in 1912 from Mr. Shuster's work "The Strangling of Persia" that Russia and England had joined to suppress constitutionalism in Persia and to divide that country between them. We knew also in 1912 of the existence of the secret treaty of 1904 by which France and England agreed to assume control respectively of Morocco and Egypt. The fact that Sir Edward Grey has now been quietly dropt from the Foreign Office without lamentations from any quarter is an indication of the eclipse of his great reputation and justifies in general Mr. Russell's criticism of his policy.

The author's attitude may be best given in his own words:

I consider that either a serious weakening of England, France and Italy, or a serious strengthening of Germany, would be a great misfortune for the civilization of the world. I wish ardently to see the Germans expelled from France and Belgium, and led to feel that the war has been a misfortune for them as well as for the Allies. These things I desire as strongly as the noisiest of our patriots. But there are other things, forgotten by most men in the excitement of battle, which seem to me of even greater importance. It is important that peace should come as soon as possible, lest European civilization should perish out of the world.

Putting the matter crudely, and considering only the Western war, we may say that the Germans love order, learning and music, all of which are good things, while the French and English love democracy and liberty, which are also good things. In order to force their respective ideals upon nations which do not value them, the Germans are willing to replace order in Europe by the universal chaos of war, and to send the young men who pursue learning or music to be killed on the battlefield, while the French and English have found it necessary to suppress democracy and liberty for the present, without any guarantee that they will be restored when the war is over. If the war lasts long, all that was good in the ideals of Germany, France and England will have perished, as the ideals of Spartans and Athenians perished in the Peloponnesian War. All three races, with all that they have added to our civilization, will have become exhausted, and victory, when it comes, will be as barren and as hopeless as defeat.

It will be seen from this that Bertrand Russell is no irrational fanatic nor indeed unpatriotic. We shall not attempt to define the limits of academic freedom in war time nor to question the necessity of a censorship, but at least we may express our regret at a state of affairs in which a distinguished philosopher of such high ideals should be regarded as an enemy of society.

Justice in War Time, by Bertrand Russell. Chicago. Open Court Publishing. Co. $1.

SCHOOL EFFICIENCY

In few fields are the leading experts closer to real conditions and needs than in education. The school survey as it has been used in Cleveland and elsewhere is an important community asset.

Two new reports, *School Organization and Administration* and *Some Problems in City School Administration,* are based respectively upon recent surveys of school systems in Salt Lake City and in Butte. These will be useful to any school officer or parent who wishes to work out an intelligent view of his own school situation. The first book states many of the comparisons for twenty-five cities which are about the size of Yonkers.

The two works supplement each other, as the second lays more stress upon the formal elements and gives model forms, records, etc., while the first gives more space to the economic setting, comparison with other communities, health conditions, etc.

School Organization and Administration, by E. P. Cubberley; *Some Problems in City School Administration,* by George D. Strayer. Yonkers, N. Y. World Book Co. $1.50 each.

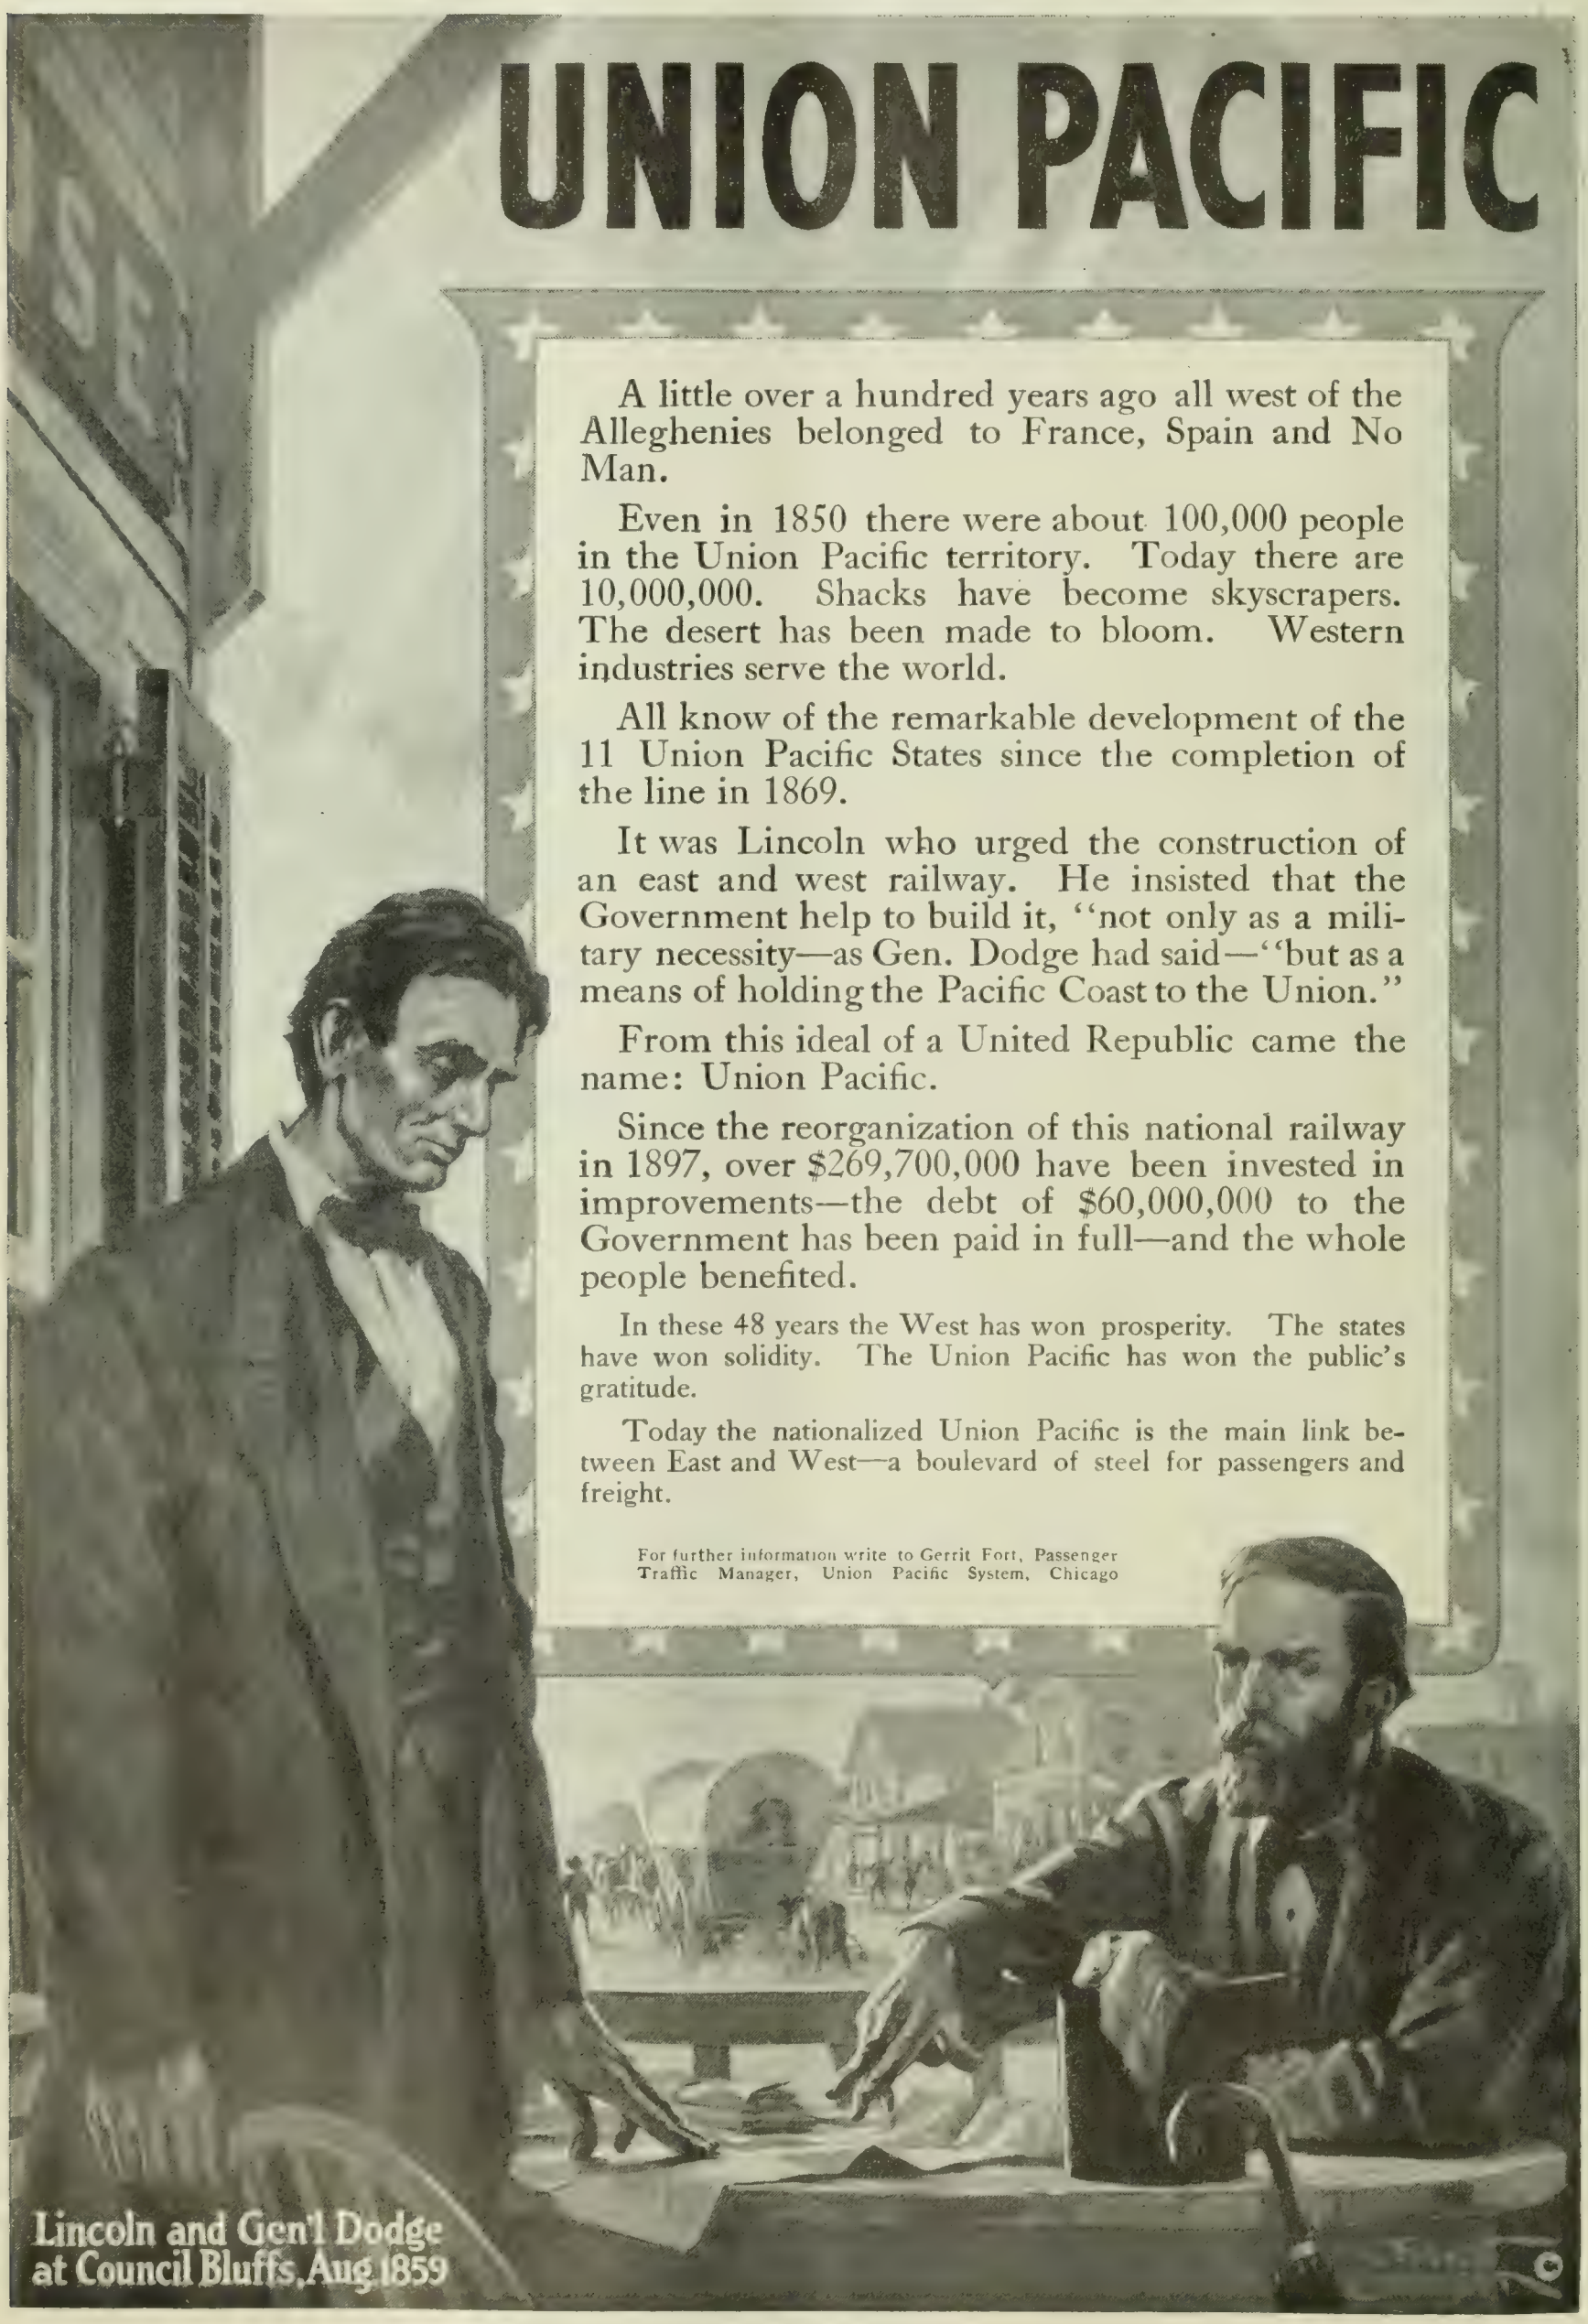
UNION PACIFIC

A little over a hundred years ago all west of the Alleghenies belonged to France, Spain and No Man.

Even in 1850 there were about 100,000 people in the Union Pacific territory. Today there are 10,000,000. Shacks have become skyscrapers. The desert has been made to bloom. Western industries serve the world.

All know of the remarkable development of the 11 Union Pacific States since the completion of the line in 1869.

It was Lincoln who urged the construction of an east and west railway. He insisted that the Government help to build it, "not only as a military necessity—as Gen. Dodge had said—"but as a means of holding the Pacific Coast to the Union."



From this ideal of a United Republic came the name: Union Pacific.

Since the reorganization of this national railway in 1897, over $269,700,000 have been invested in improvements—the debt of $60,000,000 to the Government has been paid in full—and the whole people benefited.

In these 48 years the West has won prosperity. The states have won solidity. The Union Pacific has won the public's gratitude.

Today the nationalized Union Pacific is the main link between East and West—a boulevard of steel for passengers and freight.

For further information write to Gerrit Fort, Passenger Traffic Manager, Union Pacific System, Chicago

The Terms of Peace—A Debate..... 240

REMARKABLE REMARKS

ELIHU ROOT—God knows we need men now.

CHARLES E. HUGHES—I have no wounds to exhibit.

MARY PICKFORD—Our women carry too great burdens.

PROF. CHARLES A. SHAW—A woman cannot be a friend.

GENERAL VON HINDENBURG—Prophesying does not pay.

SENATOR WARREN—The President thinks he is the President of the World.

CONGRESSMAN GARDNER—The Democrats spend money like drunken sailors.

MAX EASTMAN—I would rather go from bad to worse than let well enough alone.

DR. ABRAHAM FLEXNER—Education is the unfinished social business of the world.

ED. HOWE—Warden Osborne has worn me out as completely as has Judge Ben Lindsey.

EDWARD BOK—I wonder if the time is not ripe to revive the old custom of giving gold to a bride.

"BUGS" BAER—The Syracuse football team had a successful season until they played the faculty.

PRESIDENT JOHN GREER HIBBEN—The peace made at this time would be a peace made for expediency.

MRS. ANNA SCHOFIELD—You can tell a married man every time. They show where the harness has rubbed.

HENRY A. WISE WOOD—Jesus Christ failed to bring peace into the world. How can mere mortals do it?

EMPEROR WILLIAM—God, who planted the spirit of freedom in German hearts, will give us the full victory.

CHARLES M. SCHWAB—I have yet to hear an instance where misfortune hit a man because he worked overtime.

KARL LEMMERMAN—Lots of men should wear tail-lights so that those who want to progress won't bump into them.

JOHN D. ROCKEFELLER, JR.—Employers as well as workers are more and more appreciating the human equation.

L. H. BAILEY—A man who worries night and day about the dandelions in his lawn will find great relief in loving dandelions.

DON MARQUIS—Some of these chaps who write for the little new poetry magazines are mad at God, while others are only sore on Tennyson.

MRS. VINCENT ASTOR—We shall never become an Americanized nation until the message of Americanization is taken to the least of our neighbors—the aliens.

THEODORE ROOSEVELT—Much has been said as to munition manufacturers financing the movement for preparedness—apparently with no foundation of fact.

WOODROW WILSON—If you have a friend and you are in doubt as to whether he is a fool or not and who has large expansive opinions encourage him to hire a hall.

DR. CHRISTINE MANN—Sometimes it seems to me that the only sure way to make people strong and well would be to abolish clothes and let vanity do the rest.

EDWIN L. TURNBULL—Our Government alone, among great powers, enjoys the unenviable distinction of contributing practically nothing for the official encouragement of music.

BROWN'S DESCENT

THE STORY OF A YANKEE AND HIS "WILLY-NILLY SLIDE," BY ROBERT FROST

Brown lived at such a lofty farm
  That everyone for miles could see
His lantern when he did his chores
  In winter after half past three.

And many must have seen him make
  His wild descent from there one night,
'Cross lots, 'cross walls, 'cross everything,
  Describing rings of lantern light.

Between the house and barn the gale
  Got him by something he had on
And blew him out on the icy crust
  That cased the world, and he was gone!

Walls were all buried, trees were few:
  He saw no stay unless he stove
A hole in somewhere with his heel.
  But tho repeatedly he strove

And stamped and said things to himself,
  And sometimes something seemed to yield,
He gained no foothold, but pursued
  His journey down from field to field.

Sometimes he came with arms outspread
  Like wings, revolving in the scene
Upon his longer axis, and
  With no small dignity of mien.

Faster or slower as he chanced,
  Sitting or standing as he chose,
According as he feared to risk
  His neck, or thought to spare his clothes.

He never let the lantern drop.
  And some exclaimed who saw afar
And figures he described with it,
  "I wonder what those signals are

Brown makes at such an hour of night!
  He's celebrating something strange.
I wonder if he's sold his farm,
  Or been made Master of the Grange."

He reeled, he lurched, he bobbed, he checked;
  He fell and made the lantern rattle
(But saved the light from going out.)
  So half-way down he fought the battle.

Incredulous of his own bad luck.
  And then becoming reconciled
To everything, he gave it up
  And came down like a coasting child.

"Well—I—be—" that was all he said.
  As standing in the river road,
He looked back up the slippery slope
  (Two miles it was) to his abode.

Sometimes as an authority
  On motor-cars, I'm asked if I
Should say our stock was petered out,
  And this is my sincere reply:

Yankees are what they always were,
  Don't think Brown ever gave up hope
Of getting home again because
  He couldn't climb that slippery slope;

Or even thought of standing there
  Until the January thaw
Should take the polish off the crust.
  He bowed with grace to natural law.

And then went round it on his feet.
  After the manner of our stock;
Not much concerned for those to whom.
  At that particular time o'clock.

It must have looked as if the course
  He steered was really straight away
From that which he was headed for—
  Not much concerned for them, I say;

No more so than became a man—
  And politician at odd seasons.
I've kept Brown standing in the cold
  While I invested him with reasons;

But now he snapped his eyes three times;
  Then shook his lantern saying, "He's
'Bout out!" and took the long way home
  By road, a matter of several miles.

The Things That Endure

ALWAYS the world has sung of The Old Homestead—nobody has ever immortalized the Brown Stone Mansion of Hope.

ONE values old books, old furniture, old acquaintances, old silver, because they speak to us out of the past and refresh the heart with old memories and associations.

THE Gorham Silverware which you buy today for your home will grow into your life like a habit, minister to the present and memorialize the past, and it will not fade like old books, nor wear out like old furniture, and it will survive most friends.

Gorham Sterling Silverware
bears this trade-mark and is sold
by leading jewelers everywhere.

TO BRING RELIEF TO BELGIUM

"THE SITUATION IN BELGIUM IS THE WORST SINCE THE BEGINNING OF THE WAR. I HAVE COME HOME TO ASK FOR MORE FUNDS," SAYS MR. HERBERT C. HOOVER, HEAD OF THE BELGIAN RELIEF COMMISSION, WHICH HAS DIRECTED AMERICAN CHARITIES FOR BELGIUM SINCE THE WAR BEGAN. $200,000,000 ARE NEEDED TO CARRY ON THE WORK

THE DECLARATION OF INTERDEPENDENCE

WOODROW WILSON presides over a confederation of forty-eight sovereign states —the greatest peace society known to history and a living example to the nations of the world of how peace can be obtained thru political organization. The only way for a man to rise above the Presidency of the United States is to ascend into the international sphere and work for the one vital international issue there—the abolition of what Thomas Jefferson called "the greatest scourge of mankind."

On the 22nd of January President Wilson rose into the international realm. Before the Senate of the United States he delivered an address to the world that penetrates to the very heart of the peace problem.

Peace is the outcome of justice, justice is the outcome of law, law is the outcome of political organization. The President proposes the political organization of the world. He proposes the substitution of law for war as a means of settling international disputes. He proposes the maintenance of justice by all available sanctions. He proposes the reduction of the armies and navies of the world to an international police. He proposes universal and perpetual peace.

The political organization of the world is the first step. This implies some kind of federal or world government, to give sanction and validity to international law.

International law is no farther advanced than private law was in the tenth century. Then individuals in dispute had two legal recourses to settle it. They could go either to a priest or a judge, delegated by the king, who would decide the case, or they could go out on the field of battle and fight it out. In the latter case the judge was compelled by law to adjourn his court, witness the fight and render verdict in favor of the winner, the theory being that God would not let the guilty man win.

Today under international law a similar infamous doctrine prevails. Nations in dispute have the right to take their case to The Hague Court or seek redress thru war. Either course is perfectly legal.

The problem of a world government is then the problem of all government, namely, how to create and develop legislative, judicial and executive branches by which reason can be enthroned, and the collective will of mankind find expression, and be carried into execution.

The organization of American citizens known as the League to Enforce Peace has made the most practical suggestions along these lines that are now engaging the attention of responsible statesmen and students of international relations. The League proposes:

First. That a court be established modeled on the judicial arbitration court created at the second Hague conference (all but the method of the selection of judges) to which all justiciable questions be referred both upon the merits and upon any issue as to its jurisdiction. This will be the Supreme Court of the world.

Second. That a Council of Conciliation be established that shall investigate and make the recommendation in respect to any nonjusticiable questions that may be brought before it. As it will probably have its executive committee or "ministry" always in session at The Hague charged with keeping an eye on international happenings, especially those that are likely to lead to war, the council partakes of both legislative and executive functions.

Third. That all economic and military forces of the League shall be used against any nation that goes to war without first submitting its dispute to the court or council. This is the executive function of the League. It is discussed at length elsewhere in this issue of The Independent.

Fourth. That the nations shall meet at stated intervals to formulate and codify international law. This will be the international parliament.

We understand that President Wilson is in substantial agreement with the program of the League to Enforce Peace, tho he thinks this is not the time to insist on the formulation of complete details. He stands for the practical ideal that the nations must coöperate to destroy the monster of war, and he is willing to have the United States go as far as necessary to accomplish this beneficent purpose.

This, we take it, is the essence of President Wilson's epochal proposal. Yet this, its central feature, has scarcely been discussed at all. Perhaps such must always be the case whenever a statesman proposes to translate a great ideal into reality. But the common people of all lands hear him gladly and the responsible spokesmen of the nations at war have already indorsed the plan.

When a cowboy brands a steer, the first reaction is sizzling, sputtering and steam. But the brand remains for life. So when the President brands the minds and hearts of mankind with his burning ideal editors twitter, party politicians chatter and cynics sputter. We are passing thru this period now. The headlines ring with the side issues of "Peace Without Victory," "Impractical Idealism," "Independent Poland," "He Thinks He Is President of the World." But when the smoke and the dust pass away, the indelible mark of a great idea remains.

An unescapable issue now confronts the American people. Will they cast their lot for international coöperation or for international competition?

Our President has defined the kind of international coöperation in which the United States could join. It violates no American policy. It rather fulfils the fundamental principles of Washington, Jefferson and Monroe. It is, moreover, the only constructive idea for peace now before the world that has the slightest chance of universal acceptance. No half-way measures will go now. It is, to use Mr. Roosevelt's former phrase, "Utopia or hell."

If we now refuse to join our sister nations in a League to Enforce Peace—and foreign statesmen all agree that no league can be established without our participation—we shall have to arm to the teeth and enter the deadliest race of military madness the world has ever known.

The great issue before us is, therefore, the Americanization of the world or the Europeanization of America. When our fathers signed the Declaration of Independence they proclaimed that "for the support of this declaration we mutually pledge our lives, our fortunes and our sacred honor." The United States resulted.

Let the American people pledge their lives, their fortunes and their sacred honor to the President's Declaration of Interdependence. The United Nations will result.

PEACE WITHOUT VICTORY

THE President's critics have fallen foul of one phrase in his speech to the Senate. The dust they have kicked up over his use of the words "peace without victory" has almost blotted from view the great central idea which makes the speech an event of outstanding significance. But it is sometimes an advantage to have a saying misunderstood. It stimulates discussion, and may lead to desirable enlightenment.

It has been assumed that in postulating "a peace without victory" Mr. Wilson was talking to the Allies; and counseling them to be content with less than victory. It is not probable that this was his real purpose. The true interpretation of his argument is that it is a warning to Germany to yield before overwhelming defeat has become her portion.

For it is not the stronger in a fight that determines the moment when the fighting shall cease. So long as the weaker persists in going on, the stronger cannot stop without acknowledging defeat. The weaker only can set the moment for the coming of peace; or rather peace cannot come until the weaker is either willing to stop struggling or be annihilated. In a fight to a finish either the weaker must acknowledge defeat or the stronger must kill him.

In the Great War it is the undeniable fact that the Allies are the stronger. It must be assumed that President Wilson was speaking with that conviction in his mind. When he assumed, therefore, to set forth the conditions under which the conflict ought to cease, he was addressing himself not to the Allies, but to Germany. He was not saying to England, You must not demand victory; he was saying to Germany, You must not insist upon defeat. He was expressing to the Central Powers the unescapable fact that if the peace which is to come is to be enduring it must come by their submission before they have been overwhelmed.

What he attempted to set forth is profoundly true. The War of 1812 was a war without victory—for both sides to this day contend that they were victorious. The peace that followed it has lasted over a hundred years and may well endure in perpetuity. For it contained no element of bitterness and disgrace to bring about its destruction. The War of 1870 ended in an overwhelming triumph. The peace that flowed from it did not last half a hundred years.

Mr. Wilson might perhaps have found a better phrase than "peace without victory." He could not have found a deeper truth. But it is a truth for the weaker to take to heart and not the stronger. The Allied governments are sure to recognize the fact in their moments of sober second thought. We wish Germany were as sure to acknowledge its validity and force.

POLAND, INDEPENDENT AND UNITED

AT the conclusion of a banquet not long ago the toastmaster thanked the speakers and said that he had never heard so many new and amusing stories. A friend, who had been insufferably bored thruout the evening, took him to task afterward for exceeding the lie limit of even such a position. But the toastmaster maintained that what he had said was strictly true altho, as he must admit, the stories that were new were not amusing and those that were amusing were not new.

We are reminded of this by the remark in President Wilson's address to the Senate "that statesmen everywhere are agreed that there should be a united, independent and autonomous Poland."

This is true in somewhat the same sense as the remark of the toastmaster. For the united Poland that the Allies want would not be an independent Poland; while the independent Poland the Central Powers want would not be a united Poland.

The German and Austrian proposal is to convert the Russian part of Poland into an independent kingdom. The Russian proposal is to unite the German and Austrian parts of Poland to the Russian and keep the whole under the Russian crown. But President Wilson has a synthetic mind so he seizes upon these two policies and combines them, somewhat prematurely, into an agreement. But we believe that the President is right and that the world will yet see "a united independent and autonomous Poland."

BREAD VERSUS BEER

WAR does teach lessons. Lord Devonport, Great Britain's Food Controller, has issued an order restricting the manufacture of beer within certain definite limits. It is not abstinence that the Government is aiming at. Lord Devonport makes that quite clear. He says: "The fact is that the barley, sugar and other ingredients used in brewing are required for food. In fact, it is really a question of bread versus beer."

It is a good phrase of Lord Devonport's, but it contains no revolutionary discovery. How many a workingman's wife knows as well as he that "the barley, sugar and other ingredients used in brewing" her husband's beer are really "required for food" for her children? In how many a home is it not tragically "a question of bread versus beer?"

OREGON MAY BE RIGHT

THE Oregon minimum wage law has been reargued before the United States Supreme Court. It was first presented to that body two years ago by Mr. Louis Brandeis. As he became a member of the court before the case was decided, it became necessary to have the case presented again. Mr. Brandeis, of course, does not sit in the case. His place as counsel for the Oregon Industrial Welfare Commission is taken by Mr. Felix Frankfurter.

Mr. Frankfurter's argument before the Supreme Court last week was brilliant. What is better, it was convincing. As we pointed out two years ago, the argument for the constitutionality of the law is supported by an exhaustive brief which sets forth the reasonableness and the desirability of the law from the standpoint, not of theory or sentiment, but of the actual facts of life and real human experience.

The law, it will be remembered, provides that a commission shall have power to establish a minimum wage for women in industry. The commission, after elaborate investigation, decided that $8.64 was the weekly wage adequate to supply the necessary cost of living for women in Portland. The employer attacked the constitutionality of the law on the time-honored ground provided by the Fourteenth Amendment to the Federal Con-

stitution, that he was being deprived of his property without "due process of law."

Three points made with telling force by Mr. Frankfurter are worthy the serious attention of every American who is interested in the improvement of human conditions. He says of the experience of Oregon what is by no means confined to that outpost state:

> A large proportion of women in industry were found to be getting a wage below the living level. This was not merely the concern of some underpaid Susie or Lizzie, but the concern of the State, which must in the end pay the deficit between wages and cost of living. The grave consequence to the public health, the general lowering of standards, the resultant drain on the taxing resources of the Government gave indubitable grounds for State action.

He said of the experience of those foreign countries where the minimum wage is an accomplished fact:

> From all over the world testimony is given of the hightening of efficiency brought about by the minimum wage. . . . The minimum wage operates as a stimulus to efficiency on the part of both employers and employees which is nothing short of inspiring. On the side of the employers it stimulates invention, management, a diminution of waste, a take-up of slack that makes directly for wealth. On the employees' side the raised wage, toning up physical and social conditions as no other means can do, results in greater personal efficiency and hence in increased output.

Finally he said of the ultimate responsibility of the industry for the worker's welfare:

> Counsel says industry cannot be made responsible for the worker's needs of clothing, shelter, food, etc., since industry does not create these needs. These needs of the body do not arise from labor. Stettler [the employer] does not create them and why should Stettler, any more than John D. Rockefeller, pay Simpson's [the worker's] bill?
>
> The whole point, I will say in answer, is this: Simpson does work for Stettler and not for John D. Rockefeller. And it is incumbent on the State to see that Stettler shall not be in a position to take advantage of the necessities of Simpson.
>
> What is the State in effect saying to him? You shall not use all her working energy unless you pay her the cost of producing that energy. You shall not employ Simpson unless you pay the price of food and lodging to keep her going.

This is sound doctrine. Legislation establishing the minimum wage—already in operation in ten states—is one of the newest and most promising of the attempts to utilize the power of the state on behalf of social justice. As Mr. Frankfurter well says, it is not a panacea. Not only Oregon, but all the states that are trying it may be wrong. But, to use his words:

> The right to trial and error is one of the deep rights on which our dual system of government is based. Oregon is entitled to see how far the means she has taken may remedy the evils before her. All we ask this court to say is that Oregon *may* be right.

We are strongly inclined to believe that Oregon *is* right. In any case her putting the question to the proof of experience should not be prevented.

THREE WAYS

A NEW Adamson bill, for the compulsory investigation of railroad labor disputes, is before Congress. What are the principles involved?

There are three things we can do when railroad managers and railroad workers fall out.

We can let them alone to fight out their quarrel over the prostrate body of the public.

We can forbid them to fight until the facts of their dispute have been publicly investigated by impartial officials.

We can resort to government ownership of the railroads.

The first alternative is no longer thinkable. Transportation is too vital a part of the nation's daily life to be intermitted at the will of a part of the community.

The second alternative—that of the present Adamson bill—is distasteful to labor on the ground that the interval of investigation would be likely to be of great utility to the capitalistic side of the controversy in massing their forces for later conflict.

Remains the third way. It has much to recommend it.

The railroads are national highways; transportation is a national service used directly or indirectly by every living soul in the land.

The logic of the ownership and operation of this national service by the public authority is well-nigh irresistible.

EAT IT UP

THE food legislation of the belligerent nations is a lesson worth our study. Never has there been a dietary experiment on so large a scale. White rats and policemen, chickens and students, in squads of a dozen for a few weeks at a time, have been subjected to such experimentation, but the most ambitious dietician never dreamed that he would ever be able to observe the effects of a prescribed ration on two hundred and fifty millions of people for more than a year.

These regulations are of course dictated by necessity, and their aim is to economize food, not to discover the optimum ration. In Germany this is done chiefly by issuing daily individual tickets for bread, fat, potatoes and other foods in which there is a shortage. In England, France and Italy the police censor the menus of public eating places and dictate the number and kinds of dishes served. For instance the French hotels, restaurants and clubs, even the most expensive, will not be allowed after February 15 to serve more than four dishes at dinner. The meal may begin with *hors d'oeuvres* or soup and end with cheese or dessert. The other two dishes may consist of eggs, meat, fish or vegetables chosen from a menu that presents a maximum of nine instead of the sixty or seventy commonly found on a restaurant card.

This legislation is aimed at the root of the evil, that is, waste, and if it is continued after the war, or the eating habits it imposes are voluntarily kept up, Europe will soon recuperate from her devastation and will surpass the United States in wealth unless we follow this example. No one with a social conscience can visit the Great White Way or any of its reflections without being shocked at the appalling waste; not the waste of money, but the waste in food that is cooked but not served and served but not eaten. The extravagant prices do not matter much except to those who pay them. If a man wants to pay ten dollars for a dinner when he could get as good for one dollar, the community is not concerned. But when he spoils a lot of good victuals by looking at them and poking them with his fork, the rest of us have to pay more for what we eat. Since the amount that any person can eat at any one time is strictly limited, the caterer resorts to various devices to induce him to buy more than he can eat and to pay as much for it as possible. On the *table d'hote* or American plan, which is going out of fashion in America, a long succession of dishes is placed before the diner, who eats little or nothing of some of them. On the *a la carte* or European plan, which Europe is abandoning, more is served of one dish

than is wanted and other dishes are charged extra. In well regulated families these devices for the promotion of extravagance are not needed, but there is a constant waste, tremendous in the aggregate, due to changes in the etiquet of eating. In the days of our thrifty forefathers it was a matter of conscience to consume all that was taken on the plate, and those who had especially sensitive consciences or large appetites swabbed up the gravy with the last bit of bread. Later children were told that, however hungry they might be, they should leave a little of each article of food "for Mr. Manners." But Mr. Manners became more and more greedy, and nowadays he often gets the larger part of the food cooked.

Whether the American people as a whole eat too much for their health is still being debated, but it is quite evident that they waste too much for their wealth. No embargoes on exports, new schemes of marketing, boycotts of products or fixation of maximum prices will avail to keep down the cost of living so long as we keep up our extravagant habits. Recent dietetic experimentation points to the desirability of variety in the daily ration, and even in each meal, in order that the body may not lack any essential building material, but this does not necessarily lead to either over-eating or extravagance. For relief from the rapacity of the restaurateur we may look to the automat, the cafeteria and similar forms of self-help lunch-rooms where one can get what he wants and pay for what he gets. But this will not go far. What is needed is the individual cultivation of the custom of taking no more food on the plate than one expects to want and then eating it all unless it prove unpalatable or excessive. If this practice were universal we should have enough money to put up a palatial post-office in every hamlet, make every river navigable to its source, pension all the descendants of all the soldiers, build the biggest navy in the world, or carry out any of the schemes of social improvement urged upon us.

A new school of political economy is being created in Europe. Hitherto the criticisms of reformers and the efforts of legislators have been mainly directed toward the regulation of production and distribution. Now it is beginning to be perceived that the regulation of consumption is of equal if not greater importance.

NOT FOR THE GOOD OF THE SERVICE

WHEN President Wilson proposed to appoint Dr. Cary T. Grayson to the newly created office of Medical Director with the rank of Rear Admiral over the heads of more than a hundred of his brother officers, he blundered. Dr. Grayson may be the most capable of naval surgeons; we have heard no criticism of his ability or his devotion to duty.

But the apparent reason for his spectacular promotion is that he has been stationed at the White House during the present administration and is the friend of the President. The whole thing looks like favoritism. It has so imprest the officers of the navy, especially in the medical corps. Their resentment is natural; if allowed to persist, it will have an unfortunate effect upon the efficiency and esprit de corps of this important branch of the service.

The President should not only make appointments with an eye single to "the good of the service." He should avoid every appearance of political favoritism.

SUGAR-CURED WOUNDS

THE astonishing number of recoveries, running up to eighty and even ninety per cent of the wounded, is due to improvement in the methods of treatment which have been developed in handling these all too abundant cases. There will not be so large a proportion of one-armed and one-legged men as there were among our Civil War veterans. Dr. Alexis Carrel in France has shown how to prepare a cheap and very effective antiseptic from sodium hypochlorite and boric acid. From the other side comes a report of an even simpler treatment. Dr. Erich Meyer, in the military supplement of the *Münchener medizinische Wochenschrift* reports that he has got good results by dressing the wounds with ordinary granulated sugar after washing them out. The wounds are simply covered with a compress and the sugar renewed every second or third day. Whatever may prove to be the value of this treatment, it is at least worth knowing in case no surgeon is within call.

TELLING COLORS BY THE NOSE

PROF. R. W. WOOD, of Johns Hopkins University, in giving an account of his researches on the selective absorption of light by gases before the recent meeting of the American Association for the Advancement of Science, called attention to the curious fact that gases which are similar in color are apt to be similar in odor. A striking and familiar instance of this is the resemblance between bromine and nitrogen peroxide. These two gases are in no way related chemically. The former is an element; the latter is a compound of elements of other groups. Yet they are both heavy reddish-brown gases and show very similar absorption bands when viewed thru the spectroscope, and they both affect the nose in much the same way, and it is a decidedly unpleasant way, too. Whenever a careless assistant drops a bottle of bromine on the lecture room floor the class makes a spontaneous motion to adjourn. And whenever a student in the laboratory pours the nitric acid down the thistle tube onto the copper shavings faster than the gas can bubble up thru the water in the receiving trough, his nearest friends are the first to desert him. The poor fellows in the French trenches tell of a dense amber fog which comes rolling down upon them and sets them all to coughing and choking, but they are not agreed as to which of the two gases it is.

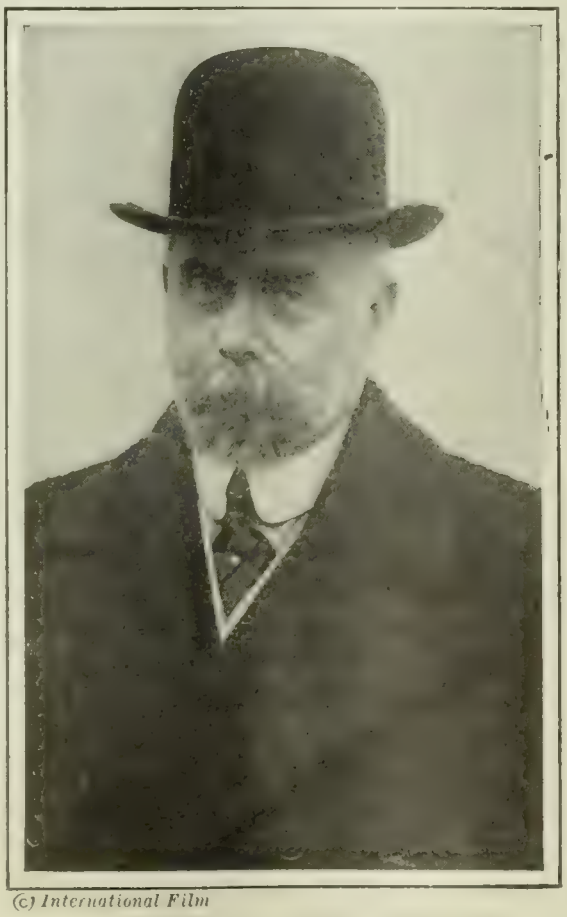
Now nitrogen by itself is colorless and it is also odorless. Oxygen by itself is colorless and it is also odorless. They constitute the air we breathe and see thru. But combine them in the proportion of N_2O_4 and we have a dark brown odor, if you know what we mean.

Of the five senses with which man is endowed three are physical and two chemical. The touch is sensitive to mass; the hearing to air waves; the sight to ether waves. The sense of taste distinguishes between liquids and the sense of smell between gases according to their chemical composition. But the nasal spectroscope is both more delicate and more discriminating than the optical spectroscope. The nose can discover a trace of bromine in the air which could not be detected by spectral analysis and it can readily tell H_2S from H_2O altho they are indistinguishable to the eye, whatever instrumental aid this may have.

THE STORY OF THE WEEK

President Makes Peace Plea On Monday, January 22, President Wilson broke a long standing precedent by speaking in person before the Senate on the foreign relations of the United States. For several days people at Washington had expected some such move on the part of the President because the attitude of the belligerent nations toward his request for a statement of terms of peace had been sufficiently receptive as to invite a renewed tender of the good offices of this country.

The keynote of President Wilson's speech to the Senate, which we print on another page of this issue, was that while the United States would willingly join in any international movement to secure the future peace of the world, the basis of peace must be just and lasting and such as the United States could approve. Such a peace could only be brought about by general consent, not imposed by force of arms upon vanquished nations. It should recognize the principle of nationality and the right of every people to political and economic freedom. To illustrate these general principles, the President specified as desirable conditions of peace the creation of "a united, independent and autonomous Poland" and a general recognition that "the paths of the sea must alike in law and in fact be free." If a satisfactory readjustment of international relations could be secured as a result of the Great War the President was sure that America would not be backward in guaranteeing its permanence, since that would not be abandoning the principle of the Monroe Doctrine, but applying it to the whole world.



It goes without saying that President Wilson's eloquent address to the Senate stirred the nation. Many even of his political opponents found much to praise in it and pacifists of all parties welcomed it as the most important diplomatic step to the credit of the present administration. On the other hand, there are not a few opponents of the administration both in Congress and in the country at large who regard the President's speech as untimely and dangerous.

In the United States criticism of the speech centers on the apparent abandonment of our tradition of diplomatic isolation implied in the President's remarks. Senator William E. Borah, of Idaho, is the most active and bitter opponent of the new foreign policy. He has introduced a resolution calling upon the Senate to reaffirm the policies "announced by Washington, Jefferson and Monroe, and ever since adhered to by this country." Senator Cummins, of Iowa, introduced another resolution, not condemning President Wilson's speech, but calling for a full debate on it. Administration leaders in the Senate oppose both resolutions.

Allies' Views of Wilson's Speech It is difficult to comprehend the psychology of the belligerents. President Wilson's note to them, which was merely a polite inquiry for a statement of their aims, was received by the Allies with an almost universal outburst of resentment at his interference and of indignation at his suggestions. But his speech to the Senate, in which he more emphatically affirmed America's concern, and used phrases such as "peace without victory" and "independent and united Poland" that might easily have offended, was received with surprizing cordiality in some quarters and nowhere aroused the furious denunciation of his note. At the conference of the Labor party in Manchester a mention of Wilson's name by the chairman called out spontaneous and prolonged applause from the 700 delegates. The conference representing over 2,000,000 workingmen adopted unanimously a resolution favoring "the formation of an international league to enforce the maintenance of peace on the plan advocated by the President of the United States and approved by the British Foreign Office."

John Dillon says:

> The speech of President Wilson is unquestionably the most remarkable and momentous uttered by the ruler of a great power for more than a hundred years. There cannot be the slightest doubt that he is speaking for liberals and the friends of humanity in every nation. . . . The President quotes the case of Poland. Surely the case of Ireland is much stronger and more to the point.

A SPOKESMAN FOR ENGLAND

Sir Gilbert Parker, Member of Parliament and author of many novels popular in this country, "The Seats of the Mighty," "The Right of Way," "The Money Master," has just come to the United States to study our viewpoint on the Great War. He presents the English attitude forcefully and predicts the end of the war next autumn

Hall Caine says that the "enlightened and responsible minds" of England are moved to "deep feeling and profound admiration" and "in strength of thought and splendor of phrase we find it almost, if not quite, equal within its narrower limits to that great last letter on the regicide peace which was Edmund Burke's final gift to mankind." Mr. Caine criticizes among other things what the President says about the "freedom of the seas" and commends to him the doctrine as set forth in the articles signed "Cosmos" in the *New York Times*. The *Westminster Gazette*, on the other hand, thinks that the "Cosmos" articles must have been written by some intimate friend of President Wilson, perhaps President Butler, of Columbia, because the views and phraseology of "Cosmos" are so similar to those of the President, especially in regard to the freedom of the seas.

Lord Northcliffe, owner of the *London Times*, says that "our democracy is excessively puzzled as to why President Wilson does not begin operations by the pacification of little Mexico."

The *Pall Mall Gazette* says: "President Wilson is many thousand miles away from the spectacle of the war, and he is addressing an audience to whom German savagery and German treachery are no more than a cinematograph film. We, who have the sword in our vitals, are by his leave better judges of how to secure that it shall not come there again."

The *London Evening Standard* says: "He is rather like a squeaking doll in the nursery, whenever his voice is heard extra pressure must be inferred."

The *Manchester Guardian* calls it "a splendid policy, nobly exprest"; "they are our terms or if they are not they ought to be, and the mass of the nation will do well to see that their rulers render to them every possible favor and support."

Bonar Law, Chancellor of the Exchequer, said in a speech:

> Our aims are the same as President Wilson's. What he is longing for, we are fighting for, our sons and brothers are risking their lives for, and we mean to secure it. The hearts of the people of this country are longing for peace: . . . We have rejected the German offer to enter into negotiations, not from lust of conquest or desire for shining victories. We have rejected it, not from a spirit of vindictiveness, or a desire for revenge, but because peace now would be a peace which would leave the military machine unbroken, with the halo of success surrounding it.

Prof. Gilbert Murray, of Oxford, who recently visited America, said:

> In essentials it is our ideal he has stated. These are the exact ends for which Great Britain in 1914 took upon herself the gigantic burden of this war and for which

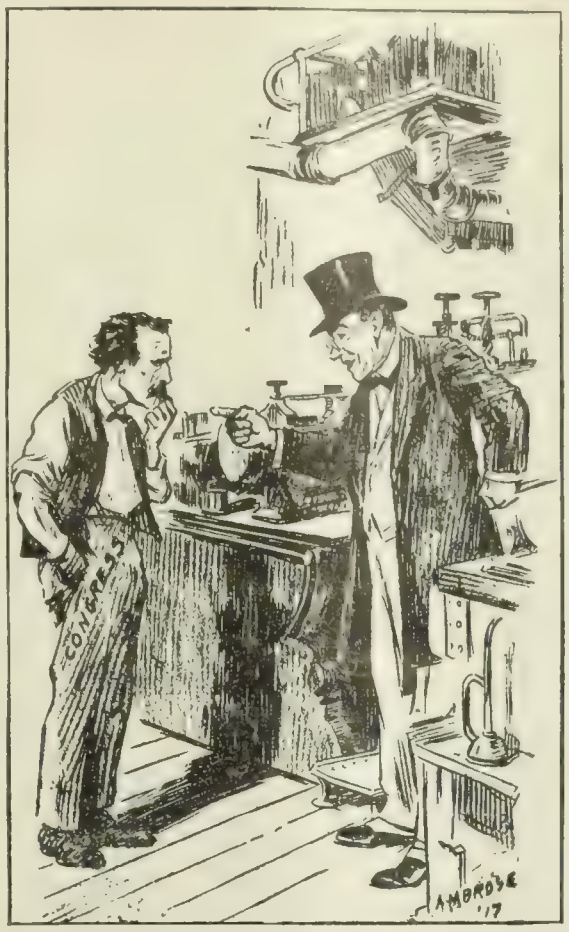
we are prepared still to use the utmost of our strength. . . .

We consider a victory necessary, but neither the people nor the Government of Great Britain has ever demanded or desired to impose peace by victory in the sense which the President deprecates. Our aim is a victory of international rights and the defeat of militarism.

The *Daily Mail*, one of the Northcliffe papers, said:

President Wilson's address is largely an abstract pontifical statement of a future international morality. On the practical question of how it is to be applied to the situation as it stands today there is only one sentence—the demand for a free autonomous Poland. For any expression of sympathy with those who are shedding their blood for freedom, we search the speech in vain.

The old Monroe Doctrine, as Captain Mahan and Homer Lea have pointed out, was maintained by the aid of the British navy. Is there to be anything so brutal behind the new version?



German Views of Wilson's Speech

The German press, like the British, generally takes the view that President Wilson is too aloof from the conflict and that his peace plans are too remote to be considered now. The *Vossische Zeitung* says: "in happy America one may ponder over attractive theories of how the millenium may be achieved," but "we in Germany must postpone discussion with Mr. Wilson over his ideals until we have licked the enemy."

The *General Anzeiger* of Essen, where the Krupp works are located, says:

Only the French spirit of revenge and English jealousy broke the peace, but Germany, nevertheless, will be glad to help toward the materialization of Mr. Wilson's ideals when the time comes for such action. In the meantime Europe has neither the time nor sufficient placidity to deal with such revolutionary proposals, and they do not appear to Germany to be at present within the range of practical politics.

Germany long since adopted Wilson's principles of the freedom of the seas, which she has never threatened. Gibraltar, Suez, and perhaps Singapore show who really threatens the freedom of the seas. As for Poland, Germany has done more and promised more than any other. She has proclaimed Poland's independence, given her a Council of State, and is trying to complete her organization as an independent state.

Ambrose in Rochester, N. Y., Post-Express

CONCERNING EFFICIENCY

The Boss (Wilson): "Look here, you've got to speed up work in this shop a bit"

The *Volks Zeitung* of Cologne says:

We must reject as entirely irrelevant and even as an intolerable suggestion the President's demand for a united independent Poland. Clearly he has in mind the separation of the region formerly belonging to the Kingdom of Poland and now belonging to the German Empire. In this matter we can only say, hands off. If the President values our friendship he should never mention this subject again.

On the birthday of the German Emperor he was visited at headquarters by the new Emperor of Austria and other notables of the Central Powers. In his response to a toast of the Emperor Charles, the Emperor William said:

The refusal of our offer of peace will recoil on those who roughly rejected our sincere act of conciliation. Glory has crowned the forces of Austria-Hungary and Germany, who, in conjunction with our Allies, will win for our countries a peace in which the bonds of friendship between us and our people's, cemented by blood and iron, will prove firm and true in the common work of peace henceforth.

The birthday message of the German Emperor to the Berlin Academy of Science was as follows:

The unshakable will to victory of the German people, who are prepared for every sacrifice of blood and treasure, will, I trust God, preserve the Fatherland from the ruin contemplated by its enemies and will force by the sword the peace necessary for the blest development of the people.

Count Stephen Tisza, the Hungarian Premier, in reply to a question in the Hungarian Parliament, exprest warm approval of President Wilson's efforts for peace and declared a willingness to continue the exchange of views with the American Government. The conditions of peace laid down by the Allies mean, he says, the disintegration of the Austro-Hungarian monarchy and of the Ottoman Empire. He questions:

What moral justification England and Russia have to lay stress on the principle of nationalities in a peace program, which would destroy the Hungarian nation and deliver the Mohammedan population of the Bosphorus region into Russian domination. But I say that the whole public opinion in Hungary holds to the principle of nationalities in honor.

New Railroad Programs

The railroad legislation desired by President Wilson will in all probability not be secured at the present session of Congress. The Senate Interstate Commerce Committee has put itself on record against any law that would forbid strikes or lockouts during the investigation of a railroad labor dispute, and it is not probable that the Senate will reverse the action of the committee. To meet the situation created by the strong opposition among senators of both parties to the strike prohibition feature of the administration's railroad program, Senator Newlands is working on a substitute measure which will, it is hoped, be more favorably received. The new plan provides that a special board of inquiry consisting of three members shall be appointed by the President to investigate any railroad labor dispute in which the existing board of mediation

NEW YORK POLICEMEN PUT TO THE TEST

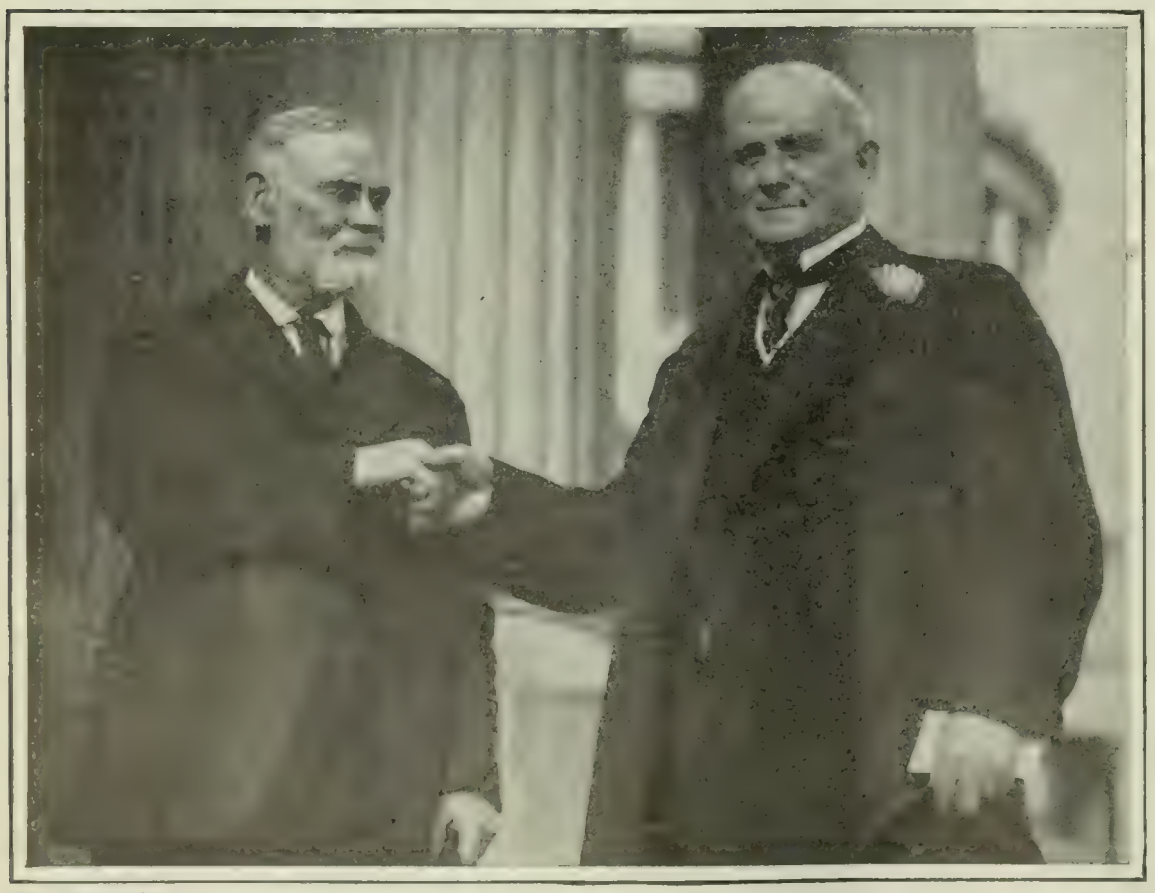
Who said "the policeman's lot is not a happy one"? Here are five thousand or more of the men who have tried it, taking voluntary examinations for their promotion as sergeants on the force of New York City

and conciliation has failed to arrive at a satisfactory settlement of the question at issue. The board will make public its report and recommendations within three months after its appointment. Strikes and lockouts will not be punished, but any interference with the movement of trains in interstate commerce will be subject to penalties similar to those now imposed for interference with the mails. In case of war the President is authorized to take over and operate the railroads in the interests of the nation. If Congress cannot reach any agreement upon railroad legislation which will meet the wishes of the administration President Wilson may summon an extra session of Congress after March 4.

W. G. Lee, chief of the Trainmen's Brotherhood, has suggested a solution of the railroad problem which, he thinks, will be satisfactory to labor. He advocated a board of eight, to be appointed by the President, consisting of four practical railroad workers and four operators. This plan would have the advantage of taking the investigation of railroad disputes out of the hands of political appointees and intrusting the decision to experienced men with direct knowledge of the difficulties involved. But, as Chairman Adamson, of the House of Representatives Commerce Committee, pointed out in answer to Mr. Lee's remarks, such a board would have on it no representative of the interests of the general public. The railroad plans of the administration, on the other hand, are designed primarily to protect the shipper and consumer and only incidentally to benefit the railroad owners and operatives.

Frank Trumbull, chairman of the railway executives' advisory committee, speaking on behalf of railway owners and managers, favors federal supervision of railroad securities and federal incorporation of interstate carriers. Rates should be regulated only by the Federal Government, never by states, but the work of the Interstate Commerce Commission might well be divided among subordinate regional commissions. Rate suspensions should be restricted to sixty days, and the Interstate Commerce Commission should have the power to fix minimum as well as maximum rates. He admitted that the past year has been the most prosperous in the history of American railroading, but asserted that after deducting taxes, hire of equipment and rentals the average net earnings of the railroads was only six per cent of the value of the property devoted to public use.

Purse Strings and Pork



The Democratic caucus in the House of Representatives has approved the new revenue bill designed to meet the cost of preparedness and other heavy expenditures confronting the nation. The burden will fall upon excess profits and inheritances. Profits less than five thousand dollars or amounting to less than eight per cent of invested capital are exempt from the profits tax. Inheritance taxes will be increased by fifty per cent. The total yield of the new and increased taxes is estimated at nearly $250,000,000. The most interesting provision inserted in the new revenue bill empowers the President to lower the exemption limit of the income tax from three thousand to two thousand dollars a year and to increase the rates on higher incomes whenever expenditures threaten to exceed revenues. The revenue bill represents the work of the House Ways and Means Committee and it will have the support of the Democratic majority in Congress and probably also the approval of President Wilson and his cabinet. Some few Democrats, such as Representatives Garner of Texas and Page of North Carolina oppose the enormous direct taxes now proposed and favor instead an increase in revenue yielding customs duties. The Republicans plan to introduce a high tariff bill which will restore the duties of the Payne-Aldrich tariff, with the exception of a few very high duties which provoked the insurgent revolt against that measure.

In spite of the financial difficulties confronting the Federal Government, Congress continues to make generous appropriations for local needs. The Senate has now before it a public buildings appropriation bill calling for $38,000,000, and a rivers and harbors improvement bill requiring an equally large expenditure. $1,125,000 will be appropriated for the improvement of the harbor of Tampa, Florida. Reclamation and flood prevention projects in the Mississippi Valley are the costliest part of this year's program of internal improvements at federal expense. What the fate of the public buildings and rivers and harbors bills will be in the Senate is quite uncertain, and even if they pass the Senate as easily as they have passed the House of Representatives there is a possibility that President Wilson may veto them.

Stock Exchange Opens Books

The Rules Committee of the House of Representatives is still busy with the investigation of the peace "leak," which is said to have affected prices in the stock market on the eve of President Wilson's first tender of good offices to the belligerent powers. The testimony of Thomas W. Lawson before the Rules Committee was, however untrustworthy, sufficiently specific to warrant a more thoro investigation than Congress had at first planned. The New York Stock Exchange was asked to aid the investigation by making public all the information in its possession which might have a bearing upon the matter in hand. For some time the exchange officials resisted the demands of the investigators on the plea that it would be a breach of confidence to make public all the dealings of members of the exchange. But the Rules Committee refused to listen to any excuses and threatened to subpoena the books of all the brokers on the exchange whether they had any relation to the "leak" investigation or not.

At length the board of governors of the Stock Exchange capitulated. The governors requested the members of the exchange to furnish forthwith to the chairman of the committee on clearing house of the exchange statements in sealed envelopes, to be examined only by the accountants of the Rules Committee of the House of Representatives, of the transactions of

A FABLE FOR CRITICS

While the leader of the Constitutional party in Japan, Yukio Ozaki, former Minister of Justice, was hotly criticizing, at a Tokio mass meeting, the present administration under Premier Terauchi, two men armed with swords sprang on the platform and tried to stab him. Before the disorder was quieted news came of the Imperial dissolution of Parliament, forestalling a vote of lack of confidence in the present cabinet

customers from the 10th to the 23d of December, 1916. These statements will show of what Clearing House stocks each customer was long and of which he was short at the end of each day, giving the name of the customer, the stocks and the number of shares each; also what stocks were borrowed, when and from whom borrowed, and when returned. All members of the exchange were also asked if they had received any cables, wireless communication or intelligence of any sort from abroad with reference to President Wilson's note. Of course, the request of the governors of the Stock Exchange will not compel brokers to comply with the demands of the investigators, but the Rules Committee will be able to enforce compliance by prosecuting disobedient brokers for contempt. Most brokers, however, seem quite ready to conform to the request for information of customers' speculations. The investigators have also asked the telephone and telegraph companies to give them access to the records of telephone and telegraph messages which passed between Washington and New York during the thirteen days covered by the investigation.

Getting Out of Mexico

The American expeditionary force, under the immediate command of General Pershing, is being gradually withdrawn from Mexico. The first step was to call in the garrison of El Valle, a southern outpost of the American army, to the army base at Colonia Dublan. Carranzista troops occupied El Valle after the Americans had evacuated the place. Then sick soldiers from the field hospital at Colonia Dublan and elsewhere were sent across the border. Stores, equipment and baggage were carried back into New Mexico by numerous automobile trucks, the Mexican government not allowing the use of the railroads. Within a few days it is expected that all American troops will have left Colonia Dublan for Columbus, New Mexico, and other army stations along the American border. Villa has been careful to avoid any conflict with the retiring American army because an attack upon our troops would mean the postponement of the day of complete withdrawal. Nevertheless, a skirmish took place on January 27 between United States cavalrymen stationed near Arivaca, Arizona, and some Mexican outposts. It is thought that the Mexicans were Carranzista regulars.

The retreating American army is followed by a host of refugees, Mexicans and foreign residents of Mexico, who fear to stay in the region which the Americans had occupied lest Villa punish them for giving aid and comfort to foreigners. Villa's army is following in the wake of General Pershing's force, not with any view to engaging it in battle, but for the purpose of occupying evacuated towns in advance of the Carranzistas. General Francisco Murguia is hot on the trail of Villa's insurgent bands, and a conflict on a grand scale may be expected in the near future. General Obregon, Mexico's Minister of War, declared that General Murguia's expedition was the first real campaign in the North against Villa, and would be prest home to completion. He admitted that the de facto government had hitherto made the mistake of simply defeating and scattering the bandits without following up its successes and crushing the rebels beyond the possibility of recovery. A decisive victory for the Carranzistas will, however, be no easy task since Villa is said to have 8000 men in Chihuahua, and to have joined forces with Zapata, the revolutionary leader in central Mexico.

The United States won a diplomatic victory by securing the life and freedom of Bishop Miguel de la Mora, of Zacatecas, accused of befriending Villista rebels. Bishop de la Mora and Archbishop Francisco Orozco, of Guadalajara, were sentenced to death by the Mexican authorities, and the American Government requested their pardon on the ground that the evidence against them was inconclusive. Archbishop Orozco is still held on the sedition charge. Secretary of State Lansing also sent a protest against the proposed provisions of the new Mexican constitution giving the executive power to expropriate property and to expel foreign residents without allowing any appeal to the courts. An official of the Bank of London and Mexico, and the National Bank of Mexico has informed the British Embassy that the bullion and specie taken from these banks by the de facto government was a forced loan. Nine million pesos were taken from the banks against the will of their directors.

Wilson Defends Militia

President Wilson, in the course of a reply to a delegation from the Maryland League for National Defense, disclosed his attitude to the issue of universal military service which is now agitating Congress and the country. The memorial of the Maryland League called the National Guard a disgraceful failure, mentioned the employment of the National Guard on the Mexican border as an example and proof of the weakness of the present system, and demanded universal and compulsory military training. President Wilson rebuked the delegation for the tone of their memorial and defended the use of the federalized National Guard as a part of the military system of the country. He pointed out that any system of universal military training and service would call men away from their civil pursuits just as much as did the recent service of the militia on the Mexican border.

The cold reception given by the President to plans of universal military service has not checked the propaganda of the advocates of such service. On January 27 a "congress of constructive patriotism," held in the city of Washington under the auspices of the National Security League, advocated the intensive training of all physically fit young men in the army or the navy

ONE CITY'S GOVERNMENT

Umatilla, Oregon, voted a straight ticket for the ladies at the last municipal election. From left to right they are: Mrs. Means and Mrs. Brownwell, councilwomen; Mrs. Cheney, recorder; Mrs. Starcher, mayor (and it didn't even jar the domestic equanimity when she defeated her husband for that office); Mrs. Paulu and Mrs. Spinning, councilwomen. One of their first reforms is municipal house cleaning

prior to the age of twenty-one and preferably in the nineteenth year. Along with compulsory training would go the obligation to serve in time of war. The leading speakers at the final session of the congress were Rear Admiral Robert E. Peary, the discoverer of the North Pole; Lafayette Young, former Senator from Iowa; George W. Wickersham, former Attorney General; Howard E. Coffin, of the advisory committee of the National Defense Council, and Representative Gardner, of Massachusetts.

American Citizenship Denied Filipinos Federal Judge Horace W. Vaughan, of Hawaii, has rejected the petition of a Filipino resident of Hawaii for American citizenship on the ground that under the existing naturalization laws of the United States no Filipino is eligible for American citizenship. This decision is directly in contravention of that of Federal Judge Charles F. Clemons, who ruled several months ago that natives of the Philippines might become citizens of the United States. The Clemons decision induced a large number of Filipinos in Hawaii to apply for citizenship and three were naturalized before the later decision had made such naturalizations impossible. The reason given for the rejection of the application was that of race, the naturalization law having been devised to prevent the naturalization of Asiatics, with particular reference to Chinese and Japanese, but inferentially including Filipinos as well. Only aliens of the white race and those of African nativity or descent can become American citizens.

The Farmers' Best Year In the year 1916 the total value of American farm products was $13,449,000,000; the greatest gross value ever attained in any year of this country's existence. Crops were valued at more than $9,000,000,000, exceeding the combined value of crops and animal products in any year before 1912. Yet the actual harvest of the year for most crops was not at all large, and the increased income of American agriculture must be ascribed almost wholly to the recent advance in prices. The level of prices paid to producers for the principal crops on the first of December, 1916, was about 55.9 per cent higher than it was a year earlier, and 52.8 per cent higher than the average for the previous eight Decembers. The four crops which in 1916 exceeded a billion dollars in value were corn, valued at $2,296,000,000; cotton, worth $1,406,000,000; hay, $1,162,000,000, and wheat, $1,026,000,000. Animal products sold for $4,338,060,000.

United States Cannot Get British Shells When Secretary of the Navy Josephus Daniels asked for bids for the manufacture of the armor-piercing projectiles needed by the navy he found to his surprize that the best offer came from England. Hadfields, Limited, of Sheffield, won the contract and would have made the shells for us but for the interference of the British Government. The prohibition will not be removed "so long as the exigencies of war continue." There is nothing surprizing in the attitude of the British Government; indeed, it would be far more remarkable if a nation engaged in a serious war and needing all the ammunition it could make or buy should permit its manufacturers to export shells to a neutral nation. The American navy is, however, very seriously embarrassed by the annulling of this promising contract. None of the offers from American munition makers satisfied Secretary Daniels.

In a public statement issued on behalf of the Navy Department, Secretary Daniels laid the failure of American munitions makers to meet the requirements of the navy largely to the absence of stimulating competition. He condemned especially the Bethlehem Steel Company for its indifference to the needs of the nation. To remedy this state of affairs he suggested that the United States Government establish a plant to manufacture for itself all the shells that are or may be needed. Unless American manufacturers revise their bids it is very probable that no private firm will get the contract.

Verdun Again Last year, in February, the Prussian Crown Prince started an offensive directed against the French fortress of Verdun and continued his efforts to capture this important point for many months in spite of heavy losses. The Germans attacked first on the eastern and then on the western side of the Meuse River, which runs thru Verdun. On the eastern side the capture of the forts of Douaumont and Vaux brought the Germans within three miles of the city, but they were not able to get any further, and recently the French regained these forts.

On the other side of the Meuse the German advance was checked by the range of hills about five miles northwest of Verdun. Two of these, Le Mort Homme (Dead Man's Hill) and Hill 304 (that is, the hill 304 meters above sea level) were for months the scene of the intense and indecisive fighting. Now, again, after some six months of comparative quiet the conflict has been renewed at this point. Following the usual preliminary bombardment the Baden and Westphalian troops under

THE GREAT WAR

January 22—President Wilson addresses Senate on his peace plans. Greek troops withdrawn from Macedonia at demand of Allies.

January 23—German and British destroyers engage in North Sea. Small Bulgar force crosses Danube estuary and is captured.

January 24—Germans drive Russians back from the Aa River.

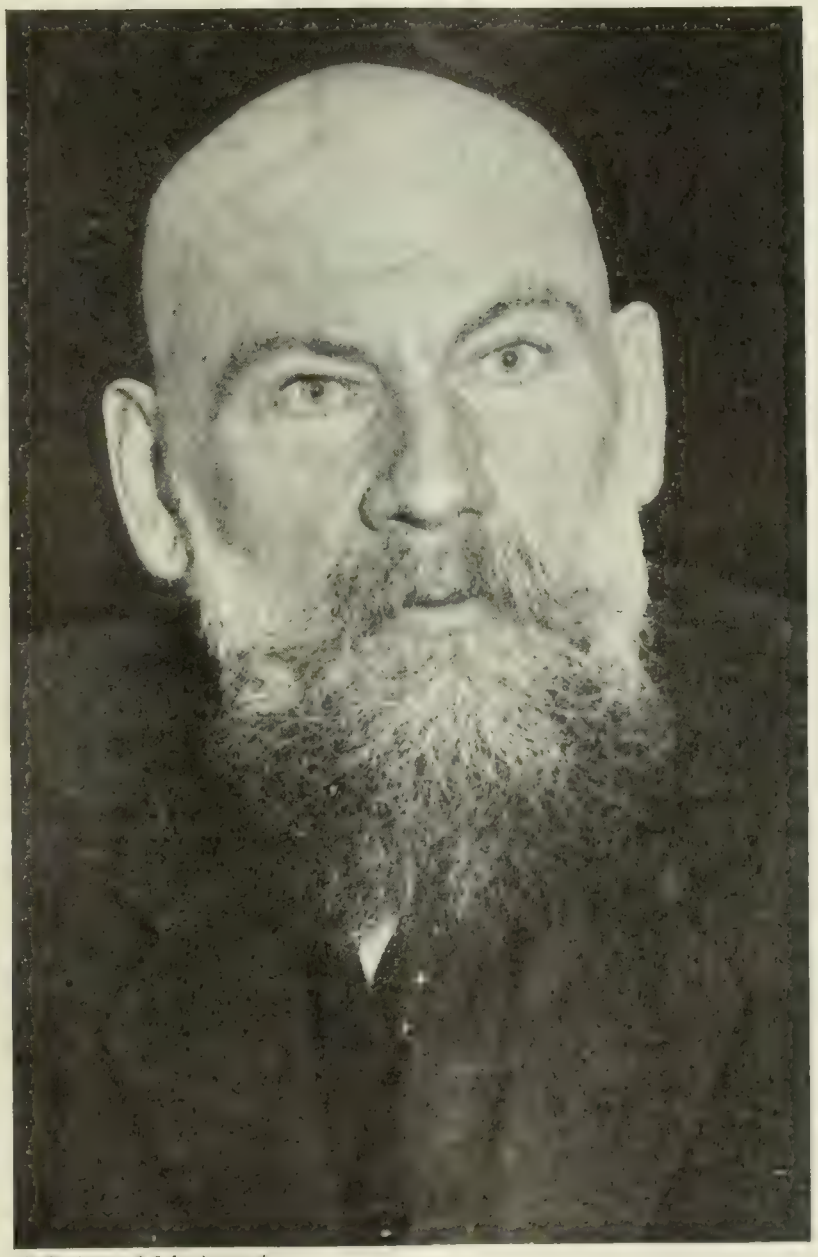
January 25—Germans attack Hill 304, west of Verdun. Premier Terauchi dissolves Japanese House of Representatives to avoid vote of censure.

January 26—German warship shells Suffolk coast. British Admiralty declares new war zone in North Sea.

January 27—British gain trench at Le Transloy. Kaiser in birthday message declares German people will force peace by the sword.

January 28—British auxiliary cruiser "Laurentic" sunk off Irish coast. Russians take a mile of German trenches on Bukovina border.

General von Francois attacked along a five-mile front. On Hill 304 they took some of the foremost French trenches with 500 prisoners and ten machine guns. The French counter attacks were not able altogether to expel them.



It has been generally assumed that the Germans, if they took the offensive again this spring, would direct their attention chiefly to Russia, where there is opportunity for easier and greater gains than in the West. But on the other hand, even a small advance in France would have a greater effect upon public opinion and increase the chances of a favorable peace much more than another defeat of Russia, so it is not inconceivable that the Germans may make a supreme effort to break the French or British lines. There are reiterated rumors that such is their plan and that they are now gathering a huge army and abundant munitions in France, Belgium and Alsace with that intention, tho such preparations would in any case be necessary to meet the Allied drive. It is also suspected that the Germans are planning to attack France on the eastern side thru Switzerland as in 1914 they attacked France on the northern side thru Belgium. The Swiss Government evidently fears that such an attempt may be made, for it has called out more troops to guard the Alsatian frontier. Verdun stands at the corner where the northern and the eastern battle fronts meet, and the increased activity here may presage a campaign to be carried on in the eastern part of France instead of the Somme front in the West.

The Battle of the Aa

It will be remembered that the great German offensive, which last year drove the Russians out of Poland and Courland, failed of reaching its objective in the northeast, the city of Riga. Ever since then the opposing forces have kept their positions confronting one another twenty-four miles apart, the Russians in Riga behind the Duna River and the Germans in Mitau behind the Aa River. Between them stretches the Tirul Marsh, crost, it is true, by the railroad from Mitau to Riga, but impassable by troops on foot.

But the winter weather, which puts a stop to mountain warfare, makes marsh warfare possible. The Russians, taking advantage of the freezing of the swamps and rivers, delivered early in the year an attack on the German lines along the Aa. The Germans fell back at first and the Russians gained a footing on both sides of the river and west of the marsh.

But on January 23 the Germans took the offensive and after a sharp bombardment of the Russian lines the East Prussian regiments advanced and drove their enemy back toward Riga. According to the German report 1700 prisoners were taken and some of Russian regiments lost five-sixths of their men. Most of the ground lost by the Germans has been regained.

COUNT TOLSTOY

The son of the great Russian novelist has just come to this country to lecture on the personality and the work of his father, Leo Tolstoy, and to interest Americans in the establishment to his memory of a home for aged literary men who, like their great teacher, have devoted their pens and their lives to the welfare of humanity.

"There is still another reason why the son has come to America," said Mr. Oscar Straus in his introduction of Count Tolstoy in New York. "Tolstoy is recognized, not only in Russia but by many elsewhere, as the truest and most sincere and the most realistic exponent of the teachings of Christ, as distinguished from Christian teachings of any secular writer of either ancient or modern times. It is because he found that in Russia, as well as in other belligerent and neutral countries, the war god was so dominant that they had no ear for the teachings of the most impressive disciple of Him who taught the Fatherhood of God and the Brotherhood of Man.

"Tolstoy lived a long life, born in the third decade of the nineteenth century and dying at the end of the first decade in the twentieth. His name and fame have spread in all languages thruout the world and the deep interest in his writings has naturally aroused no less curiosity than admiration for the man. We are fortunate to be privileged in being brought into intimate relations with the distinguished philosopher thru the introduction of his gifted son, and to learn from the lips of his son much of the daily life, family relationship, and intimate personal characteristics which books fail to convey."

The War on the Sea

Two encounters took place during the night of January 22-23 in the North Sea between the British and German flotillas. Each side admits the loss of one destroyer and claims to have sunk several of the enemy's vessels. It seems that a German flotilla, said to consist of eleven destroyers, had come out of the Belgian port of Zeebrugge and was trying to make its way north along the Dutch coast under cover of the darkness when it encountered a large British patroling fleet. The first intimation to the Germans that they had been discovered was a shell which struck the bridge of the flagship, "V-69," and cut off both legs of the commandant, Max Schultz, who died in a few minutes. Two other officers standing beside him were also killed. The second shot killed the gun crew of five men, and the third disabled the steering gear so the "V-69" rammed and damaged another of the German destroyers. The "V-69" ran in toward the coast, where at daybreak she was discovered by a Dutch fishing smack and towed into Ymuiden. In another engagement the same night a torpedo struck a British destroyer, killing three officers and forty-four men.

The unknown German raider which has been preying on British shipping off the coast of Brazil has not yet been caught, altho an Allied fleet of six British cruisers, two Italian cruisers and four French warships are searching the South Atlantic for her.

According to the estimates of the American Bureau of Navigation the world's shipping suffered a net loss of one and a half per cent during 1916. The vessels sunk during the year number 1149 of 2,082,683 tons, and those built number 2506 of 1,889,943 tons. Great Britain built during the year 510 vessels of 619,000 tons, and the United States comes second with 1213 vessels of 560,000 tons.

The British Admiralty has declared a new danger zone and mine area extending in a large triangle westward from the Jutland coast. A large part of the North Sea is now closed to commercial shipping by order of the British Government, while the British Isles are surrounded by the war zone established by Germany.

WHY PEACE MUST BE ENFORCED

BY HAMILTON HOLT

THE age-long dream of poets, prophets and philosophers has at last entered the realm of practical statesmanship. From now on till the peace conference assembles at the close of the war the issue before the world will be President Wilson's proposal to substitute coöperation for competition in the relations of nations.

The first step in international cooperation is the establishment of a League of Peace. The last step—if there be a last step—is that world state which the historian Freeman said when it comes into existence will be "the most finished and artificial production of political ingenuity." The establishment of a League of Peace, therefore, is the immediate problem before the world. And the problem of a League of Peace is the problem of its sanctions, for there is little or no difference of opinion as to the proper constitution of a league. All are agreed that it must function thru legislative, judicial and executive agencies.

THREE main sanctions have been suggested for the international law which a League of Peace will formulate and maintain. I leave out of account diplomatic pressure, because diplomatic pressure has never been accounted sufficient when a real crisis arises. The three are:

I. Public opinion.
II. Economic pressure.
III. Force.

Let us take them up in order.

First, Public opinion. Of course, no sanction can have the effect desired unless it is strong enough to deter those who are tempted to disregard it. Can public opinion do this? Can it of itself compel obedience to international law? While it is an axiom of political science that no law can be enforced contrary to public opinion, the converse is, of course, not true. Public opinion can no more prevent a great nation violating the canons of international law, as has amply been demonstrated in the present war, than can the public opinion within a nation apprehend a criminal or put down a riot. Public opinion must sustain international law and approve its enforcement, but public opinion as a substitute for force is a pure chimera.

Second, Economic pressure. Will non-intercourse or economic pressure be sufficient to enforce the rules of the league? This phase of the question has been little discussed until very recently.

The argument runs that if a nation were absolutely cut off from all intercourse with the rest of the world it would suffer so severely that it would have to give in. If all credit, all loans, all trade were stopped, if even letters and telegrams were prohibited, no nation could endure such a strangling isolation and would come to terms.

Mr. Herbert S. Houston, in his address before the International Peace Conference at the Panama-Pacific Exposition in San Francisco last October, expresses this view most succinctly when he says:

> The most effective factors in world-wide economic pressure, such as would be required to compel nations to take justiciable issues to a World Court for decision are a group of international forces. Today money is international because in all civilized countries it has gold as the common basis. Credit based on gold is international. Commerce based on money and on credit is international. Then the amazing network of agencies by which money and credit and commerce are employed in the world are also international. Take the stock exchanges, the cables, the wireless, the international postal service and the wonderful modern facilities for communication and intercommunication, all these are international forces. They are common to all nations. In the truest sense they are independent of race, of language, of religion, of culture, of government, and of every other human limitation. That is one of their chief merits in making them the most effective possible power used in the form of economic pressure to put behind a World Court.

Now while economic embargoes would undoubtedly exert a very great pressure in international affairs, and would doubtless, in many instances, be sufficient to bring about a recourse to courts and councils of conciliation, there are several reasons to think it would not always avail. Two of the most important are as follows:

Economic pressure can never be as great as physical pressure, both by the very nature of the case, and because, as President Lowell of Harvard University has recently pointed out, "the resistance of the interests effected will be at least as great against an economic boycott as against war, and they will be constantly striving to break it down, whereas, war once declared silences opposition—a fact which any nation that thought of defying a League of Peace would not fail to note."

The proposal to resort to non-intercourse will have to meet this practical difficulty. When such a measure is to be employed how can the coercing powers equitably apportion the pressure among themselves? In undertaking to employ military force this may not be quite so difficult, but when economic pressure is to be employed, it is conceivable that a single nation may have to bear practically the entire cost of the undertaking. In fact every nation which is party to the league, as has been said by the minority report of the "Committee of the American Chambers of Commerce" would have to be prepared to risk, or sacrifice for the time its entire trade with an offending nation, even tho other members of the league suffered no corresponding loss. Unless the nations were willing to devise some plan by which the nation that suffered the most from the loss of trade would be compensated by the others this objection might be almost insuperable.

Third, Force. If public opinion and economic pressure will not always and invariably suffice to compel a recourse to the peaceful adjustment of international disputes, we must evidently fall back on force as the ultimate sanction. For, as Woolf says in *The New Statesman*, July 10, 1915, "The maintenance of overwhelming power in the great nations and the continuance of their agreement" are the only guarantee of the future peace of the world.

The nations are now living in a world in which there are laws to prevent war but no force to compel a resort to them. It would be an exact parallel if within the state there were elaborate laws governing the conduct of persons engaged in riots, murder and violence but none to prevent riot, murder and violence and no police to enforce them. This aspect of the case has recently been discussed by Elihu Root, who says:

> Many states have grown so great that there is no power capable of imposing punishment upon them except the power of collective civilization outside that state . . . and the only possibility of establishing real restraint by law seems to remain to give effect to the undoubted will of the vast majority of mankind.

In other words, Mr. Root proposes to establish an international criminal law.

If, then, we must have force as the ultimate sanction to bring the nations before the courts and councils, are there not times when economic pressure will do just as well as force and the nations will not have to resort to the bloody arbitrament of war? Or, if force cannot entirely be dispensed with, why might not some members of the league be permitted to use economic force while the others fight? Let us take up the latter question first.

THERE can be no doubt that if a nation knows that certainly, instantly and concertedly all the other nations will make war against it the minute it begins hostilities, such a nation will not break the peace as long as the force of the league is unquestionably superior to its own force. In other words, the certainty that an overwhelming force will be used means that practically it never will be used. The only conceivable contingency in which the force of the league might not be effective would be in the improbably but not impossibly rare case when the members of the league divide into two nearly equal groups, as the American states did in the Civil War. Such a contingency, tho remote, can, of course, never be absolutely guarded against.

But the real danger of trying to separate economic from military pressure and exerting it independently lies in this fact: If the choice is open as to which course may be pursued, delay

and parleying ensue after the danger has arisen, and that in turn would give the offending nation opportunity to befog the issue with intrigue, with the possibility that either nothing at all would be done, and the guilty nation escape punishment, or else the intrigue would continue until war would become inevitable. On the other hand, if the offending nation knew that no parleying and intrigue could prevent instant military intervention it would behave itself from the beginning and neither injustice nor war would be nearly so likely to ensue.

The League to Enforce Peace, to whom is unquestionably due the credit of bringing the League of Nations idea before the world, has seen these difficulties most clearly. In its Article III as adopted at its meeting at Independence Hall, Philadelphia, June 17, 1915, it said:

> The signatory powers shall jointly use forthwith both their economic and military forces against any one of their number that goes to war, or commits acts of hostility against another of the signatories before any question arising shall be submitted as provided in the foregoing [to the Court or Council of Conciliation].

SEVERAL of the various American peace organizations, as well as the American Chamber of Commerce, which represent the business life of the United States, have exprest a belief that there is a stage in the proceedings before hostilities are actually reached where economic pressure might advantageously be applied. There are two stages, it is claimed, in which joint intervention of the league might take place, to put pressure upon a recalcitrant nation. The first stage is that in which war is being threatened by one power against a second when an ultimatum might be presented and the mobilization of troops begun. This would be the stage for economic pressure. But once actual hostilities or invasion had ensued the second state would be reached and military pressure automatically applied. The League to Enforce Peace has been willing to accept an amendment granting the value of economic pressure before military pressure, provided military pressure follows the instant hostilities begin. But the probability is that there would not be a sufficiently extended time between the ultimatum and actual hostilities in modern warfare to bring economic pressure into action or to permit pressure to exert any deterrent effect on the nation bent on war. In other words, economic pressure is of more theoretical than practical value, since modern wars begin so suddenly.

In taking up the question of whether all members of the league must invariably furnish their quota of force against the recalcitrant nation, there can be no doubt that if it is necessary it must be done. But as a practical proposition, if all nations exert economic pressure it may be sufficient for certain nations of the league alone to furnish the military force.

When the Hague Court announced its decision in the Venezuela case in 1904 it called upon the United States to see that its decree was carried out. When the allied nations lifted the siege of Peking, only those sent troops who happened to have them in Asia. In the present war, Japan, tho an equal member of the alliance, does not send troops to Europe. In case the United States should enter the present war on the side of the Allies, the Allies might not need our troops any more than they do Japan's. Likewise, if we intervene in Mexico it will not be necessary for other nations of Europe or Asia to send an armada over here to help us. The United States alone is amply able to protect all foreign interests in Mexico with her own forces. The question of how and in what measure the force of the league shall be used is, after all, a practical one to be decided at the time. The only important thing is to have each nation prepared to use its force to the utmost if necessary.

Now, it will be noticed that Article III of the program of the League to Enforce Peace has nothing to say as to whether force shall be used on the part of the league to carry out the decisions of the court and the recommendations of the council. This is a very important matter.

There are apparently four distinct stages in the evolution of the political organization of the world. These are as follows:

First. The creation of the machinery —courts, parliaments and executives— to do the international business.

Second. The agreement to use the machinery.

Third. The agreement to use sanctions, including force, against the nation that goes to war without first using the machinery.

Fourth. The agreement to use sanctions, including force, to carry out the decisions of the courts, councils and legislatures of the league.

It is evident that the world has already reached the first stage. The Hague Conferences are the Parliament of Man and the Hague Court is the germ of the Supreme Court of the world. Tho they are still embryonic institutions they are, nevertheless, the beginning of the legislative and judicial branches of the world government. The beginnings of the world executive are hardly discernible.

The second step most peace advocates are willing to take today. Those pacifists who think that treaties backed by public opinion furnish sufficient sanctions for international law will not go beyond this state, for they argue that to abolish force by force and war by war is a paradox, not realizing that as John A. Hobson has stated, "there is no display of moral force in any act of human conduct which does not make some use of physical force as its instrument." They, however, comprize only a minority of the American peace party.

But the world has not got even to this second state. There is no agreement by which the nations promise to refer their disputes to peaceful investigation, report and decision.

The League to Enforce Peace would evidently take us into the third stage.

Now, altho it is certain that the enforcement of the decisions of courts, legislatures and councils will eventually come, it is doubtful if the nations are yet ready to enter the fourth and final stage in which they will agree to this. It will be difficult enough to get them to enter a Peace League of any kind, and perhaps we must not try to do too much at once. As far as the United States is concerned, it is doubtful if she would enter a league in which any award an international court might make in such a vital matter as the Monroe Doctrine or the right of foreigners to enter our public schools would be enforced. But the United States ought to be willing to enter a league and consent to state her case before the court or council provided she did not have to abide by the decisions and recommendations there made.

IT is evident, therefore, that Article III of the League to Enforce Peace, if carried out, will not necessarily abolish war, but will simply cause delay until the case has been submitted to reason. But the League to Enforce Peace is a real peace measure. For delay pending investigation and adjudication would stop most wars.

In Canada there is an industrial law known as the Investigation Act, by which neither the employers can lock out employees nor employees strike until after an impartial and official investigation of the dispute has been made and the findings published. Then they can strike or lock out if they dare. But the history of this act shows that in the vast majority of instances the findings of the investigation commission have had all the effects of an arbitral decision. In other words, tho neither side agreed to abide by the decision or recommendations they have found it to their interest to do so and thus industrial peace has been brought about in Canada. So may we argue that once the nations take time to present their differences to an impartial court or council, passions will cool and by the time the award or findings are published the nations will be in a mood to live up to them. And besides the history of international arbitration conclusively shows that there is no difficulty in getting nations to live up to recommendations of tribunals after they have once resorted to arbitration. The difficulty is to get them to take their important questions to arbitration.

It is evident, therefore, that while the basis of a League of Peace and its sanctions can be reduced to a very few principles, the working out of these principles into a world constitution would be a labor of constructive statesmanship as great in this day and generation as was the creation of the Constitution of the United States over a century ago.

What a source of pride it must be to every patriotic American that we have a President with the courage, vision and statesmanship to take the lead.

COUNT TERAUCHI, PREMIER OF JAPAN

ORIENTAL ACCORD

BY JEREMIAH W. JENKS

DIRECTOR OF PUBLIC AFFAIRS AT NEW YORK UNIVERSITY

Bain

PRESIDENT OF CHINA, LI YUAN-HUNG

WITHOUT leaping to an extreme optimism, American friends of Japan and China have good reason to rejoice over the news cabled from Peking on January 23. The two great Oriental nations have come to an honorable understanding regarding a matter which, at several times during the last five months, threatened to destroy all hope of amicable peace between the people of China and the people of Japan. The Chengchiatung incident is closed on the very reasonable principle of give and take.

Now, this is a victory for peace, for diplomacy as against the sword, for Japanese common sense and good faith and for Chinese toleration, patience and good judgment. America's old friend, Dr. Wu Ting-fang, undoubtedly deserves the chief laurel wreath; but I think he would be the first to bestow the palm upon Baron Hayashi and Marshal Terauchi. All three have done well, as has undoubtedly Viscount Motono, Japan's very capable Minister for Foreign Affairs. Taken in conjunction with the principal speeches on the opening day of the Japanese Diet, the Chengchiatung arrangement offers more than the possibility of a frank and friendly understanding between two nations whose relations are of practical as well as sentimental interest to the American people.

The Chengchiatung affair illustrates the fact that the most trivial incidents often lead to the most serious consequences. A Japanese peddler of "quack" medicines quarreled with a Chinese policeman, and two nations came almost to the verge of war.

Chengchiatung is a Manchuria town of about 22,000 inhabitants. It is close to the border of Mongolia, a little more than twenty miles northwest of Shi-Pingai on the South Manchuria Railway; a key to the Mongolian trade and an important soya bean mart. The people are sturdy, honest and industrious, not much given to politics. In 1915 the imports—cotton goods, kerosene, hardware and salt—were $1,585,000; and the exports—soya beans, kaolin, leather and furs—were $635,000.

As is to be expected, the Japanese and Chinese accounts of the "incident" are very contradictory. It is agreed, however, that whatever occurred happened on August 13, 1916. The Japanese say that on that day a Japanese druggist was insulted and beaten by some Chinese soldiers, while the Chinese allege that one of their local policemen "admonished" "the leader of a Japanese gang of smugglers engaged in furnishing arms to Mongolian bandits." It is important to remember that in addition to a strained local Chino-Japanese situation at that time, China was not yet recovered from the shock of Yuan Shih-kai's death and the rebellion which restored the republic. With this in mind, we may accept as fact the statement that the druggist or peddler appealed to the police sergeant at the newly opened Japanese consulate. This sergeant took the matter to the officer in command of a detachment of Japanese soldiers encamped in the town, who ordered out a squad of twenty men under a youthful lieutenant. The latter, accompanied by the peddler and Japanese police sergeant, forced his way into the Chinese barracks. In the office of the Chinese colonel, a pitched battle began. Blood was spilled. Several Japanese soldiers were killed. The Japanese retired from the barracks, vowing vengeance. The Chinese colonel reported to his superior officer, who "endeavored to straighten out the affair without further trouble."

The lamentable nature of the business was intensified by the fact that a new Japanese minister, Baron Hayashi, was on his way to Peking to endeavor to restore Chino-Japanese friendship which had been sacrificed because of the famous "twenty-one" demands presented by his predecessor, Dr. Hioki, under orders from Tokyo. Baron Hayashi had won his diplomatic spurs in Peking and had many friends in China.

On September 3 the following "demands" and "desires" were presented by Japan to China:

Demands: 1. The reprimand of the commander of the twenty-eighth division, a regiment of which formed the Chinese force engaged in the affair.

2. The dismissal of certain senior officers, and the punishment of the men who actually took part in the fighting.

3. Some form of public apology, including the posting of proclamations in all military centers in South Manchuria and Eastern Inner Mongolia, warning Chinese soldiers and civilians to avoid collision with Japanese peddlers and others.

4. The establishment of Japanese police stations in South Manchuria and Eastern Inner Mongolia.

Desires: 1. The appointment of Japanese military advisers to all the military headquarters in South Manchuria and Eastern Inner Mongolia.

2. The engagement of Japanese military instructors in all military schools and academies in China.

3. The payment of compensation to the families of the deceased Japanese soldiers.

4. The expression of some form of apology either by the Chinese Government or by the military governor of Mukden.

The demands were delivered by Baron Hayashi to Dr. Chen Chin-tao, at that time sustaining the impossible responsibilities of both Chinese Minister for Foreign Affairs and Minister of Finance. In addition to international and national politics, Dr. Chen had to wrestle with a financial stringency, involving the suspension of specie payments by the government banks, not to speak of other complications. President Li Yuan-hung was laboring night and day to knit China together and make peace between contending political parties. In Japan, in Europe, as well as in China and America, the presentation of these Japanese claims was regarded as a very serious blunder by all save those who seemed bent upon "humbling" China. The *North-China Daily News*, which is the senior and most responsible British newspaper in China, warned the Okuma government that "there was no reason for posting Japanese troops at Chengchiatung."

That was the very root of the matter—the Japanese soldiers were encamped where they had no right to be—they were many miles beyond the railway zone, where guards are allowed under treaty.

The Okuma ministry fell, to be succeeded by the present Terauchi administration. Baron Sakatani and other good Japanese friends of America pointed out at the time that one advantage of the change would be better control of Japanese military forces at points where they might be likely to clash with Chinese forces. The Chengchiatung settlement assured that this promise and the exprest desire to be more considerate in dealing with the Chinese Government, were sincere and could be maintained.

China "has granted the demands for reprimanding and punishing the responsible officers"—that was done immediately after the affair—"and also has agreed to warn Chinese soldiers against incivility in their treatment of Japanese"—that has been done repeatedly during recent years. China also "has granted an indemnity to the Japanese whose case caused the incident."

One exhibit in the first Aeronautics Exposition ever held in this country. It will open in New York on February 8, when seventy-five manufacturers are to show their latest types of aeroplanes, and to discuss the standardization of parts

WHEN THE HEALTH DEPARTMENT BRINGS ITS SHOW TO TOWN

THE PICTURE OF HEALTH

BY S. R. WINTERS

"MY old man told me the pictures would move, and I've read about them in the papers, but these are the first I've ever seen."

The speaker was an elderly woman, and her remark was addrest to her neighbor. The two had journeyed six miles from a remote rural district to the township village to see the "pictures" "Hope" and "The Man Who Learned," shown in every rural community of North Carolina by the State Board of Health. The purpose is to carry from the State health office expert knowledge for the man and woman on the farm.

The idea of carrying the agricultural college, and the tested methods of the experiment station to the farm, has become commonplace by reason of its wide application. But it remained for Warren H. Booker, of the bureau of engineering and education of the North Carolina health department, to conceive a plan whereby the propaganda of disease prevention is taken from the laboratory to the rural home, and to stimulate the suggestion for a health department on wheels.

The work is conducted by means of a "Moving Picture Health Car," which travels from community to community. The inexpensiveness and simplicity of the North Carolina health car recommend wide duplication. A delivery truck was designed and constructed at an outlay of $750. In the truck has been placed a complete, separate unit consisting of a four-cylinder, four-cycle gas engine, connected to a three k.w. d.c. generator, having a capacity of fifty amperes and sixty volts. This represented an investment of $360. One hundred feet of stage cable is used to connect the lighting plant with the motion picture machine. The cable is suspended thru a door or window.

The advertising feature to stimulate attendance is novel. The car is placed "on parade," with the curtains unhoisted, for display purposes. A megaphone announces the time and place of the entertainment. The village is usually littered with handbills before the arrival of the car.

The motion picture machine is similar to those in use by traveling motion picture companies. To the machine the board of health has added a number of accessories. A fire extinguisher and a switchboard are attached, the latter device to provide a string of incandescent lights for illuminating the entertainment hall. These lights are attached to a piece of stage cable which stretches from one end of the auditorium to the other and afford a much better lighting system than is common in rural schools. They can be snapped on and off from a switch on the operating table.

The health car is equipt with a camping outfit and cooking utensils for "roughing it" in isolated communities. H. E. Hamilton, a trained machinist, takes care of the car and reports daily to the health office. Roy Tatum, a young college man trained in medical science, is in charge of the lectureship platform. The chief of the State health department has constant generalship over the health tour.

An intensive campaign is conducted in each county, the car having twelve scheduled stops weekly at various points. The picture program remains unchanged for a week. A week later, and again two weeks later, the communities are revisited with complete changes in program. The weekly audiences approximate 8000 men, women and children, and the daily attendance ranges from 450 to 900.

The health exhibit's expenses of operation are $15 daily or $90 weekly. County boards of commissioners and education, as well as private initiative, are sources of support. A guarantee of $90 is required for each county. Johnston County obtained funds from six villages; a private citizen in Alamance County subscribed the full amount; the superintendent of education in Anson County obtained the guarantee from the board of education, and an agricultural society in Rowan County stood sponsor for the $90. Five county fairs subscribed $100 each for a week's engagement.

Typhoid fever, tuberculosis, the fly germ, and diseases traceable to improper care of the teeth are the predominant film-productions flashed on canvas. The propaganda of disease prevention is waged unerringly. A testimonial from a woman in a village where the exhibit was produced suggests the emphatic results achieved:

"The film on the care of the teeth and mouth has increased the sale of toothbrushes, and the fly-screen business will be greatly stimulated since the fly danger film has made the genus fly a thing to be fought to a finish. Another thing of importance is the impression made upon the dairymen who saw the films, 'The Man Who Learned' and 'In His Father's Footsteps.' . . . My experience is broad in North Carolina rural communities, and I find that a lesson learned thru practical demonstration is of greater value than all the literature which is 'never read,' sent out by a beneficent board of health."

The North Carolina motion picture health car is just in its infancy of usefulness. Its development offers an untried field with a wealth of opportunities. Such subjects as agriculture, domestic science, educational topics and even religious and uplift subjects are susceptible to close relationship with these health topics that are being displayed upon the canvas. "I feel that we are just pioneers in this field at this time and that it is only a question of time until something like this will develop," adds the author of this idea —which signifies better rural homes, and a happier and richer country life.

Durham, North Carolina

HOW THE MINIMUM WAGE WORKS

BY W. J. GHENT

AUTHOR OF "MASS AND CLASS," "OUR BENEVOLENT FEUDALISM"

NOW that ten states have passed minimum-wage acts, and several other states have taken preliminary steps toward the same end, the movement has passed from the stage of propaganda to that of definite experiment. Yet the opposition to the legal minimum is still, as it has long been, determined and bitter. A certain class of employers and their retainers are still declaring that it would cause the wholesale displacement of women and girls by men, the sweeping discharge of the less competent workers and the raising of prices of commodities. Mr. Gompers and others of the stand-pat trades union school are still echoing at least two of these assertions (for obvious reasons they have hesitated at affirming the third), and are further asserting that a legal minimum would set a precedent for a legal maximum, and that it would naturally tend by its operation to convert the minimum into a maximum, or at least an average. Finally the Syndicalists, Impossibilists and super-Socialists generally are flouting the minimum wage as a thing too trifling to bother with, since the whole industrial plant of the nation, they contend, might easily be grasped by a vigorous reaching forth of hands. The world, however, turns a deaf ear to these protestants, and goes on with its work.

Most of the new state laws have been in operation too brief a time to furnish convincing evidence. Regarding several of them we have casual and informal reports, tho in the main too meager to serve as a basis of judgment. Some of them, indeed, have not yet even instituted a wage schedule. From Washington, Oregon and Utah, however, we have definite reports which bear directly on these assertions.

SOME ARGUMENTS ANSWERED

THE assertion that a legal minimum wage would cause a wholesale substitution of women and girls by men and boys finds no support in the reports from the three states named. It is based on the assumption that in most occupations males render a better service than females, and that females are employed because they work more cheaply.

Linked with this assumption is another—that there is a probability, in this day, of imposing a legal minimum sufficiently high to attract male labor. There is no such probability. Moreover, it ought not to be necessary to say that there are thousands of occupations for which women are peculiarly fitted and wherein they render a better service than men. The employer is in business for profit, and to win this profit he must furnish the service which best accords with his needs or which the public demands. If the state compels him to pay a higher wage he will pay it, because he can not help himself. He will continue to employ women in the occupations wherein their labor is best.

The assertion that a legal minimum would result in a general "weeding out" of the less competent is almost equally fallacious. The "weeding-out" process could hardly be more rigorously employed than it is today. Employers do not, as a rule, pay wages to more hands than they need. They do not, as a rule, employ incompetent workers. The legal minimum is not likely to cause them to discharge masses of their workers in order to run shorthanded and to miss the harvest of profits. But even if they should attempt to thin out the ranks of their present wage-earners, from what sources would they draw new recruits? Not from the ranks of the army of the unemployed, which, on the whole, comprises the workers least acceptable to the employers. The employer would find small gain in dismissing even the less competent worker, who is familiar with her task, and employing the unfamiliar and untrained worker. The danger of a drastic "weeding-out" is not disclosed either by theory or by the evidence at hand.

WAGE SCALES IN THREE STATES

IN Washington five industries—mercantile establishments, factories, laundries and dye works, business offices and telephone exchanges and telegraph offices—have come under the legal minimum wage. The weekly minimum is $8.90 in factories, $9 in laundries, telegraph offices and telephone exchanges, and $10 in stores and offices. There is also a $6 minimum for minors in all these industries, and a graded minimum for apprentices, beginning at $6 for the shortest period of employment and running to the full minimum on completion of a term of service. There is also a special schedule, at less than $6 weekly, for minor apprentices in millinery and dressmaking and in manicuring and hairdressing.

In Oregon, for experienced adult women, there is a weekly minimum of $8.64 in Portland factories; $9.25 in Portland stores, and $8.25 in general industries thruout the state, and a monthly minimum of $40 in Portland offices. For inexperienced adult women generally there is a weekly minimum of $6, and for girls between sixteen and eighteen, in a wide range of specified occupations, a daily minimum of $1. There is also a special schedule for inexperienced women and girls in millinery and dressmaking at less than $6 weekly.

In Utah the wage scale came into force with the law itself, on March 13, 1913. It calls for a daily minimum for experienced adult women in all occupations of $1.25; for adult learners and apprentices, of 90 cents, and for girls under eighteen, of 75 cents.

The predicted general discharge of women workers has failed to happen. In Oregon, for which we have reports both by the State Bureau and the Federal Bureau of Labor Statistics, there has been a considerable reduction of working forces, of both sexes, due to the general business depression.

In Utah, according to the Labor Commissioner, "perhaps not more than 5 per cent of the whole number of female employees were discharged because of this law going into effect, and many of those who lost their employment found employment in other like establishments or in other lines."

"There has been no wholesale discharges of women employees," says the Washington report; ". . . there are vastly more women workers in the State of Washington today receiving a living wage than there were two years ago." This, too, be it remembered, under conditions of unusual business depression.

There is no indication of any appreciable displacement of women and girls by men and boys. "The wage determinations," says the Federal report on Oregon, "have not put men in positions vacated by women. The causes operating to decrease the number of women also operated to decrease the number of men, tho to a less degree, as the non-selling male force is not as adjustable as the non-selling female force." In Utah a number of the department stores supplanted cash girls, entitled to $4.50 under the law, with cash boys, who are paid $4; but the practise seems not to have been carried to other enterprises. In Washington there is no indication of such displacement.

MINIMUM OR MAXIMUM?

WAS there any "weeding out" of the less competent? Some of it, perhaps; but nothing that can be called general. In Oregon and Utah the tendency seems rather to have been to give the less competent an increased employment. The provision of a lower wage for minors and apprentices has confessedly caused some abuses of the spirit of the law. In Washington, on the other hand, as shown by the testimony of several employers, the effect of the law has been generally to increase the concern of the employers for the efficiency of their help. More careful training is now given, as the employer understands that unless his apprentice is able to earn, according to his standards, the full minimum which after a time must be paid her, he himself loses.

It is hard to determine upon what ground the argument is made that a legal minimum would tend to become a legal maximum, or even an average rate. In the clothing industry of Victoria, according to recent reports, even the average rate exceeds the fixed minimum by 17.4 per cent for women and

18.8 per cent for men. Maximum wages must thus be very considerably in excess of the minimum. In the mercantile establishments of Washington there has so far admittedly been a slight reduction in average hourly wages of women receiving more than $10 a week. But the number of girls receiving more than $10 a week increased from 1063 to 1250, tho the average wage declined from $15.75 to $14.83. Somewhat similar figures are shown for laundry employees. "There has been no tendency," says the Washington report, "for the minimum wage to become the maximum wage." In Utah, says Governor Haines, the law "has not caused the minimum wage to become very nearly the maximum wage. . . . The situation now is that a much larger number of employees in Utah are drawing a wage in excess of the highest minimum wage than those who are paid the legal wage itself." "Evidently," says the Federal report on Oregon, "the more poorly paid girls have been benefited, while the better paid have not suffered."

It may be conceded that under the operation of the compulsory arbitration law of New Zealand legal wages tend to approximate an average. Under that law arbitration boards fix the wage-rates. These are not "minimum" rates, however, but "fair" rates. The two things are radically different. The data taken into consideration in determining "fair" wages are not the data considered in determining "minimum" wages. Trades-union schedules, prevailing rates, the general state of trade, are the main factors in the former; a decent standard of living the main factor in the latter. A parasitical industry that can not live except by exploiting the most wretched part of the working-class gets no consideration in a determination of a legal minimum. If such an industry can not assure a decent living wage, the decision dooms it to extinction. The legal minimum is thus a provision for maintaining mere physical efficiency. "Fair" wages, on the other hand, are presumed to furnish much more than this. Thus, while there is ample reason why legally determined "fair" wages should tend to an average rate, there is no reason why a legal minimum should so tend.

WAGES AND PRICES

THAT prices of commodities can be advanced to meet increases of wages is an assertion frequently made by employers as well as by radical social theorists. If the assertion is true it must apply quite as well to increases won by the trade-unions as to those compelled by the state. One wonders why any employer so believing should ever have resisted a demand for higher wages. Yet a large part of the history of capitalism has been a record of strikes by workmen for more pay and of consequent resistance by employers. Much of this resistance has been maintained at enormous expense. Much of it has involved the demoralization of a developed working force, the irrecoverable loss of trade and the destruction of property. That employers as a class should have accepted, even courted, these stupendous losses rather than pay higher wages when they could easily have recouped themselves by charging higher prices, would be, if true, one of the marvels of social psychology. But the assertion is wholly ridiculous; and none knows its absurdity better than the average employer. He resists a strike for higher wages because he knows that the increase can not, as a general rule, be taken from the public; because he knows that it means, unless compensated by greater or better production, a decrease of profits for himself or his stockholders. Whatever may be his argument before a legislative committee, his private view of the matter is distorted by no such illusion.

The minimum wage law has not "ruined business." In Victoria, where it has been gradually extended to cover more than 100 trades, employing more than 100,000 persons, the number of factories has increased by 60 per cent, and the number of employees by more than 100 per cent. In the five sweated trades to which it was first applied the number of employees has increased much faster than the population. In Washington, Oregon and Utah it has won the cordial support of enlightened employers. There has been some difficulty in applying it to industries that have to compete with sweatshop products from the East; but the employing class in the main, says the Washington report, "have been following the letter and spirit of the law and aiding greatly in its application." It has raised to a living wage the compensation of 60 per cent of the women workers in the industries of that state to which it has been applied; it has considerably increased the number of women workers at rates higher than the minimum; it has tended toward increased efficiency and vocational training, and it has accomplished these things without any "disturbance of business." The testimony from Utah and Oregon is similar.

AGAINST THE MINIMUM WAGE

YET the campaign against the extension of this humane and wise measure continues—and strange bedfellows it makes! Laborism of a sort, capitalism of another sort, and utopianism of all sorts find a common lodgment. In his opposition to a legal minimum wage and the related demand for a maximum workday, Mr. Gompers is presumed to speak in the name of the whole American Federation of Labor. He admits the establishment, thru pressure by the unions, of a legal maximum workday for miners in several Western states, and concedes that the unions acted "within their rights." The proposal to grant a minimum wage to women, however, he declares, in a recent article, as well as in his testimony before the Industrial Relations Commission, to be "a curb upon the rights, the natural development, and the opportunity for development, of the women employed in the industries of our country." Evidently the women, almost wholly unorganized as they are, should win this good for themselves without the intervention of government. "I am very suspicious," he says in the same article, "of the activities of governmental agencies"—a somewhat puzzling remark in view of the maintenance by the Federation of an active and expensive lobby in Washington and the persistent demands of the Federation, both in Washington and in forty-eight state capitals, for increasing labor legislation. Remembering his Virgil, he says further, "I fear the Greeks even when they bear gifts." The Greeks of the National Civic Federation have for him, however, evidently no terrors; for the union of the two forces in this campaign against the minimum wage is cordial and compact. Nor do those other and more militant Greeks of the National Association of Manufacturers, who represent the extremest antagonism to organized labor, affright him with their gifts. They, also, have joined in the campaign.

AN IMMEDIATE NEED

THUS labor reaction joins with capital—and only the narrower element of capital at that—in opposing the grant by the state to a large part of the working population, without economic or political power to win it for themselves, a decent standard of living. This coalition is supported, moreover, by that increasing element of visionary utopians who demand a whole loaf or no bread. That the securing of a legal minimum for women and minors is but a small achievement, as compared with the seizure by the working class of the whole industrial plant of the nation, may be true enough. Our Impossibilists and Illuminati generally so assert, and they are very likely correct. Only it happens that the one thing is attainable, while the attainability of the other —during at least the present generation—is a matter about which, in spite of the assertions of the theorists, grave doubts persist. Most of our "revolutionary" seers and philosophers, it happens, are persons of means. Some of them have landed property, others incomes from professional services. They can afford to wait.

The beneficiaries of a minimum wage, on the other hand, are women and children upon whom the grind of overtoil and underpay is rigorous and unremitting. They can not afford to wait. Every slightest improvement in their condition means for them some measure of release from insupportable burdens. They cannot obtain this betterment for themselves. Only by general state action can it be achieved.

If the obtaining of these immediate benefits sacrificed or delayed the obtaining of some more sweeping and radical future benefits, there might be some justification for opposing the present movement. But no one can prove any such thing as that; and the assertions of the Impossibilists fall upon deaf ears. A growing sense of the remorseless tragedy of the helpless toilers brings daily increasing strength to the movement for a minimum wage.

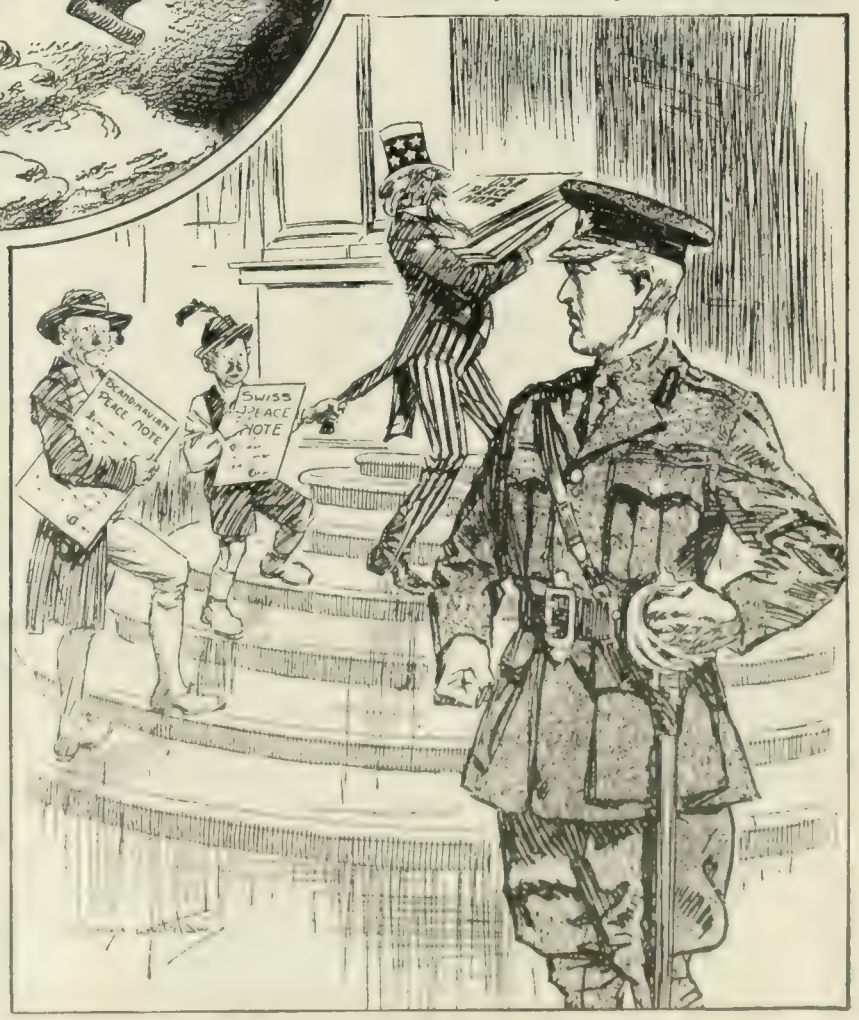
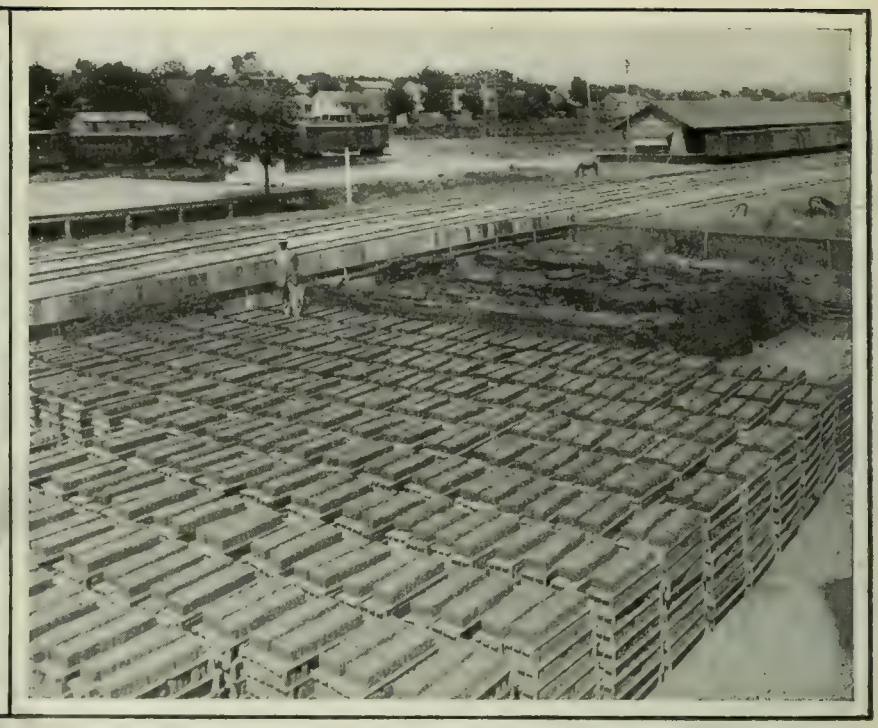
CARTOON COMMENT

THE ALLIES AND THE UNITED STATES ON PRESIDENT WILSON'S PEACE PLAN



An English answer to the peacemaker's question: "Why don't you let him go? He says he's had enough." *London Opinion* makes the Bobby reply: "E's such a bloomin' liar, sir!" Below, the Italian viewpoint in *Il Numero*. It presents forcefully its suspicions of Uncle Sam's motives

In the *Brooklyn Daily Eagle* Nelson Harding has an entertaining sketch of Wilson "Stretching It." Above, the most optimistic comment, drawn by Rollin Kirby for the *New York World*. Belgium asks a question in the last cartoon, "But why didn't you speak up when my country was invaded?"



BEFORE
Given: Waste paper, old shoes, rags and house garbage

AND AFTER
Result: Oakoal, the perfect fuel brick

TURNING GARBAGE INTO FUEL

BY ROBERT H. MOULTON

THE next time the coal miners of the United States go on a strike, the people of the city of Austin, Texas, won't care so very much. For Austin has found a way to turn its garbage into fuel—a fuel which burns as long and gives off as much heat as the best bituminous lump coal—and, what is equally important, Austin has at the same time solved the problem of a sanitary system of garbage collection and disposal. This may sound like a fairy tale, but it is perfectly true. All doubters are invited to visit the Texas city, and see the remarkable spectacle of old shoes, hats, paper, rags, straw, manure, house garbage, and a variety of other waste products being thrown into one machine and emerging from another in the shape of a perfect fuel brick, odorless and bearing no resemblance whatever to the original materials. Austin, in fact, has taken the lead in a movement which seems likely to work a new epoch in the garbage problems of the country.

The inventor of the new fuel, which has been named Oakoal because of its similarity to oak wood in burning, is E. L. Culver, a Chicago man. Five years ago Mr. Culver began investigating the possibilities and practicability of commercializing municipal garbage, being moved thereto by the knowledge that the high cost of disposing of such refuse was a serious obstacle to the betterment of a city's health conditions. As a result of a long series of experiments he proved the adaptability of a method of making fuel bricks out of garbage and an experimental plant was erected at Austin. This proved so successful that a plant capable of taking care of the entire waste of the city was built, and it is now running to full capacity each day, turning out fuel bricks which sell at $6.50 per ton. Austin, therefore, instead of paying a big price to have its garbage destroyed, is actually making money out of it, to say nothing of being cleaner and healthier than ever before.

The main ingredients of the fuel bricks are the municipal waste, a carbonaceous material, and a material for disinfecting and waterproofing. All of the combustible matter of municipal waste or any part of it can be used in the manufacture of the fuel—garbage, trash, rubbish, offal, sewage, street debris, trade wastes and manure. It is this organic or decaying matter that is such a danger to the public health and whose riddance has been such a problem to the cities. The second ingredient may be coke, lignite, or coal dust, the latter being best adapted to the purpose. The function of this part is to retard the otherwise too rapid combustion of the raw refuse.

The third ingredient used in the manufacture of the bricks, an agent for deodorizing and waterproofing, is furnished by liquids having an asphaltic base. Tar, water tar (the residue from gas manufacturing plants), the residue from oil refineries, and asphalt are used in this connection. Thus every ingredient of the new fuel is now considered a waste, and one of them for health reasons has been a serious and expensive problem.

The process thru which the materials pass at the Austin plant, while simple, is very interesting. The garbage and trash of the city is delivered at one end of the building, and dumped into a pit from which it is lifted to the second floor by an endless chain. Such articles as boxes, sticks and barrels are dropt thru a chute to the boiler room. The remainder of the garbage and trash is delivered upon a sorting belt, on each side of which people are stationed to remove such articles as have more value as they are received than they would have if manufactured into fuel. Non-combustible matter is also removed. The by-products are sterilized and prepared for sale. The sorting belt conveys the remainder to a disintegrator which breaks up the larger portions. It is then passed on to a pulverizer where it is reduced to the required fineness.

From the pulverizer the material is conveyed to a pulping machine, where hot water and live steam are applied, together with a certain percentage of tar, which acts in conjunction with the hot water and steam as a thoro disinfectant of the product, and also as a deodorizer of the smoke of the fuel while being consumed, as well as a deodorizer of the fuel itself. From the pulping machine the mass is conveyed to a mixer, where coal dust is added.

From the mixer the mass passes on to a brick molding press, which presses the material into two-pound bricks, at the rate of forty a minute. The fuel is then placed on wooden palets to be set aside to mature, and in a few days it is ready for the market.

According to a chemical analysis made by Dr. William B. Philips, of the University of Texas, at Austin, the fuel bricks contain over 12,000 heat units per pound, which is about the same as the best bituminous lump coal. Oak wood has 8000 heat units per pound, so that the garbage fuel is one and one-half times as strong in heat as oak wood.

It seems probable that Austin's success in converting its garbage into fuel will soon be followed by other American cities, even some of those which now dispose of their waste by incineration. While incineration possesses many advantages over dumping, it totally destroys a very valuable product. By the new process, however, a municipal plant for manufacturing the fuel bricks may not only be made self-supporting. but a source of considerable revenue to the city operating it.

Chicago, Illinois

Three Cents a Day!

That's all. What you pay for newspapers—and yet **that small sum will stand between you and trouble.** For that small sum you can have $3,250 worth of insurance, if you are killed in an accident. For that small sum you have a weekly income if you are disabled in an accident. For that small sum your wife and your children may be saved the bitterest struggle for money.

One man in seven is killed or hurt in an accident each year. You don't know when an accident is coming, but for 3c a day you can be ready when the accident does come.

ÆTNA-IZE

Send the coupon today and let us tell you about the Ætna $10 Combination Policy. 3c a day, if you are in "Preferred" occupation and under 50 years of age, brings $1,250 to $3,250 in case of death by accident; $5 to $10 weekly income for disability due to accidental injuries, plus $1,000 to $3,000 for loss of two limbs or eyes, or the income plus $500 to $1,500 for loss of one hand, foot or eye; or $250 for death from any cause. You can make these amounts as much larger as you like by paying more than three cents daily. ($50 added to above payments for death if you are insured while under 40 years of age.)

There are other Ætna Policies. You can have as much or as little insurance as you want.

Send the coupon now and let us tell you what you can get for 3c a day.

PERMANENT PEACE

PRESIDENT WILSON SPEAKS ON BEHALF OF HUMANITY

GENTLEMEN OF THE SENATE—On the 18th of December last I addrest an identic note to the governments of the nations now at war requesting them to state, more definitely than they had yet been stated by either group of belligerents, the terms upon which they would deem it possible to make peace. I spoke on behalf of humanity and of the rights of all neutral nations like our own, many of whose most vital interests the war puts in constant jeopardy.

The Central Powers united in a reply which stated merely that they were ready to meet their antagonists in conference to discuss terms of peace.

The Entente Powers have replied much more definitely, and have stated, in general terms, indeed, but with sufficient definiteness to imply details, the arrangements, guarantees, and acts of reparation which they deem to be the indispensable conditions of a satisfactory settlement.

We are that much nearer a definite discussion of the peace which shall end the present war. We are that much nearer the discussion of the international concept which must thereafter hold the world at peace. In every discussion of the peace that must end this war it is taken for granted that that peace must be followed by some definite concert of power, which will make it virtually impossible that any such catastrophe should ever overwhelm us again. Every lover of mankind, every sane and thoughtful man, must take that for granted.

I have sought this opportunity to address you because I thought that I owed it to you, as the council associated with me in the final determination of our international obligations, to disclose to you without reserve the thought and purpose that have been taking form in my mind in regard to the duty of our Government in those days to come when it will be necessary to lay afresh and upon a new plan the foundations of peace among the nations.

AMERICA'S PART

It is inconceivable that the people of the United States should play no part in that great enterprise. To take part in such a service will be the opportunity for which they have sought to prepare themselves by the very principles and purposes of their polity and the approved practices of their Government, ever since the days when they set up a new nation in the high and honorable hope that it might in all that it was and did show mankind the way to liberty. They cannot, in honor, withhold the service to which they are now about to be challenged. They do not wish to withhold it. But they owe it to themselves and to the other nations of the world to state the conditions under which they will feel free to render it.

That service is nothing less than this: to add their authority and their power to the authority and force of other nations to guarantee peace and justice thruout the world. Such a settlement cannot now be long postponed. It is right that before it comes this Government should frankly formulate the conditions upon which it would feel justified in asking our people to approve its formal and solemn adherence to a league for peace. I am here to attempt to state those conditions.

The present war must first be ended, but we owe it to candor and to a just regard for the opinion of mankind to say that, so far as our participation in guarantees of future peace is concerned, it makes a great deal of difference in what way and upon what terms it is ended. The treaties and agreements which bring it to an end must embody terms which will create a peace that is worth guaranteeing and preserving, a peace that will win the approval of mankind, not merely a peace that will serve the several interests and immediate aims of the nations engaged.

We shall have no voice in determining what those terms shall be, but we shall, I feel sure, have a voice in determining whether they shall be made lasting or not by the guarantees of a universal covenant, and our judgment upon what is fundamental and essential as a condition precedent to permanency should be spoken now, not afterward, when it may be too late.

No covenant of coöperative peace that does not include the peoples of the new world can suffice to keep the future safe against war, and yet there is only one sort of peace that the peoples of America could join in guaranteeing.

The elements of that peace must be elements that engage the confidence and satisfy the principles of the American governments, elements consistent with their political faith and the practical conviction which the peoples of America have once for all embraced and undertaken to defend.

I do not mean to say that any American government would throw any obstacle in the way of any terms of peace the governments now at war might agree upon, or seek to upset them when made, whatever they might be. I only take it for granted that mere terms of peace between the belligerents will not satisfy even the belligerents themselves. Mere agreements may not make peace secure. It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected, that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

The terms of the immediate peace agreed upon will determine whether it is a peace for which such a guarantee can be secured. The question upon which the whole future peace and policy of the world depends is this:

Is the present war a struggle for a just and secure peace or only for a new balance of power? If it be only a struggle for a new balance of power, who will guarantee, who can guarantee, the stable equilibrium of the new arrangement? Only a tranquil Europe can be a stable Europe. There must be not only a balance of power, but a community of power; not organized rivalries, but an organized common peace.

Fortunately, we have received very explicit assurances on this point. The statesmen of both of the groups of nations now arrayed against one another have said, in terms that could not be misinterpreted, that it was no part of the purpose they had in mind to crush their antagonists. But the implications of these assurances may not be equally clear to all, may not be the same on both sides of the water. I think it will be serviceable if I attempt to set forth what we understand them to be.

PEACE WITHOUT VICTORY

They imply first of all that it must be a peace without victory. It is not pleasant to say this. I beg that I may be permitted to put my own interpretation upon it and that it may be understood that no other interpretation was in my thought. I am seeking only to face realities and to face them without soft concealments. Victory would mean peace forced upon the loser, a victor's terms imposed upon the vanquished. It would be accepted in humiliation, under duress, at an intolerable sacrifice, and would leave a sting, a resentment, a bitter memory, upon which terms of peace would rest, not permanently, but only as upon quicksand.

Only a peace between equals can last; only a peace the very principle of which is equality and a common participation in a common benefit. The right is as necessary for a lasting peace as is the just settlement of vext questions of territory or of racial and national allegiance.

The equality of nations, upon which peace must be founded, if it is to last, must be an equality of rights; the guarantees exchanged must neither recognize nor imply a difference between big nations and small, between those that are powerful and those that are weak. Right must be based upon the common strength, not upon the individual strength, of the nations upon whose concert peace will depend.

Equality of territory, of resources, there, of course, cannot be; nor any other sort of equality not gained in the ordinary peaceful and legitimate development of the peoples themselves. But

no one asks or expects anything more than an equality of rights. Mankind is looking now for freedom of life, not for equipoises of power.

And there is a deeper thing involved than even equality of rights among organized nations. No peace can last, or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand peoples about from sovereignty to sovereignty as if they were property.

I take it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent, and autonomous Poland, and that henceforth inviolable security of life, of worship, and of industrial and social development should be guaranteed to all peoples who have lived hitherto under the power of governments devoted to a faith and purpose hostile to their own.

I speak of this not because of any desire to exalt an abstract political principle which has always been held very dear by those who have sought to build up liberty in America, but for the same reason that I have spoken of the other conditions of peace, which seem to me clearly indispensable—because I wish frankly to uncover realities. Any peace which does not recognize and accept this principle will inevitably be upset. It will not rest upon the affections or the convictions of mankind. The ferment of spirit of whole populations will fight subtly and constantly against it, and all the world will sympathize. The world can be at peace only if its life is stable, and there can be no stability where the will is in rebellion, where there is not tranquillity of spirit and a sense of justice, of freedom, and of right.

FREEDOM OF THE SEAS

So far as practicable, moreover, every great people now struggling toward a full development of its resources and of its powers should be assured a direct outlet to the great highways of the sea. Where this cannot be done by the cession of territory, it can no doubt be done by the neutralization of direct rights of way under the general guarantee which will assure the peace itself. With a right comity of arrangement no nation need be shut away from free access to the open paths of the world's commerce.

And the paths of the sea must alike in law and in fact be free. The freedom of the seas is the *sine qua non* of peace, equality, and coöperation. No doubt a somewhat radical reconsideration of many of the rules of international practice hitherto sought to be established may be necessary in order to make the seas indeed free and common in practically all circumstances for the use of mankind, but the motive for such changes is convincing and compelling. There can be no trust or intimacy between the peoples of the world without them.

The free, constant, unthreatened in-

Taste Them
They're Like
Bubbled Nuts

Puffed Wheat and Rice are whole grains puffed to bubbles. They are eight times normal size.

Before we explode them they are toasted in a fearful heat. This gives a nut-like taste.

So they seem like nut meats made airy and flaky, made flimsy and thin and crisp. If you ate them with your eyes shut you would never guess them grain foods.

They are Foods—Not Bonbons

But don't treat them like confections.

These are whole-grain foods. By Prof. Anderson's process, every food cell is exploded. So every atom of the whole grain feeds.

Don't be too sparing of these dainty morsels. Every food element is in them. And in this form those elements are all made available.

Don't confine them to breakfast. They are ideal foods for luncheons and suppers, floated in bowls of milk.

Between meals, when children get hungry, let them eat to their hearts' content. Let them eat the grains dry, or doused with melted butter.

Let Puffed Grains displace sweetmeats and confections—displace them with foods which are just as delightful. And which one can eat without any restrictions.

Not one child in ten ever gets enough of the minerals stored in whole wheat.

Puffed Wheat
Puffed Rice
and Corn Puffs
Each 15c. Except in Far West

Here are three grains—wheat, rice and corn—prepared in the perfect way. Every food cell is steam exploded. Every granule is fitted to feed.

Each has a different flavor. Each can be served in a dozen ways. A supply of each gives you an endless variety. And all are fascinating, hygienic foods.

Puffed Rice excels in nut-like flavor. Corn Puffs excels as a dainty. And Puffed Wheat excels as a food.

Keep all three on hand.

How to Use The Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address W. W. Ferrin, The Independent, 119 West 40th St., New York.

Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC.
106-110 Seventh Ave., New York City

tercourse of nations is an essential part of the process of peace and of development. It need not be difficult to define or to secure the freedom of the seas if the governments of the world sincerely desire to come to an agreement concerning it.

It is a problem closely connected with the limitation of naval armaments and the coöperation of the navies of the world in keeping the seas at once free and safe.

And the question of limiting naval armaments opens the wider and perhaps more difficult question of the limitation of armies and of all programs of military preparation. Difficult and delicate as these questions are, they must be faced with the utmost candor and decided in a spirit of real accommodation if peace is to come with healing in its wings and come to stay.

Peace cannot be had without concession and sacrifice. There can be no sense of safety and equality among the nations if great preponderating armies are henceforth to continue here and there to be built up and maintained. The statesmen of the world must plan for peace, and nations must adjust and accommodate their policy to it as they have planned for war and made ready for pitiless contest and rivalry. The question of armaments, whether on land or sea, is the most immediately and intensely practical question connected with the future fortunes of nations and of mankind.

I have spoken upon these great matters without reserve, and with the utmost explicitness because it has seemed to me to be necessary if the world's yearning desire for peace was anywhere to find free voice and utterance. Perhaps I am the only person in high authority among all the peoples of the world who is at liberty to speak and hold nothing back. I am speaking as an individual, and yet I am speaking also, of course, as the responsible head of a great Government, and I feel confident that I have said what the people of the United States would wish me to say.

May I not add that I hope and believe that I am, in effect, speaking for liberals and friends of humanity in every nation and of every program of liberty? I would fain believe that I am speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.

And in holding out the expectation that the people and the Government of the United States will join the other civilized nations of the world in guaranteeing the permanence of peace upon such terms as I have named, I speak with the greater boldness and confidence because it is clear to every man who can think that there is in this promise no breach in either our traditions or our policy as a nation, but a fulfilment rather of all that we have professed or striven for.

I am proposing, as it were, that the nations should with one accord adopt

the doctrine of President Monroe as the doctrine of the world: That no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own policy, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful.

I am proposing that all nations henceforth avoid entangling alliances which would draw them into competition of power, catch them in a net of intrigue and selfish rivalry, and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose, all act in the common interest and are free to live their own lives under a common protection.

I am proposing government by the consent of the governed; that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are the convinced disciples of liberty; and that moderation of armaments which makes of armies and navies a power for order merely, not an instrument of aggression or of selfish violence.

These are American principles, American policies. We can stand for no others. And they are also the principles and policies of forward-looking men and women everywhere, of every modern nation, of every enlightened community. They are the principles of mankind and must prevail.

PEBBLES

Miss Ollie Grooty's pupils acted a playlet called "The Seamstress" at the hall Wednesday afternoon. We thought it was sew sew.—*Walnut (Mo.) Times.*

Dad—My son, the lives of lazy men are not recorded in history or literature, for the benefit of future generations.

Son—How about Rip Van Winkle?—*Cornell Widow.*

Domestic Science Student — Science shows that a man can live on Limburger cheese alone.

Ze Anzac—Well—er—I think you had better get a trooper to do that. You see—er—I am a chaplain.—*Sydney Bulletin.*

"It is my belief, and I venture to assert it," declared the lecturer, raising his voice, "there isn't a man in this audience who has ever done anything to prevent the destruction of our vast forests."

A rather timid looking man quietly arose in the rear of the hall and said: "I've shot woodpeckers."—*Life.*

The doctor's wife had advertised for a girl to do housework and was showing an applicant over the house. She had been very liberal in her promises of privileges and it looked as tho the two were going to come to an agreement, when the girl suddenly asked:

"Do you do your own stretchin'?"

"Do we do our own what?" asked the puzzled mistress.

"Stretchin'," repeated the girl. "Do you put all the food on the table and stretch for it, or do I have to shuffle it around?"—*New York Times.*

New and Forthcoming Macmillan Books

H. G. Wells' New Book

ITALY, FRANCE AND BRITAIN AT WAR

By the Author of "Mr. Britling Sees It Through," etc.

An incisive and penetrating discussion of conditions in three of the great countries engaged in war, written out of Mr. Wells' own observations on the various battle fronts. *Ready Feb. 6. $1.50*

GALLIPOLI
By John Masefield

MOTOR PROGRESS

By John Chapman Hilder

THE New York Shows are over. For six hectic days and nights the world and his wife—and his mother, sisters, cousins, aunts and fiancée—besieged Grand Central Palace. If you will permit me a somewhat weather-beaten expression, "you'd have thought they were giving cars away."

With all its floor space, the Palace seemed painfully like the subway after office hours. In fact more than once I found myself reaching for a strap to hang on from sheer force of habit.

Of course the show was a great success. From a box office point of view it must have been most gratifying. For the benefit of next year's visitors, however, I would like to suggest that the management might do well to put the show on for two weeks instead of one and to sell tickets ahead good for admission on specified dates, limiting the attendance on any one day. It would then be possible for every one to get a good look at all the exhibits. And I am confident that, with half a chance, more people would buy.

The exhibits themselves, so far as I could judge between scrimmages, were even more remarkable than had been expected. Taking them as a whole it seemed to me that the greatest advance was shown in the variety of color schemes available in stock cars, with yellow as the predominating hue. There were a number of reds, blues, grays and greens of various shades, a few in white for show purposes, but fewer dead blacks than have been shown in previous years.

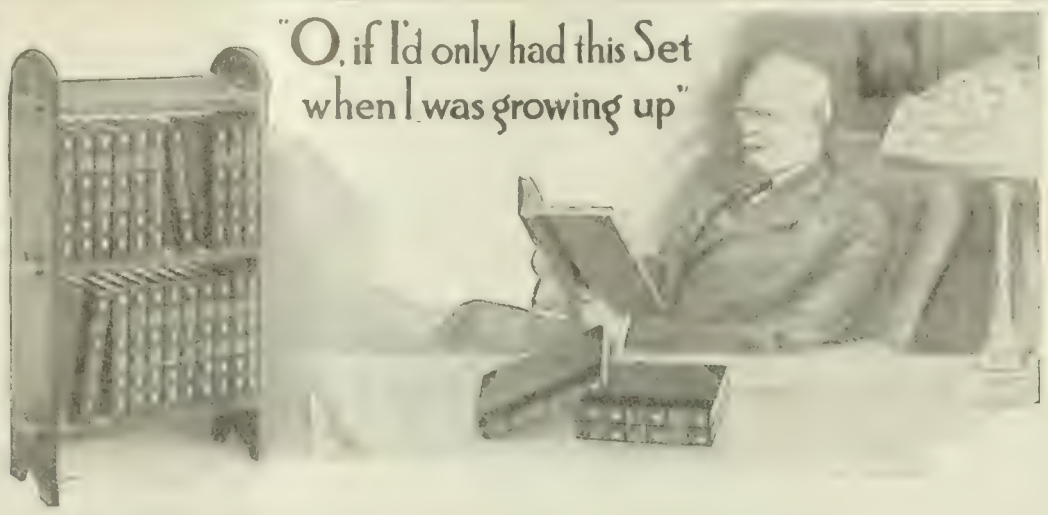
BODY designs showed rather few major changes, but innumerable refinements of detail. Greatest interest centered in the close-coupled four passenger roadsters and the convertible models. Seven, six and five passenger touring cars and two and three passenger roadsters were practically all of conventional type. One seven passenger car at the Palace was a radical departure from current practise in stock bodies, altho somewhat similar designs have been shown by the special body builders and one or two foreign producers.

Sifting down the majority, we find the smooth rounded body, rolled at the top, curved radiator, rounded—and poorly fitted—hood, and crowned fenders much in evidence. Few cars, indeed, among those shown at the Palace departed from these conventional features.

It is really a pity that manufacturers in general have taken so little trouble toward improving the "sit" of the hood. It is a conspicuous part. Probably it meets the eye before any other portion of the car. And yet in most cases it looks as if it had been dropt on from a distance. In nearly every case there is a hiatus between radiator shell and hood and between hood and cowl. These are accentuated by the smoothness of line and could, I believe, be eliminated by the use of moldings.

It would perhaps be a little difficult to produce such moldings under the present system of pressing hoods and cowls out of single pieces of sheet metal, but our engineers have accomplished so many harder things during the past few years that this change is undoubtedly within the realms of possibility.

A NOTICEABLE improvement in practically all models is evident in the increased comfort afforded driver and passengers. Tonneaus are more roomy than before. Upholstery is deeper and more springy. Seats are set at more careful angles, with a view to doing away with that feeling of stiffness that frequently used to assail one after long riding. Designers have succeeded, in most cases, in making you feel you are sitting in the car rather than on it.



Doors are wider than they were, and nearly all are equipt with curtain holders which open the side curtain flaps like doors and enable you to get in or out when the curtains are in place without being slapped in the face.

In many cars the driver's seat is adjustable so that long or short-legged people may have the pedals within comfortable reach. This feature, coupled with adjustable pedals and conveniently located gear and brake levers, makes the driver's lot happier than ever.

Many models show originality in the location of baggage room and pockets for tools. These latter are to be found in doors, in seat backs, and in drawers that slide out of sight and most of them are equipt with locks operated by the key that opens and closes the ignition circuits. In one car there are seven locks, all controlled by one key. Everything that a light fingered gentleman with facilities for disposing of such loot might be tempted to remove is locked on to the machine, or in it.

Of course, a thief who has an hour or so to spare can quite easily get what he wants regardless of locks. But, fortunately for automobile owners, the average thief is in a hurry and cannot risk being discovered while he takes the time it would require to pick the lock or to tinker with the machinery or to make the necessary electrical connections.

It might be well for owners, however, to have a few duplicate keys made and to keep them in a safe but accessible place. For keys are apt to

24 Volumes
20,000 Pages
80,000 Articles

STRONG POINTS:

1. **Accuracy:** all important articles *written by specialists.*
2. **Authority:** can be quoted *on any subject* without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field than any other general reference-work. It contains 80,000 articles—*30,000 more than any other encyclopædia.*
4. **Lucidity:** written in *plain language* so that even the young folks can understand.
5. **Attractiveness:** not only *educational* but *attractive* and *entertaining.*
6. **Illustrations and Maps:** carefully prepared to *illuminate* and *explain* the text.
7. **Convenience:** printed on thin paper—not *too* thin but easy to *handle* and to *leaf.*
8. **Arrangement:** all subjects alphabetically arranged and *easy to find.*
9. **Pronunciation:** all except the most common words made clear by *a simple phonetic system.*
10. **Bibliography:** every important subject supplemented by a *full list of books* that may be consulted.
11. **Courses of Reading and Study:** afford specialized help toward *self-instruction* in leading branches of knowledge.
12. **Research Bureau Service:** provides subscribers the *free privilege* of information from our Editors on *any encyclopædic subject.*

SPECIAL NOTICE

Unusual demand for the New, Revised, Enlarged and Improved Edition will soon exhaust the first and second printings and the delay in manufacturing, in sufficient quantity, the special thin paper required, will doubtless retard our deliveries.

However, those who *subscribe* first will be *served* first, and at the low price *just now* available, which present large sales warrant us in continuing temporarily, but *subject to advance without notice.* It is, therefore, best to

ACT NOW

That's what men who have had to battle for success now say when they see something new and useful and think how in the days gone by it would have helped them on their way.

That's what they say, for instance, when they *buy* and *use* and learn to *know* and *prize*

THE NEW INTERNATIONAL ENCYCLOPÆDIA

Second Edition

REVISED, REWRITTEN, AND RESET FROM A TO Z
SIZE OF PAGE ENLARGED
NUMBER OF VOLUMES INCREASED
PRINTED THROUGHOUT FROM NEW PLATES

In a recent letter praising the work, a successful civil engineer used these words:

"Oh, how I wish I could have had this encyclopædia when a farmer boy and with scarcely any books in the house."

Thousands of other men have thought the same. February is the birth-month of the illustrious Lincoln. How *he* would have revelled in THE NEW INTERNATIONAL, just as those who are thoughtful and ambitious revel in it *now*—the thousands of men and women who *have* it.

And those who *haven't* the work certainly *should* have it, which is *now easily possible.* They should have it because it is

An Education in Itself

And it is just now *easy to secure.* Simply have us send you our 80-page Book about the *new knowledge*, showing Specimen Pages, Color-Plates, Engravings and Maps with list of subjects covered by the Courses of Reading and Study—a valuable educational adjunct, for personal use or to help the young folks in their schoolwork.

The Coupon Brings the Book
Tear off and Mail Today

The Book is especially impressive with respect to the *new knowledge* which most other encyclopædias do not contain.

CASH FOR OLD FALSE TEETH OR BROKEN JEWELRY

SEND us any diamonds, watches, old gold, platinum or silver jewelry (new or broken), false teeth (with or without gold), any dental fillings, painters' gold-leaf cotton or magneto points. Nothing too large or too small. We pay in cash the highest possible prices. Can do this because we do the largest business of this kind in the country. Established 1899. Your goods returned at our expense should our offer be refused in 10 days.

Liberty Refining Co., 432 G Wood St., Pittsburgh, Pa.

get lost, and altho it is perfectly easy to start a car and run it quite independent of the electric switch arrangements (this has been proved often by motor thieves) it is a bit troublesome.

An analysis of 188 models of 1917 cars from a mechanical standpoint shows that in the matter of cylinders 85 are sixes, 68 are fours, 26 are eights and 9 twelves. Altho there are more individual models containing six cylinders than four, more fours than sixes are sold, since some of the largest producers turn out fours alone.

Eights are not increasing in number as rapidly as some people expected. Twelves also are at rather a standstill. As a matter of fact the action of two of the most successful makers of high-priced cars in calling attention to their development of the four has had a far reaching effect in the industry and with the public.

REAR springs have been undergoing a change of ratios. The last year has seen a great growth in the use of the cantilever, instead of semi and three-quarter elliptic. Figures this year show that out of 188 models, 66 have semi-elliptic springs, 54 have three-quarter elliptic, 52 have cantilever, 9 full elliptic, and 7 other types.

Figures on clutches show a falling off of the cone type and a gain in the plate and the disc types. In the same 188 models there are 78 equipt with disc clutches, 55 cone, 46 plate, 3 magnetic and 1 multiple disc. With regard to the last two, it must not be thought that there are three cars featuring magnetic clutches. There are really but two.

The 188 models included various chassis of the same make. Also, the multiple disc clutch is found on the one car featuring planetary transmission. No need to tell you that it is a well known car.

At the Automobile Salon held in the ballroom of the Hotel Astor the prices of the cars kept the attendance down to reasonable limits. Formerly the Importers' show, this year but three foreign cars were in evidence, representing England and Italy. Four new American cars made their debut—a very impressive one.

The Astor exhibits were for the most part marvels of mechanical refinement beautifully drest. On the whole, they were well worth the prices charged for them. And I saw some that I consider underpriced.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. PEBBLES

"Did the doctor treat you?"
"No, he charged me twenty dollars."—*Widow.*

"Goodness," cried the gas engine to the crank as they became engaged, "what a turn you gave me."—*Widow.*

Bread made of straw flour is now an article of German diet. This is the straw which shows the way the wind blows.—*Passing Show.*

"Y'know Mr. Brown? He's got a lien on that house."
"He was worse than that last night."—*London Opinion.*

He—Is she a widow?
Hee—Or a divorcee?
He Hee—I call her a Peach o' Reno.—*Chapparall.*

The Customer—Have you any more sixteenth century chairs like those I bought from you before?
The Dealer in Genuine Antiques—No, sir, they've stopped making them since the war.—*Le Pêle Mêle.*

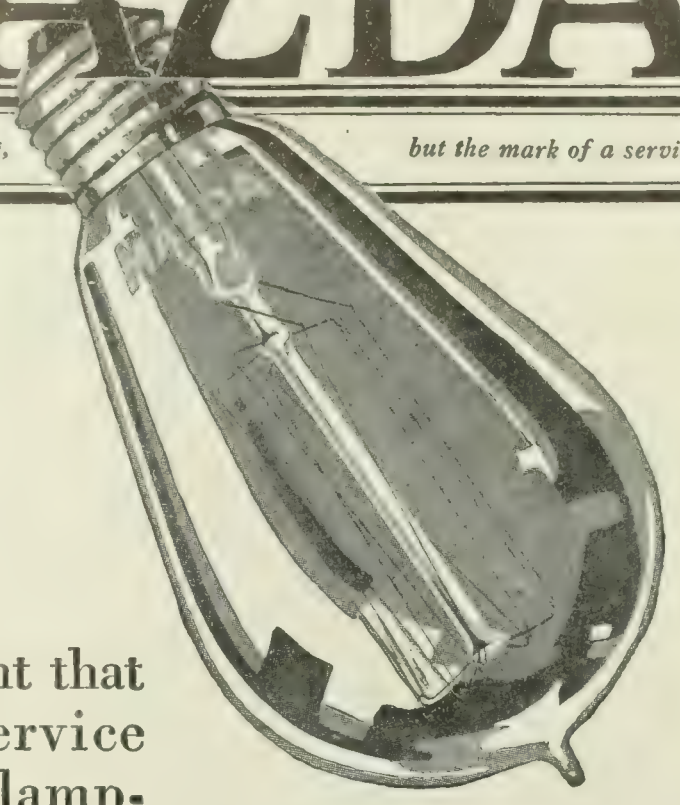
"Is this hotel run on the European plan?"
"What do you mean, sir?"
"Furious charges, trouble over borders, and no quarter given."—*Lampoon.*

He left his college with a Ph.D.,
To teach on a cannibal isle,
The chief when he spied him smacked his lips,
And served him up with style.

The dinner o'er, from the ashes rose,
A spectre, weird to relate—
"What is that," cried the chief; and a voice replied:
"'Tis the ghost of the grad-u-ate."
—*Cornell Widow.*

Aunt (severely)—As I glanced into the drawing-room just now I saw the young man's arms round you.
Niece—Yes, Aunty, I was waiting for you to see us. Young men are so scarce nowadays, one can't have too many witnesses!—*Passing Show.*

A boy was visiting another boy, and as they were going to bed the little host knelt to say his prayers.
"I never say my prayers when I am home," said the visitor.
"That's all right," said the other boy. "You better say them here; this is a folding bed."—*Pathfinder.*



A soldier of the Seventh Illinois, according to Major Brady, was limping around Camp Wilson, down in Texas, with his ankle heavily swathed in bandages. An elderly lady visitor, wishing to be sympathetic, remarked:
"My poor fellow, and you were hurt in the leg!"
"No, ma'am," the soldier boy replied, "I was kicked in the head by a mule, but the bandages slipt."—*Chicago Herald.*

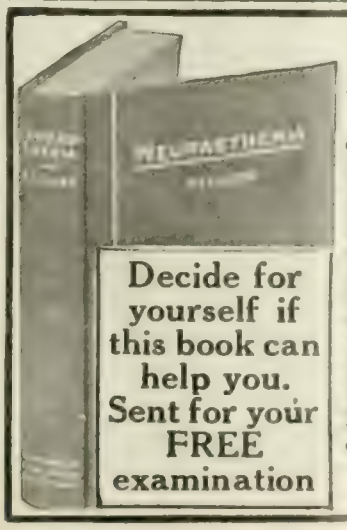
Daughter of Western Farmer—Oh, George, the harvest hands threaten to leave, and papa is away!
Young Foreman—Yes, I know I wired him this morning for instructions
Daughter of Western Farmer—What did he answer?
Young Farmer—He said: "Hold hands till I come."
Daughter of Western Farmer—Well, it means an awful lot of spooning, but I think we can do it, can't we?—*Passing Show.*

The scene was a kinema palace where the Somme battle pictures were being flickered. As the Warwickshires were seen going over the top to the attack, an excited Birmingham man exclaimed triumphantly, "What about your Highland regiments now?" As luck would have it, there was a short, bandy-legged Scot in a kilt within hearing. He flared up, and replied: "What aboot our Hielan' regiments? Why, they are keepin' back the Germans while your men are gettin' their photographs taken."
—*London Opinion.*

MAZDA

"Not the name of a thing, but the mark of a service"

The new light that MAZDA Service throws on lamp-manufacturers' problems is reflected in brighter, whiter light that MAZDA Lamps give in your home



The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

Are Your Nerves Hungry?

Steady nerves—poise and self control—are largely a matter of nourishment. Nervousness may usually be corrected by careful attention to habits of living. This Dr John Harvey Kellogg today explains in his new book, "Neurasthenia," containing the "net results" of his experience with thousands of cases of nervous ills treated during the forty years he has been Chief Medical Director of the Battle Creek Sanitarium. This book is not dry and technical. On the contrary, you understand it readily—it is intensely interesting—and easy to follow. If you suffer from nervousness, exhaustion, sleeplessness or any of these ills, send for this book and study it. It teaches you how to escape from nervous suffering. No drugs. Only natural means—diet, exercise, rest, sleep and careful adjustment of working hours. Instructions are full and complete. Over 300 pages—many illustrations—substantially bound—only $2. Sent "on approval" *for FREE examination.* Write for it today. We send the book *fully postpaid* upon receipt of the coupon. Get this book on Neurasthenia if you are nervous, over-tired or in need of new energy. It will show you the way to permanent relief.

Send No Money—Just the Coupon

THE NEW BOOKS

UNCLE SAM'S SOLDIERS

The Congress of Constructive Patriotism to be held in Washington this month will doubtless put many on inquiry as to our army and navy and all our means of defense. Such a book as *Military and Naval America* will answer well their questions as to ships, guns, organization drill and duty—even as to uniform and pay in the navy, and the like questions as to the army, cavalry, infantry and artillery, and about the Red Cross, the aeroplane service, the bureaus of supplies, docks, medicine, the work of West Point and Annapolis and of military instruction camps; in fact almost every point bearing on our preparation for defense is considered here, as well as the service of the army and navy in time of peace.

The Army War College rightly endorses *The Soldiers' Catechism,* which by questions and answers—something over a thousand—reviews the soldiers duty in camp and field, on guard or fighting, in bayonet practise or on the range, in giving first aid, and in sanitation and caring for his own health. It is a summary of the knowledge essential to good service.

Military and Naval America, by Capt. H. S. Kerrick. $2. *The Soldiers' Catechism,* by Maj. F. C. Bolles and Capts. E. C. Jones and J. S. Upham. Doubleday Page & Co. $1.

CHARTISM

Several times during the last ten or fifteen years gaps in the literature of the history and political science of England have been filled by the work of American scholars. Again American scholars have filled a gap—this time with a series of three books which taken together constitute a full, detailed and discriminating history of the Chartist movement of 1837-1854. All three are issued by the Columbia University Press. That by Frank F. Rosenblatt is a study of the *Chartist Movement in its Social and Economic Aspects*; that of Preston W. Slosson, a history of the *Decline of the Chartist Movement;* and the third, by Harold U. Faulkner, is a study of the attitude of the churches to Chartism, and of the attitude of the Chartists toward the churches, particularly toward the Established Church of England, which in the early days of the Chartist movement was, as a national institution intended primarily for the service of the people, at its lowest ebb.

Mr. Rosenblatt's book covers only two years of the movement; but it is of much interest because of the detail with which it surveys the causes which, briefly stated, were the poverty and social squalor growing out of the industrial era, out of the burden of the Napoleonic wars and out of a political system under which no efforts were made against the exploitation of the working classes.

Mr. Slosson's is much more than a study of the decline of chartism. It really covers the entire movement; and its interest and permanent value are due to its clear exposition of the aim of the Chartists; to its examination of the reasons for their persistent hostility toward the Anti-Corn Law League, of which Bright and Cobden were the leaders; to its singularly complete analysis of the causes which account for the disappearance of the movement; and its survey of the indirect but wide and beneficent results that accrued to the common people of England from the apparently abortive political agitation of 1837-1854. Mr. Slosson's history of Chartism will rank with the best contributions of American scholars to the literature of English political movement in the nineteenth century, and also with many of the best contributions to this literature from the pens of English historians. Mr. Faulkner's book—*Chartism and the Churches*—is a venture into a field that hitherto had been quite unexplored either by English or American writers. Mr. Faulkner has been eminently successful, for he has written a book that is more than a contribution to political history. It is a book that has its value and its obvious lesson for organized Christianity in the United States and Canada as well as in England.

EDWARD PORRITT.

The Chartist Movement in Its Social and Economic Aspects, by F. F. Rosenblatt. $2. *The Decline of the Chartist Movement,* by Preston W. Slosson. $2. *Chartism and the Churches,* by H. U. Faulkner. $1.25. Longmans, Green & Co.

THE WEST UNDER THE BRITISH

In an exhaustive two volume study of *The Mississippi Valley in British Politics,* Clarence Walworth Alvord recounts the various attempts made by the British Government to settle and develop the vast territory between the Appalachian barrier and the Mississippi which came into its hands as a result of the Treaty of Paris in 1769. In the opinion of the author the failure of the British to solve the problem of governing and settling this region was one of the leading causes of the American Revolution, and a far more important one than the riots and patriotic demonstrations in Boston and other cities on the Atlantic coast which bulk so large in our histories. The cause of this failure was the ignorance of the British statesmen of the potential greatness of the western wilderness, an ignorance amusingly illustrated by the remark of William Pitt: "Some are for keeping Canada; some Guadaloupe; who will tell me which I shall be hanged for not keeping?"

After making and abandoning endless schemes for new western colonies under strict royal control and unwisely setting aside large areas as

unregulated Indian reservations, the mother country attempted to settle the question by the Quebec Act of 1774 which satisfied the wishes of the French Canadians, but made the region around the Great Lakes a barrier to the westward expansion of the thirteen colonies and, thereby, permanently alienated their loyalty.

The Mississippi Valley in British Politics, by C. W. Alvord. 2 vols. Cleveland: Arthur H. Clark Co.

VERSE FROM CHINA

Very delicate and gentle is the beauty of the *Chinese Lyrics* of Pai Ta-Shun. They were first printed in Harper's Weekly and have been collected into a slender, silk-bound volume together with ten collotype reproductions of ancient Chinese paintings. The lyrics have the magic of gracious picturing, clear, sweet music and simple, well chosen words. They create for us the emotion and mood of the poet. Almost any of them could be quoted to good advantage. This one is called "Absence."

The Spring seems distant with her jasmine-flowers.
The gaunt bare trees with icicles are drest.
The snowbird in the cryptomeria cowers;
Yet—is Spring far when Spring is in my breast?

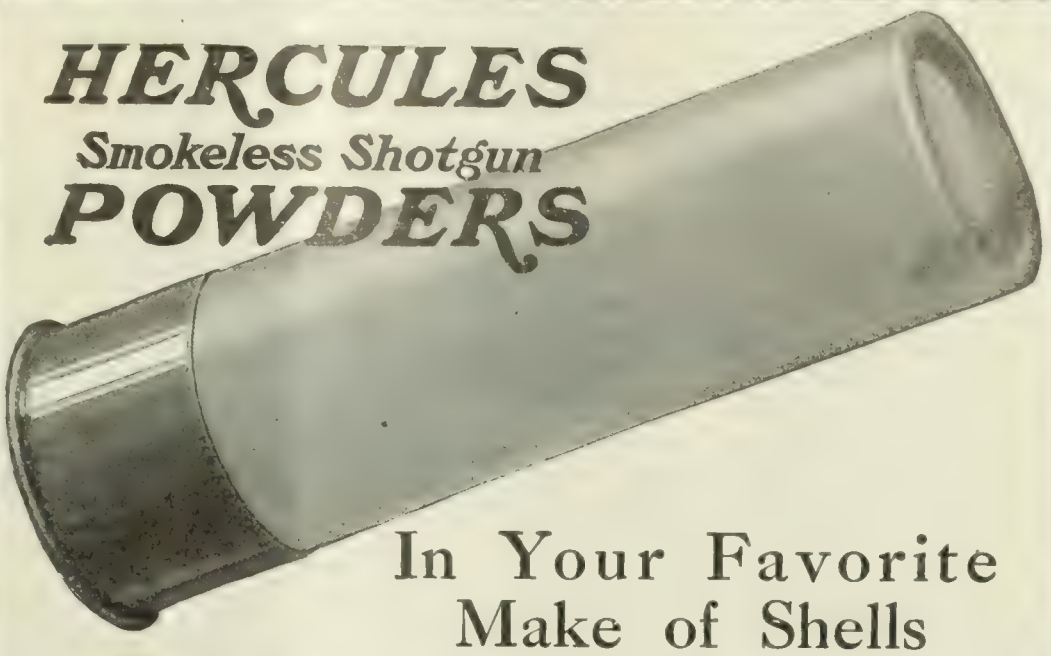
And you seem far, too far for eye to see
Your lantern and your lattices apart—
So many moons, so many hundred li—
Yet—are you far when you are in my heart?

Chinese Lyrics, by Pai Ta-Shun. Charles Scribner's Sons. $5.

THE GREAT WAR

Men, Women and Guns, by "Sapper," is a book of popular stories of life in the English trenches, of heroism and tragedy, of the little ironies and the great futility of war. (G. H. Doran Company, $1.25.)

On the vext question of what happened in Berlin in July, 1914, Baron Beyens is one of the few who can speak with authority, for he was Belgian Minister to Germany when the war broke out. In *Germany Before the War* he gives many personal sidelights on the actors in the great drama. (T. Nelson & Sons, $1.50.)



Trenching at Gallipoli, by John Gallishaw, is a record of personal experience which stands out sharply from the mass of such material. It treats of the little known Gallipoli campaign and is written with a startling simplicity and directness. In reading it one feels that one is receiving personal letters from the front. (The Century Company, $1.30.)

There is much well worth reading in *A Visit to Three Fronts*, by Sir Arthur Conan Doyle. We have previously ventured the opinion that such visits by distinguished authors failed to grasp what one may term, in the words of General Foch, "the divine element, the terrific and passionate human drama." This little volume strikes this note surely and impressively. (G. H. Doran Company, 50 cents.)

With the Flying Squadron, letters of Harold Rosher, give the author's experiences from the beginning of instruction to within a day or two of his death. For thrills the reader will hardly ask more than the raid on the Belgian coast thru a snow-storm, and the flight when chased by a Zepp above and bombarded from below by the guns of Ghent. (The Macmillan Company, $1.25.)

That publishers are sometimes actuated by a purely altruistic motive witness the 316 pages of *A Diary of the Great War*, by Saml. Pepys Junr. It is announced as "An Up-to-date and Amusing History of the Times." If there are minds that re-

HERCULES
Smokeless Shotgun
POWDERS

In Your Favorite Make of Shells

THE fact that you prefer some particular make of shell when shooting at the traps or in the field need not prevent you from enjoying the satisfaction given sportsmen by Hercules Smokelss Shotgun Powders, Infallible and "E. C."

These splendid powders, which are of high and remarkably uniform quality, may be obtained in any standard make of shell. Undoubtedly the shell you use is named in the list given at the left. The next time you order ask for a Hercules Powder in that particular make of shell. You will see the name of the powder stenciled on the box and on the top wad in each shell.

Hercules Smokeless Shotgun Powders give light recoil, high velocity, even patterns. You can't do better than shoot either Infallible or "E. C." Write for a free booklet that describes them fully.

Infallible and "E. C." can be obtained in all of the following makes of shotgun shells.

What 15c Will Bring You from the Nation's Capital

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published **at the Nation's Center,** for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new Friends. **The Pathfinder, Box 39, Washington, D. C.**

The Kind of Prevention That Is the Best Cure

THE old adage is at last coming into its own.

There are but few people nowadays who have the temerity to make a broad claim that they can "cure" anything—but it may be truthfully said that we have advanced beyond the dawn of the day of prevention.

It would not be too much to claim that we are up to the noon of that day—

And perhaps in no direction could that claim be more justly made than in Internal Bathing.

Perhaps you know, but it is nevertheless the fact that the vast majority of human ills develop because of the universal prevalence of Auto-Intoxication—any physician will tell you this—

And Auto-Intoxication is caused by accumulated waste in the system.

The prevalence of this is shown by the sale of more laxative drugs than for all other ailments combined.

But drugs are at best only partly effective, are a shock to the system and, if continued, finally cease to be effective at all.

How much better to use occasionally Nature's cleanser, warm water, in the proper way, and thoroughly cleanse the lower intestine from all waste, making it as clean, sweet and pure as Nature demands it to be for perfect health—

That's what over half a million thinking Americans are doing with the most remarkable results—not only preventing illness but adding fifty per cent to their virulence, competence and efficiency at the same time.

Internal Baths did such wonders for Dr. Chas. A. Tyrrell, of 134 West 65th Street, New York, twenty-five years ago that ever since that time he has specialized on this form of treatment. The result of his studies and practical experience is reviewed in a book called "The What, The Why, The Way of Internal Bathing," which will be sent free on request, if you write him and mention having read this in The Independent.

Whether you are interested in Internal Bathing or not, you will get much useful information about yourself which you have never before known, by reading the pages of this little book. (Advertisement.)

SPEAKERS, LECTURERS: We assist in preparing material for special articles, papers, speeches, debates. Expert, scholarly service. AUTHORS RESEARCH BUREAU, 500 Fifth Avenue, New York.

WOMAN
By VANCE THOMPSON

Tells how, from earliest times, man has specialized woman for sex alone and woman has striven to escape from that thralldom. The most searching and comprehensive account yet made of the causes of the Feminist Movement and its means of success, written in Vance Thompson's pungent and strongly individual style. Price $1.25. Postage extra.

gard the present times as amusing possibly this record will appeal to them as funny. For the average reader it contains as much sparkle as a cup of tepid cocoa. (John Lane Company, $1.50.)

Heroes of the Great War, by G. A. Leash, is a record of the deeds by which British, Australian, Canadian and Indian soldiers have won the Victoria Cross. Among them is "The Immortal Deed of O'Leary." Fortune has singled out O'Leary's exploit for world-wide renown, but in all the others is equal daring and, in some, the finest disregard of personal risk in bringing comrades from out the "jaws of death." (T. Y. Crowell Company, $1.50.)

Meanwhile, by H. L. G., is a collection of private letters "written in days of great sorrow, and directed to a particular case." In parts these letters are deeply psychological, while in others the writer takes a practical view of the present situation in England. He protests that the English hysterical press does not represent faithfully English feeling, and in defending the neutral course taken by the United States discloses an exceptionally well informed knowledge of this country. (E. P. Dutton & Co., $1.)

NOVELS AND TALES

Percival J. Cooney is a new writer, who gives us, in *The Kinsmen*, a good story of Canadian life in 1837 and of the last chief of the McNabs, a curious but lovable anachronism with a medieval mind. (G. H. Doran Company, $1.50.)

The Secret Trails, by Charles G. D. Roberts, is a collection of novel stories of animals. Lovers of the wilds who must live in cities and cannot follow "the secret trails" by showshoes or canoe will welcome this book on a winter evening. (The Macmillan Company, $1.35.)

The Far Cry, by Henry Milner Rideout, is a wholesome romance of tropical seas for those who do not find it incongruous to let a hero pass thru most of the drama of heroic dying and then pleasantly come to life that there may be a happy ending. (Duffield & Co., $1.25.)

Jitney and the Boys, by Bennet Copplestone, tells the adventure of a father and three lovable sons with their motor car called "Jitney." Eventually the great war claims the eldest son, "Big Peter," whose experiences with "Jitney" have prepared him for sterner things. (E. P. Dutton & Co., $1.50.)

Dr. Grenfell's *Tales of the Labrador* give us a sense of the physical and moral stamina of mankind. Tom Marvin's heroic pursuit of the silver-black fox, Kommak's marvelous journey across the floe, and young Jim Wilson's rescue of his father were sturdy adventures and make good stories. (Houghton, Mifflin Company, $1.25.)

The Last Ditch, by Will Levington Comfort, is a story of the two forces struggling together in China, the young China and the old, of the part played in the struggle by a young American, and two passionate and absorbing love affairs. The fine philosophical comment of the sage Rajananda deserves consideration. (G. H. Doran Company, $1.35.)

From An Oregon Ranch, by "Katharine," is an entertaining account of the experiences of two middle-aged couples who sell their city homes and buy ranches in Oregon. Complete ignorance of the ways of life in the country is responsible for piquant adventures with cows, chickens, wood ranges, churns and kerosene lamps. (Chicago: A. C. McClurg & Co., $1.)

A life of drudgery strives to be, and becomes, an "Immortal Poem." Simple and sincere and "American" in style and spirit, inevitably with its content, *Belle Jones*, by Allan Meacham, is also a bit "preachy" and "made" in places. It is at once oversentimental, and saved by grim humor, powerful in ending, stark in a Russian way, unoriginal, good, bad and very promising work. (E. P. Dutton & Co., 50 cents.)

In *The Magic of Malaya*, by C. W. Harrison, of the Malay Civil Service, both the atmosphere of this tropical land and native characterization are strongly drawn, while the problems confronting the lone British district ruler present a curious mingling of comedy and tragedy. The chapter on Malacca is of historical value, showing the stern vicissitudes thru which the city has passed in its transfer from native to Portuguese, Dutch, and finally to British possession. (John Lane Company, $1.25.)

THE CHILDREN'S STAGE

A delightful little play is *The Steadfast Princess*, by Cornelia L. Meigs, which took the Drama League prize. The scenes are short, the characters few, the plot not complicated and holding the interest well. (The Macmillan Company, 50 cents.)

Built round a pretty fancy is the *Pipes of Pan*, an uncommonly attractive outdoor masque by Sylvia Sherman. A mortal wanders into the world of tree dryads so bringing the world of mortals into Arcady. Music for the songs follows the text. (Boston: R. G. Badger & Co., $1.)

Marguerite Merington has arranged some *Fairy Tale Plays* from "Bluebeard," "Cinderella" and "Little Red Riding Hood." These have much of Miss Merington's wit and deftness of expression and thereby will perhaps serve better for grown up actors than for children. (Duffield & Co., $1.50.)

Quite beyond the average in ingenuity are the *Fairy Operettas*, arranged by Laura E. Richards. These are in rimes set to popular airs and any youngsters with love for acting and ears for simple music and a kind grown up to play the old tunes can give these short and extremely clever musical plays. (Boston: Little, Brown & Co., $1.)

Plays for Home, School and Settlement are in the simplest words and with slight plots. Virginia Olcott has not, as is usual in arranging plays for little children, adapted old tales but has written excellent new plays; a good feature is the careful explanations of the simple costumes with outlines and color diagrams. (Moffat, Yard & Co., $1.)

For use in reading classes and in children's programs, F. W. Dunn has skillfully arranged various fairy tales from Mrs. Ewing and Lewis Carroll, the "Golden River" and the "Pied Piper." Much of the dramatization in *What Shall We Play* was actually done by the boys and girls of the classes for which this work was originally prepared. (The Macmillan Company, 40 cents.)

RELIGION IN PRACTISE

Dr. Jefferson has not been swayed by events. *What the War Is Teaching* is the same courageous, determined, well-grounded peace doctrine which he has long and powerfully preached. (F. H. Revell & Co., $1.)

Under such headings as Grace at Meals, Morning and Evening Prayer, Ozora S. Davis has gathered from writers old and new and from the liturgies, verses and prayers for children to use. *At Mother's Knee* is a useful and beautiful little book. (Abingdon Press, 25 cents.)

There are beautiful prayers among those written especially for the *Book of Family Prayer*, or selected for it from the "Book of Common Worship." A series of readings, Psalms and lessons for every day in the year is also arranged. (Philadelphia: Presbyterian Board of Publication, 50 cents.)

The rift between the working classes and the church has given great concern to Christian leaders. Canon W. H. Carnegie seeks for a reconciliation in his *Democracy and Christian Doctrine*, which is an exposition and justification of Anglican Christianity, and a plea for pronounced social leadership on the part of the church. (The Macmillan Company, $1.50.)

Social Evangelism, by Prof. H. F. Ward, defines this new movement directed at the group life of man as well as at individuals, discusses the imperative need of such a gospel and the new methods demanded by the times in which we live. The nature of

the social message and the results that may be expected are subjects treated with enthusiasm and strong conviction. (Missionary Education Movement, 50 cents.)

Is Conscience an Emotion? is answered by Canon Hastings Rashdall in the West Memorial Lectures with a decided negative. The author contends that the demands of conscience are based not merely in moral feelings, but in intellectual value judgments of universal validity. While contending stoutly for the rationalistic position he does not deny elements of truth in the emotional view of ethics (Houghton, Mifflin Company, $1.)

The relation of the church and state in Episcopal, Presbyterian and Independent forms of organization are reviewed in Archdeacon Cunningham's *Christianity and Politics*, and some of the problems the war has raised are considered in the light of historical developments. The clash between class and national interests, humanitarianism and coercion, Christian democracy and military efficiency are dealt with in a broad, scholarly, yet somewhat undecisive way. (Houghton, Mifflin Company, $1.50.)

VARIOUS VERSE

Henry Newbold's stirring, striking, singing poems are out in the Nelson Shilling Library. These *Collected Poems* are very English, very warlike, very patriotic. (Thomas Nelson & Sons, 50 cents.)

In his collection of *Cowboy Songs*, Prof. John A. Lomax has brought together about 150 native American ballads of the Southwest, the primitive, crude songs of the prairies, the sturdy lays of the cow-puncher and the range rider. Foreword by Colonel Roosevelt. (Sturgis & Walton, $1.50.)

William Rose Benét has written a narrative poem called *The Great White Wall*, which has to do with Timur the Great and his epic deeds, his attack upon the great wall of China and his love for the Princess Yin. Elements of fantasy are happily combined with the epic story. (Yale University Press, $1.)

William Griffith's *Loves and Losses of Pierrot* is a slender book of delicately alluring lyrics finely and gracefully wrought. In them we find tenderness, gaiety, finesse, sorrow and abandon associated with the perennially interesting and charming personalities of Pierrot, Pierrette, Columbine, Harlequin and their friends. (Robert J. Shores, $1.)

Compassion for his countrymen, loving pride in his king, an indissoluble love of his country, the country with "bruised hands," and indignation against "les Boches," find eloquent expression in *New Belgian Poems: Les Trois Rois et Autres Poèmes*, by Emile Cammaerts. The translation has been made by Tita Brand-Cammaerts. (John Lane Company, $1.25.)

Violent *vers libre* and all sorts of metrical experiments are found in *Flashlights*, a volume of poems by Mary Aldis. Much of the work in free verse is excellently done—with vividness and boldness, tho lacking compression. City Sketches are by far the best things in the book. The more old-fashioned verse isn't done nearly so well. (Duffield, $1.25.)

One of the most radical of the Imagistes, D. H. Lawrence—who also writes excellent stories—has collected in *Amores* his more emotional verse: love, sorrow, anxiety, passion, exprest in terms of realism. Sometimes the result is pure poetry, but sometimes the crudity of the phrasing and the abrupt transitions hinder rather than stimulate one's imagination. (B. W. Huebsch, $1.50.)

The Chicago Anthology, a collection of all sorts of verse by modern poets, is assembled in one volume because the poets were all inspired more or less by Chicago. In the case of such poems as Eugene Field's "Little Boy Blue" there is slight evidence of the city's direct inspiration, but many of the poets, Carl Sandburg, Harriet Monroe or Bert Leston Taylor, for example, do reflect the spirit of Chicago. (Chicago: The Roadside Press.)

If Your Eyes Are Not Normal

there is a perfectly safe and natural way of restoring perfect circulation of blood, which is all that weak eyes require.

It is in the nature of a gentle massage given over the closed lids for five minutes at a time twice a day, and for twenty years this method had been successfully used in correcting eye troubles and bringing back normal eyesight to young and old——

Many of those whom it has benefited had very serious eye troubles too, as is shown by their voluntary letters on the subject.

Just note what leading authorities say on the subject of eye massage—Doctor De Schweinitz of Philadelphia, Professor of Ophthalmology at Jefferson College, has stated that in treating even so serious a condition as dreaded cataract of the eye, massage of the eye-ball "has been followed by improvement in vision and deepening of the anterior chamber." The Medical Record, in treating the same subject, says that "the most feasible plan seems to be properly applied massage."

This system of massage to which we refer is fully explained in a scientific book on "The Eyes—Their Care, Their Ills, Their Cure," which may be obtained free on request from *The Ideal Masseur Co.*, 1968 Broadway, New York City, if you will mention The Independent.

The most effective helps for our weaknesses nowadays are often the most simple and safe. Hosts of people have saved themselves from the nuisance of constantly wearing eye-glasses by using this massage (or exercise), so it will probably be well worth your while to at least inform yourself further by writing for the little book which treats the subject so thoroughly.

CURRENT OFFERINGS OF INVESTMENTS

FOR the information of those of our readers who may have a decided preference for safety of principal and marketability, as well as a reasonable yield, we have made a selection of good bonds from circulars recently issued by the larger bond houses

We have chosen a foreign government bond, an American municipal, a railroad bond, a telephone bond, a traction bond and an industrial bond. All of these bonds are worthy of consideration in their respective classes, the yield ranging from 3.80 per cent to 5.70 per cent. The descriptions, while detailed to some extent, are not as complete as those given on the circulars of the bond houses, but full information can be obtained from any of our advertisers who deal in standard securities.

The selection is particularly attractive in that it forms a widely diversified investment with an average yield of over 5 per cent and at the same time combines safety and easy marketability in each case.

United Kingdom of Great Britain and Ireland

Two-Year 5½ per cent Secured Loan Convertible Gold Notes.

Interest payable February and August 1st.

These notes are part of an issue of $250,000,000, of which $100,000,000 are one-year notes due February 1, 1918, while the issue referred to amounts to $150,000,000 and is due February 1, 1919. Principal and interest payable in New York in United States gold coin, or in London in sterling at the fixed rate of $486½ to the pound, free of present or future British taxes.

The notes are convertible at the option of the holder at any time before maturity, or (if called for earlier redemption) at any time until the redemption date, into 20-year 5½ per cent bonds to be payable February 1, 1937, and not subject to earlier redemption. They are redeemable at the option of the government as a whole or in part on 30 days' notice from February 1, 1918, to January 31, 1919, at 101 and interest.

The notes are to be secured by pledge with the Bankers' Trust Company of New York of approved securities having an aggregate value of not less than $300,000,000 calculated on the basis of the prevailing market. The securities are divided into two groups consisting (1) of $150,000,000 in securities of American municipalities and corporations, the Canadian Pacific Railway, Canadian Government, municipal, or provincial securities, etc., and (2) of securities of various South and Central American countries, Japan, Cuba, New Zealand, Union of South Africa, etc., together with Argentine railway and Grand Trunk Railway of Canada securities.

The notes have been offered at 99.07 and interest, at which price the yield is 6 per cent. We consider the notes very desirable, more particularly to form a part of a fairly good size investment.

City of Philadelphia

Improvement 4 per cent Bonds due 1947 and 1967.

Interest payable January and July 1.

These bonds were issued January 1 and are due as follows: $4,550,000 January 1, 1947, and $2,250,000 January 1, 1967. Principal and interest is payable at the Farmers & Mechanics National Bank in Philadelphia. Coupon bonds are in $1,000 denomination while registered bonds may be had in denominations of $100 or multiples, which form is especially attractive for small investors.

The bonds are tax free in Pennsylvania and a legal investment for savings banks and trust funds in Pennsylvania, New York, Massachusetts, Connecticut, etc.; they are eligible to secure postal savings deposits. A particularly attractive feature is that they are absolutely exempt from the operations of the federal income tax and no return need be made of the interest therefrom.

The 1947 maturity has been offered at 103½, to yield 3.80, while the 1967 bonds were offered at 104½, on the same basis.

St. Louis-San Francisco Railway Co.

Prior Lien Mortgage 5 per cent Bonds due 1950.

Interest payable January and July 1.

These bonds, of which $25,000,000 are outstanding, are part of an issue which includes $83,069,075 4 per cent bonds. They were issued in the recent reorganization of the St. Louis & San Francisco Railroad Company. They are secured by a mortgage on practically the entire property of the company, being a direct lien on 3462 miles of road and a collateral lien on 470 miles additional, subject to $11,612,800 underlying bonds and $6,366,873 equipment trust obligations. The bonds are a first lien on 1470 miles of road.

They are prior in lien to $40,547,818 Cumulative Adjustment Mortgage 6 per cent bonds and $35,192,000 Income Mortgage 6 per cent bonds upon which the full interest was paid for the year ended June 30, 1916. The bonds are also followed by $7,500,000 preferred stock and $50,447,000 common stock. The company's net earnings for the year ended June 30, 1916. are reported as $14,181,327 against $9,331,630 fixed interest charges and rentals.

The bonds are selling at 88½ and interest, at which price the yield is 5.70 per cent. It appears to us that these bonds will sell at a materially higher figure as soon as the St. Louis-San Francisco is firmly established, particularly as current earnings are considerably higher than those for 1916.

American Telephone & Telegraph Co.

Thirty-Year Collateral Trust 5 per cent Bonds

Interest payable June and December 1.

These bonds are dated December 1, 1916, and are due December 1, 1946. The amount authorized and outstanding is $80,000,000 and the bonds are issued in denominations of $100, $500 and $1,000. They are redeemable as a whole or in part at the option of the company at 105 and interest on any interest date. They are regarded as a legal investment for savings banks in Connecticut.

The bonds are secured by pledge of collateral having a market value of 133 1/3 per cent of the amount of bonds issued and the company has agreed to maintain the margin of 33 1/3 per cent. The collateral consists of stocks of the following important subsidiary telephone and telegraph companies: New England, Southern Bell, New York, Southwestern and Pacific. There is provided a sinking fund amounting to $800,000 yearly for the retirement of bonds by purchase in the open market or by call at 105 and interest.

The American Telephone & Telegraph Company has paid dividends on its capital stock since 1900 at the average annual rate of 7.85 per cent, the present rate being 8 per cent on over $391,000,000 capital stock. The company is regarded as the best of its class and even its stock is considered a conservative and desirable investment.

The bonds are listed on the New York Stock Exchange and are selling at about 101, to yield 4.95 per cent.

Interborough Rapid Transit Company

First and Refunding Mortgage 5 per cent Bonds.

Interest payable January and July 1.

These bonds are dated January 1, 1913, are due January 1, 1966 and are part of an issue of $160,587,000. They are in denomination of $1,000, are callable at 110 and interest in any amount for the sinking fund or at the option of the company as a whole or in blocks of not less than $500,000.

The bonds are exempt from personal taxes in New York State which makes them particularly desirable for large investors who are residents of that state. They are secured by a first lien, subject to the rights of the City of New York under the lease, upon real estate, power houses, equipment, etc., now owned by the company and also upon the leasehold rights of the company in the existing and proposed subway and elevated traction lines in New York City. The mortgage provides for an annual sinking fund which it is calculated should retire all of the bonds now outstanding before maturity.

The bonds are followed by $35,000,000 capital stock upon which dividends have been paid since 1904. The company has paid at least 8 per cent yearly since

This Is Our Work

FULFILLING the vision of its founder, this institution serves and will continue to serve its double function in providing safe investments for the funds of the public and the upbuilding of this nation's permanent prosperity.

PROMOTING thrift, encouraging systematic accumulations, providing for such accumulations a form of investment unimpeachably conservative; and giving to each investor, large or small, a real, vital and profitable part in the material improving of the nation's great cities: This is our work.

WE will be pleased to honor requests by mail or in person for literature describing the sound 5½% first mortgage bonds we offer. Investors should ask for

Write for this investment book

Many prospective investors and others who have already made their first investments will find this book full of information they have desired.

It gives in terse language, particulars of the difference between stock and bonds, and between speculation and investment — the stability of bonds — why banks, insurance companies and capitalists place their monies in bonds — the ideal bond — "listed" and "unlisted" securities — how money grows, etc.

Write for "Investing $100 to $10,000" to Department "D," 47 Exchange Place, New York, or 8-12 South Calvert Street, Baltimore.

245 West 63rd Street Chicago, Illinois

1906 and is now paying dividends at the rate of 20 per cent.

The bonds are listed on the New York Stock Exchange and are selling around 99 and interest, yielding 5.05 per cent.

United States Rubber Company

First and Refunding Mortgage 5 per cent Bonds.

Interest payable January and July 1.

These bonds are dated January 2, 1917, and are due January 1, 1947. The amount authorized is equal to the amount of capital stock of the company now outstanding, viz.—$97,250,000—while the amount to be issued is $60,000,000. The bonds are in denomination of $100, $500 and $1,000 and are redeemable as a whole on any interest date at 105 and interest after January 1, 1920, upon 90 days' notice.

The issue is to be secured upon the company's properties either by direct mortgage or by deposit of securities. The company provides a yearly sinking fund amounting to 1 per cent of the bonds issued, this sum to be applied by the trustee to the purchase of bonds at not over 105 and interest. However, any unexhausted cash in the sinking fund is to be credited to the company on account of the sinking fund for the next year.

The bonds are followed by $59,629,000 first preferred stock, $458,400 second preferred and $36,000,000 common. The company has paid dividends since 1905 on the first preferred at the rate of 8 per cent per annum and since 1906 on the second preferred at the rate of 6 per cent. It is reported that during the last three years the net earnings applicable to interest on these bonds have averaged over three times the amount so required.

The bonds are selling at 97 and interest, to yield about 5.20 per cent.

INVESTORS' SERVICE

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds.

We cannot, of course, decide for our readers where they should put their savings and ordinarily will not undertake the responsibility of recommending specific securities to any individual. Neither will we give information on highly speculative oil or mining stocks of doubtful origin, which we advise readers not to purchase.

We ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

Readers who request advice on investments should specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Insurance

Conducted by

W. E. UNDERWOOD

A MOST IMPROBABLE THEORY

In a careless moment a man can say or write something out of which may grow, under mature consideration, a problem exceedingly difficult of satisfactory solution. The following observation occurs in the course of an editoral appearing in an insurance paper:

> If fire underwriters knew just when any particular city would be partially or wholly wiped out by fire, they would cancel all the insurance on property in that city just before the disaster was due and let the property owners pocket the loss. Not having the gift of prophecy they have to pocket the loss themselves. All they can do to protect themselves from the consequences of such disaster is to reduce to a minimum the chance of its occurrence.

In all candor, I do not believe that any great fire underwriter would do as this writer predicts. Doubtless, it is a wise provision of nature which keeps us ignorant of future events. It is the moral to be drawn from the episode in the Garden of Eden. Insurance is a coöperative effort in which hundreds of thousands all over the habitable globe are joincd in an effort to protect each other. It is made practicable thru the operation of the law of average. If each contributor pays his just share and that share is adequate, all is well.

Properly organized, equipt and managed fire insurance companies must be prepared to meet the demands on their funds made by conflagrations. If they are not they should not subject themselves to conflagration hazards. Having done so, they would be guilty of a cruel injustice if, possessing prophetic powers, they cancelled their policies immediately preceding the occurrence of a conflagration "and let the property owners pocket the loss."

Fortunately, none of them will ever have to face the temptation, for, as we see every once in a while, a great many of them, so far from being seers, are lacking in that full quality of human judgment to keep them out of areas which, ordinarily normal, do in a moment thru force of circumstances undergo rapid changes, resulting in tremendous damage. Such an opinion as the one I have quoted would reflect little credit on fire underwriters and, as I understand it, little knowledge of the objects for which fire insurance companies exist.

J. D., Titusville, Pa.—As advised on many former occasions in this department, term insurance for a specific purpose, such as the covering a debt or mortgage, or for emergencies, is a splendid convenience. But for regular purposes it is a mistake. My advice to you is to convert the Term policy into an Ordinary Life at the next anniversary or, if you can stand the higher cost, make it a Twenty Payment Life. An endowment at your age would not be as judicious as either of those mentioned.

BOTH SIDES A DEBATE

THE TERMS OF PEACE

RESOLVED, That the proposals of the Allies in their reply to President Wilson should be the basis of the terms of peace which will end the Great War.

ON December 19, 1916, the President of the United States formally requested the belligerent nations to formulate the aims which they were fighting to obtain. The Central Powers replied, suggesting a peace conference but not publicly announcing what would be to them an acceptable treaty of peace. The Entente Allies, on the other hand, objected to the idea of a peace conference at the present time, but announced, in general terms, the aims for which the allied nations were contending. The text of the Allies' note was published in The Independent of January 22, 1917.

This brief was prepared by Preston W. Slosson, Ph.D.

ARGUMENT FOR THE AFFIRMATIVE

I. The terms offered by the Allies are just.

A. Influential spokesmen for the Central Powers themselves admit that the German occupation of Belgium and other countries does not justify annexation.

B. The Entente Allies ask for no conquests, but propose only such territorial changes as will liberate nationalities now ruled against their will.

C. The German invasion of Belgium was an unquestionable and admitted violation of international law and special reparation is due that country.

D. Since Austria-Hungary inaugurated the Great War by attacking Serbia and Germany carried the war to western Europe by attacking France and Belgium, the Allies have the right to demand indemnities and guarantees of good conduct from the Central Powers.

E. By ages of misgovernment Turkey has forfeited the right to rule other nationalities. 1. Any peace would be unjust which would leave the remnant of the Armenians under the Turkish yoke.

F. The reunion of Poland and the liberation of the minor nationalities of Austria-Hungary will solve many international problems and be a boon to the peoples concerned.

G. The justice and necessity of guaranteeing all nations against aggression and of securing liberty of economic development to even the smallest are conceded by enlightened statesmen of every belligerent and neutral country. 1. These principles form the basis of President Wilson's recent peace proposals.

II. The terms offered by the Allies will tend to ensure peace for the future.

A. An indecisive war would be the parent of future wars. 1. It would leave unsolved all those national and economic problems which furnish occasions for war. 2. It would have Europe divided into two hostile armed alliances. 3. It would leave a powerful federation of Central Powers to begin a new war of aggression at the first opportunity.

B. Any conquest by the Central Powers would make a lasting peace impossible; it would lead to attempts to regain the lost national territory.

C. The Allies' policy will settle the Polish question. 1. Poland desires not only self-government but national unity; the Allied Powers promise both; the Central Powers do not. 2. A partly independent Poland will seek national unity even by war. 3. Poland is a Slavic nation and its affinities are rather with Russia than Germany.

D. The Allies' policy will settle the Near Eastern question. 1. So long as Turkey controls Russia's only adequate outlet to the world's trade routes Russia will seek expansion by war. 2. The inefficiency of the Turkish Government is a direct invitation to the intrigues of European powers in that part of the world. 3. The establishment of strong Rumanian and Jugo-Slavic (Serb) nations will check Russian and Austrian dreams of expansion in the Balkans.

E. The Allies offer the only means of guaranteeing the world's peace. 1. Without the machinery for enforcing peace suggested in the Allies' note, treaties of arbitration and Hague Conventions become mere "scraps of paper." 2. No such international organization can be established without the coöperation of the Entente Allies, since they possess more than half the armed strength of the world. 3. The victory of the Allies and the coöperation of the United States in carrying out their plans for international organization will mean the creation of an absolutely invincible league of nations.

ARGUMENT FOR THE NEGATIVE

I. The terms offered by the Allies are unjust.

A. They are contrary to the principle of nationality. 1. Bohemia and Prussian Poland contain a very large German minority and Alsace-Lorraine would probably vote to remain German since the French element is a minority. The Germans in these countries would resent the imposition of an alien rule. 2. The intended expansion of Serbia, Rumania, Russia and Italy will bring under the rule of these nations many thousands of reluctant Slavic, Magyar and Turkish subjects. 3. They do nothing to relieve the nationalities now subject to the Allies; such as the Irish, the Finns, the Koreans, etc. 4. They enlarge the Balkan states at the expense of Austria-Hungary but do nothing to readjust the flagrantly unjust partition of territory now existing within the Balkan region.

B. They are calculated to ruin the prosperity of the Central Powers. 1. They would cut Austria-Hungary off from the Adriatic coast by taking away her Italian and Slavic territories. 2. The partition of Turkey means the destruction of Germany's most hopeful field for commercial expansion. 3. The loss of Alsace-Lorraine would be a serious blow to many German industries. 4. The Central Powers can never pay the enormous indemnities demanded. 5. No provision is made for indemnifying the Central Powers for what they have suffered in war; for example, in the Russian invasion of East Prussia. 6. No provision is made for the restoration of the equal commercial rights, denied to the Central Powers by the Paris Conference.

C. The proposals for the enforcement of world peace are really proposals for continuing the present anti-German alliance and so preventing future territorial changes after the map of Europe, Asia and Africa has been remodeled in the interest of the Allies.

II. The terms offered by the Allies endanger future peace.

A. A stable peace must not be based on conquest. 1. President Wilson has made a plea for establishing a just peace by common consent without any claim of victory for either side. 2. A defeated Germany will devote all its energies to reconquering a place in the sun. 3. The bitterness engendered by a war of conquest will intensify national feeling and prevent internal reforms.

B. The Allies fail to solve many menacing international problems. 1. The Allies make no mention of colonial adjustments, but the question of overseas expansion is more likely than any other to lead to war. 2. The Allies do not touch upon the Far Eastern question or the control exercized by Japan in China and on the Pacific. 3. The Allies do not state what Russia will annex from Turkey.

C. The program of the Allies means an all-powerful Russia. 1. Russia's enemies, Germany, Austria-Hungary and Turkey, will be so weakened that Russia will have nothing to fear from them. 2. Constantinople will probably become a Russian naval base and the Black Sea a Russian lake. 3. All Poland will pass under Russian control, bringing the western boundary of Russia almost to Berlin. 4. Polish autonomy may be withdrawn by Russia at some future time, as Finnish autonomy has been, and the whole Polish territory be Russified. 5. The new nations to be carved out of Turkey or Austro-Hungarian territory will be too weak to stand alone and may be drawn into an alliance with Russia. 6. A powerful Russia will be a danger to peace because Russia has always sought to enlarge its empire wherever possible.

D. The international organization proposed by the Allies is inadequate to guarantee peace. 1. If it were imposed upon the world by a war of conquest it would not have the support of the Central Powers. 2. Neutral nations would not favor a plan which ignored their interests on many points; for instance, the refusal of the Allies to concede the principle of the freedom of the seas. 3. The present alliance of the Entente Powers is for a limited military purpose and it will probably break up after the danger from Germany has passed; it cannot, therefore, be the basis for a permanent league of the nations.

III. The terms offered by the Allies mean a prolongation of the war.

A. Germany will fight to the end before conceding the drastic demands of the Allies.

B. The demands of the Allies cannot be conceded by Turkey or Austria-Hungary because they imply the destruction of these empires.

C. On more equal terms the Great War might be ended now.

White
Town Car

The White Town Car has a style individuality which is immediately recognized. It is markedly unlike any other enclosed car. The new lines, with square back, reflect in modern form the stately equipage of fifty years ago. These are richly simple. Not a dispensable decoration is permitted to blur perfect form.

SIXTEEN-VALVE FOUR

The new sixteen-valve four-cylinder motor which combines with the inherent advantages of a simple, rugged "Four," all the power and flexibility of the most complex engine.

THE WHITE COMPANY
CLEVELAND

This Great Car Leads All Sixes Because of Its Marvelous Motor

THOUSANDS of men and women who would pay hundreds of dollars more for an automobile, if *paying* more would *get* them more, choose the Chandler. They are not seekers after a low price. They desire the best six-cylinder motor regardless of price. They desire a Six because time has shown that a six-cylinder motor, correctly designed, gives all the power and all the *flexibility* of power that any motor can give; that such a motor has the life and snap and "go" they desire; that such a motor is genuinely economical in cost of operation.

So these devotees of the Six choose the Chandler, because through four years of intelligent, conscientious, manufacturing effort, and without radical or experimental changes of design, the Chandler motor has been developed to a point approximating perfection.

Chandler Low Price Is Important, Too

While with so many the question of price is of secondary consideration, still Chandler leads in price today quite as distinctly as it has always led.

In the face of advanced cost of all materials and labor, the Chandler price is but $100 higher than two years ago. And the car is finer than then. Not a feature has been cut out of it. Much has been added.

And other cars in the Chandler field have advanced as much as three hundred dollars the past year, either because of necessity or opportunity.

The Chandler Company has not been willing to take advantage of a situation which would have permitted price inflation.

And this year we shall probably build and sell more cars than any other manufacturer building a car of even similar quality.

Wide Choice of Beautiful Bodies

You who demand such a motor as the Chandler demand grace of body design, also, and richness of finish. Chandler offers you five beautiful types of body, each mounted on the one standard Chandler chassis.

INDEPENDENT LESSON PLANS

ENGLISH

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

TO THE TEACHER: Assign one or more of the following questions to every member of your class, making the assignments in such a way that some reports will be made at every recitation in English during the week. The work will be done to best advantage if the reports are made in writing, and if the students bring their copies of The Independent to every recitation in English.

SECTION I. LITERATURE.

The Wife. By Marguerite Wilkinson. Page 268.

1. In what ways is the thought of this poem a product of the times in which we live?
2. In what ways does the poem emphasize noble womanhood?
3. What is meant by being "strong in the clan"?
4. Show the resemblances between the thought of this poem and the thought of Ruskin's "Sesame and Lilies."
5. In what way does the poem resemble some of Kipling's poems?
6. How has the poem been made song-like?
7. Select what seems to you the most beautiful line, and tell why you think it beautiful.

De Glory Road. By Clement Wood. Page 258.

8. Point out similarities between this poem and Burns' "Tam o' Shanter."
9. Point out similarities between the poem and Irving's "Legend of Sleepy Hollow."
10. What famous authors have written in dialect? What is the reason for writing in dialect?
11. What is meant by "folk-song"? What is the literary importance of "folk-song"?
12. How has this poem been made unusually effective?
13. Compare this poem with "Captain Stormfield's Visit to Heaven," by Mark Twain.

The New Books. Page 270.

14. Point out the elements of poetic beauty in the four lines quoted from Alan Seeger.
15. Tell something concerning the literary work of at least two of the following authors: Thoreau; Henry James; Mrs. Humphrey Ward; Arthur Sherburne Hardy; Lady Gregory.

SECTION II. COMPOSITION.

Not a Blockade, But War. By Ellery C. Stowell. Page 257.

16. Point out means by which this exposition has been made clear.
17. Write a composition on the subject, "When a nation cannot win in a fair fight it had best give in." Use illustrations from the history of past ages.
18. Write a clear exposition of the last paragraph of the article.

A Parade of Privilege. By Alida von Krockow. Page 258.

19. What is the particular point of this article? By what means has this point been emphasized?
20. How did the author make the article interesting?
21. Write an article on your own school life. In the article tell what you think is the purpose of such training as you have been given. Make your article vivid and interesting.

A British Pragmatist. By Edwin E. Slosson. Page 265.

22. Select a few passages that add materially to the interest of the article.
23. Select several sentences that attract attention because of their originality.
24. Write an article concerning one of the most influential students in your school. Try to make your article goodnatured, interesting and original.

Editorial Articles. Pages 246-249.

25. Write an argument for or against the proposition: "Dr. Flexner's plans for a modern school should be supported."
26. Read the article called "Is Your Education Over?" Write a convincing article on the subject: "All people should be interested in current topics."
27. Read "With Malice toward None." Write an editorial article on "The Spirit that Moves the American People."

The Story of the Week. Pages 251-256.

28. Write in a single paragraph a clear explanation based on "The Response of the Nation."
29. Write a paragraph of detail on "Taking Precautions."
30. Write a clear, unprejudiced explanation of the break between the United States and Germany.
31. Write a very short newspaper item on the Costa Rica revolution.
32. Write a single paragraph in which you explain the nature and purpose of a Chamber of Commerce.
33. Write a short editorial article in which you favor or oppose the Immigration Bill.
34. Write two contrasting paragraphs based on "Mexico's New Constitution."
35. Write a clear expression of your opinion concerning the Alien Land Bills.

SECTION III. WORD STUDY.

36. Give the derivation and the meaning of the following words in the article on "A Modern School": Conservatives; impious; invoked; impracticable; denounced; prejudiced; tirade; materialism; clerical; esthetics.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL, JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

TO THE TEACHER: The following questions should be given out to students in history, civics or economics classes so as to provide both individual work and opportunities for classroom discussion. The work will be done to the best advantage if the reports are made in writing and if the students bring their copies of The Independent to each recitation.

I. The United States and the Great War—"Not a Blockade, But War," "With Malice Toward None," "The Freedom of the Seas," "United States Breaks with Germany," "Germany's New Naval Policy," etc. Page 257.

A. Look up in a manual on international law (a) the essentials of an effective blockade, (b) limitations on the right of blockade.

B. What, according to the first article above, are the essentials of a blockade? How far does this article agree with the view expressed in the manual which you consulted? How far does the German intention exprest in the note of January 31 conform to the law of blockade?

C. Discuss the last two paragraphs of this article in the light of the President's declaration in Congress, Saturday, February 3.

D. What, in your judgment, are the most striking sentences in the President's Address? Why?

E. The editorial "The Freedom of the Seas" calls attention to a possible difference of opinion between the United States and Great Britain. Why does this difference exist? Under what circumstances did it first appear? How was it settled?

F. The news item "United States Breaks with Germany" offers an opportunity for studying diplomatic practice and consular service.

G. Classify the editorial comments under "What the Papers Say," page 263. What seems to you the general attitude toward President Wilson's speech to Congress; in regard to the possibility of war with Germany?

II. The Prussian System—"A Parade of Privilege." Page 258, ff.

A. What do you think of the title of this article? What impression does the author intend to convey?

B. Show how the opening sentence of the article is the key to the entire article.

C. What are the elements of strength and of weakness in the educational system described? Compare this system of education with the one under which you are being educated.

III. A History of Modern Europe—"History That Explains." Page 270.

A. Compare the indicated contents of Professor Hayes's history with the table of contents of the history which you are studying. What topics are discussed in Professor Hayes's book that are omitted in your textbook?

B. Note the next to the last sentence in the review. Write a brief paragraph on two or three of the men and movements referred to.

C. If possible, examine Professor Hayes's book and write a review of your own.

IV. Mediums of Exchange—"Money and War Finance." Page 272 ff.

A. What, according to your textbook, are the essentials of a sound system of currency? What part does money play in exchange? What part does credit play?

B. Comment on the sentence beginning: "The patriotic service of the small capitalists," etc. Find out, if you can, what Scott Nearing's judgment in this matter is.

C. Note the comment which is made in the review of Mr. Noyes, Financial Chapters on the War, upon the financial and economic effect of the war upon America. What do you think of the validity of his judgment?

V. Immigration—"President Vetoes Immigration Bill."

A. Under what provision of the Constitution has Congress the right to pass immigration laws? What are the main provisions of the existing laws?

B. Explain the steps through which the present bill has thus far gone. What further steps are necessary if it is to become a law?

C. What are the chief arguments in favor of the present bill? The arguments against it?

D. Why has Congress so frequently favored legislation similar to this? The presidents opposed it?

VI. Education and the State—"A Modern School."

A. "The American people spend a billion dollars a year on education." What part of this is spent in your community? Describe the machinery which supervises your schools.

B. Who determines what subjects shall be taught in your schools? What do you think of this system?

C. What is the General Education Board referred to in this article? Do you think it ought to carry on such experiments as are here described?

D. Note the men connected with this experiment. What do you know about any of them?

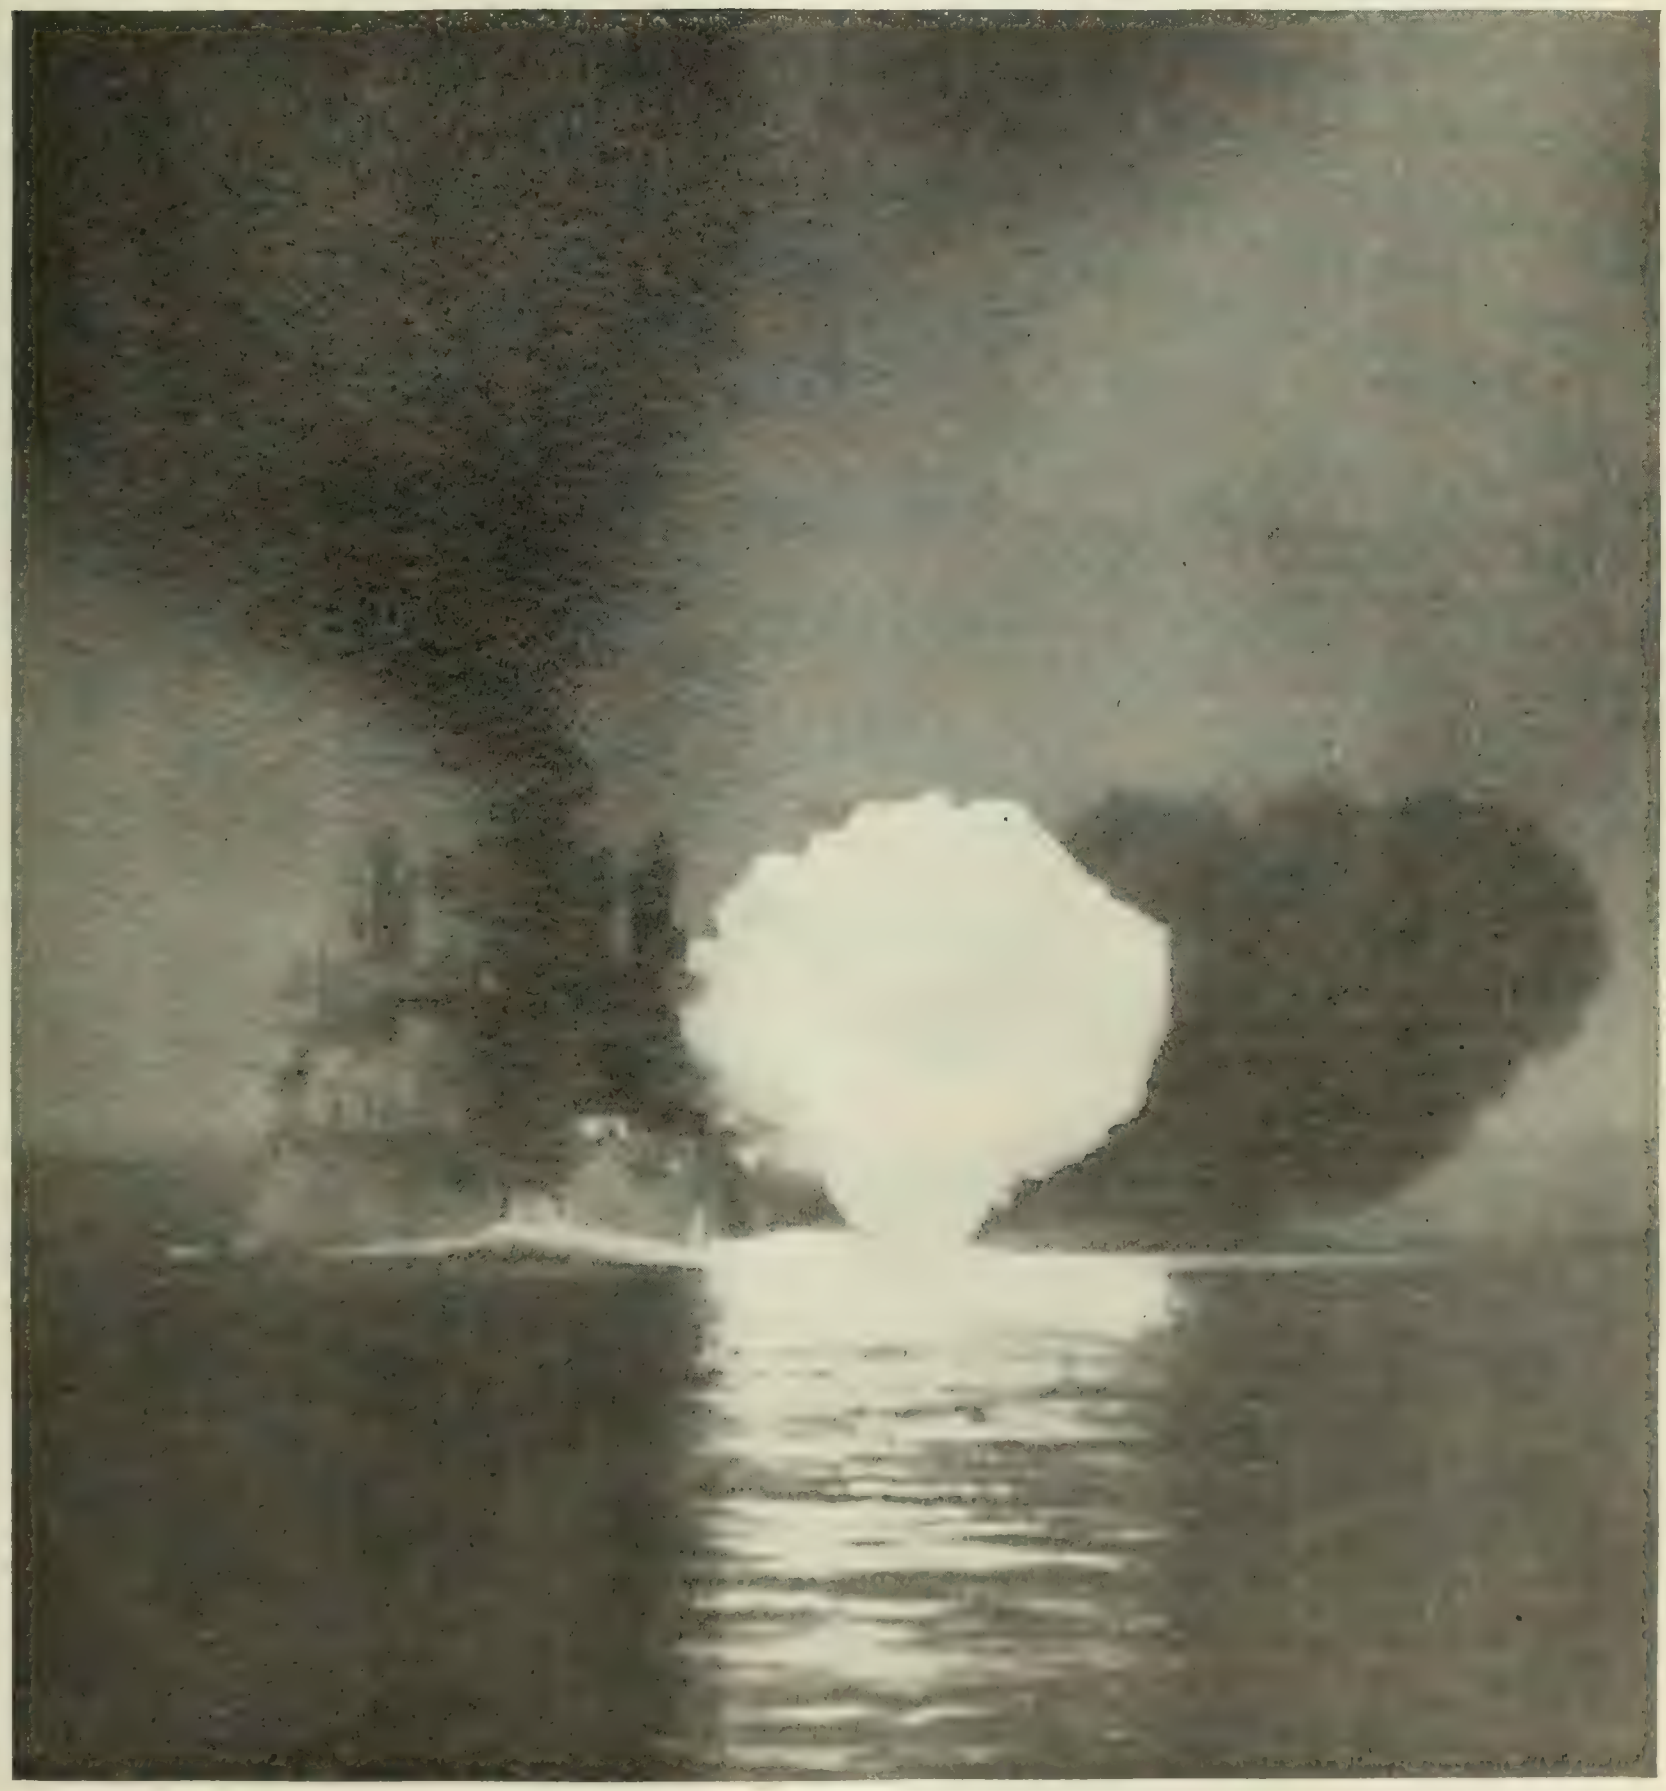
THE WORKERS OF THE WORLD

With amazing rapidity the nimble fingers of the typist must register, day in and day out, the thoughts that move the commerce of the world—a vocation that calls for food that keeps the mind alert and the muscles responsive.

Shredded Wheat

is a perfect food for all workers whose employment calls for quick thinking and quick acting. It is not a "proteid food" nor a "carbohydrate food," but just an all-around well-balanced ration containing just enough muscle-making material and just enough energy and heat-creating material for outdoor work or indoor work. For breakfast or luncheon, with milk or cream, with baked apple, sliced bananas or other fruits.

Made only by



The Shredded Wheat Company, Niagara Falls, N.Y.

THE ANSWER—IF GERMANY WILLS IT SO

THE SHOT THAT BROKE THE WORLD'S RECORD IN NIGHT FIRING, MADE BY THE "WYOMING," FLAGSHIP OF THE EIGHTH DIVISION OF THE ATLANTIC FLEET

THE PRESIDENT TO THE AMERICAN PEOPLE

WE do not desire any hostile conflict with the Imperial German Government. We are the sincere friends of the German people, and earnestly desire to remain at peace with the Government which speaks for them. We shall not believe that they are hostile to us unless and until we are obliged to believe it; and we purpose nothing more than the reasonable defense of the undoubted rights of our people. We wish to serve no selfish ends. We seek merely to stand true alike in thought and in action to the immemorial principles of our people which I have sought to express in my address to the Senate only two weeks ago—seek merely to vindicate our right to liberty and justice and an unmolested life. These are the bases of peace, not war. God grant that we may not be challenged to defend them by acts of willful injustice on the part of the Government of Germany!

WITH MALICE TOWARD NONE

THE American people stand upon the verge of a terrible adventure. Five times has this land and its people gone down into the shadowy valley of war and trodden in suffering and in fortitude its bitter ways. Unless a miracle happens, once more we shall find our feet set upon that pitiless path.

As we face this stern reality, two questions loom before us:

Why must we do this thing?

And how?

The first question we should answer with our minds and hearts as we cast the die. The other we shall answer with our deeds as we go forward our appointed way. What answers do we make?

God knows we have been slow of entrance to this quarrel. We have been patient till patience seemed to have lost all show of virtue. We have suffered brutal affront after brutal affront. We have added to patience long suffering, to long suffering forbearance, to forbearance self abnegation. But our every effort has been in vain.

It was no single invasion of our rights, no isolated assault upon our honor that brought us to this dread decision. It is not even the cumulating series of wrongs to our national self that is forcing us from the paths of peace. The truth is deeper than this and more portentous.

There is abroad in the world a malignant and menacing spirit that would not let us be. We have sought with full sincerity to hold aloof from the conflict this spirit waged against our neighbors in the world. We have tried, and tried again, to hold the balance even between the contestants in this titanic struggle. But the evil spirit that possesses the leaders of the German Empire would not suffer it to be. Driven by desperation and proud wilfulness it so threatened civilization's very foundations that we had no choice but to end the friendly relations which have continued for one hundred and forty years.

If Germany wills that we shall fight, fight we must. Heavy hearted, for that we know the price that we must pay, but mighty spirited, for that we know the pricelessness of what we fight for, we shall give our hearts and our hands to this cause.

If Germany will not recant we shall endure to the end. We shall strike hands with those who for two years and a half have poured out their blood and treasure in this great cause. We shall give everything that we have and are that the right may prevail. We shall enter upon this terrible adventure with malice toward none, but with an overwhelming hatred of the ruthless and merciless spirit of evil that possesses those we are called upon to fight. God willing, we shall not hold our hand until that demoniac spirit is exorcised from the world.

THE FREEDOM OF THE SEAS

THE break with Germany has come as we all anticipated over the question of neutral maritime rights. Germany still professes to be faithful to her historic policy of standing with the United States in defense of the freedom of the seas, but she has belied her words by her ruthless attacks upon the ships of all nations regardless of international law or the dictates of humanity. America has been patient beyond precedent under these outrages, but the threat of an extension of such depredations is unendurable. It is impossible to argue further with Germany. The time has come for action. But since our action, whatever it be, will necessarily bring us into coöperation with England, it is necessary that these two nations come to an understanding, if not an agreement upon this —to us—most vital issue of the war.

Between the United States and England there is now a closer sympathy and a greater desire for mutual coöperation than ever before in the history of the two countries. But sympathy and coöperation are impossible unless they are based upon an understanding of each other's aims and ideals. Under the emotional strain of the war, and when the interests of belligerent and neutral conflict as they frequently do, misunderstandings and misjudgments are hard to avoid, and the press on both sides should make especial efforts to explain the ideals of its own nation and to understand, tho it may not approve, the ideals of the other.

One of the questions over which a serious misunderstanding is most likely to arise is that of the freedom of the seas, because this is something the American people think strongly about and the English people think little about.

The other day we received a letter from a British journalist asking: "What is the meaning of that phrase, 'the freedom of the seas' which the President uses?" Now this is a very creditable inquiry and one that many another British journalist should make, but to an American ear it sounds the same as: "How did your President happen to hit upon that peculiar phrase, 'all men are created equal'?" For the doctrine of maritime liberty was one of our dearest ideals at the foundation of our government and we have stuck to it ever since. We fought England to maintain it a hundred years ago and if now, under much greater provocation, we content ourselves with writing notes of protest, it is not so much because we dread to become an enemy of England as because we would dislike to become an ally of Germany. Our quietude should not be interpreted to mean acquiescence in the unprecedented violations of international law of which both parties have been guilty in this war.

A striking illustration of the difference in the importance attached to this principle in England and America is afforded by the present discussion of peace terms. President Wilson, in his address to the Senate, placed the freedom of the seas in the forefront of the issues of the war. But the Allies, in the somewhat detailed statement of their aims, do not even mention it. Mr. Balfour devotes a large part of his supplementary note to urging the expulsion of the Turk from Europe, a point on which Americans need little convincing, but he fails to say a word about the matter in which America is most vitally concerned.

In the emphasis that President Wilson lays upon this doctrine he is but following in the footsteps of his predecessors from the first. Washington rejoiced when Franklin embodied the principle in the treaty that he negotiated with Prussia in 1785, the treaty which the United States and Germany have now fallen back upon when the Declarations of Paris and London and the two Conventions of The Hague have been swept away.

Franklin hoped to see it adopted by all Europe in his time. In a letter written from Passy, France, in 1780, he says:

> All the internal states of Europe seem at present disposed to change what they have before deemed the law of nations, to wit: That an enemy's property may be taken wherever found, and to establish the rule that free ships make free goods. This rule is itself so reasonable and of a nature to be so beneficial to mankind that I can not but wish it may become general, and I make no doubt but that the Congress will agree to it in as full an extent as France and Spain.

A quotation from another letter written a few days later shows that Franklin held views on the rights of commerce and the desirability of a league to enforce them which we are only now beginning to consider practicable:

> I approve much of the principles of the confederacy of the neutral powers, and am not only for respecting the ships as the house of a friend, tho containing the goods of an enemy, but I even wish, for the sake of humanity, that the law of nations may be further improved by determining that even in time of war all those kinds of people who are employed in procuring subsistence for the species, or in exchanging the necessaries or conveniences of life, which are for the common benefit of mankind, such as husbandmen on their lands, fishermen in their barks, and traders in unarmed vessels, shall be permitted to prosecute their several innocent and useful employments without interruption or molestation, and nothing taken from them, even when wanted by the enemy, but on paying a fair price for the same.

Altho the principle enunciated by Franklin met later with the approval of Russia, Holland and the Scandinavian countries as well as Prussia, it failed of general adoption because of the persistent opposition of England. But the United States has never relinquished the effort to establish it. In 1854 Secretary of State Marcy wrote Mr. Buchanan, our Ambassador to Russia, urging a union of the maritime nations in support of the American doctrine of freedom of neutral commerce and saying:

> In the earliest period of this Republic, attempts were made to procure the recognition of the doctrine that "free ships make free goods" as a principle of international law; but those attempts were unavailing, and up to this time enemies' property on board of a neutral vessel has been held liable to seizure and confiscation. Russia has the merit of having favored the liberal view of this question; France has been willing to concede the doctrine, but Great Britain strenuously resisted. Her maritime ascendency has inclined her to maintain extreme doctrines in regard to belligerent rights.

The latest and most complete formulation of the doctrine is given in the code of maritime neutrality drawn up by Secretary of State Lansing for the American Institute of International Law at the Havana convention, January 22, 1917. This code states in part:

> The commercial blockade, both of the belligerent ports and the maritime zones along belligerent coasts, is formally forbidden, no matter what the means by which the blockade is to be effected. Private property on the open sea is inviolable. Belligerent and neutral merchant vessels may in no case be confiscated, nor sunk, under any pretext whatever. If carrying contraband, this may be confiscated or destroyed by the captor. The right of search is abolished. The official

or private postal correspondence of neutrals or belligerents found in the open sea on board a neutral or enemy vessel is inviolable.

We see by these quotations, one from the beginning of our national life, one from its middle period, and one from the present, that the United States has been stedfast in its determination to have this principle incorporated into international law. It is true that during the Civil War the United States did maintain a strict blockade and did seize private property at sea; but in so doing it was simply following the accepted practise of the times. It is entirely possible for an honest man or an honest nation to take advantage of the laws as they are and at the same time to strive with entire sincerity to have the laws changed. These efforts were apparently meeting with some success before the war, for each successive convention marked some step toward the acceptance and extension of the doctrine. The latest of these conventions, the Declaration of London, went the farthest in limiting contraband and restricting the right of seizure. At the outbreak of the war Germany exprest her willingness to abide by the Declaration of London, but Great Britain refused to accept it as a whole and later repudiated it altogether. Consequently there are no restrictions upon the actions of belligerents, and their depredations upon neutral commerce are worse than they have been for a century. The British seize our ships, cargoes and mails and drag them into their own ports. The Germans sink the ships without warning, cargoes, mails, passengers and all. The German practise is infinitely worse, but the British practise is not easy to bear.

If our British cousins find us unduly sensitive, let them imagine how it would feel if they were in our shoes. Suppose the United States were at war with Argentina and Great Britain were neutral. Suppose an American cruiser captured a British vessel flying the British flag on her way from London to Liverpool in ballast and took her off to New York to be sold as a prize on the ground that some of the stock of the steamer company was owned by Argentinians. Would the British be as patient as the Americans have been under like provocation in the "Hocking," "Genesee" and "Kankakee" cases?

At The Hague conference of 1907 the nations agreed that—

> The postal correspondence of neutrals or belligerents, whatever its official or private character may be, found on high seas on board a neutral or enemy ship, is inviolable.

Yet the British Government intercepts, seizes, opens, reads, censors, detains or confiscates even neutral mails on neutral ships on the high seas between neutral ports. Practically no German periodicals of any kind have been allowed to reach this country since last May. Even the Smithsonian Institution and the Library of Congress are prohibited by the British censorship from getting such papers as the reports of archeological or scientific societies. A large proportion of the despatches of American correspondents in Berlin are not transmitted as written. The London *Times* boasts that the British censors have intercepted checks, drafts and other securities amounting to "considerably over £50,000,000" in the course of transmission by mail when they were suspected to be "for enemy benefit." This of course includes money sent by German-Americans to their dependent or distrest relatives in the old country. It doubtless comprizes many of the dimes and dollars collected from the American public by tags and charity bazars. Here are buried for an indefinite period an unknown number of the checks sent abroad by American banks. Presumably they will be recoverable after the war, but in the meantime their fate is indiscoverable and their interest is lost. Our Government is not merely prevented from transmitting its money orders and registered letters to individuals in Central Europe, but is not allowed by the British Government even to send lists of the money orders that have been despatched so as to ascertain which of these have been lost or confiscated en route.

In the note of May 24, 1916, in which the Secretary of State complains of such violations of international law by England, he says that we "can no longer tolerate the wrongs which the citizens of the United States have suffered and continue to suffer thru these methods." Nevertheless we have tolerated and shall doubtless continue to tolerate these wrongs because we sympathize in the main with the cause for which the Allies are fighting and do not wish to interfere with them. But they should not be surprized or annoyed at our insistence upon the importance of the freedom of the seas, and they should realize our determination that the principle for which we have stood for a hundred and forty years should be *recognized and enforced* thruout the world.

Our position is somewhat the same as it was before 1812. Then America was alternately exasperated by the restrictions imposed upon our commerce by the edicts of Napoleon and the British Orders in Council. Some of our people demanded retaliation on one, some on the other, for there was reason enough for both, but finally the British by seizing the seamen from our own ships turned the scale and war was declared against England. So now we can not approve the conduct of either belligerent foe, both are in violation of what we hold to be right. But while England is merely restricting our shipping, Germany is destroying it with reckless disregard for human lives. That is why, if we go to war, it will unquestionably be with Germany.

A MODERN SCHOOL

THE American people spend a billion dollars a year on education. How much of this money is wasted or ill-spent, how much of the time of the millions of young people undergoing education is wasted or ill-spent nobody can tell because nobody knows. Yet, when somebody proposes to try, at his own expense, to find out if and how schooling can be improved, he is met with a chorus of condemnation from the conservatives. He is curst with the curse of Uzzah, who was smote dead for touching the ark of the Lord. In the opinion of many the American school, just as it stands, is equally sacred. To intimate that it has faults is impious; to attempt to make a better school is a crime which the law is invoked to prevent.

So long as the General Education Board confined itself to giving away a million dollars a year to existing schools and colleges few people found fault with it except those who failed to receive its benefactions. When the board began to study the school system and to suggest improvements it was met by the objection that its suggestions were impracticable. When it announced its intention of doing a little experimenting on its own

hook to see if they were impracticable it is denounced as an enemy of society. Who would have thought that the proposal to try a new kind of training on one or two hundred boys and girls on the East Side of New York City would have aroused such a commotion?

The ignorance and prejudice manifested in some of these criticisms are amazing. Very strangely one of the worst of them appeared in one of the best of newspapers. The *New York Times* devoted a two column editorial to a tirade of which the following is a fair sample:

> This is bread-and-butter education and nothing else. Unblushing materialism finds its crowning triumph in the theory of the Modern School. In the whole plan there is not a spiritual thought, not an idea that rises above the need of finding money for the pocket and food for the belly.

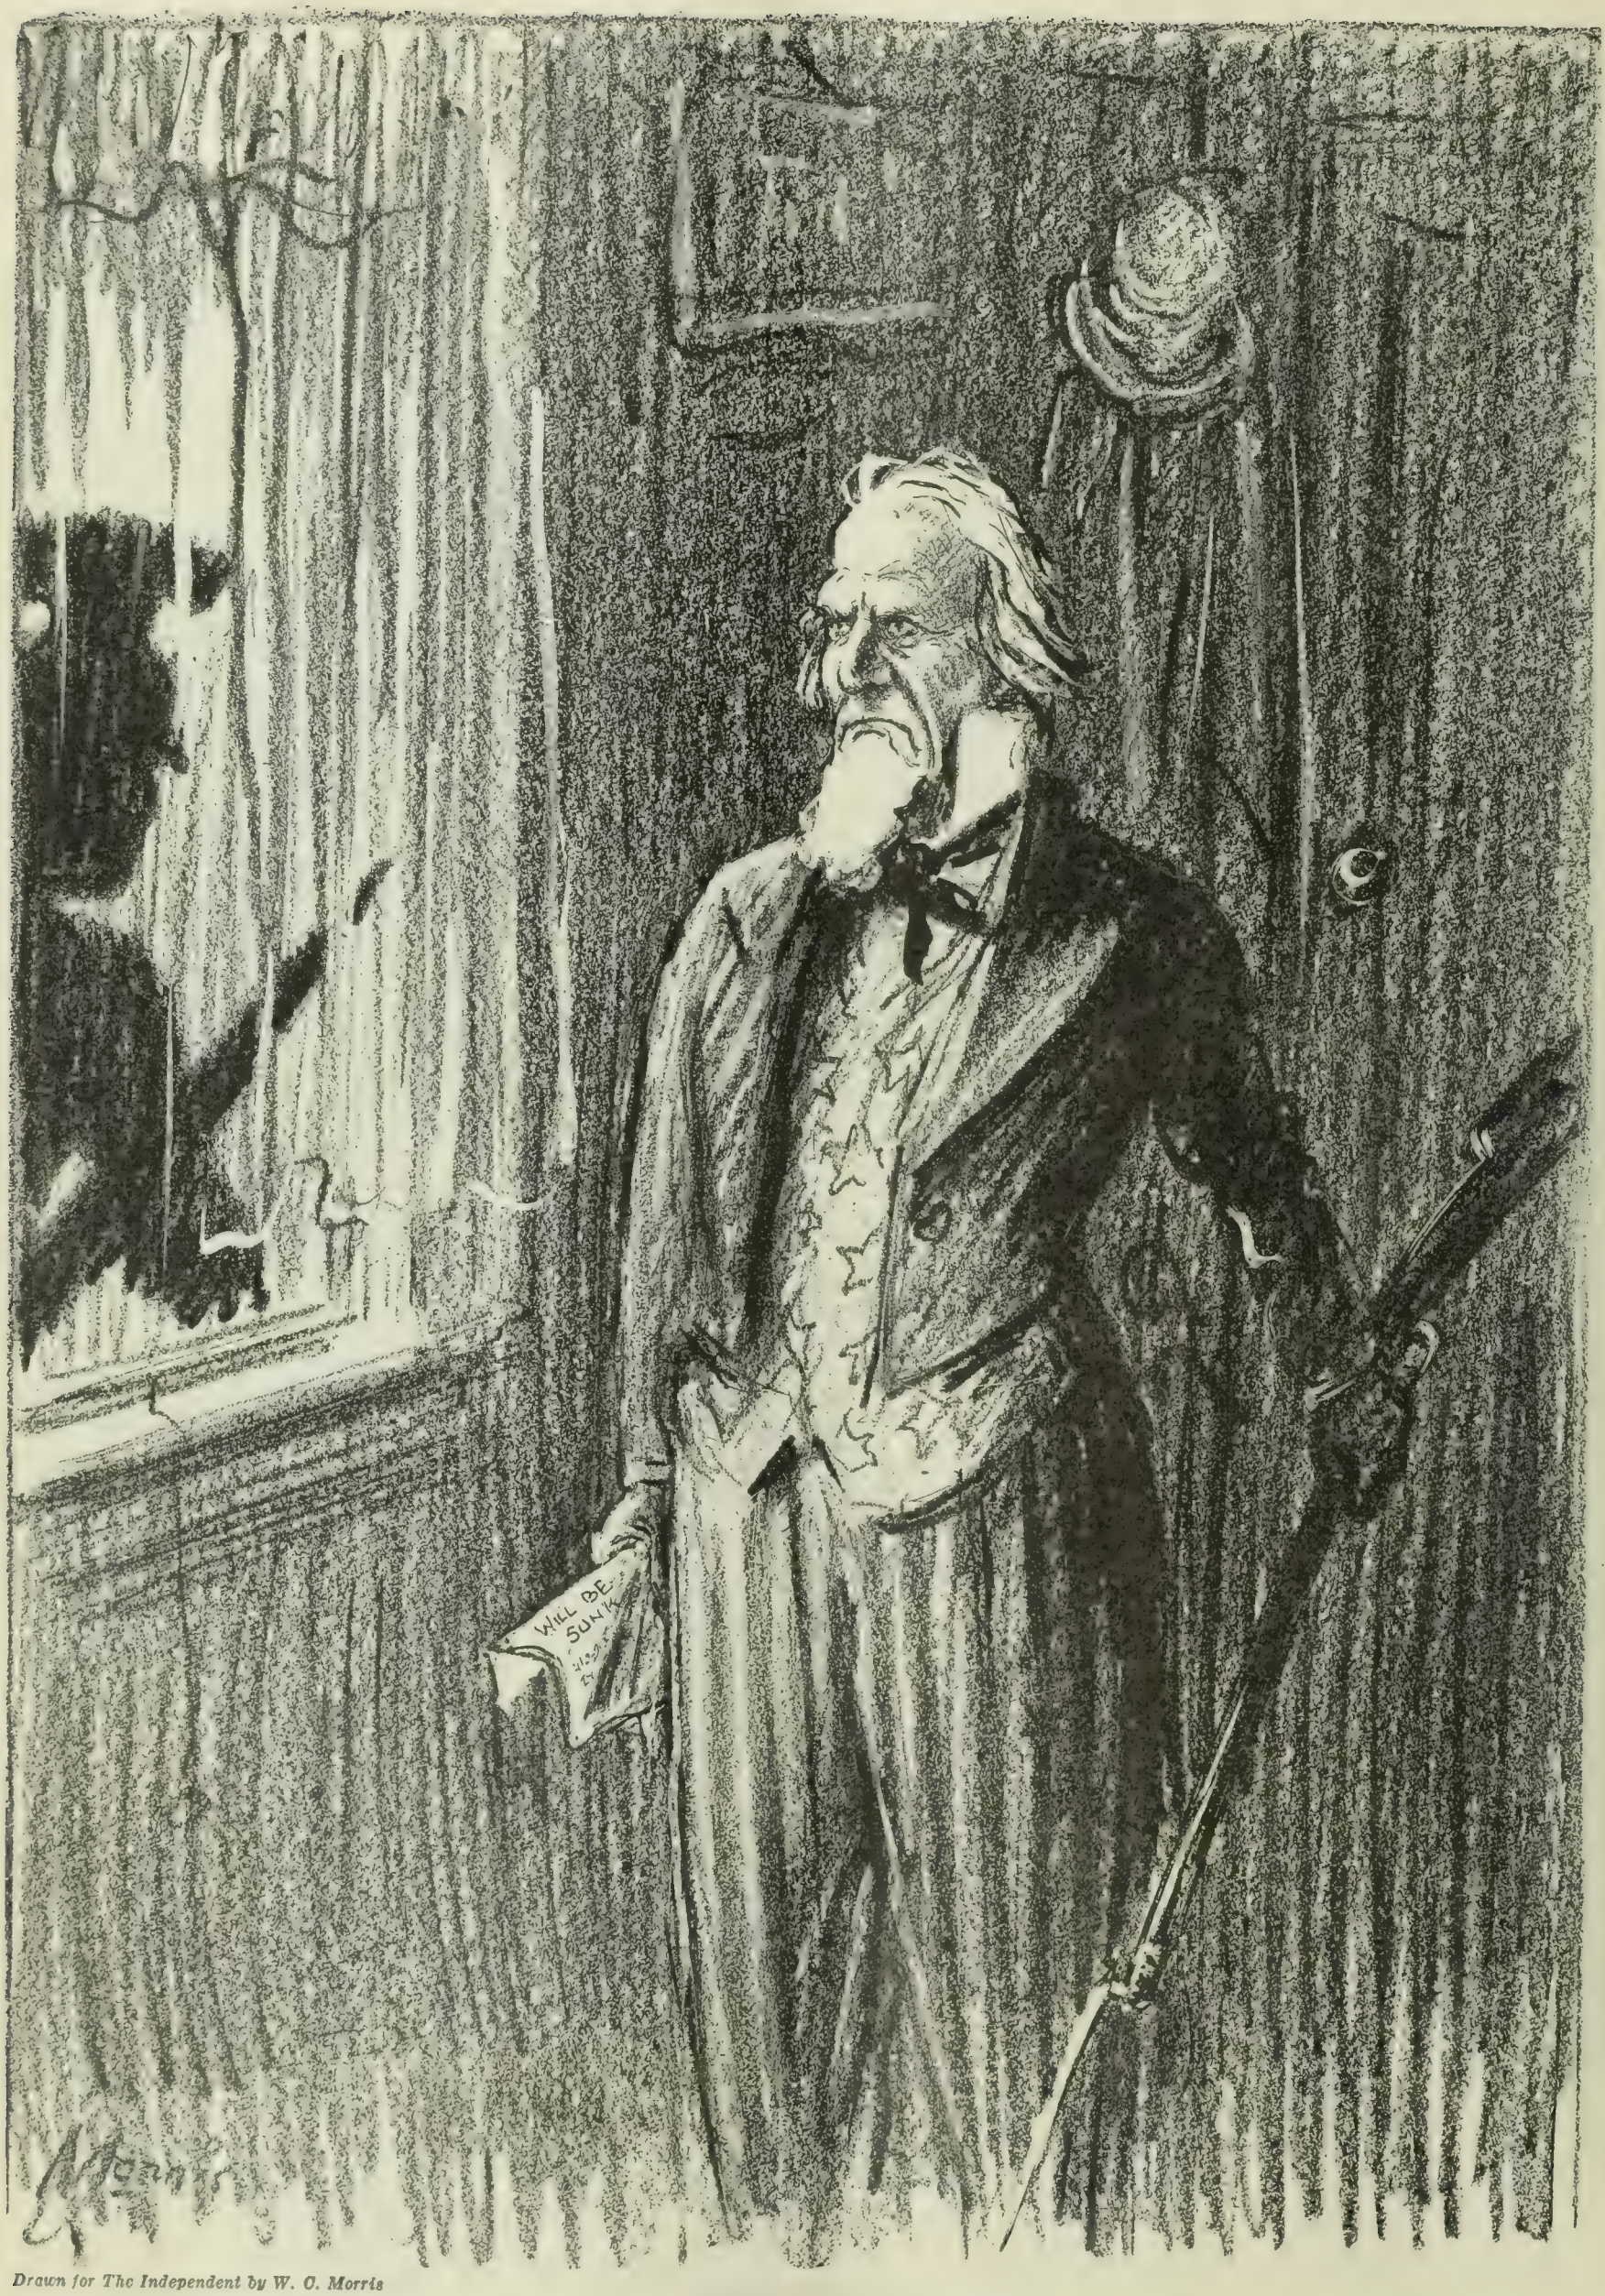
Now the two papers so characterized are well known to all interested, for they are distributed free of charge by the General Education Board of New York City. In the first of these "Changes Needed in American Secondary Education" Ex-President Eliot, of Harvard, devotes a large part of his space to criticism of American education for its neglect of artistic culture and to plans for the cultivation of taste and ethical ideals thru art and literature. Dr. Abraham Flexner, in the second paper, "A Modern School," proposes a curriculum with a fourfold basis, namely science, industry, esthetics, civics, all of which he regards as character-building studies. He would have every boy and girl taught to speak one foreign language, to play upon some musical instrument, and to read more widely in ancient and modern history and literature than is now customary. One of the chief points in which the modern school proposes to deviate from the traditional school is the emphasis it lays upon those features which the editor of the *Times* says are altogether absent from its program. The plan may be impracticable—*quod est demonstrandum*—but it is certainly not sordid.

Both President Eliot and Dr. Flexner have had experience as teachers and as directors of education. The Modern School is to be under the control of the Teachers' College of Columbia University, which has in past years conducted the Horace Mann and Speyers schools as laboratories of educational experimentation to the great benefit of the country. Professor Caldwell, who has been appointed director of the Modern School, comes from the School of Education of the University of Chicago, which is the outgrowth of the pioneer experimental schools started in Chicago by Colonel Parker and Professor Dewey.

There is then a very encouraging prospect that the new school may assist in solving some of the educational problems that now perplex us and so save the effort, time and money now lost thru antiquated methods and misfit types of training. Such experimentation cannot easily be carried on in the public school system because a school of novel type would not fit into the system. Private schools usually cannot undertake it because it involves heavy initial expenditure with no assured return. So we must look for the most part to independent schools like this for that experimentation without which no progress is possible. Our only fear is lest the Modern School be too successful and get stuck in its own groove like some of its predecessors.

IS YOUR EDUCATION OVER?

WE thought we would just inquire, because if it is not you may be interested in the new department that we are starting this week. It is a course of study in current events and contemporary literature. What topics will be taken up for study during the year we cannot say because we do not know, but we can assure the reader that they will be the most momentous in the world and of the greatest interest to everyone. The textbook—well, we will say nothing about that for you have it in your hand.



When The Independent began to be used in the class room there came a demand for lesson plans which would call attention to the salient points in the news and articles and would suggest lines of reading and thought. So we have been for the last two years mailing such lists of questions and suggestions every week to the thousands of college and high school teachers who were using The Independent in their classes.

But soon we found that other subscribers of The Independent besides teachers wanted these study plans either for use in clubs and reading circles or for their own personal use. They found that they got more out of the magazine if they looked over the questions prepared and tried to answer some of them. So we have decided to print these lessons on The Independent in The Independent instead of sending them in a separate envelop to such as ask for them. In other words, we have taken the "teacher's key" from his private drawer and put it on the desk so all may use it.

Chesterton says that there are two classes of readers: eager men who want to read a book and tired men who want a book to read. We hope to attract both classes but we confess that we are especially interested in the former, that is, in those who are reading The Independent because it contains something which they want to know. Such readers will want to know if they really do know what they read and we believe that many of them will find it profitable to look over the questions which we publish in the same issue. There will be two such lists; one on history and civics and the other on language and literature, both prepared by competent teachers of these subjects. Of course, no reader will care to take such a quiz every week or to prepare all the exercizes suggested but the habit of refering to it will add greatly to the interest and profit of the magazine.

POT AND KETTLE

THERE is a proverb much heard nowadays that we never could see the sense of; "The pot can't call the kettle black." Why not, we should like to know? The kettle *is* black. It ought to be called black. Who has a better right to speak with confidence about the faults of the kettle than the pot, which has for years hung on the same crane and inhaled the same smoke. Truthfulness is a virtue if smuttiness is a vice. If there is anything that would make the pot seem less sooty in our eyes it is giving us a clear reflection of the image of the kettle. Shall no one point out blackness anywhere unless he knows himself to be speckless? Would the pot rise in our estimation if it followed the custom of its critics and said "The kettle is white, as white as I am?"

Drawn for The Independent by W. O. Morris

THE SHADOW

THE STORY OF THE WEEK

Germany's New Naval Policy

On the last day of January the German Ambassador, Count Bernstorff, delivered to our State Department an announcement that since Germany's proffer of peace negotiations had been rejected by the Allies the German Government "is now compelled to continue the fight for existence, again forced upon it, with the full employment of all the weapons which are at its disposal." The full text of the note is published below.

Accompanying this note was a statement of the contemplated military measures at sea. This declares that

From February 1, 1917, sea traffic will be stopped with every available weapon and without further notice in the following blockade zones around Great Britain, France, Italy and in the eastern Mediterranean.

The version of the note transmitted direct from Germany by wireless to Sayville uses the term "barred zones" instead of "blockade zones." The word "blockade" has a well defined meaning in international law and hitherto both Germany and Great Britain have for that reason avoided the use of the word while exercizing and even exceeding the privileges of a blockade.

The barred or blockaded area is delimited on the accompanying map. A free strip twenty miles wide, instead of the customary three miles, is left along the coasts of the neutral countries, Spain and Holland. From the Terschilling Lightship, off the Dutch coast, the line runs north to Utsire Island, thence northwest, passing just above the Shetland Islands, which belong to England, and just below the Faröe Islands, which belong to Denmark. The line then runs out into the Atlantic to a distance about five miles west of Ireland, and so south to a point opposite Cape Finisterre and from there back to France, leaving a free strip twenty miles wide along the northern coast of Spain. Warning is given that "neutral ships navigating these blockade zones do so at their own risk." Time will be given to neutral ships in the blockaded zones to leave and ships on their way to arrive.

Regular American passenger steamers may continue undisturbed if,

(A) The port of destination is Falmouth.

(B) Sailing to or coming from that port course is taken via the Scilly Islands and a point 50 degrees north, 20 degrees west. Along this route no German mines will be laid.

(C) The steamers are marked in the fol-

GERMANY'S NOTE TO THE UNITED STATES

WASHINGTON, D. C., Jan. 31, 1917.

Mr. Secretary of State:

Your Excellency was good enough to transmit to the Imperial Government a copy of the message which the President of the United States of America addrest to the Senate on the 22d inst. The Imperial Government has given it the earnest consideration which the President's statements deserve, inspired, as they are, by a deep sentiment of responsibility.

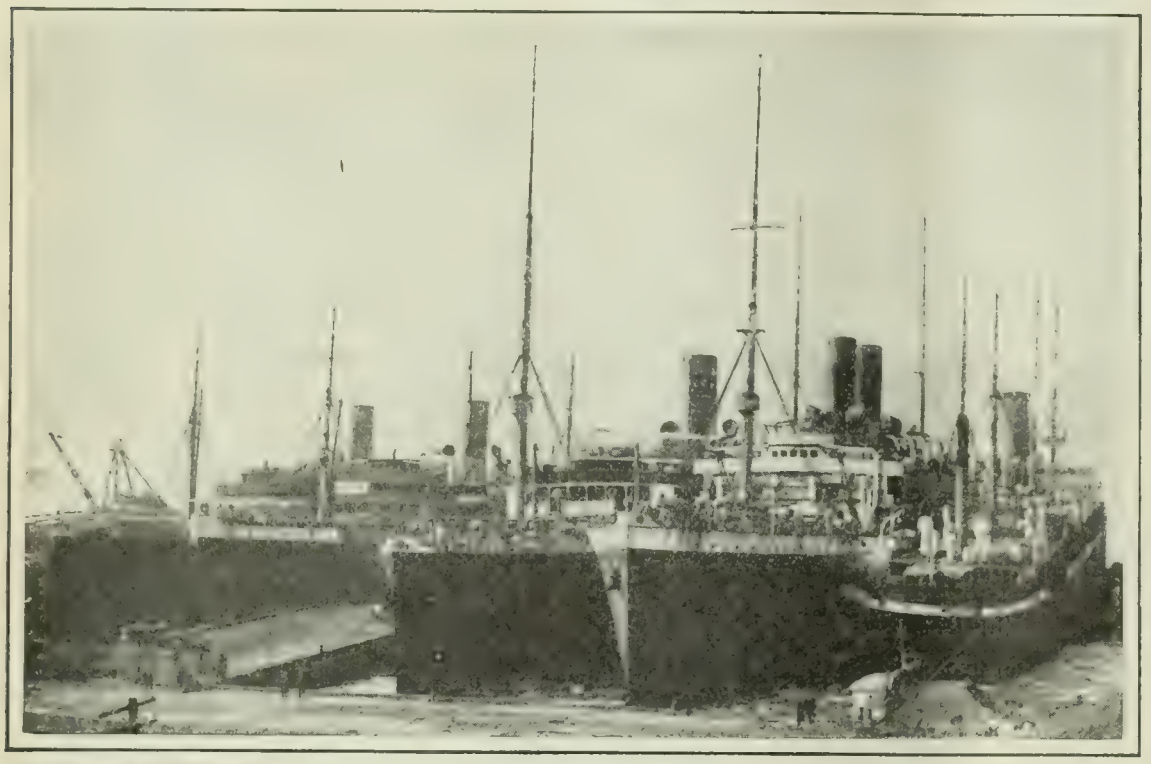
It is highly gratifying to the Imperial Government to ascertain that the main tendencies of this important statement correspond largely to the desires and principles professed by Germany. These principles especially include self-government and equality of rights for all nations. Germany would be sincerely glad if in recognition of this principle countries like Ireland and India, which do not enjoy the benefits of political independence, should now obtain their freedom.

The German people also repudiate all alliances which serve to force the countries into a competition for might and to involve them in a net of selfish intrigues. On the other hand, Germany will gladly coöperate in all efforts to prevent future wars.

The freedom of the seas, being a preliminary condition of the free existence of nations and the peaceful intercourse between them, as well as the open-door for the commerce of all nations, has always formed part of the leading principles of Germany's political program. All the more the Imperial Government regrets that the attitude of her enemies, who are so entirely opposed to peace, makes it impossible for the world at present to bring about the realization of these lofty ideals.

Germany and her allies were ready to enter now into a discussion of peace, and had set down as basis the guarantee of existence, honor, and free development of their peoples. Their aims, as has been expressly stated in the note of December 12, 1916, were not directed toward the destruction or annihilation of their enemies, and were, according to their conviction, perfectly compatible with the rights of the other nations. As to Belgium, for which such warm and cordial sympathy is felt in the United States, the Chancellor had declared only a few weeks previously that its annexation had never formed part of Germany's intentions. The peace to be signed with Belgium was to provide for such conditions in that country, with which Germany desires to maintain friendly neighborly relations, that Belgium should not be used again by Germany's enemies for the purpose of instigating continuous hostile intrigues. Such precautionary measures are all the more necessary, as Germany's enemies have repeatedly stated, not only in speeches delivered by their leading men, but also in the statutes of the Economical Conference in Paris, that it is their intention not to treat Germany as an equal, even after peace has been restored, but to continue their hostile attitude, and especially to wage a systematical economic war against her. The attempt of the four allied powers to bring about peace has failed, owing to the lust of conquest of their enemies, who desired to dictate the conditions of peace. Under the pretense of following the principle of nationality, our enemies have disclosed their real aims in this way, viz.: To dismember and dishonor Germany, Austria-Hungary, Turkey, and Bulgaria. To the wish of reconciliation they oppose the will of destruction. They desire a fight to the bitter end.

A new situation has thus been created which forces Germany to new decisions. Since two years and a half England is using her naval power for a criminal attempt to force Germany into submission by starvation. In brutal contempt of international law, the group of powers led by England does not only curtail the legitimate trade of their opponents, but they also, by ruthless pressure, compel neutral countries either to altogether forego every trade not agreeable to the Entente Powers or to limit it according to their arbitrary decrees.



The American Government knows the steps which have been taken to cause England and her allies to return to the rules of international law and to respect the freedom of the seas. The English Government, however, insists upon continuing its war of starvation, which does not at all affect the military power of its opponents, but compels women and children, the sick and the aged, to suffer for their country pains and privations which endanger the vitality of the nation. Thus British tyranny mercilessly increases the sufferings of the world, indifferent to the laws of humanity, indifferent to the protests of the neutrals whom they severely harm, indifferent even to the silent longing for peace among England's own allies. Each day of the terrible struggle causes new destruction, new sufferings. Each day shortening the war will, on both sides, preserve the lives of thousands of brave soldiers and be a benefit to mankind.

The Imperial Government could not justify, before its own conscience, before the German people and before history, the neglect of any means destined to bring about the end of the war. Like the President of the United States, the Imperial Government had hoped to reach this goal by negotiations. After the attempts to come to an understanding with the Entente Powers have been answered by the latter with the announcement of an intensified continuation of the war, the Imperial Government—in order to serve the welfare of mankind in a higher sense and not to wrong its own people—is now compelled to continue the fight for existence, again forced upon it, with the full employment of all the weapons which are at its disposal.

Sincerely trusting that the people and the Government of the United States will understand the motives for this decision and its necessity, the Imperial Government hopes that the United States may view the new situation from the lofty hights of impartiality, and assist, on their part, to prevent further misery and unavoidable sacrifice of human life.

Enclosing two memoranda regarding the details of the contemplated military measures at sea, I remain, etc.,

J. BERNSTORFF.

© Underwood & Underwood

THOSE INTERNED LINERS

The neutrality squad has been doubled and closer inspections made of the interned German liners at New York, the "Prinz Joachim," "Prinz Eitel Friedrich," "König Wilhelm II," "Hamburg" and "Allemania." The "Allemania" is pointed seaward and has been coaling up

lowing way, which must not be allowed to other vessels in American ports: On ship's hull and superstructure three vertical stripes one meter wide each to be painted alternately white and red. Each mast should show a large flag checkered white and red, and the stern the American national flag. Care should be taken that, during dark, national flag and painted marks are easily recognizable from a distance, and that the boats are well lighted thruout.

(D) One steamer a week sails in each direction with arrival at Falmouth on Sunday and departure from Falmouth on Wednesday.

(E) United States Government guarantees that no contraband (according to German contraband list) is carried by those steamers.

In the Mediterranean, according to the German note, the sea remains open to neutral ships west of Minorca. From here a free lane twenty miles wide runs eastward thru the middle of the Mediterranean and turns north to Greece. This allows access to Greece, which tho occupied by the Allied troops, is still nominally neutral and so could not legally be blockaded.

Hospital Ships Besides declaring a wide war zone about the British Isles, the German Government on the same date announced that even hospital ships passing between France and England would not be exempt in the area bounded by a line drawn from Flamborough Head on the east coast of England to Terschelling on the Dutch coast and a line drawn from Land's End in Wales to Ushant in France, near Brest. This covers the English Channel, Dover Strait and the southern part of the North Sea.

In explanation of this action the German Government alleges that it has "convincing evidence in hand that hostile hospital ships frequently are misused for the transportation of ammunition and troops. The Government has communicated these proofs to the British and French Governments by diplomatic means." Hospital ships will be allowed to pass between the Continent and the British Isles outside of these limits.

The evidence handed to the American and other neutral embassies at Berlin for transmission to Great Britain includes twenty-three affidavits and statements of eye-witnesses as to the misuse of hospital ships, among them the "Britannic" and "Aquitania." It is also alleged that the British captured and sold a German hospital ship while cruising in the North Sea picking up survivors and that Russia has announced that she will not respect Turkish or Bulgarian hospital ships in the Black Sea.

The British Government declares that it has received no such communications and emphatically denies that British hospital ships have been used for munitions or troops or in any other way contrary to the Hague Convention. Warning is given that if the German threat is carried out reprisals will immediately be taken by the British authorities concerned.

A Second German Note In delivering the note which we publish in full elsewhere and the memorandum outlining the war zone, Count von Bernstorff added another memorandum giving the reason for Germany's action as follows:

After bluntly refusing Germany's peace offer the Entente Powers stated in their note addrest to the American Government that they are determined to continue the war in order to deprive Germany of German provinces in the west and east, to destroy Austria-Hungary and to annihilate Turkey. In waging war with such aims the Entente Allies are violating all rules of international law, as they prevent the legitimate trade of neutrals with the Central Powers, and of the neutrals among themselves.

Germany has so far not made unrestricted use of the weapon which she possesses in her submarines. Since the Entente Powers, however, have made it impossible to come to an understanding based upon equality of rights of all nations, as proposed by the Central Powers, and have instead declared only such a peace to be possible which shall be dictated by the Entente Allies and shall result in the destruction and the humiliation of the Central Powers, Germany is unable further to forego the full use of her submarines.

The Imperial Government, therefore, does not doubt that the Government of the United States will understand the situation thus forced upon Germany by the Entente Allies' brutal methods of war and by their determination to destroy the Central Powers, and that the Government of the United States will further realize that the now openly disclosed intention of the Entente Allies gives back to Germany the freedom of action which she reserved in her note addrest to the Government of the United States on May 4, 1916.

The note referred to will be found in The Independent of May 15. In this communication the German Government promised not to sink merchant vessels without warning and without saving human lives unless the ship attempt to escape or offer resistance." But this was coupled with a complaint of Great Britain's violation of the freedom of the seas and the expression of expectation that the United States will insist upon British compliance with the rules of international warfare as laid down in the American notes to Great Britain. The final paragraph of the note of May 4, 1916, states that the German promise to abstain from attacks on merchant vessels is conditional upon getting such concessions from England:

Should steps taken by the Government of the United States not attain the object it desires, to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation in which it must reserve to itself complete liberty of decision.

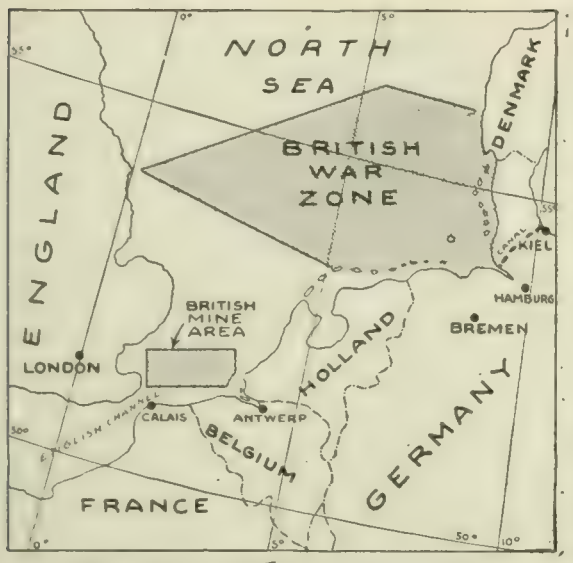
In acknowledging the receipt of this note of May 4, the American Government refused to accept this condition or to make its negotiations with Germany in any way dependent upon its negotiations with England.

Count von Bernstorff in his note of January 31, 1916, says further that under the circumstances Germany "will meet the illegal measures of her ene-

THE GREAT WAR

January 29—Cold weather stops the fighting in Rumania. British gain 300 yards on Tigris.

January 30—Russians take 2000 prisoners on border of Bukovina. Count Adam Tarnowski von Tarnow, new Austro-Hungarian Ambassador, reaches America.



January 31—Germany announces that hospital ships will be debarred from British Channel. Plot to poison Lloyd George disclosed.

February 1—Germany declares a large blockaded area surrounding British Isles and covering most of Mediterranean in which all ships will be sunk.

February 2—British penetrate German trenches near Gueudecourt. Ten ships sunk by Germans.

February 3—President announces to Congress that he has broken off diplomatic relations with Germany. German cruisers in American ports seized and crews imprisoned. American ship "Housatonic" sunk.

February 4—National guard called out. The seventy-two Americans taken from British steamers by German raider are released.

THE NEW BRITISH WAR ZONE

Last week the British Admiralty notified the United States that on account of belligerent operations the area in the North Sea outlined above, except for a strip from four to seven miles wide along the Dutch and Danish coasts, would be dangerous to shipping. The square area at the entrance to the English Channel is that previously announced as mined

mies by forcibly preventing" all navigation, even that of neutrals, within the specified zone. He adds:

All ships met within that zone will be sunk. The Imperial Government is confident that this measure will result in a speedy termination of the war and in the restoration of peace, which the Government of the United States has so much at heart.

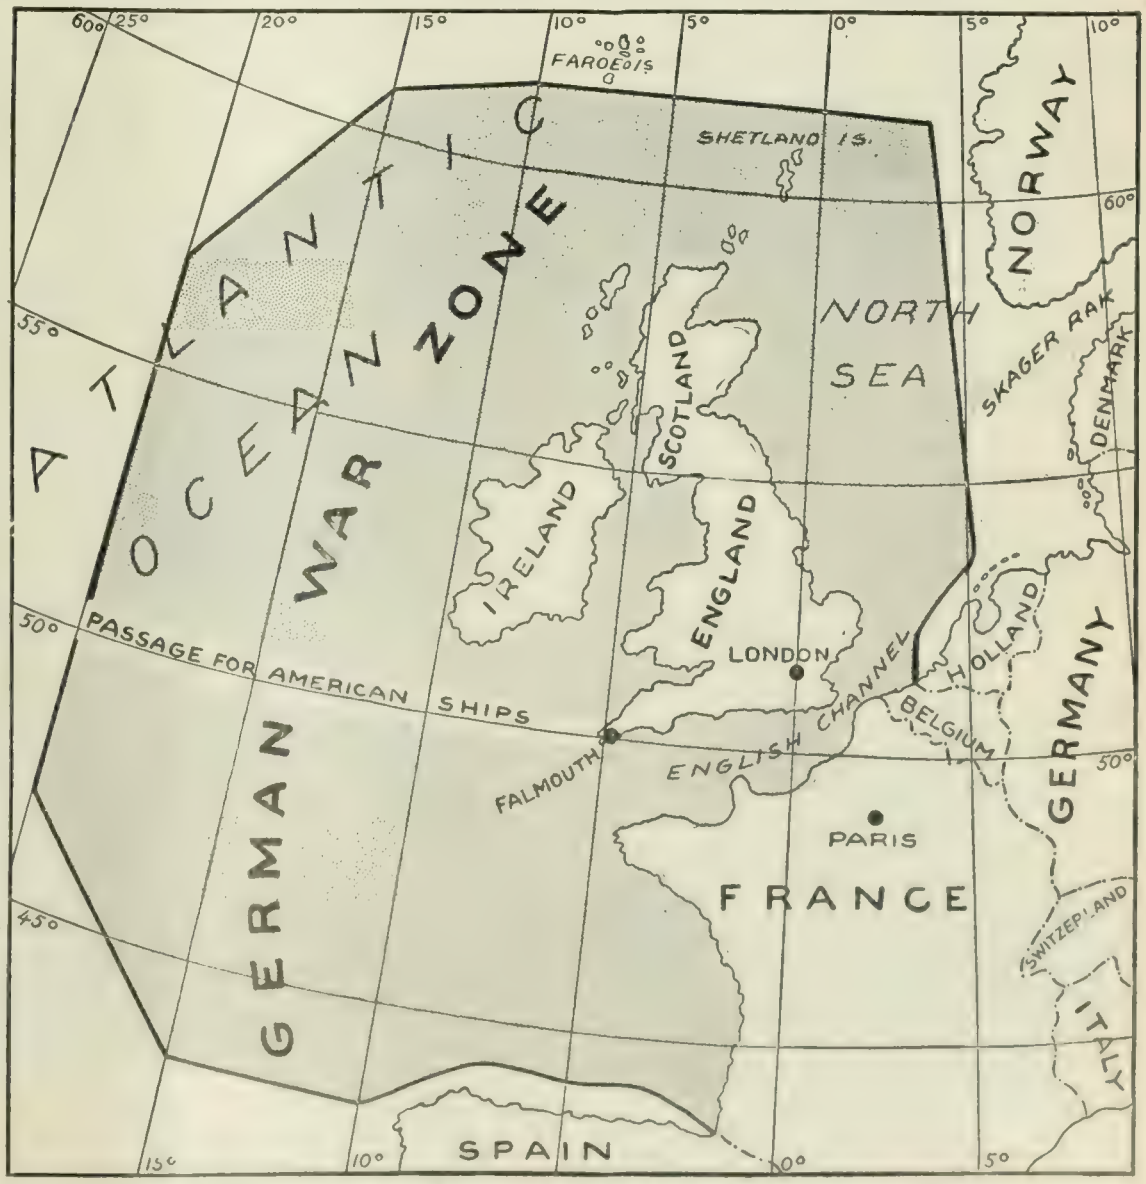
The Russian Front

Russia has again been saved by her ancient ally, "General January." In the Carpathian and Balkan mountains the weather is colder than it has been in years, and the defiles are filled with snow. It is hard to handle the artillery under such conditions and many soldiers have been frozen to death. Some of the Germans taken prisoner were found to have only their summer clothes and no overcoats.

Apparently no effort will be made at present to dislodge the Russians and Rumanians from their position behind the Sereth River, and it is reported that a hundred thousand German troops have been withdrawn from Rumania for service elsewhere, leaving the Bulgars and Turks to guard the Sereth line.

At only two points along the Russian front that extends from the Gulf of Riga to the Black Sea is there any considerable activity. One of these fighting centers is the knot of mountains where the boundaries of Bukovina, Hungary and Rumania meet. The Germans are here entrenched along the Golden Bistritza, which runs in front of the passes leading thru the Carpathians from Bukovina into Hungary. The Russians have driven them out of their front trenches for a distance of over a mile and taken more than two thousand prisoners.

The other scene of activity is in the far north where the Russians and Germans are fighting in the swamps thru which the river Aa runs into the Gulf of Riga. Here the Russian troops are under the command of a Bulgarian general, Radko Dmitrieff, altho at the southern end of the line the Bulgars are fighting the Russians. Dmitrieff became known four years ago as "the Bulgar Napoleon" because of his remarkable campaign against the Turks, At the opening of the present war he proffered his sword to Russia and led the Russian troops in their first invasion of Galicia. When King Ferdinand of Bulgaria took the German side Dmitrieff declared his willingness to lead Russian troops against him, but evidently he has been transferred to the other end of the line to avoid having to fight his countrymen. His recent order to his troops before Riga is curious and worth quoting:



Neither blinding snowstorms nor paralyzing frost nor impassable marshes could check your ardor. After long hand-to-hand struggles you broke thru in spite of the murderous fire of hundreds of machine guns, the fortifications, the redoubts, and the bombproof shelters which the enemy has been constructing for fifteen months. You penetrated these works in awe-inspiring silence. Everywhere you cleared a passage with the bayonet, thus saving tens of thousands of shells for other and better ends. Among the booty captured are 30 cannon, 50 machine guns, 15,000 rifles, 50,000 uniforms, the treasury chest of the 264th Infantry Regiment, containing 350,000 marks, and 10,000 bottles of brandy.

United States Breaks with Germany

On Saturday, February 3, President Wilson gave Ambassador Count Johann von Bernstorff passports for himself and his official staff. At the same hour, two o'clock in the afternoon, when the German ambassador received his passports President Wilson addrest a joint session of the two Houses of Congress. We print the text of his speech on another page of this issue. The Chief Justice and several other members of the Supreme Court attended the session and the galleries were crowded with spectators. Both the members of Congress on the floor of the House of Representatives and the general public in the gallery greeted the address with enthusiasm and interrupted it more than once with applause.

The break with Germany had been generally anticipated ever since the German Government announced its intention of sinking every vessel, neutral or belligerent, that entered a war zone established around the coasts of the Entente Powers. But the swiftness of the President's response to the German note surprized nearly every one. Not until some four hours before Congress met to hear the official announcement of the severance of our diplomatic relations with the German Government did the news that such a step was to be taken become public.

The diplomatic break is not confined to the recall of Ambassador Gerard from Berlin and the refusal to regard Count Johann von Bernstorff as hereafter a diplomatic representative of Germany to the United States. Even American consuls and consular agents in Germany are to cease their duties,

THE NEW GERMAN WAR ZONE

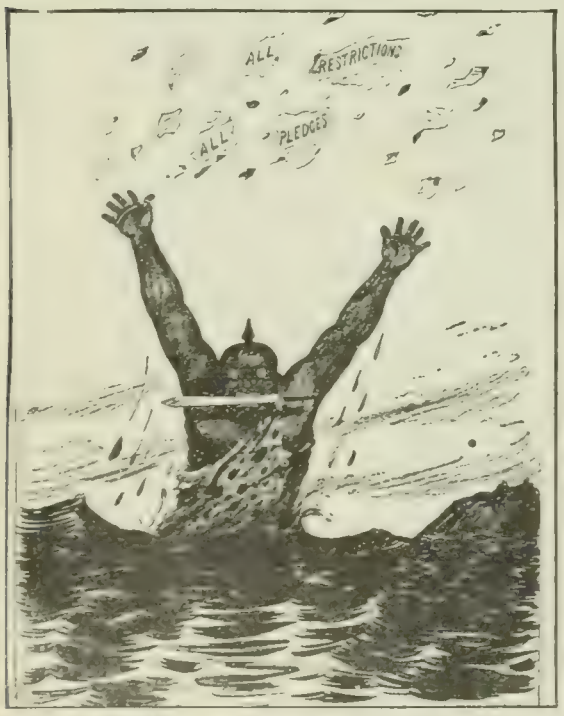
On February 1 the German Government declared a barred zone along the British and French coasts as outlined above and warned neutral ships from entering it. A lane leading to Falmouth will be left unmined thru which one American ship a week, plainly marked, will be allowed to pass. The Mediterranean west of Spain is likewise declared a barred zone but a twenty mile channel is left leading to Greece.

and American ministers in countries at war with Germany will cease to care for the interests of the subjects of the Central Powers resident in those countries. The diplomatic interests of the United States in Germany will be assumed by the Spanish legation, while the representative of the Swiss Government will look after Germany's interests in this country. Since the Austrian Government supports the position of the German Government on the submarine question the break with Germany will probably extend to Austria-Hungary and perhaps to Germany's other allies.

President Wilson is determined to take no step that will lead to war unless Germany follows her threat of unrestricted submarine war by some "overt act" such as the sinking without due warning of a merchant or passenger ship with Americans on board. The only chance of peace lies in the possibility of persuading the German Government to modify its new naval policy before such an incident occurs. The attitude of the United States may not persuade Germany to this course, since the men responsible for the German naval policy must have taken into consideration the probable effect it would have upon American public opinion, and decided that the opportunity of striking a mortal blow at Britain's lordship of the seas outweighed the risk of war with the United States. But there is still the hope that if other neutral nations support the stand of the American Government the Central Powers may decide that the odds against them would be too great. Therefore the President is bending every effort to persuade other neutrals to follow his lead. Public opinion in Argentina, Brazil and Chile, so far as this can be gathered from the press of these republics, favors a vigorous stand against Germany. The neutral nations of Europe, not protected from German wrath by an ocean and the Allied fleet, seem less ready to commit themselves to any positive opposition to Germany.

The Response of the Nation

At no time since the opening of the Great War have Congress, the press and the general public been so nearly in agreement on the foreign policy of the United States as they are at present. Practically every member of Congress, Republican or Democratic, who has spoken for publication has commended President Wilson's action in breaking off diplomatic relations with Germany. Newspapers and periodicals in every section of the country, including those which have been more or less pro-German in the past, are for once agreed. Of course the attitude of the papers printed in the German language is of the greatest interest since these papers are read chiefly by persons of German birth or descent. The German-American papers unanimously deplore the severance of diplomatic relations, many believe that the break was unnecessary, but not one suggests disloyalty or resistance to the American Government even if President Wilson's action should lead to war. The governors of many states have telegraphed to assure the President that their commonwealths would not be wanting in the hour of trial.



President Wilson's Republican predecessor Mr. Taft and his recent Republican rival for the presidency Mr. Hughes have emphatically indorsed the stand which he has taken. Colonel Roosevelt has volunteered to raise an army division if war is declared, and to go to the front with his four sons. Among the leaders of public opinion almost the only opponent of the policy of maintaining American rights at sea even by war is William J. Bryan. He suggested a number of alternative courses to an immediate declaration of war: the postponement of the controversy till the end of the Great War; forbidding Americans to travel on belligerent ships; forbidding American ships to enter the war zone, and submitting the question of war or peace to a popular referendum.

Representatives of both labor and capitalist interests have assured the President that he can count on their loyalty and hearty coöperation. A few labor leaders, however, especially among the Socialists, oppose entrance into the war no matter what turn the submarine issue may take. The confidence of capital in the Government's policy is well reflected on the stock exchange.

When the German threat was first made public there was a sharp slump in the prices of most of the stocks traded in, but President Wilson's speech to Congress was followed by a strong upward movement in the very stocks which had declined most rapidly two days before.

Taking Precautions

The international crisis which threatens the United States with war has compelled the local and national authorities of this country to take drastic precautions against any injury to the war time efficiency of the nation. Congress is now considering a number of measures, introduced several months ago but never pressed to passage, imposing heavy penalties on persons guilty of offenses against the neutrality of the United States. These measures if enacted would authorize officials to inspect any private vessel within American jurisdiction, regulate the use of passports, authorize the arrest of interned belligerent soldiers or sailors who attempt to escape from their place of internment, make it a crime to make untrue statements under oath in questions of international controversy, prevent aliens not duly accredited from acting as agents of foreign governments, punish severely any attempt to injure a ship within the United States or of American registry or to injure or destroy factories producing commercial products, and in many other ways

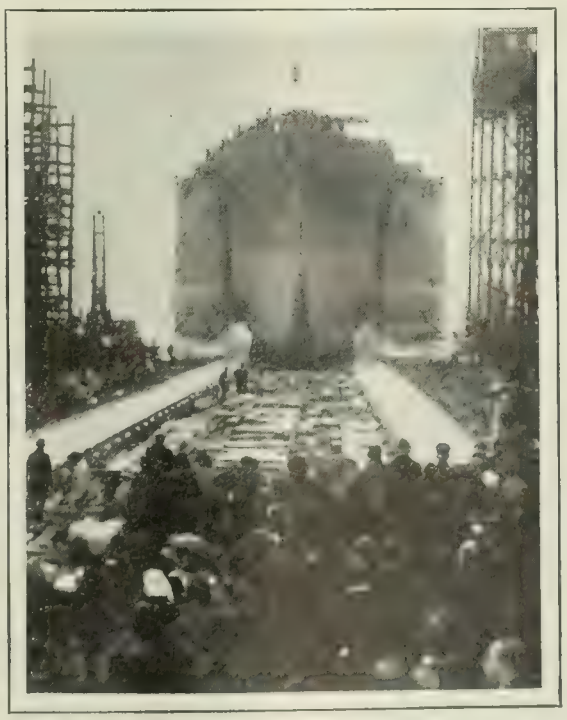
AN ILL-TIMED ENTRANCE



Count Tarnowski, the new Austro-Hungarian ambassador to the United States, was appointed some months ago, but hindered by the lack of a "safe conduct" from the Allied powers. After some correspondence the matter was arranged and by unlucky coincidence the Austrian ambassador reached New York on the same day as Germany's "blockade" note and just two days before the dismissal of the German ambassador, Count Bernstorff

protect the nation from conspiracies in the interest of belligerent powers. Congress will also have to consider new appropriation bills for putting the army and navy into a condition of instant readiness and, in case of war, for enlisting volunteers. A bond issue of five hundred million dollars is expected if war should be declared.

In order to prevent damage to German ships in American ports the United States Government has, in many cases, undertaken to detain and police them. The North German Lloyd liner "Kronprinzessin Cecilie," which has been for some time detained at Boston in the custody of United States Marshal Mitchell in consequence of litigation against the owners of the vessel, has been supplied with an American crew and its German officers and crew put ashore. In Philadelphia the interned German auxiliary cruisers "Kronprinz Wilhelm" and "Prince Eitel Friedrich" were seized by the Navy Department. The authorities of the Panama Canal Zone have taken possession of four Hamburg-American steamships in Cristobal harbor. The German prize crew of the liner "Appam" at Newport News, Va., has been removed from the ship. That such precautions are necessary is shown by the attempt made to wreck the engines of the Austrian freight ship "Himalaya" in Newark Bay. The American Government will probably make some effort to protect its transatlantic shipping by furnishing naval convoys thru the war zone. The Sayville wireless station on Long Island, which has for a long time been the most important means of rapid communication between Germany and the United States, will not be closed but Americans will replace Germans among the men employed at the station.

President Vetoes Immigration Bill On January 29 President Wilson for the second time vetoed an immigration bill limiting immigration into the United States to persons able to read and write. In his comment on the measure the President characterized it as not a test of character or of personal fitness and said that it would operate merely as a penalty for lack of opportunity in the country from which the alien seeking admission came. Another reason which he gave for refusing his assent was that the immigration bill contained a provision for admitting refugees from religious persecution even if they could not pass the literacy test. President Wilson feared that the presence in the bill of such a clause would oblige immigration officials to pass judgment upon the laws and policies of foreign governments and that this might lead to unnecessary friction between the United States and the governments concerned.

The House of Representatives promptly passed the immigration bill over the President's veto by a vote of 285 to 106. Friends of the bill say that they have enough votes to pass it thru the Senate with more than the necessary two-thirds. But the calendar of the Senate is crowded with pressing business up to the end of the session and it is not at all certain that there will be time enough to secure its passage, especially in view of the wide latitude of debate permitted in the Senate and the determination of certain opponents of immigration restriction to talk it to death if necessary. Few measures have had such persistent ill fortune as the immigration bill containing the literacy test. Substantially the same measure has passed the House thirteen times and the Senate twelve. Four times during the last two decades it has been passed by both branches of Congress, but Presidents Cleveland, Taft and Wilson in each case refused to approve it and Congress has not hitherto been able to override the veto.

SOME MORE U. S. NAVY

A crowd of 15,000 people cheered the launching last week of the superdreadnought "Mississippi," which ranks with the "Arizona" and the "Pennsylvania," our best fighting ships. Its speed is twenty-one knots; displacement, 32,000 tons; battery, twelve 14-inch guns, twenty-two 5-inch, four anti-aircraft rifles, and two torpedo tubes; cost, about $16,000,000

Press Illustrating

ANOTHER LATE AMBASSADOR

Appointed a year ago, and delayed while we debated the recognition of Carranza and while the expedition under Pershing was in Mexico, Ambassador Fletcher has at last been sent to Mexico to succeed perhaps, where arms and arbitration have failed, in establishing the right relationship between the United States and Mexico

Mexico's New Constitution The constitutional convention at Queretaro finished its work on the new Mexican constitution with the end of January. It has received the approval of President Carranza, who will soon issue a call for the election of President and members of the Mexican Congress on the second Sunday in March. Among the interesting reforms realized in the new constitution are the abolition of the office of vice-president, a single term for the presidency, compulsory military instruction, limitation of the hours of labor, compulsory arbitration of labor disputes, free employment bureaus, abolition of court costs in criminal procedure, regulation of the presidential succession by Congress in case of a vacancy from any cause, partition of great landed estates, restriction of alien ownership of land or other productive property, federal supervision of schools and churches, clergymen required to be of Mexican birth and debarred from teaching in the public schools. The clauses of the constitution limiting or annulling the

property rights of foreign residents are likely to cause trouble whenever the United States and European Powers with invested capital in the country are free to turn their attention to Mexican affairs, but at present the only Mexican problem of interest to us is keeping the border quiet so that the army need not be detained there longer on police duty.

Alien Land Bills Squelched At the urgent request of the Secretary of State the legislatures of Idaho and Oregon decided not to press pending anti-alien bills which would have the effect of preventing Japanese from owning land in those states. The Japanese ambassador had against what he considered as hostile protested to the Federal Government and unfair state legislation. Thereupon Secretary Lansing and Counsellor Polk of the State Department, acting as agents of the President, asked the Senators from Idaho and Oregon to remonstrate with the legislatures of their respective states. The Oregon bill was withdrawn by its author without pressure from the state's Senators; but both Senator Borah and Senator Brady of Idaho sent long telegrams urging their state not to embarrass the foreign relations of the United States at a time of crisis. Both pointed out that the question at issue was not whether the anti-alien land bill was right or wrong but whether it could not be postponed until some more convenient season.

Chamber of Commerce Meets The sessions of the United States Chamber of Commerce, a national conference of business men meeting in Washington, D. C., have this year been of unusual interest. The range of topics of public interest touched upon was very wide and the attitude of the delegates towards them both positive and radical. The Chamber of Commerce voted overwhelmingly in favor of a constitutional amendment permitting the President to veto single items in an appropriation bill, thus eliminating "rider" legislation on bills providing revenues for essential functions of government and so impossible to veto without disorganizing the national administration. The Chamber of Commerce approved the purchase of the Danish West Indies, and urged the acquisition of other Caribbean islands should they be offered for sale. It also approved the President's veto of the immigration bill, pledged unqualified support to preparedness for the national defense, suggested advantageous commercial treaties with foreign nations, favored the "daylight saving" project, opposed the heavy direct taxes now under discussion in Congress, and discussed probable business conditions after the Great War. The Chamber of Commerce promised to stand by the government in the present international crisis and give it every possible support "whatever the eventuality."

COMMANDING THE ATLANTIC FLEET

Admiral Henry Thomas Mayo, in charge of our first line of defense in case of war with Germany

The "Housatonic" Case When the news came that an American ship, the "Housatonic," had been sunk on February 3, it was at first feared that this was an instance of the new and more ruthless measures which Germany had declared she would take in the war zone about England after February 1. But later reports showed that the Germans had been more scrupulous than usual in providing for the safety of the crew. The "Housatonic" was formerly the Hamburg-American liner "Georgia," and was granted American registry in 1915. She was carrying wheat for the British Government, which would make the cargo contraband of war. The German submarine gave her due warning and the crew of thirty-seven had an hour to embark in their boats before the ship was torpedoed.

The submarine also towed the boats for ninety minutes toward the land and fired a signal for help to a British patrol boat which took the crew into Penzance. When the Germans searched the "Housatonic" they took from her a large quantity of soap, which is scarce in Germany on account of the shortage of fats both for food and for nitroglycerine.

THE AMBASSADORS' RETURN

The German ambassador, Count Bernstorff, was handed his passports by the United States Government on February 3. He leaves German affairs at Washington in charge of the Swiss ambassador. The American ambassador to Germany, James Watson Gerard, is to leave Berlin as soon as his passage can be arranged. Our affairs there are to be taken care of by the Spanish ambassador

IN DEFENSE OF OUR RIGHTS

PRESIDENT WILSON'S ADDRESS TO CONGRESS ON THE SEVERANCE OF DIPLOMATIC RELATIONS WITH GERMANY

February 3, 1917.

Gentlemen of the Congress:

The Imperial German Government, on the 31st of January, announced to this Government and to the Governments of the other neutral nations that on and after the first day of February, the present month, it would adopt a policy with regard to the use of submarines against all shipping seeking to pass thru certain designated areas of the high seas to which it is clearly my duty to call your attention.

Let me remind the Congress that on the 18th of April last, in view of the sinking on the 24th of March of the cross-Channel passenger steamer "Sussex" by a German submarine, without summons or warning, and the consequent loss of the lives of several citizens of the United States who were passengers aboard her, this Government addrest a note to the Imperial German Government in which it made the following declaration:

"If it is still the purpose of the Imperial German Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines without regard to what the Government of the United States must consider the sacred and indisputable rules of international law, and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue. Unless the German Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight carrying vessels the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether."

In reply to this declaration the German Government gave this Government the following assurances:

"The German Government is prepared to do its utmost to confine the operations of war for the rest of its duration to the fighting forces of the belligerents, thereby insuring the freedom of the seas, a principle upon which the German Government believes, now as before, to be in agreement with the Government of the United States.

"The German Government, guided by this idea, notifies the Government of the United States that the German naval forces have received the following orders:

"In accordance with the general principles of visit and search and destruction of merchant vessels recognized by international law, such vessels, both within and without the area declared as naval war zone, shall not be sunk without warning and without saving human lives, unless these ships attempt to escape or offer resistance.

"But neutrals can not expect that Germany, forced to fight for her existence, shall, for the sake of neutral interest, restrict the use of an effective weapon if her enemy is permitted to continue to apply at will methods of warfare violating the rules of international law. Such a demand would be incompatible with the character of neutrality, and the German Government is convinced that the Government of the United States does not think of making such a demand, knowing that the Government of the United States has repeatedly declared that it is determined to restore the principle of the freedom of the seas from whatever quarter it has been violated."

To this the Government of the United States replied on the 8th of May, accepting, of course, the assurances given, but adding:

"The Government of the United States feels it necessary to state that it takes it for granted that the Imperial German Government does not intend to imply that the maintenance of its newly announced policy is in any way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other belligerent Government, notwithstanding the fact that certain passages in the Imperial Government's note of the 4th instant might appear to be susceptible to that construction. In order, however, to avoid any possible misunderstanding, the Government of the United States notifies the Imperial Government that it cannot for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other Government affecting the rights of neutrals and non-combatants. Responsibility in such matters is single, not joint; absolute, not relative."

To this note of the 8th of May the Imperial German Government made no reply.

On the 31st of January, the Wednesday of the present week, the German Ambassador handed to the Secretary of State, along with a formal note, a memorandum which contains the following statement:

"The Imperial Government, therefore, does not doubt that the Government of the United States will understand the situation thus forced upon Germany by the Entente Allies' brutal methods of war and by their determination to destroy the Central Powers, and that the Government of the United States will further realize that the now openly disclosed intentions of the Entente Allies give back to Germany the freedom of action which she reserved in her note addrest to the Government of the United States on May 4, 1916.

"Under these circumstances Germany will meet the illegal measures of her enemies by forcibly preventing after February 1, 1917, in a zone around Great Britain, France, Italy and in the eastern Mediterranean all navigation, that of neutrals included, from and to France, etc. All ships met within the zone will be sunk."

I think that you will agree with me that, in view of this declaration, which suddenly and without prior intimation of any kind deliberately withdraws the solemn assurance given in the Imperial Government's note of the fourth of May, 1916, this Government has no alternative consistent with the dignity and honor of the United States but to take the course which, in its note of the 18th of April, 1916, it announced that it would take in the event that the German Government did not declare and effect an abandonment of the methods of submarine warfare which it was then employing and to which it now purposes again to resort.

I have, therefore, directed the Secretary of State to announce to his excellency the German Ambassador that all diplomatic relations between the United States and the German Empire are severed, and that the American Ambassador at Berlin will immediately be withdrawn, and, in accordance with this decision, to hand to his excellency his passports.

Notwithstanding this unexpected action of the German Government, this sudden and deeply deplorable renunciation of its assurances, given this Government at one of the most critical moments of tension in the relation of the two Governments, I refuse to believe that it is the intention of the German authorities to do in fact what they have warned us they will feel at liberty to do. I cannot bring myself to believe that they will indeed pay no regard to the ancient friendship between their people and our own or to the solemn obligations which have been exchanged between them and destroy American ships and take the lives of American citizens in the wilful prosecution of the ruthless naval program they have announced their intention to adopt.

Only actual overt acts on their part can make me believe it even now.

If this inveterate confidence on my part in the sobriety and prudent foresight of their purpose should unhappily prove unfounded, if American ships and American lives should in fact be sacrificed by their naval commanders in heedless contravention of the just and reasonable understandings of international law and the obvious dictates of humanity, I shall take the liberty of coming again before the Congress to ask that authority be given me to use any means that may be necessary for the protection of our seamen and our people in the prosecution of their peaceful and legitimate errands on the high seas. I can do nothing less. I take it for granted that all neutral governments will take the same course.

I do not desire any hostile conflict with the Imperial German Government. We are the sincere friends of the German people and earnestly desire to remain at peace with the Government which speaks for them. We shall not believe that they are hostile to us until we are obliged to believe it; and we purpose nothing more than the reasonable defense of the undoubted rights of our people. We wish to serve no selfish ends. We seek merely to stand true alike in thought and in action to the immemorial principles of our people which I sought to express in my address to the Senate only two weeks ago—seek merely to vindicate our right to liberty and justice and an unmolested life. These are bases of peace, not war. God grant we may not be challenged to defend them by acts of wilful injustice on the part of the Government of Germany!

NOT BLOCKADE, BUT WAR

BY ELLERY C. STOWELL

ASSOCIATE PROFESSOR OF INTERNATIONAL LAW AT COLUMBIA UNIVERSITY

THE submarine operations announced in the German note of January 31st constitute a repudiation of Germany's pledge not to sink merchant vessels "without warning and without saving human lives, unless these ships attempt to escape or offer resistance." Even if we should admit, what is not the case, that these measures constitute a valid blockade, the cruisers maintaining a blockade have no right to sink an approaching vessel unless it flees or offers resistance to capture. International law prohibits a paper or fictitious blockade, and the best way to enforce this provision is to permit vessels to sail for the blockaded regions at their own risk of seizure. The confiscation of the vessel and cargo and the detention of the passengers until they can be transferred to their homes is a sufficient penalty for any attempt to violate a blockade which is really effective.

FOR the purpose of determining the exact nature of the measures announced by Germany it is first necessary to understand what constitutes an international law blockade. The first essential is the presence of a sufficient force to render ingress and egress from the blockaded area really dangerous. If we assume, for the sake of argument, that in accordance with claims from German sources that country will be able to patrol the proscribed area with several hundred submarines, I think it is fair to consider that the distribution of such a force in coastal waters might conceivably be able to effect an actual blockade of an extensive area. How great in extent this might be is impossible to state in the absence of further data. It is most doubtful, however, whether German submarines can patrol any great part of an area so vast. Consequently, an alleged blockade so extensive would probably be fictitious—what in the parlance of diplomacy is known as a paper blockade. If a squadron of British torpedo destroyers should appear and sweep the German submarines clear of a certain area, the blockade would be broken, but if within this area there should be a game of hide and seek between the destroyers and the submarines without preventing the submarines from intercepting the greater proportion of commerce headed for the area alleged to be blockaded, I still believe that the submarines might fairly be said to maintain themselves in force sufficient to continue the blockade.

The second condition is that the area over which the blockade extends, as well as the date at which it commences, be notified to neutral powers. The German memorandum, as nearly as a land-lubber can judge, seems to have set forth with exact particularity the limits of the proscribed area, so that from this point of view the operations conform to the rules of blockade. The translation of the German note does not refer to "blockade," but speaks of "blockade zones," or according to the the version received via Sayville, of "barred zones." But even if the technical term of blockade should not be employed, this would probably not affect the validity of the measure, on condition that all the essential provisions of an international blockade were complied with.

A third condition of blockade is that it may not cut off access to neutral ports. As nearly as we can judge from the charts published in the press and the terms of the German memorandum, great care has been taken not to obstruct the commerce of neutral ports.

Another important provision of blockade is that it must apply equally to the commerce of all neutrals. The blockading government may not even permit its own vessels to pass thru. This was brought out in the famous case of the "Franciska," made a prize for a violation of the alleged blockade of Riga during the Crimean War. On appeal from the decision of Dr. Lushington, the judicial committee of the Privy Council restored the vessel on the ground that the relaxation of the blockade in favor of certain licensed vessels had destroyed its validity. (Roscoe: "English Prize Cases," vol. II, pp. 346-70.) Still less justification can exist for the favoring of the commerce of one neutral power beyond another. Consequently the German measures are obviously not a blockade unless in her notification to all other neutral powers Germany has extended to them the same permission of limited trade with Falmouth that is indicated for American vessels in the note presented by Ambassador Bernstorff. I should not be surprized to learn that Germany had foreseen this difficulty and extended the same privileges to all other neutral powers. Did she fail to do so, this one ground alone would render invalid any claim on the part of Germany that the measures be considered as constituting a blockade.

THE examination into which we have entered makes clear the requirements of a valid international law blockade. If it shall have been found that Germany has complied with all these conditions, she will then be entitled to all the rights of a blockader, that is to say, she will be justified in seizing and confiscating all vessels setting sail for the blockaded coast. But she will not, as we have said above, have any right to sink such vessels without warning nor until the safety of the passengers and crew has been provided for. Turning them adrift in small boats will not suffice. Such treatment of American passengers or the crews of American vessels will, in my opinion, constitute a violation of American rights such that our Government should have recourse to appropriate measures to prevent it. I do not mean to express any opinion in regard to the question of fact as to whether Germany has a sufficient force of submarines to blockade the proscribed area.

It may well be that Germany recognizes that she cannot succeed in the establishment of an international law blockade, but that from reasons of policy the measures based upon reprisal which she now adopts are made to follow as closely as possible the conditions of blockade. It is necessary to repeat again that such a measure of reprisal jeopardizing the lives of American citizens is a virtual act of war against the United States. From a practical point of view, American merchants can hardly be expected to tolerate having their trade with the Entente Allies cut off after Great Britain has succeeded in strangling almost all intercourse with Germany.

The question relative to the nature of the "barred zones" measures is thus seen to involve the right of submarines while engaged in maintaining a blockade to sink merchantmen without complying with the requirements of cruiser warfare. Just as in the case of carriage of contraband, Germany wished to avoid compliance with the requirement that her submarines must, in every case before sinking prizes, first provide for the safety of passengers and crew.

THE rules of international law permit merchantmen to carry what armament they choose provided they make no aggressive use thereof. An armed belligerent merchantman engaged in the carriage of contraband or attempting to pass the lines of a blockading squadron must be treated as a noncombatant vessel until it offer resistance to capture. The enforcement of this rule, as is well known, interferes with the effective use of German submarines. This is unfortunate for Germany, but it is no reason why we should connive at a modification of the existing rule which affords some slight protection to the lives and property of neutrals.

When a nation cannot win in a fair fight it had best give in. Unfair fighting has been found by centuries of warfare not to pay, else it would have become recognized as the rule to follow.

If Germany cannot maintain her independence without such acts as the violation of Belgium and the ruthless recourse to illegal submarine warfare, she will find it impossible to do so in spite of any momentary or apparent advantages which such transgression may seem to offer. Let those who talk of a league to enforce respect for international law remember that this is an opportunity to demonstrate that the society of nations constitutes such a league. The United States must remain a member of this league.

THE UNITED STATES NAVY IS READY

ADMIRAL BENSON IS NOW CHIEF OF NAVAL OPERATIONS AND WILL PROBABLY BE APPOINTED PRESIDENT OF THE GENERAL NAVAL BOARD TO FILL THE POSITION LATELY HELD BY ADMIRAL DEWEY

DE GLORY ROAD

BY CLEMENT WOOD

O de Glory Road! O de Glory Road!
I'm gwine ter drap mah load upon de Glory Road.

I lay on mah bed untell one erclock,
An' de Lawd come callin' all his faithful flock.
An' He call "Whoo-ee!", an' He call "Whoo-ee!",
An I knowed dat de Savior wuz ercallin' me.
An' He call "Whoo-ee!", an' He call "Whoo-ee!",
An' I cry "Massa Jesus, is you callin' me?"
An' He call "Whoo-ee!", an' He call "Whoo-ee!",
An' I riz up f'um mah pallet, an' I cry, "Hyah's me!"

De Lawd sez, "Niggah, ain' I call yer thrice
Ter ride erlong behin' me up ter Paradise,
On de Glory Road, on de Glory Road?"
An' I clime up ter de saddle, an' I jined de load!

De hawse he wuz longer dan a thousan' mile;
His tail went lashin', an' his hoofs wuz wile;
His mane wuz flamin', an' his eyes wuz moons,
An' his mouth kep' singin' Halleluyah tunes!

De Lawd sez, "Niggah, why 'n' cher look erroun'?"
An' dar we wuz flyin' over risin' groun'!
Powerful hills, an' mountains, too,
An' de earth an' de people wuz drapt f'um view.
An' I hyahd all 'roun' me how de sperits sang,
An' de Lawd sang louder dan de whole shebang!

De Lawd sez, "Niggah, why 'n' cher look ergin?"
An' dar wuz de Debbil, on de back uv Sin,
A-bangin' on de critter wid his whip an' goad,
An' boun' he gwine ter kotch us, on de Glory Road!
"O Lawdy, it's de Debbil, comin' straight f'um Hell!
I kin tell him by his roarin', an' de brimstone smell!"
But de Lawd sez, "Niggah, he ain' kotch us yit!"
An' he lashed an' he hustled, an' he loosed de bit.
Den de Debbil crep' closuh, an' I hyahd him yell,
"I'm gwine ter kotch a niggah, fuh ter roas' in Hell!"
An' I cried, "Lawd, save me!" an' de Lawd cry, "Sho!"
An' hyah it was Hebben, an' we shet de do'.

O, Glory, Glory, how de angels sang!
An' Glory, Glory, how de rafters rang!
An' Moses 'n' Aaron, an' Methusalum
Dey shout an' dey holler, an' dey beat de drum.
King Solomon kissed me, an' his thousan' wives,
Jes' like dey'd knowed me durin' all dey lives;
An' de Lawd sez, "Niggah, take a gran'-stan' seat.
But I 'specks youse hongry; have a bite ter eat?"
An' de ravens fed me, an' Elijah prayed,
An' de Saved Ones gathered, while de organ played,
An' dey cry: "Oh, Sinnah, come an' lose yuh load
On de Glory Road, on de Glory Road.
An' come an' dwell in de Lawd's abode,
Glory, Glory, on de Glory Road!"
Sez de Lawd, "No, sinnah, you mus' trabbel back
Ter he'p po' niggahs up de Glory Track;
Ter he'p ole mo'ners an' de scoffin' coons,
By shoutin' loud Halleluyah tunes."

O come, mah breddren, won' yuh drap yuh load,
An' ride ter Hebben up de Glory Road?

A PARADE OF PRIVILEGE

BY ALIDA VON KROCKOW

Independent readers will remember Countess von Krockow as "The American Wife of a Titled German," whose series of articles on the Prussian military régime was published in The Independent soon after the beginning of the Great War. Her experience of thirty years among the German nobility and her essentially democratic viewpoint give particular interest to Countess von Krockow's stories of Prussian caste.—THE EDITOR.

AN essential factor in maintaining a sense of caste is homogeneity of opinion, and, in Prussia, with girls who abide at home thruout their early youth, coming in contact only with persons of their parents' choosing, this homogeneity is easily preserved. Any infection of it from alien governesses and tutors is provided against by engaging only those who are infused with reverence for the aristocracy; and, to make doubly sure, by systematically disparaging the social status of instructors.

Girls are seldom allowed away from home except to finish their education. And the schools pursue the aim of keeping pupils to one and the same way of thinking; an aim that is effected by methods as minute as they are odd.

WHEN I was a school girl at X. Stift, the girls were restricted to certain rooms in the plain, great building, the rest being prohibited ground. They saw first the dining hall, a long room quite barren in aspect, but distinguished from the other rooms by having its walls adorned with portraits of their Majesties done resplendently in oil. Upstairs were the dormitories, the recitation rooms, the evening sitting room, and a corridor. The corridor was the heart of the place; for altho the dormitory end of it was dark, and the other end of it nearly filled with lines of wardrobes, a free space occurred near the middle, and here the girls were allowed to stand and to chat as they liked during the quarter of an hour intervals when they ate their morning and afternoon lunches of black buttered bread. At other times of the day we were not only under the eye of a governess, but had to use a foreign tongue.

Of course, lessons made an exception to the rule, and were carried on in German, men teachers from Berlin coming to the Stift to give them. Each lesson occupied an hour, and the succession of them filled the entire day, from eight o'clock on winter mornings, from seven o'clock in summer, until *Abendbrodt*, or supper; with intervals for meals and a midday promenade. Religion, German, geography, literature and history were the subjects of the lessons. Much Hohenzollern history was taught, with stress upon the virtues of Prussian sovereigns, and upon the heroic roles played by women in the way of sacrifices made by them in times of war for the sake of the Fatherland. One of the elder girls, who had undergone the like tuition when a child, had made herself such a heroine by cutting off her hair in the War of 1870-1871; and she enjoyed in consequence the envious regard of the other girls.

At half past five o'clock on summer mornings, an hour later in winter, the tongue of the dormitory bell started hammering against its brazen sides, maids appeared bearing vessels of warm water, and governesses began their rounds of inspection thru the passages between the rows of iron beds. While the girls were washing and donning their uniforms, a governess would inspect them, to see whether they were obeying the rules for the toilet, which rules included such things as washing the ears, scrubbing the teeth and cleaning the finger nails. Repeated disregard of a regulation would be reported to the Oberin (directress), an accidental oversight pointed out for correction. As soon as they were ready, the girls folded their nightgowns in bags, laid

the bags in the proper place, then assembled at the dormitory door and waited there in the same silence they had maintained while dressing; the anxious eye of a governess in the meantime flying over such last-attended-to details of their toilets as the set of the bow that bound their braids of hair about their heads, and that of the bow that bound the collars at their throats.

The bell sounding again, a governess would press down the brass handle of the door, the door would open, and the girls file out into the hallway. Here the Oberin stood at the door of her apartment awaiting them.

LIKE every one in the school she wore a uniform. That of the girls consisted of a blue and white striped frock and waist made of calico for week day wear, of wool for holidays, an apron of black alpaca bordered by a ruffle, a white linen collar, and small black velvet bows. The governesses wore plain blue dresses, white aprons and caps. By comparison with these neat attires, the light gray-blue poplin or silk gown of the Oberin, her delicate white aprons, and elaborate lace caps always looked elegant. And while an upright carriage of the body was a requirement of us all, the erectness of hers appeared ingrained. The sight of it accounted for a simultaneous jerking up of knees and necks all along our line.

As the file moved slowly by, each girl would pause in front of her welcoming smile, make a curtesy, say good morning, and kiss her hand. The line ended, Frau Oberin would leave her ceremonial post and descend the stairway. The governesses would follow, and we girls in their rear, in accordance with our school number. While the rest were stationing themselves behind their table chairs in the dining room, the Oberin would advance to a window, where a maid stood in waiting with a book of prayers spread open upon the palms of her hands. From the book so supported, she would read the morning prayer. Then the maid would withdraw, and the Oberin would assume her place at the head of the board. She being seated, the governesses would sit down, and after our elders were all in their places, we pupils would take ours.

The signal for ending all meals was given by Frau Oberin, after which the return upstairs would take place in the same ceremoniously regulated fashion as the descent.

After the evening meal we took our places on the green chairs of the sitting room, needlework in hand, to listen to the reading of some classic tale by a governess. On the entrance of Frau Oberin's maid carrying the prayer book, we would store away our things. And presently, the Frau Oberin herself would appear, and the girls rise to their feet, as they did always when any elderly person entered a room. The maid again supported the book before the face of her mistress like a living lectern, and the evening service was read aloud. There followed the same ceremony of filing past, curtesying to the Oberin, and kissing her hand; and then within the dormitories the same inspection would take place on our going to bed which we had undergone on rising.

The titles of rank which pupils bore, while not employed by anyone, were nevertheless known. And the spectacle of certain mothers, who visited their daughters in the corridor, being greeted with much more ceremony by the Oberin than other girls' mothers impress us like a precept.

Not infrequently during the winter the Empress would come to inspect the school. These visits pupils always became aware of in advance, for the reason that the floors and their persons were subjected to stricter scrubbings; the routine of lessons stopped, and the order issued for us to stand collected in the middle recitation room. While we were assembled there, the Oberin would pass thru all the rooms attended by a maid, and swing a censer of burning incense, whose fumes drove off the odor of soap emanating from the floors.

The intrusion of the head of a governess at one door, nodding vigorously a signal to the governess supervising us, a sharp command from the latter to "give attention," and presently the royal cortège would appear; and, while passing thru the room, be greeted by the governess and pupils making simultaneously a deep curtsy.

I missed my part in the first of these demonstrations because all the pictures of queens that I had seen showed them walking with a crown on their heads, and a scepter and glove in their hands. So seeing just ordinary ladies, I withheld my reverence, and finally whispered to the girl standing next to me: "Where is the Empress, Hedwig?"

"You ninny," was the giggling reply, "that was the Empress in the soiled gloves." (You see what sharpness of eye for details much inspection leads to.)

While we were still standing on this occasion, for our governess thought Her Majesty might return thru the room, the senior governess came in, and to everybody's wonder summoned me by name. This governess and the Oberin had made a part of the company escorting the visitors. And now she explained that Her Majesty had asked after me.

"Don't forget to kiss her hand, should she favor you with it," were her hurried admonitions, as she led me away. "And don't speak, unless she speaks to you, and then say: 'Yes, Majesty,' or 'No, Majesty.'"

Whereupon, quite out of breath and wits, I found myself in a room I never had entered before, a carpeted room, and at a table sat Her Majesty, while the others stood in a half circle at her back. A surreptitious tug at my frock was a hint from the governess that I gave heed to by making the *reverence* I had been waiting to make since five o'clock that morning.

The Empress responded with a nod, then lifting a newspaper from the table, which I recognized as being the *Saugerties Telegraph*, she bade me come near her, and said: "Is this, indeed, an article written by you?" And she indicated a column on the front page of our home newspaper. Other questions followed: Had I arrived in Berlin without misadventure? Did I like the Stift? Had I received good news from America? How did I happen to write on the Tower of London?

On dismissing me, she did give me her hand, which I kissed fervently. She had not only been kind and gracious, she had spoken in English, and so spared me the necessity of shocking her with the gutturals that I was still exhilarating the school with—the German I had learned at Bordentown College having turned out to be a Zurich brogue.

The newspaper containing my article had not been handed to me, however. It had been withheld on its receipt at the Stift, and was still, as were all papers and letters which for any reason it seemed advisable to keep from pupils. The letters we wrote on our weekly half holidays were delivered to the Oberin open for her to censor, the one exception being those to our mothers.

If the Empress came to the school garbed so inconspicuously as to fail to equal her portraits in the quality of impressiveness, such was not the case with the Emperor, the Crown Prince and famous generals, whom she at times persuaded, or commanded to accompany her.

In the barren recitation room, banked with our plain uniforms of dark blue, the advent of these bright blue, white, crimson and gold flashing figures acted like the turning on of a tungsten light. And just as moths love the flame, so were the girls attracted by the dazzling dress of these men.

BEFORE long the fascinating splendor of military uniforms came to be gazed upon by us in public places with a sentiment of intimacy, our comrades having recognized their own family names in those borne by some of the men wearing the most brilliant ones. For we were taken to view processions and parades. And we did so from privileged seats. Who knows, you may have seen us yourself on one of these occasions in Berlin. Casting your curious tourist eyes over the spectators, massed in the Schlossplatz before the palace, it may well be that they were arrested by the sight of the sombre blotch in the gay scene, made by our drooping-brimmed, brown hats, black capes, and dark blue woolen frocks. And perhaps you pitied us for being obviously in moral bondage, and took us for asylum girls. Whereas, could your gaze have penetrated to our hearts, you would have discovered there pity for, and disdain of, you for being plebeian foreigners, deprived of any proprietorship in the magnificent chieftains of the grand display.

On Sundays, which were the only days when lessons were suspended, we donned those same hats and capes and marched in order down a stairway to the chapel of the Stift. Here lights

burnt upon the altar. Their glow scintillated pleasantly along the strip of gold mosaic, set in the warm tinted walls, and varnished the red carpet and cushions of the pews with scarlet spots. Into this cosiness would come presently the black draped figure of the pastor. But the figure was so rotund, his face so benign, the tones of his voice so unctuous, that the black of his cassock added only a rich touch the more to the cheery picture. Nor was the physical comfort we felt disturbed by his spiritual messages. It is true, he likened us, who were under the protection of Her Majesty, to the sheep of the Christian fold under that of the dear Saviour; but the rustic analogy did not displease, since it was understood that among such sheep we were the merinos.

We were enmeshed in an outer, shining garment of ceremonious forms and compliments, that covered the cords of discipline beneath. We had, however, become accustomed to the cords, and grew at length to like them, and even to value them, because they were habitual.

I think here of one of the minutiae of these restrictions. Our own clothes and other belongings being stored away, each girl was allotted a wardrobe in the corridor to keep her extra uniform and small keepsakes in, the latter being limited to photographs of their Majesties and members of the girl's own family. These wardrobes had each three shelves and four hooks, and exact regulations existed as to which hook, and which spot on the shelves, should contain respectively our several things. When summoned to unlock the cases for inspection, every one of these wardrobes was a replica of all the others, no hat being by chance on a dress hook, and no school book on the wrong side of a portrait. The ideal we were held to was not merely tidiness, you see; it was parade. And drill and uniformity were as perfect as they were incessant.

The accentuation of direction from outside ourselves, in the form of ever recurrent commands, enfeebled whatever power of self-direction we might have possest originally. In other words, we were prevented from forming the habit of resorting to directions taken from our own consciences and brains.

MOREOVER, the example set by governesses reporting to the Oberin was, in time. followed by us. One pupil would report against another. And we did this in precisely the same manner as our governesses; simply reporting to a superior, without speaking of our intention, or of its execution, or of the outcome, to any one else. It was like dropping a fish line loose into a sunny lake, the serene surface of which betrays scarcely a ruffle, while only the worm on the hook suffers from the silent, big fish below. What chatter, hubbub and emotion always ensue in our American schools on the news of a delinquency on the part of a girl, and what partizan outpourings over its chastisement. At X. Stift, on the contrary, the discussion of a petty offense, and its punishment, even when evident, was prohibited; no unpleasant event transpiring among ourselves was ever allowed to disturb the surface of the school's placid life.

Like all the rest of the school discipline, this measure tended admirably to fit pupils for the society they were to enter: a society in which officers who cannot pay their debts banish themselves; those who commit felonies that would cast discredit on the army kill themselves; families who become bankrupt sink silently into obscurity; and girls who err disappear utterly from sight and mention; and all without perturbing visibly the spirits of the people who compose their world.

At the same time that we were being accustomed to a single standard of thought and conduct, we were witnessing perpetually the exercize of a graded authority. The domestics deferred formally to us, we to the governesses, the governesses to the Oberin; and between no two of these grades existed any exchange of personal intercourse. And beholding the Oberin deferring to the president (who came occasionally), while the president and the whole school together deferred reverentially to royal princes, composed a lesson for us in the art of adapting demeanor to individuals, and of fastening our stedfast regard on the one immutable point —Royalty. For it was royalty alone that we never saw exchange its role.

What wonder that life took on the aspect of a parade, in which we formed a privileged unit; that the individual spirits of pupils were merged into a spirit of class; that indulgence, not being experienced, became like a thing unknown; that the girls, in a word, were made like copies in porcelain of a bronze military ideal.

Saugerties, New York

ON MEETING GREAT MEN

BY MARGUERITE WILKINSON

THE great man has made a speech. Now he must suffer the consequences of it. The pygmies who have heard him surround their giant. Their eyes are sharp darts of curiosity to wound him or soft seas of sentimentality to engulf him. Rudely they crowd upon him, pushing nearer and nearer to the platform on which he is standing. The candle of truth and beauty which he has lighted for them they strive to put out under the smothering silliness of their own comment. They might have shaken hands with his spirit, but they prefer to be able to say that they have shaken hands with his body.

He is grave and patient and courteous. They are effusive, frivolous, inane. Women, upholstered in plush, who have never worked in their lives, thank him for what he said about labor. Men with cynical eyes thank him for what he said about love. A pudgy, aggressive spinster with asthma tells him that she once knew a second cousin of his who lived in Peoria. A lean radical asks him whether he is a vegetarian. A respectable mother of seven children tells him with tears in her eyes that she will never forget him—never! An anaemic young man wants fifteen dollars a week to go to work at once under the great man's direction. An old couple from the country ask where he went to college. They want to send their son John to the same place. Thru it all the great man is grave and patient and courteous. But in his heart of hearts he must feel very lonely. Perhaps he can rise to a feeling of tender compassion for such folly. Perhaps he knows only a strong "silver scorn."

Soon I am engulfed in the mob moving toward him. A well-meaning friend has dragged me into it. She wants me to touch his fingers and murmur his name in his presence. I try to withdraw tactfully. I fail. I am shoved and elbowed into my place. My name is repeated to him. Then, in spite of his gravity, his patience, his grace, I am displeased by the insincerity of the whole performance. I long to tell him that I never wanted to meet him in this ridiculous way. I am gawky and awkward. I drop his fingers and escape.

When I am free of the mob I swear in my heart a great oath. I admonish the kindly fruit trees and gracious fields of grain to refrain from providing me nourishment if ever again I bend my pride to such folly; I tell the garden to be barren for me if ever again I consent to play the pygmy before the giant. I do not want to shake hands with great men that I may tell my friends about it.

I will hear great men speak. I will seize upon their thoughts with avid desire to learn. I will watch their behavior from my corner of the room and from my corner of the world. If I meet them at the homes of friends I will be serene, content, dignified in their presence. I will accept their friendship if it comes to me naturally. But I declare myself free forever more from the snobbery and silliness of standing in line to meet the great man who has just spoken.

WHAT THE PAPERS SAY

WORLD COMMENT ON PRESIDENT WILSON'S STAND

London Daily Mail—The Allies are frankly glad to have the moral support and sympathy of the United States. We have been fighting for two and a half years for what we know to be right. We are glad the Americans know it too.

London Times—The act of President Wilson is an event of measureless importance in the history of mankind. Whatever the immediate consequences of the breach, a new chapter is opened for the New World and the Old. For the first time since it became a great power the United States has directly intervened in a European war—a course pregnant with untold results hereafter. . . . The American people do not want war, but are resolved to keep their honor unstained. Whether they will be forced to draw the sword now lies in the hands of Germany. If Germany does not draw back, the armed intervention of America becomes certain.

London Morning Post—President Wilson's decision, which was both just and courageous, will put new spirit into the hearts and minds of the neutral nations, which for two years have suffered the most atrocious injuries ever done by one country to another at sea since the Barbary corsairs. We are entitled to congratulate ourselves that the truth of what we constantly affirmed respecting the character and aims of the German Government has now received the indorsement of a great and friendly nation. The American spirit of pride, justice and independence has again proved itself.

La Liberté (Paris)—Circumstances give to Mr. Wilson's act an incontestable grandeur. History will say of Wilson, the pacifist, that he was too proud, not to fight, but to give way, and that, placed between solicitude for national honor and apprehension for the unknown consequences—perhaps formidable—he did not want a humiliating peace. His case resembles that of the King of the Belgians. Albert I might have been able to avoid the avalanche that menaced him by resigning himself to a state of vassalage. No more than he did Mr. Wilson think a single instant of breaking his word and making his country an object of derision.

Journal des Dêbats (Paris)—We are happy, after so many vicissitudes, to render homage to President Wilson. We would have liked it had he decided sooner, not because he would have rendered us a service, but because it would have given the signal to other neutrals and put Austria and Germany in their place, under the ban of the civilized world.

Besides, we do not imagine that American intervention, even in a military way, can hasten a great deal the end of hostilities. The United States has not at its disposal sea and land forces sufficient to turn the scale. However, they bring us a great moral force, and it is in view of that that we salute the decision of President Wilson.

La Prensa (Buenos Aires)—The rupture between the United States and Germany will have an enormous moral effect, particularly in view of the power and prestige of the United States. The step taken by the Washington Government will compel other countries to emerge from the conditions of relative tranquillity in which they have been living.

La Vanguardia (Buenos Aires)—The breaking of relations does honor to the Government of the United States. It now becomes necessary for all neutral states to compel the Central Powers to respect the rights of man.

Dallas News—The people of the United States will unanimously support the momentous decision which the President has made. They will support it out of intellectual conviction and out of faith in his patriotism and wisdom. Germany will persist in its mad course, and the declaration of war will await only the inevitable crime which will make the flag and citizens of the United States its victims. Upon this course we are now set out. . . . Hateful as war is, it is less hateful than the price fixed for the continued enjoyment of peace.

San Francisco Chronicle—In this hour of crisis, when our nation is facing graver possibilities than any others which have presented themselves during the progress of the European war, it is well to take stock of those assets upon which we must rely in the event of our being called upon to participate in the contest. . . . Whatever else may be necessary, no situation can possibly devolp which will demand an appeal to American patriotism. It will arise spontaneously and in advance of any call.

Il Progresso Italo-Americano (New York)—The heart of all us Italians is now, as ever, with America; today more than ever we understand and appreciate the strength of the bonds which bind her to Italy.

Los Angeles Germania—We stand firmly behind the President in every effort to keep this country out of war. We are all good American citizens—free and sovereign—loyal to this country. We owe no other allegiance to any other nation.

Richmond Times Dispatch—President Wilson's action was demanded—demanded not alone by the solemn warning he had given in the case of the "Sussex" but by his own guardianship of his country's dignity and honor.

Fargo Courier News—Another "Lusitania" horror and the United States is at war. That is certain. There can be no doubt of it. We have a united Nation. It will remain united by forbearance, by every possible effort to remain neutral. By pursuing remonstrance to the last limit, the President has represented the opinion of the people of the nation he leads. He has their confidence and will have their support in more positive action.

New York Sun—The blood of the citizen who is first of all things an American pulses more firmly and proudly this morning. His Government has at last spoken the voice of the nation. He can now hold his head upright and thank God and the President for the old fashioned American perpendicularity of it.

New York Herald—The confidence of the American people in their President has not been misplaced. Mr. Wilson has made his decision, and it is for the right. In severing diplomatic relations between the United States and Germany he has done the thing which Washington would have done, which Lincoln would have done, and what any other American President would have done. He has upheld the rights, the dignity and the honor of the American people.

New York Tribune—If war must come—not by our act but by Germany's—we should welcome it. We have a righteous cause—a cause for which we fought a century ago, and against much greater odds. Its righteousness will exalt and unify the nation. And no nation of the first rank is more in need just now of being exalted and unified than is the United States.

Philadelphia Public Ledger—President Wilson has met the expectations of the nation. The President's decision to refuse any further parleying is proof to the American people that in this gravest crisis the honor and dignity of the United States are safe in the President's hands.

Detroit Free Press—President Wilson has taken the one course left for a self-respecting, courageous and honorable sovereign power. His act will have the approval of every genuine citizen of the United States. In his address to Congress he has outlined a policy which is sound and must receive the indorsement and support of the country.

Milwaukee Sentinel—It is a perilous and unwelcome situation. The President has exercized great patience. He will continue to do so. If forced to the extremities in support of our rights, he must have the loyal support of every American worth calling an American. And it is the immediate duty of the Government to prepare against any eventuality that may imperil our rights. Meanwhile all will echo the President's sentiment, "God grant that we may not be challenged to defend them."

Boston Herald—There will be no dissent in any quarter, we believe, from the resolute stand which President Wilson has at last taken. . . . Because the President has conducted himself with such deliberation he may now be fully assured that he has the undivided support of his fellow-coun trymen.

Boston Transcript—There will be no opponent of the President's act in thus suspending diplomatic intercourse among loyal American citizens, of whatever derivation or parentage. politics end at the water's edge—and that is precisely where the crisis which now confronts the nation centers. There are times when to consider too slavishly a want of preparation for resistance to outrage is unwise as well as cowardly. We stand now to do what we can and when we must. We have stood up for freedom before when unprepared, and stood up successfully; we can do it again, if we must.

Atlanta Constitution—Never at any time has the sentiment of this country been more solidly united, more nearly unanimous, in backing a President in a crisis than it is today back of President Wilson. At no stage of the world war, following no incident of it in which America has been concerned, from the "Lusitania" atrocity down to the present, could the President have taken the step that he has taken with knowledge of such overwhelming approval of the rank and file of the American people.

Denver Times—Coldly and in unmistakable language the issue was put up to the United States of America. There was only one answer to be made, unless this country were to play the part of the craven and to insure its own safety at the risk of those precious laws which leading nations of civilization had signed in holy faith and which only one signer of that pact has seen fit to break. The answer has come, scintillating like a shaft of light from the sword which Columbia bears.

OUR MILITARY LEADER

THE CHIEF OF STAFF OF THE UNITED STATES ARMY, GENERAL HUGH L. SCOTT,
NOTABLE FOR HIS SERVICES BOTH AS STATESMAN
AND AS SOLDIER

A BRITISH PRAGMATIST

THE PHILOSOPHY AND PERSONALITY OF F. C. S. SCHILLER

BY EDWIN E. SLOSSON

A DOZEN years ago I happened upon the word "pragmatism," as it was printed, rather inappropriately, upon the slip cover of Santayana's "Life of Reason." Being a queer looking word and unknown to me, I started to find out what it meant and that led me on a long chase. The farther I went the more interested I became, for I soon discovered that I had been a pragmatist all my life without knowing it. I was as delighted as M. Jourdain when he was told that he had been unconsciously talking prose all his life. I felt as relieved as Huxley when he found his tag. For I knew then that I was no longer alone in the world. There were others, it seemed, even men of standing in philosophical circles, whose minds ran in this way and who were not ashamed to own it. I got their names and started to find them wherever they might be. I ran down Dewey in the Adirondacks and Bergson in the Alps. Poincaré I unearthed in a Paris flat; James I heard in a Columbia lecture room; Ostwald I found in a Saxon village; Schiller I caught in an Oxford quad. I was thinking of going to China to see Wang Yang-ming, but fortunately before I bought my steamer ticket or had learned Chinese I discovered that he had been dead for three centuries.

A man in the act of dismounting from a bicycle is temporarily incapacitated for the effective use of either mode of locomotion, and it was at this psychological moment that I caught Dr. Schiller at the gate of Corpus Christi College. Otherwise I might have missed him, for he is as alert and agile physically as he is mentally. He usually spends his summers mountain climbing in the Alps, tho I suppose he has suspended this pastime during the last three years while the Tyrolean Alps are being used for other purposes than tourism.

Mr. Schiller wears the pointed beard that was the distinguishing mark of the radical of the nineties. He has a Shakespearean-shaped forehead, but wears un-Shakespearean glasses. He is as interesting to converse with as he is to read, which is more than you can say of many authors. He talks best while in motion, a real peripatetic philosopher. I wondered why he did not take his students out of the dark and stuffy lecture room and walk with them as he did with me, up and down the lawn between the trees and the ivy-clad walls of the college garden. Curious turf it was, close-cut and springy; I never felt anything like it under my feet except an asphalt pavement on a hot summer day.

But I suppose it would be against the Oxford customs to adopt the Greek method in teaching Greek philosophy. At any rate when I went to Mr. Schiller's lecture on logic I found it as conventional in form as it was revolutionary in spirit. One would have thought that printing had never been invented, nor even the mimeograph. The lecture was delivered slowly, and necessarily without feeling, clause by clause, with frequent repetitions, so every word could be taken down. It was really a brilliant lecture as I discovered afterwards when I read over my notes, but at the time it sounded as dull as proofreading, for the lecturer dictated even the punctuation marks, as he went along: "colon," "Italics," "inverted commas," etc. The English leave out the punctuation marks in legal documents where they are needed and put them into lectures where they do not belong.

This is the eleventh article of a series entitled "Twelve Major Prophets of Today." The first six, dealing with Maurice Maeterlinck, Henri Bergson, Henri Poincaré, Elie Metchnikoff, Wilhelm Ostwald and Ernst Haeckel, have been republished in book form by Little, Brown & Co., Boston. Of the second group of these studies of contemporary thinkers, the following have appeared in The Independent: Rudolf Eucken (Feb. 17, 1913), H. G. Wells (Nov. 20, 1913), Bernard Shaw (April 20, 1916) and G. K. Chesterton (Nov. 27, 1916). A sketch of John Dewey will complete the series.—THE EDITOR.

The students, in long black gowns, were seated uncomfortably on benches carved with the names of many generations, and were writing awkwardly on long boards. These were furnished with inkwells and quill pens, altho the students sensibly used fountain pens. I suppose it is somebody's perquisite to supply such things as quills and snuff to the college even if nobody uses them. An American college president told me that he thought there was more graft at Oxford than anywhere else in the world.

If Mr. Schiller had remained in America he would now be lecturing to one or two hundred at a time, largely teachers who had come from all parts of the country expressly to hear his ideas and who would in turn transmit them to their students. But in that room there were only these fifteen boys, many of whom doubtless had no special interest in logic or in Schiller's views of logic and who took his lectures simply because they were required for examination, after which they could be forgotten. I could not help contrasting this scene with the big lecture room at Jena, modern yet satisfying to the esthetic and historic taste, where Eucken's fiery eloquence held men and women gathered from five continents, or with the Collège de France, where Bergson had attracted an even larger and equally cosmopolitan audience. A man in Schiller's position must gain his disciples chiefly thru his books, and for a man of Schiller's attractive personality this is a great disadvantage. Print can never take the place of "the spoken word," but to have its effect the spoken word must be heard by many people.

The American visitor to Oxford meets a double mystery: how it is that Oxford accomplishes so much with a poor and antiquated plant and how it is that American universities do not accomplish more with their modern and convenient plants. One hates to conclude that plumbing and ventilation are incompatible with high thinking. But if Spencer is right in defining life as the power of adaptation to environment, the Oxford dons are most alive of any human beings. They have shown the adaptability of the hermit crab in fitting themselves into their awkward environment. They somehow manage to make themselves comfortable in buildings that a New York tenement house inspector—who is never regarded as unduly particular—would order torn down. They work contentedly under conditions that would cause a strike in any well-regulated union.

FERDINAND CANNING SCOTT SCHILLER, M. A., D. Sc., Fellow and Senior Tutor of Corpus Christi College, Oxford—to give for once his full name and titles—was born in 1864. While at Rugby he showed decided symptoms of intelligence, so he was picked as a winner in the scholastic race and put in training for the classical scholarships. The British turn all things into sport, even war and education and since public opinion does not allow headmasters to keep racehorses they indulge their sporting instincts by backing their boys for the Blue Ribbon, the Balliol Scholarships. These boys are then given daily doses of classical verse competition; I infer for the same reason that jockeys are fed on gin.

It is curious to see how widely educators differ as to the fundamental principles of their business. The British system is built upon competitions, prizes and examinations. The American state universities in the days of their pristine purity—I mean by that of course, when I was a student—regarded competition as vicious, prizes as demoralizing and examinations as an evil to be eliminated if possible. But it ill becomes a pragmatist to condemn a system that works so well as the British, whatever theoretical objections may occur.

Much as Schiller detested making verses in a dead language, he did it so well that he got a Major Exhibition. This gave him $350 for five years as well as $450 in Exhibitions from Rugby. But it also meant that he had sold himself to run in harness for an-

HUMANIST AND ICONOCLAST

DR. F. C. S. SCHILLER OF CORPUS CHRISTI COLLEGE, OXFORD, HAS SHOCKED CONSERVATIVE PHILOSOPHERS BY HIS SHARP CRITICISM OF CONVENTIONAL METAPHYSICS AND FORMAL LOGIC

other four years at Balliol and was obliged to master a philosophy which he already felt to be a fraud. T. H. Green had died just before Schiller came up and had been sainted for the greater glory of Balliol, and it seemed to the tutors good pedagogy to set their pupils to begin the study of philosophy with Green's "Prolegomena to Ethics." Most of the boys confronted with this abstruse introduction came to the conclusion that metaphysics was wonderful, but that they had no head for it. Schiller very curiously came to the opposite conclusion from the same premise.

Orthodox Oxford was then as now under the sway of the great philosophic Trinity of Plato, Aristotle and Hegel, which was supposed somehow to be concordant with or at least allied to the theological Trinity, and therefore fit food for the souls of innocent young men. The third person of the philosophic Trinity was kept much in the dark because the tutors generally were not fond of reading German. They knew still less of science and apparently did not suspect that Darwin and his evolution might prove to have some bearing upon philosophy.

Schiller took his First Classes at Oxford, altho he was given to asking awkward questions and was known to be reading "out of bounds." One of his examiners complained that he used such queer terms in his papers, "solipsism" and "epistemology" for instance.

THE years 1893-7 Schiller spent as instructor at Cornell University and at the end of that period an amusing incident occurred, tho what it was and how it came about I don't know; possibly because I never thought it best to inquire of any of the few who were in the room at the time. The bare fact is interesting enough; that a young man who had written one of the most brilliant volumes of the times on metaphysics, "Riddles of the Sphinx," and who carried in his pocket a call to teach philosophy at a leading Oxford college, was flunked in Cornell on his oral examination for Ph.D. in philosophy! Anybody who is curious can pick up half a dozen inconsistent versions of this famous episode on almost any campus. One is, that being fortified by the crinkle of the above mentioned letter over his heart and knowing that an American degree would have no value in England, Schiller did not take the examination seriously and neglected the necessary cramming. Another version of the story is that he turned tables upon his examiners by bringing into action for the first time the pragmatic arguments so much to their discomfiture and bewilderment that he was penalized for these foul blows. But probably the details, if one knew them, would prove to be quite commonplace compared with either of these versions or the more picturesque legends that are in circulation, so it is better to remain in ignorance and file it in the envelope with such cases as John Henry Newman, who only got a Third Class; F. H. Bradley, who got a Second; Gustave Doré, who failed in drawing; Darwin, who was called a stupid student; Grant, who was graduated near the foot of his class; Mendel, who was never allowed to graduate at Vienna, and the like, good material all for some one who wants to investigate the psychology of students—and examiners.

The chief benefit that Schiller got out of his American sojourn was an acquaintance with William James. It was a case of love at first sight and a lifelong devotion. Schiller dedicated his "Humanism" "To my dear friend, the humanest of philosophers, William James, without whose example and unfailing encouragement this book would never have been written."

In 1897 Schiller was called back to England to become tutor in Corpus Christi College. The president of that college, the late Thomas Fowler, belonged rather to the pre-Hegelian Oxford generation of the Mill-British-empiricism school of thought. He liked things to be made intelligible and he was so much struck by the lucidity of Schiller's "Riddles of the Sphinx" that he called him from Cornell to Oxford.

HERE then he has for twenty years lived the quiet, sheltered, contemplative life of the Oxford don, varied only by such daring adventures as his hunt for the hidden fallacies of formal logic, his single combats with Mr. Bradley and his ascent of the bleak hights of speculative philosophy, where the Absolute is supposed to dwell in solitude. Our American universities are putting up some very fair imitations of Oxford architecture now. Some have transplanted ivy and it is growing. Some have transplanted tutors and they are growing. But one Oxford custom has not yet been introduced into our universities, the custom of giving the professors time to think. In Oxford all the men have time to think and some of them do. In America if a man shows a tendency to become absorbed in thought he is made a dean or put on the committee of accredited high schools, which cures him.

In the British "Who's Who" Mr. Schiller's recreations are ordinarily put down as "mountaineering, golf, etc." But in one edition of that handy volume of contemporary autobiography it is stated that his chief recreation is "editing *Mind!*" Thus was revealed the secret of the mysterious appearance at Christmas, 1901, of a periodical which in looks resembled one of the regular numbers of that staid blue-covered review of philosophy, *Mind*, but with most startling contents. The frontispiece is a "Portrait of Its Immanence, the Absolute." This is followed by an article on "The Place of Humour in the Absolute, by F. H. Badley"; "The Critique of Pure Rot, by I. Cant"; "A Commentary on the Snark"; "More Riddles from Worse Sphinxes" and the like. The advertisements were likewise unusual: "A Dictionary of Oxford Mythology, in six volumes, containing a complete account of the stories told in the Common Rooms and the men to whom they have from time to time been attached"; "A fine consignment of assorted Weltanschauungen just received from Germany"; phonograms of all the lectures, jokes extra, with colored cinematographs of the most famous professors in action, for armchair study, etc. The history of philosophy in fifty-one limericks, covering all systems from Thales to Nietzsche, would be useful on examination time.

BUT Schiller has not been able to confine his humor to that uniquity *Mind!* He allows it to creep into his contributions to *Mind*-without-the-exclamation-point and other serious journals. He is a keen debater and does not follow the ordinary rules of fencing, but frequently disconcerts his antagonists by parrying their thrusts with a pun or a personality. He is, so far as I know, the first philosopher to find room for jokes in his formal philosophy, as the following passage shows:

> When we map out the whole region of Truth-claim or Formal Truth, we find that it contains (1) lies, (2) errors, (3) methodological fictions, (4) methodological assumptions, (5) postulates, (6) validated truths, (7) axioms, and (8) jokes.

Most philosophers in fact would not only ignore his eighth category, but would neglect his first and second, accepting any statement that claimed to be true and devoting themselves to the study of its logical implications. But the pragmatist is more interested in finding out how and in what way an assertion comes to be called true and how it makes good its claim after it has been asserted. As Schiller puts it:

> What then is common to all sorts of Truth and Error, and renders them species of a common genus? Nothing but their psychological side; "truth" is the proper term for what satisfies, "error" for what thwarts, a human purpose in cognitive activity.
>
> The difference between Truth and Error, therefore, is ultimately one in value. The "true" way of conceiving an object or judging a situation is simply the way most valuable for our purpose; the "false" way is one which is, at least relatively, worthless. "Truth" is a eulogistic, "error" a dyslogistic, way of valuing cognitive situation.
>
> Truth and Error therefore are continuous, as history shows. Either may develop out of the other, and both are rooted in the same problems of knowing, which are ultimately problems of living. The "truths" of one generation become the "errors" of the next, when it has achieved more valuable and efficient modes of interpreting and manipulating the apparent "facts," which the new "truths" are continuously transforming. And conversely, what is now scouted as "error" may hereafter become the fruitful parent of a long progeny of "truths."
>
> It follows also that (as every examiner who marks a paper knows) Truth and Error admit of quantitative differences. Both can vary in importance, and can attain (or fail of) their purpose to greater or a less degree. But neither is absolute. An answer to a question is in general called true if it is *true enough* for the purpose in hand. But this does not preclude a greater exactitude if (for a different purpose) it should be required. It is a true answer to the question—"when do you leave?" to reply "tomorrow"; but if necessary I can specify the train I go by. Thus

the demand for absolute exactness is both humanly unnecessary and scientifically unmeaning. Indeed a degree of accuracy higher than the situation demands would be irrational. No one wants to know the hight of a mountain in millimeters, and if he did, he could not ascertain it, because his methods would not measure fine enough. Scientific truths are infinitely perfectible, but never absolute.

Now if philosophers are wise, they will accept this sort of truth, and admit that any truth is "absolute" enough so soon as it is equal to the demands made upon it, while none must ever be so absolute as to become incorrigible and incapable of further growth.

A human factor, an element of personal desire, enters into all our thinking; otherwise why should we bother to think? Even our most abstract and general theorems have a hidden *Hinterland* of subconscious motives, and applications which philosophy has hitherto fought shy of.

The abstract statement that "two and two make four" is always incomplete. We need to know to what "twos" and "fours" the dictum is applied. It would not be true of lions and lambs, nor of drops of water, nor of pleasures and pains.

"Every thought," he says, "is an act and even the most 'theoretical' assertions are made to gratify an interest." He finds in the present war confirmation of his theory that thought is subordinate to action and never free from human volitional influence:

If only philosophers could be got to face the facts of actual life, could any of them fail to observe the enormous object-lesson in the truth of pragmatism which the world has been exhibiting in the present crisis? Everywhere the "truths" believed in are relative to the nationality and sympathies of their believers. It is, indeed, lamentable that such an orgy of the will to believe should have been needed to illustrate the pragmatic nature of truth, but who will dispute that for months say 999 persons out of 1000 have been believing what they please, and consciously or unconsciously making it "true" with a ferver rarely bestowed even by the most ardent philosophers on the most self-evident truths? No improbability, no absurdity, no atrocity has been too great to win credence, and the uniformity of human nature has been signally attested by the way in which the same stories (*mutatis mutandis*) have been credited on both sides.

It is because thought is always affected, and in such times as these altogether vitiated by personal desires that Schiller desires to have this hidden influence recognized and allowed for. The endeavor to drag forth the suppressed context of thought is very properly called Humanism. Schiller conceives every thought as *some one's experiment* for which he is responsible.

The humanistic view of metaphysics Schiller expresses in the preface to the 1910 edition of his earliest work, "Riddles of the Sphinx."

Practically a system of metaphysics, with whatever pretensions to pure thought and absolute rationality it may start is always in the end one man's personal vision about the universe, and the "metaphysical craving" often so strong in the young, is nothing but the desire to tell the universe what one thinks of it. Of course, the tale may be worth telling if told well.

This describes the "Riddles of the Sphinx" exactly. In it the youthful Schiller tells the universe what he thinks of it and it is told well. But his thoughts have changed in the twenty-five years since this volume was published so that even in its revised form does not so well express his views as do his later volumes "Humanism" and "Studies in Humanism," of which revised editions were brought out in 1912. His *magnum opus*, "Formal Logic," a destructive criticism of the Artistotelian logic, is too technical for the general reader who, however, will find a popular outline of its argument by Schiller himself in The Independent of August 15, 1912, and a review of the volume by Professor Dewey in The Independent of July 25, 1912.

The value of the pragmatic method to religion is discussed by Schiller in his article on "Faith, Reason and Religion," where he shows that even the most rigorous scientific reasoning involves the element of faith and on the other hand that faith is devoid of value unless it is verified in the only way by which anything can be verified, that is, by works. He says:

Christianity is an essentially human and thoroly pragmatic religion, hampered thruout its history and at times almost strangled by an alien theology, based upon the intellectualistic speculations of Greek philosophers. Fortunately the Greek metaphysic embodied (mainly) in the "Athanasian" creed is too obscure to have ever been really functional; its chief mischief has always been to give theological support to "philosophic" criticisms which by identifying God with "the One" have aimed at eliminating the human elements from the Christian religion. As against all such attempts, however, we must hold fast to the principle that the truest religion is that which issues in and fosters the best life.

The pragmatic criterion of truth, that all truths must work, is not a lax one as its opponents assert but the most stringent that can be applied. It means—"You shall not assert the truth of whatever suits you without any testing at all." It eliminates as meaningless all theories that make no difference whether they are believed or disbelieved. It demands constant confirmation of all beliefs by their consequences. It insists upon the unity of theory and practise, of faith and works. This point was plainly put by Schiller in his address before the Pan-Anglican Church Congress of 1908:

For any theory to work, it must be believed in, e. g., believed to be *true*. It is impossible, e. g., to practice prayer merely as a piece of spiritual hygiene, and in order to get the strengthening which is said to result from the practice. The practice need not, of course, start with a firm belief in the reality of its object. But unless it engenders a real belief, it will become inefficacious. Hence, to conceive of Pragmatism as ultimately sanctioning an "act-as-if" attitude of religious make-believe is a misapprehension; it is to confound it with the discredited and ineffectual dualism of Kant's antithesis of practical and theoretic "reason." Lastly, it should be noted that any theory which works must evoke some response from the objective nature of things. If there were no "God," i. e., nothing that could afford any satisfaction to any religious emotion, the whole religious attitude would be futile. If it is not, it must contain essential truth, tho it may remain to be determined what is the objective fact corresponding to the postulate.

THE WIFE

BY MARGUERITE WILKINSON

This is the song of the wife who is strong in the clan—

"I, who have joy of his lips, I would be to my man,
Shelter and warmth and food and a place of rest.
And a home for the hope of his heart and a mother breast!

"Tho he must ask by day that I toil and tire,
Fire I shall be to his flesh and flesh to his fire;
Tho he must go by night while I wait alone,
My love shall rise and follow and guard my own.

"Think you I ask release from the load I bear
Think you I care to please as a slave must care?
Not tho the seven-walled seas were thrice as wide,
Could I give my love as I give if I lost my pride.

"We have traveled by day, on the same rough roads and red,
We have slept by night on a hard and narrow bed,
We have shared the crumbs, when life would have hunger wait;
By this he was made my man, I was made his mate.

"Laughter we know and the wild young song of the heart,
Poverty's pain and the spite and scorn that smart;
And not tho the seven-walled seas were thrice as deep
Would I change my place at his side for a softer sleep.

"Shelter and warmth and food and a place of rest,
A haven of dreams and a holy mother breast,
Bounty and beauty and breath I would be for my man!"
Such is the song of the wife who is strong in the clan.

1917 ATLAS With New War Maps Given FREE

To the readers of *The Independent* who *take advantage of this offer* now made in connection with

Webster's New International

The Only Grand Prize (Highest Award) given to **dictionaries** at the **Panama Pacific International Exposition** was granted to **Webster's New International** and the **Merriam Series** for **superiority** of **educational merit.**

This New Creation
The *Merriam* Webster

A Complete Reference Library in Dictionary Form—with nearly 3,000 pages, and type matter equivalent to a **15-Volume Encyclopedia** all in **a single volume,** in Rich, Full Red Leather Binding, can now be secured by readers of *The Independent* on the following remarkably easy terms:

The entire work in full leather (with 1917 Atlas)

DELIVERED for $1.00

and easy payments thereafter of only a few cents a week
(In United States and Canada)

on SUPERIOR INDIA PAPER

REDUCED ONE HALF
In Thickness and Weight

India-Paper Edition

Printed on ***thin, opaque, strong,*** superior India Paper. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the ***new Merriam Webster*** in a form so light and so convenient to use! This edition is ***one half*** the thickness and less than one half the weight of the regular edition. Size 12⅜ in. x 9¾ in. x 2¾ in. ***Weight*** 7½ lbs.

Regular-Paper Edition

Printed on strong book paper of the highest quality. Size 12⅜ in. x 9¾ in. x 5½ in. Weight 16 lbs.

Both Editions are printed from the same plates and indexed.

Over 400,000 Vocabulary Terms, and, in addition, ***12,000 Biographical Names,*** nearly ***30,000 Geographical Subjects,*** besides thousands of other References. Nearly ***3,000 Pages. Over 6,000 Illustrations.***

"To have this work in the home is like sending the whole family to college."

The only dictionary with the New Divided Page, characterized as "A Stroke of Genius"

THE ATLAS

Is the **1917** "New Reference Atlas of the World," containing nearly **200** pages, with **128** pages of maps, beautifully printed in colors, with marginal reference indexes, late Census Figures, Parcel-Post Guide, New War Maps, etc., all handsomely bound in red cloth, size **10¼ x 13⅝.**

To those who respond at once we will send

a copy of "Dictionary Wrinkles," containing an amusing "Test in Pronunciation" (with key) entitled "The Americanization of Carver," and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

THE NEW BOOKS

A POET OF THE FOREIGN LEGION

"I have always had the passion to play the biggest part within my reach, and it is really in a sense a supreme success to be allowed to play this." These words, taken from a letter to his mother, were written by Alan Seeger, the young American poet, who, for the love of France and because of his faith in her cause, joined the foreign legion and was killed on the field of Belloy-on-Santerre.

Romantic, passionate and heroic youth is in these words and in his poetry. All sensuous beauty he understood and loved. The more austere beauties that must be spiritually learned from life he had not yet perceived. He seems to have accepted life with the zest of the young pagan lads of Attica in the days of the glory of Greece. But it may be that his enthusiasm for war was closer akin to the enthusiasm of the medieval knight, to whom war was an opportunity for sacrifice, but also an opportunity for distinction, the only real and glamorous romance. The quality of his book is uneven. But there are beautiful poems. None of them, perhaps, achieves so much of dignity and beauty as does the much-quoted poem of prophecy from which the following lines are taken:

I have a rendezvous with Death
On some scarred slope of battered hill.
When Spring comes round again this year
And the first meadow-flowers appear.

Poems, by Alan Seeger. Charles Scribner's Sons. $1.25.

HISTORY THAT EXPLAINS

A Political and Social History of Modern Europe, by Professor Carlton Hayes, of Columbia University, is in some respects the best existing text book of modern history for the college student or intelligent general reader. It covers the four centuries since the beginning of the sixteenth century, but about one-third of the whole work is devoted to the brief period between the Franco-Prussian War and the outbreak of the Great War, with which the narrative ends. The explanation of the fundamental principles of contemporary civilization, of the irresistible development of nationalism and democracy, of the capitalistic organization of industry and its relation to imperialism and world politics, and of the origin and significance of socialism, militarism and other current social creeds is quite exceptionally full, lucid and enlightening.

However, Professor Hayes has not neglected the conventional chronicle of political events in his enthusiasm for aspects of history which are usually skipped in the classroom, and the conservative teacher will find an adequate amount of space devoted to wars, treaties and royal genealogies as well as exceptionally complete critical bibliographies at the end of each chapter. Nevertheless, certain phases of modern history receive unusual attention and emphasis. The ordinary history, for example, gives one the impression that, while the people in the sixteenth century did nothing but fight about religion, the Christian Church played no important part in "history" thereafter. But Professor Hayes gives as much space and as careful study to Huxley, Renan, Pius IX, anti-clericalism, the Oxford movement and the Bulgarian exarchate as to Luther, Calvin, Philip II and the Council of Trent. There is hardly another general history of which this can be said.

A Political and Social History of Modern Europe, by Carlton J. H. Hayes. 2 vols. The Macmillan Company. $4.25.

ART IN RUSSIA

Alexandre Benois, one time art director of the *Ballet Russe* and himself a painter, has written a history of the *Russian School of Painting*. Sympathetic with the modern movements he is yet their critic, and he deals broad-mindedly with the amazingly dull periods of the romantic and the "purpose" painters. Plates give many examples of important works, some of these, as Ivanov's St. Andrew, being notably fine. Immediately interesting is M. Benois' comment on Bakst, on his illustrations as differing from his scene design, and on the historical accuracy of his work. This and the modest handbook of "The Russian Arts," by Rosa Newmarch, fill what has been a real lack in our art literature.

The Russian School of Painting, by Alexandre Benois. A. A. Knopf. $4.

TWO LITERARY CRITICS

Mark van Doren's study of *Henry David Thoreau* considers the man and his philosophy mainly as set forth in his journal rather than as a nature lover and an essayist. As a man and a philosopher he finds Thoreau far from satisfying, tho he admits that "Walden" and "The Week" by reason of their independence, courage and beauty will live long. It seems to the lover of these discursive essays, with their freshness and their whimsical wisdom, almost a thankless task to analyze so minutely and adversely the oddities of a genius who, if he added little to the sum of philosophic truth, gave us pages of serene charm without which we should be the poorer. Mr. van Doren has some unusual and thoughtful views of Thoreau, but like Lowell, he wishes him other than he was created.

Rebecca West is in something the same state of mind with regard to much of the work of *Henry James*, and expresses her dissatisfaction with a noticeable smartness and at times a carelessness of phrase. That she admires

ARE AMERICANS AS CULTURED AS EUROPEANS?

How four young men from Washington Square, New York, proved that literary appreciation is as keen here as abroad

By ROBERT JENNINGS STANLEY

Old Print of a House in Washington Square

This is a story of a unique experiment, one of the most interesting in the literary annals of this country. The book-world has watched it, first with curiosity tempered with amusement, and lately with genuine amazement.

About a year ago, four young men, hardly more than boys, sat about in the Washington Square Bookshop, one of the show-places of the artistic and literary colony of New York. Many a unique enterprise had been fathered in this quaint place. A few days before, another group of young people had, in the same place, decided to organize the Washington Square Players, and were soon to startle New York with the most unusual plays seen on Broadway in many years. These four young men, however, were not interested in the theater. They were interested in books. None of them had any money. But one of them had an idea.

He held in his hand a small edition of an English classic. "Before the war," he said, "books like this sold by the million in England, Germany and France. People read them in public, just as Americans read newspapers and magazines. From this a casual observer might infer that Europeans possess a higher culture. I don't believe it. I believe the standard of culture is as high here as abroad.

What Americans Read and Why

"Americans read so many newspapers and magazines because they may be obtained more easily than other reading. No matter where a man is, he can secure his favorite periodical, but not his favorite *book*. I believe that if the great masterpieces of literature could be obtained as easily as newspapers, many more people would read them. Think of the time we Americans waste reading profitless matter in newspapers. Most of us, too, know that a great deal of such reading is profitless. We would rather read worth-while books, but we cannot buy them on a news-stand and we cannot carry large library volumes around with us. Make the masterpieces of literature more easily obtainable and really handy to carry, and you can't tell me that the average American will not prefer the better reading."

Other Publishers Say It Can't Succeed

Between them, these four young men raised enough money to publish *one* book. They showed this to department stores, and within a week had evidence that they had struck a popular vein. They then managed to raise enough capital to publish fifteen books, and the enterprise was definitely launched. Their books were compact and well printed, and were bound in genuine ooze-sheep leather. In size, they were smaller than the usual misnamed pocket-size volume, which is usually too large for a pocket.

More remarkable than the quality was the price at which the books were offered. Publishers are usually forced to add several hundred per cent profit, in order to cover their selling costs. These young men cut their profit to a smaller margin than perhaps books had ever before been marketed on, believing that a low price would so increase the volume of business as to make the venture self-sustaining. Because of this, other publishers predicted disaster for the enterprise at once. Even today, some of the oldest American publishers declare that they do not see how genuine limp-leather volumes like these can be sold at so low a price.

Selling a Million Books a Year

Immediately upon their appearance, the demand for the books was so extraordinary that it could not be met. Department stores swamped the little business with orders for thousands of books, in some cases tens of thousands. Letters from readers poured in, inquiring when new titles would be issued, and within three months it was necessary to publish fifteen new books. This only increased the demand. Requests for new titles became so insistent that three months afterward thirty new books were published, making sixty titles in all. *Of these sixty volumes, close to one million copies were sold in little over a year.*

Today it is a common thing in New York to see business men and women traveling in the subways or on trains to and from the suburbs, reading these little masterpieces, instead of newspapers. The judgment of the young publishers was justified. The masters who have inspired and charmed millions in the past still hold their own with the present-day best-sellers. The American public wants good books. It will read them more eagerly than it reads mediocre fiction.

What the Book Lover Wants

Without doubt the success of the Little Leather Library, the name given to this series, has been due chiefly to the selection of titles. Some educational authorities acclaim it as the most excellent collection of masterpieces ever issued in so compact a form. Every one of them is complete and unabridged. They include not only the best work of the old masters, but the finest writing of many modern authors—English, French, Russian, American. They are works that a book-lover wants to have about him always, to read in spare moments during travel, or at home in the evening when nothing can quite so satisfy as an hour with a good poem, story, drama, or essay. The library now includes works of such authors as these:

G. Bernard Shaw	Rudyard Kipling
De Maupassant	Emerson
Abraham Lincoln	Conan Doyle
Ivan Turgenev	Oscar Wilde
Stevenson	Poe
Henrik Ibsen	Shakespeare
Leo Tolstoy	Washington Irving
Dickens	Olive Schreiner
Dante	Alex. Dumas
Elizabeth Browning	W. S. Gilbert
Lewis Carroll	Tennyson
Hans Andersen	Walt Whitman
Longfellow	Geo. Washington
Thoreau	Robert Burns
Coleridge	Thos. De Quincey
William Morris	Victor Hugo
Prosper Merimee	
Browning	
Maeterlinck	
J. M. Barrie	

An Anthology of American verse, including the best poems of Bryant, Emerson, Longfellow, Whittier, Poe, Holmes, Lowell, Whitman, Bret Harte, Lanier, Edwin Markham, Bliss Carman, Richard Hovey, Le Gallienne, and others.

An Anthology of English verse, including the best poems of Michael Drayton, Shakespeare, Ben Jonson, Robt. Herrick, Milton, Collins, Blake, Wordsworth, Coleridge, Lamb, Moore, Byron, Shelley, Keats, Thos. Gray, Hood, Arnold, Tennyson, Browning, Rossetti, Swinburne, and others.

Complete Set Shipped Free for Examination

The publishers of the Little Leather Library have such confidence in the desire of the public to possess works of this character, and also in the ability of the public to discern unusual book values, that they ship free the complete set of sixty volumes to any person, for five days' examination. They do not require the payment of any money in advance. If the books do not meet the expectation of the buyer, they may be returned within five days after delivery.

With each set of sixty books, a handsome mahogany or quartered oak book-rack is given free. This is attractive enough to ornament any library table. The publishers are perfectly willing to stand the expense of shipping charges to points within the United States, to anyone desirous of seeing these books. If they are not wanted when they are seen, not the slightest hesitation may be felt in sending them back, within the time allowed for examination. It is only necessary to send your simple request to the Little Leather Library, 52 Mercantile Bldg., 23d St., New York, or for convenience, use the blank form below.

Why Some Foods Explode in the Stomach

By WILLIAM ELDRIDGE

"THE combinations of food that most people eat three times a day inflict nothing less than a crime against their health and are the direct cause of 90 per cent of all sickness."

This is the rather startling statement of Eugene Christian, the famous New York Food Scientist whose wonderful system of corrective eating is receiving so much eager attention throughout the Nation at the present time

According to Eugene Christian we eat without any thought of the relation which one food has to another when eaten at the same time. The result is that often we combine two foods each of great value in itself, but which when combined in the stomach literally explode, liberating toxins which are absorbed by the blood and form the root of nearly all sickness, the first indications of which are acidity, fermentation, gas, constipation, and many other sympathetic ills leading to most serious consequences.

All of this, states Eugene Christian, can be avoided if we would only pay a little attention to the selection of our daily menus instead of eating without any regard for the consequences.

This does not mean that it is necessary to eat foods we don't like; instead Christian prescribes meals which are twice as delicious as those to which we are accustomed.

Not long ago I was fortunate enough to be present when Eugene Christian was relating some of his experiences with corrective eating to a group of men interested in dietetics, and I was literally amazed at what he accomplished with food alone and without drugs or medicines of any kind.

One case which sticks in my mind was that of a mother and daughter who went to him for treatment. The mother was forty pounds overweight and her physician diagnosed her case as Bright's Disease. She had a sluggish liver, low blood pressure and lacked vitality. The daughter had an extreme case of stomach acidity and intestinal fermentation, was extremely nervous, had chronic constipation, and was 30 pounds underweight.

Christian prescribed the proper food combinations for each. Within a few weeks all symptoms had disappeared, and within three months the mother had lost 33 pounds and the daughter had gained 26 pounds, and both were in perfect health —normal in every particular.

Another case which interested me greatly was that of a young man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation resulting in physical sluggishness which was naturally reflected in his ability to use his mind. He was twenty pounds underweight when he first went to see Christian and was so nervous he couldn't sleep. Stomach and intestinal gases were so severe that they caused irregular heart action and often fits of great mental depression. As Christian describes it he was not 50 per cent efficient either mentally or physically. Yet in a few days, by following Dr. Christian's suggestions as to food, his constipation had completely gone, although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks every abnormal symptom had disappeared—his weight having increased six pounds. In addition to this he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

But perhaps the most interesting case that Christian told me of was that of a multi-millionaire—a man 70 years old who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago and rheumatism. For over twenty years he had suffered with stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition—all caused by the wrong selection and combination of foods. After six months' treatment this man was as well and strong as he had ever been in his life.

These instances of the efficacy of right eating I have simply chosen at random from perhaps a dozen Eugene Christian told me of, every one of which was fully as interesting and they applied to as many different ailments.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a little course of lessons which tells you exactly what to eat for health, strength and efficiency. This course is published by The Corrective Eating Society of New York.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons.

Reasons are given for every recommendation based upon actual results secured in the author's many years of practice although technical terms have been avoided. Every point is explained so clearly that there can be no possible misunderstanding.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, because every possible point is so thoroughly covered that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write The Corrective Eating Society, Dept. 42, 460 Fourth Ave., New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will either return them within that time or remit $3, the small fee asked.

Please clip out and mail the following form instead of writing a letter, as this is a copy of the official blank adopted by the Society and will be honored at once

CORRECTIVE EATING SOCIETY, Dept. 42, 460 Fourth Avenue, New York City

You may send me prepaid a copy of Corrective Eating in 24 Lessons. I will either remail them to you within five days after receipt or send you $3.

Name..... Address.....

her subject is certain, and, as in the few excellent words on the Altar of the Dead, she can give convincing reason for the faith which is in her. She comments neatly on his later style of English but her quarrel, in the considerable instances in which she does quarrel, seems to be that the characters do not act in the given circumstances as she would have acted. The conduct of Isabel in "The Portrait of a Lady," for instance, is suggestive of a "nincumpoop." This critic's difficulty, even to the conservative lover of James, who shares her annoyance at the splitting of infinitestimal hairs. is that, in a number of his works, she fails to perceive or, if she perceives, rejects, what seems to us the theory of life underlying all of his writing, that is, the necessity, and the beauty, and, at last, the satisfaction of renouncement.

Henry David Thoreau, by Mark van Doren. Houghton, Mifflin Company. $1.25. *James*, by Rebecca West. Henry Holt & Co. 50 cents.

MONEY AND WAR FINANCE

Hartley Withers, sometime financial writer for the London *Times* and an authority of weight, wrote a book in 1909 on the *Meaning of Money*, that is, the term as used in the large and manifold financial operations of the day, in exchange, loans, reserves and deposits. It is a text book on the "money market," not profound and fundamental as is Bagehot's "Lombard Street," but more popularly written—almost sprightly in spots. The fourth edition is just issued. *International Finance* was written by Mr. Withers in 1916 at the instance of the Council for the Study of International Relations. With a twinkle in his eye the author says: "Perhaps I have a weakness for financiers, but if so it is entitled to some respect, because it is based on a closer knowledge of them than is owned by most of their critics." He finds "high finance buffeted by men of war and men of peace with a unanimity that must puzzle it." The war has called in Europe for the concentrated attention of capital; international finance has reached staggering proportions. The *modus operandi* of it all is Mr. Withers' important theme, while to illustrate it he draws from the financial history of Egypt, Honduras, Brazil. The patriotic service of the small capitalist, the man with a savings bank account, is brought out in his view that capital deserves its reward of income, that it may be called stored labor, and that capitalism usefully permeates society. At some length he deals with Scott Nearing's judgment in this matter. It is a readable and profitable book.

Time was, we recall, when many rested comfortably in the belief that no great overwhelming war could shake the world—"the bankers would not allow it." The destructiveness of modern weapons and the expense of them were so appalling that mankind would not be again drawn to a great war. All signs save the accumulation of weapons and soldiers, and possibly human nature acting nationally, have failed. So we need not be surprized to find the soundest financial writers feeling their way with

caution. Mr. Noyes found it necessary to rewrite his current magazine comment when he came to include its substance in his book *Financial Chapters on the War*. This is a history of the greatest of panics; of the quick, vigorous measures to surmount it; of the national and international loans by which the war has been and is financed. To us the most valuable if not the most interesting part of the book lies in the concluding chapters on finance and economics after the war and as affecting America. Here, while he states the uncertain problems of emigration, labor and woman's entrance into the industrial field, and recognizes the temporary element in our prosperity, Mr. Noyes expects that the United States will avoid economic disaster, and much more, even being the strongest nation in the money market of the world.

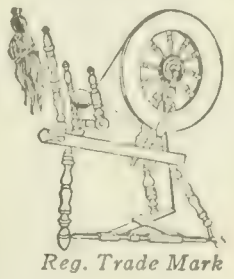
The Meaning of Money, International Finance, by Hartley Withers. E. P. Dutton & Co. $1.25 each. *Financial Chapters on the War*, by A. D. Noyes. Charles Scribner's Sons. $1.25.

"WHAT FOOLS WE MORTALS BE"

The Intelligence of Women is a collection of feminist essays by W. L. George which might as appropriately be called "The Lack of Intelligence of Human Beings with Especial Reference to Sexual Relationships." At first, we are quite upset by the author's assurance, for he does not argue, he tells. But, if we are good-natured enough to let him have his way, we soon discover his delightful sense of humor and cleverness in the presentation of his—arguments is not the right word, finalities would be better—which make us like him very much. We even thank him for making his thoughts more vivid by occasional exaggerations and we do not mind if at times he seems somewhat illogical, for the book has the tonic quality of first rate conversation.

The Intelligence of Women, by W. L. George. Boston, Little, Brown & Co. $1.25.

LINCOLN AND OTHERS



For a short life of *Abraham Lincoln*, that by Brand Whitlock, originally one of the Beacon Hill Biographies, is of the best. It is vivid, unexaggerated, human, well balanced, and can be read at a sitting. (Boston: Small, Maynard & Co., $1.)

A. J. Dittenhoefer, who worked in both the Lincoln campaigns, gives his recollections of the men and incidents of those stirring times. The little book, *How We Elected Lincoln*, shows vividly how the candidate appeared to the public in the first campaign and how slowly the sense of his greatness came even to his supporters. (Harper & Bros., 50 cents.)

The story of *Charles Frohman, Manager and Man*, by Isaac F. Marcosson and Daniel Frohman, is a very human, interesting, somewhat too detailed chronicle of "the man who controlled and directed hundreds of theatrical productions, gave employment to thousands of actors in this country, England and France, and ruled the destinies of scores of theaters—and who never broke his word." (Harper & Bros., $2.)

Mrs. Reginald de Koven has collected the legend and history of the *Counts of Gruyere*, and made thereby a study of one of Switzerland's most quaint and lovely, but less visited spots. The photographs show the wonderful little hill town standing today precisely as it stood centuries ago, and there is a charming translation of the ancient herdsman's song that still

Dress Linens *and* Cottons
For Season 1917

Reg. Trade Mark

NOTWITHSTANDING the conditions in the European markets we have secured a most remarkable assortment of French, English and Swiss Novelties, and in addition we will show the choicest products of American manufacture, some of which compare favorably with the foreign-made fabrics.

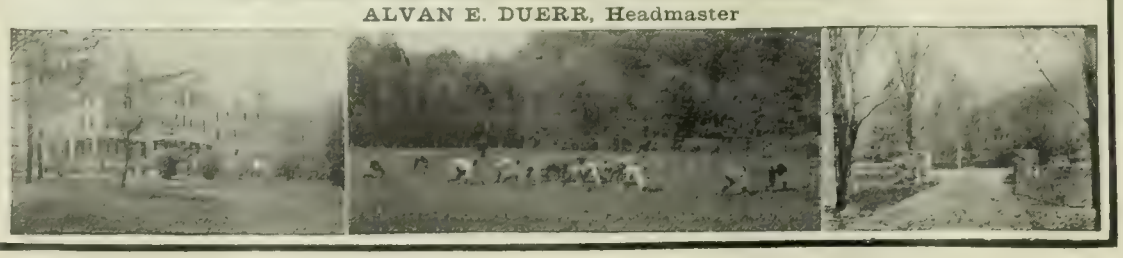
THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTIETH YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.



LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision: hiking, woods life.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

sounds on the surrounding hillsides. (Duffield and Co., $2.)

A new edition of *The Life of Francis Thompson*, by Everard Meynell, has just been published. There could hardly be a more intimately authentic biography of the great Catholic poet "who carried dignity amid all vicissitudes" than this one written by the son of his "discoverer" and friend. (Charles Scribner's Sons, $2.)

A Dreamer of Dreams, by Oliver Huckle, is a story of the life of "Will Penn, the Quaker," as it is told in an old journal found in a chest at Worminghurst, England, and thought to be the journal of Guli Springett, Penn's first wife. It is a quaint, old-fashioned, loving account of a great life. (T. Y. Crowell Company, $1.25.)

Doctor Luther, by Gustav Freytag, is a translation of that well known author's sketch of Martin Luther in his "Pictures of the German Past" of half a century ago. This brief, readable and appreciative life of the great reformer is a contribution to the Reformation Quadri-Centennial celebration to come next fall. (Philadelphia: Lutheran Publication Society, $1.)

Clara Endicott Sears has done service to the student of religious manifestations as well as to those interested in our early social development by her *Gleanings from Old Shaker Journals*. Illustrated by quaint wood cuts and by portraits of the brethren and sisters, the account of the little understood beliefs and inner life of these devout and lovable people is full of pathetic interest. (Houghton, Mifflin Company, $1.25.)

PLAYS AND STORIES

The Brown Mare, by Alfred Ollivant, is a collection of stories of the war, mostly of the war and people in England. They are very simple tales, told in a direct and simple style that is curiously forceful and poignant. (A. A. Knopf, $1.)

Recalling in the delicate allegory Olive Shreiner's "Dreams" comes *The Little Boy Out of the Wood*. These are "dream plays," tragic and comic, and exquisite in workmanship, by Kathleen Conyingham Greene. (John Lane Company, 75 cents.)

Drake, By George! by John Trevena, has to do with two vague and ineffectual sisters and their nephew, a scapegrace with a decided disaffection for work. Obviously—too obviously—this book is meant to be humorous. (A. Knopf, $1.50.)

Possibly children not "Kiltartan" would find difficulty in following all the joyous complications of Lady Gregory's charming, whimsical folk-lore play, *The Golden Apple*. But children of larger growth will delight in its charm of phrase, its shy humor and its bubbling youth. (G. P. Putnam's Sons, $1.25.)

In *The Klondyke Clan*, by S. Hall Young, we have a story of the adventures of several uncommonly good and lovable people during the days of the gold rush. We should like to eat sourdough bread with the Parson or Long Sandy. The author has lived many years in Alaska. (F. H. Revell & Co., $1.35.)

Mrs. Humphry Ward's *Lady Connie* is the conventional lady of all romance. She is young, rich, distinguished, beautiful, fascinating to men. Her omnipotence in arranging the lives of other people is matter for wonder—or scepticism. She is a pleasant person, and quite improbable. (Hearst's International Library Company, $1.50.)

Helen, by Arthur Sherburne Hardy, is the story of a girl whose sudden acquisition of a fortune sets her free from a wearisome life with an American grandmother and introduces her to a society of diplomats and French aristocrats under the chaperonage of an attractive princess. A pleasant love story. (Houghton, Mifflin Company, $1.35.)

Jennette Lee's *Unfinished Portraits* are stories of a number of the world's geniuses, Chopin, Titian, Bach, Albrecht, Durer and others, told with eloquent humanity and

a very evident reverence for their achievements. Not the least interesting is "The Lost Monogram," which has to do with Durer's face of the man of sorrows. (Charles Scribner's Sons, $1.25.)

A masque easily adapted to out or indoors, to large or small company, and suitable for patriotic celebrations, is *America's Gifts to the Old World*, by H. W. Atwater and C. F. Langworthy. This personifies the different foodstuffs and other valuables discovered in the Western Hemisphere, a list that lends itself to picturesque treatment and should serve well for history and geography classes. (Baltimore: Home Economics Association, 50 cents.)

It is difficult to write judiciously of L. M. Steele's novel, *Dr. Nick*. Parts of this story of a young doctor and a young nurse are unduly emotional, strained, perhaps even unsound. Parts elude us by their vague transcendentalism. But the tragedies enacted at Hobbes Hospital have a real power. Old Dr. Rideau is a remarkable character and there is much of profound truth and prescient beauty in what he says about women. (Boston: Small, Maynard & Co., $1.40.)

ON THE WAY TO HEALTH

A sane and safe book on *Home Care of Consumptives* is by R. L. French, one time secretary of Kentucky's tuberculosis commission. Its suggestions are especially planned for those of limited means and give special attention to danger of infection. (G P. Putnam's Sons, $1.)

A carefully planned and clearly explained and illustrated series of exercizes, for use alone and without apparatus, is set forth in *Physical Training for Boys*, by M. N. Bunker. The style of the text is a bit forced but the advice is excellent. (Boston: Lothrop, Lee and Shepard, $1.)

Personal Health, by William Brady, M.D., is an exceptionally good book on hygiene for the general reader. Correspondence with readers of his syndicated "Health Talks" has taught the author to present his subject matter in clear, forceful English. (W. B. Saunders Company, $1.50.)

The Fight for Food, by Leon A. Congdon, Assistant Chief Food Inspector of the Kansas State Board of Health, contains important and timely information on the subject of foods, but the author evidently knows more about his subject than he does about the art of writing a book. (Philadelphia: J. B. Lippincott Company, $1.25.)

Tho anyone suffering from frequent headache should consult a physician since headaches arise from various causes, yet *Headaches and How to Prevent Them*, by Dr. W. H. Riley, has much wise advice and a table of foods and the values, useful to anyone planning a diet. (Good Health Pub. Co., Battle Creek, Mich.)

In *The Sexes in Science and History*, Eliza Burt Gamble labors to show what is quite obvious—that, with respect to the functions of motherhood, females are more highly specialized than males. Her conclusion is that, since woman is man's superior as a female, it follows that she is his superior as a human being! (G. P. Putnam's Sons, $1.50.)

One of the pioneers in the fight against the malarial mosquito, Dr. Malcolm Watson, District Surgeon of the town of Klang, Federated Malay States, has given a valuable record of personal observations in his *Rural Sanitation in the Tropics*. It is a very readable book, well illustrated, with eight chapters on the Panama achievement. (E. P. Dutton & Co., $4.25.)

An excellent introduction to the study of psychoanalysis is given by Dr. W. A. White in his *Mechanisms of Character Formation*. General students of biology and psychology have been much interested in this new system of cure for nervous disorders, which has thrown such a flood of light also on normal mental development. One will find here a very readable and able presentation of the present status of the subject. (The Macmillan Company, $1.75.)

How I Raised My Earnings from $30 to $1000 a week

The Story of a Young Man's Remarkable Rise, as Told by Himself.

THREE YEARS AGO I was earning $30 per week. With a wife and two children to support it was a constant struggle to make both ends meet. We saved very little, and that only by sacrificing things we really needed. Today my earnings average a thousand dollars weekly. I own two automobiles. My children go to private schools. I have just purchased, for cash, a $25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to, and I do less work than ever before.

What I have done, anyone can do—for I am only an average man. I have never gone to college, my education is limited, and I am not "brilliant" by any means. I personally know at least a hundred men who are better business men than I, who are better educated, who are better informed on hundreds of subjects, and who have much better ideas than I ever had. Yet not one of them approaches my earnings. I mention this merely to show that earning capacity is not governed by the extent of a man's education, and to convince my readers that there is only *one* reason for my success—a reason I will give herein.

One day, a few years ago, I began to "take stock" of myself. I found that, like most other men, I had energy, ambition, determination. Yet in spite of these assets, for some reason or other I drifted along without getting anywhere. My lack of education bothered me, and I had thought seriously of making further sacrifices in order to better equip myself to earn more. Then I read somewhere that but few *millionaires* ever went to college. Edison, Rockefeller, Hill, Schwab, Carnegie—not one of them had any more schooling than I had.

One day something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of little consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another I couldn't for the life of me make the decision I knew was right.

I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to *discover* myself. Along towards dawn I resolved to try an experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to put it "over"—that I would not be "afraid" of myself or of things or of others.

With this new purpose in mind I applied myself to finding out something more about the will. I was sure that other men must have studied the subject, and the results of their experience would doubtless be of great value to me in understanding the workings of my own will power. So, with a directness of purpose that I had scarcely known before, I began my search.

The results at first were discouraging. While a good deal had been written about the memory and other faculties of the brain, I could find nothing that offered any help to me in acquiring the new power that I had hoped might be possible.

But a little later in my investigation I encountered the works of Prof. Frank Channing Haddock. To my amazement and delight I discovered that this eminent scientist, whose name ranks with James, Bergson and Royce, had just completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, "The will is just as susceptible of development as the muscles of the body!" My question was answered! Eagerly I read further—how Dr. Haddock had devoted twenty years to this study—how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of training.

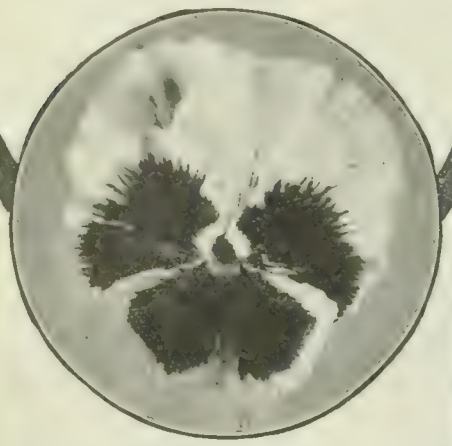
It is almost needless to say that I at once began to practice the simple exercises formulated by Dr. Haddock. And I need not recount the extraordinary results that I obtained almost from the first day. I have already indicated the success that my developed power of will has made for me.

I understand that Professor Haddock's lessons, rules, and exercises in will training have recently been compiled and published in book form by the Pelton Publishing Co. of Meriden, Conn., and that any reader who cares to examine the book may do so without sending any money in advance. In other words, if after a week's reading you do not feel that this book is worth $3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on: the law of great thinking; how to develop analytical power; how to perfectly concentrate on any subject; how to guard against errors in thought; how to develop fearlessness; how to use the mind in sickness; how to acquire a dominating personality.

Some few doubters will scoff at the idea of will power being the fountainhead of wealth, position and everything we are striving for, and some may say that no mere book can teach the development of the will. But the great mass of intelligent men and women will at least investigate for themselves by sending for the book at the publishers' risk. I am sure that any book that has done for me—and for thousands of others—what "Power of Will" has done—is well worth investigating. It is interesting to note that among the 150,000 owners who have read, used and praised "Power of Will," are such prominent men as Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson of Wells-Fargo Express Co.; E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the form below, if you prefer, addressing it to the Pelton Publishing Company 23-B Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life, as it has meant to me and to so many others.

PELTON PUBLISHING COMPANY
23-B Wilcox Block, Meriden, Conn.



I will examine a copy of "Power of Will" at your risk. I agree to remit $3 or remail the book in 5 days.

INDEPENDENT OPINIONS

We have received communications from friends of Governor Hunt of Arizona questioning the accuracy of the current newspaper accounts of the election controversy in that state. As The Independent printed an item on the subject in its "Story of the Week" of January 15, 1917, an extract from one of these letters may prove of interest to some of our readers.

While the returns from the County Supervisors gave Mr. Thomas E. Campbell, Republican candidate for Governor, a majority of thirty votes, the recount of the ballots (at present technically called an "inspection of the ballots") gave Governor Hunt a majority of ninety-six votes the evening of December 30, 1916; and as the section of the law creating a State Canvassing Board consisting of the Governor, Secretary of State, and the Chief Justice of the Supreme Court, empowered to issue certificates of election, was declared unconstitutional by the State Supreme Court some time in August, 1913, it would seem reasonable for Governor Hunt to refuse to turn his office over to Mr. Campbell in view of his majority on January 1.

Governor Hunt did not lock Mr. Campbell out of the Capitol. Governor Hunt's *office* was closed on January 1, as is customary on Sundays and legal holidays, and a Deputy Sheriff was stationed outside the door to prevent the forcible taking of the office by Mr. Campbell, as had been planned. Mr. Campbell and a number of his friends entered the Capitol the morning of January 1, and Mr. Campbell made an address from the balcony on the second floor to the "crowd" (about 500 people) assembled on the grounds in front of the Capitol. On Tuesday, January 2, Mr. Campbell called on Governor Hunt, was received courteously; but, naturally, Governor Hunt did refuse to recognize Mr. Campbell's so-called credentials.

M. I. PLANT

Phoenix, Arizona

We are glad to hear from the President of the California Avocado Association that he approves of our efforts in favor of a palatable name for that delectable fruit. We hope all our readers will call for vignas at the best hotels.

In view of your editorial in the issue of November 13, on "The Taste of a Name," and the various comments in a later issue of December 25, I desire to make a few comments especially for the benefit of some critics that apparently do not realize that even a name in the case of fruits and vegetables may mean success or failure.

The avocado is coming to be grown extensively in California and Florida and soon this delicious fruit will be seeking new markets. According to reports, the accuracy of which I cannot now confirm, 10,000 dozen avocados from Florida have been sold in the Los Angeles markets this season at prices of from 50 cents to $1.25 each. Aside from this a much larger number of homegrown California fruits have been sold together with some small shipments from Tahiti. This, it must be remembered, is in a market where all sorts of fruits are offered in abundance far surpassing most markets of the East.

For this fruit, a native of Mexico and Central America, cultivated by the Indians before Columbus landed in America, and first described by Oviedo in a report to Charles V of Spain, the name "avocado" has been used in English speaking countries since the sixteenth century. "Avocado" is the name adopted by the growers of California and Florida and by all students. Market men, however, have gotten into the habit of calling them "alligator pears" or more commonly "gaters" or merely "pears." Such names are confusing, illogical and offensive. They do not tend to encourage the use of this really good product. The reader will be interested in knowing that in food value the avacado ranks the highest of any fruit in our markets, the fat or oil content averaging about 25 per cent in the good varieties. Is it not the duty of all citizens interested in developing our industries to aid even in the small way of using a proper and attractive name?

If there is nothing in a name then tell me why has not the cowpea, a very delicious vegetable, come into general use? It is a fine food for cows, but for us—no. If these cowpeas were called "Vignas," using the scientific name, I doubt not they would be served regularly in the best hotels of the land.

H. J. WEBBER
Dean of the Graduate School of Tropical Agriculture, University of California.

Riverside, California

In your issue of December 25, replying to Mr. Aberdeen, Jr. (pp. 555), you ask, "Do you suppose that Germany would have entered upon the war if she had known that she would have against her the nine nations named as well as all the neutrals?"

May I ask, why not suppose such a thing? In the first place is it reasonable to believe that the neutrals could have added any great strength to the Allies which would have materially changed the progress of the present war? And in the second place, is it possible to believe that a League to Enforce Peace, made up of all the world's powers, could maintain its unity in any such crisis as the world faced at the beginning of this war? Would it not be probable, as well as possible, that the paper bond of union might easily degenerate into a mere scrap of paper?

Permit me to express the opinion that no League to Enforce Peace will ever enforce peace, till men have become possest, in larger measure than at present, of the spirit of brotherhood, born of a real love for one's neighbor.

F. A. HAWLEY

Modena, New York

We do not profess to understand the mind of Germany or to forecast her action in a hypothetical case, but we believe that a League to Enforce Peace would have served as a deterrent influence at any rate. It is true that the United States, being without an army, could not, for the first year, have been of any more use to the Allies than she has been, but if Denmark, Holland, Switzerland, Norway, Sweden and Rumania had even put an embargo upon the export of supplies to Germany she would speedily have run short of food and metals.

We quite agree that the world will never be free from danger of war until the Christian spirit of brotherhood prevails universally, but in the meantime—and it seems likely to prove a long meantime—the League to Enforce Peace seems to us to offer the most practical preventive.

PEBBLES

Fish—I have a friend who suffers terribly from the heat.
Squirrel—Where does he live.
Fish—He isn't living.—*Awgwan.*

Child—Father, what is a vacuum?
Parent—Vacuum; why, ain't you never learnt that at school? It's where the Pope lives.—*Passing Show.*

A nickel's all right to have, of course,
But it's dimes I'm wanting today;
For a nickel is only a nickel,
But—a dime is a photoplay.
—*Pelican.*

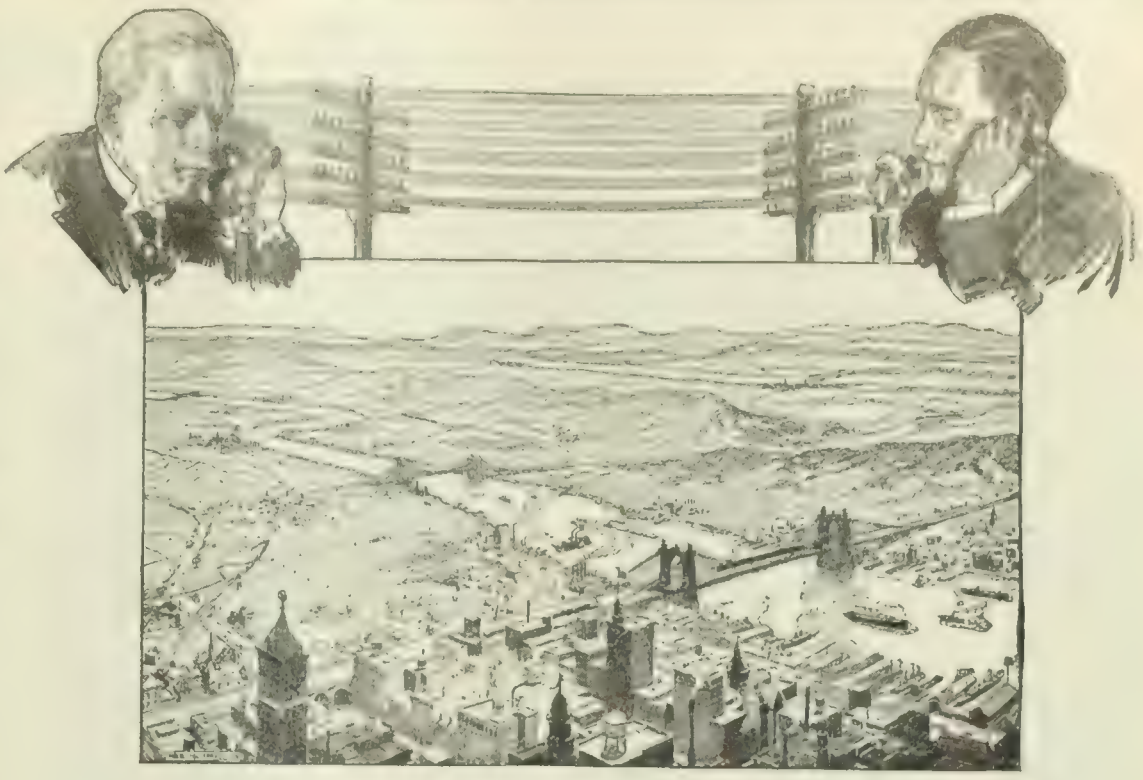
Harry—And what changed your mind about committing suicide? Was it some spiritual message?
Carrie—Naw, I'd a had to put another quarter in the gas meter.—*Pitt Panther.*

"I never stooped to theft," said Bill,
"For it has been my lot
To be a second story man,
And climb for all I got."
—*Cornell Widow.*

"Father," said Chester, "what is a diplomat?"
"A diplomat, my son," answered the father, "is a man who remembers a woman's birthday and forgets her age."—*New York Times.*

Mother—Sylvester, what are you doing to that cat to make him holler that way? Are you pulling his tail?
Sylvest—No Ma'am, I ain't pulling his tail. I'm just holding it. He is doing all the pulling.—*Awgwan.*

She—What does it mean when the name of a stock in the stock market quotations has the letters "w. i." after it?
He (who didn't know himself until he bought on a five-point margin)—Wasted income, as far as I can discover.—*Puck.*



"You see," said the country editor, "I have printed your poem." "Thank you," responded the poet. "I suppose I shall receive remuneration according to your usual tariff?" "Tariff? My good man, poetry is on the free list."—*Louisville Courier-Journal.*

Marie hit upon a problem the other day more perplexing than George II's apple dumpling. She peered between the uncut leaves of a magazine and said:
"Mother, how did they ever get the printing in there?"—*Publishers' Weekly.*

"Yes," said Salkover, "the audience was very enthusiastic over my speech; when I got thru they yelled, 'Fine! Fine!'"
"Well," replied Doberg, "it's a good thing you stopped when you did. If you had spoken any longer they might have yelled 'Imprisonment!'"—*Judge.*

Boston Mother—Do you know Willie Bump?
Little Son—Sure. I soaked that bone-headed shrimp on the beezer the last time I seen him.
Boston Mother—What awful language! You should say "I soaked that bone-headed shrimp on the beezer the last time I saw him.—*New York Times.*

A Bee-Line to Everyone

Straight as the bee flies and quick as though caught by lightning the voice in the telephone carries near and far over this Nation.

This marvelous instrument is the pre-eminent vehicle of speed and speech. Railroads cover the country, but your traveler often must alight with bag and baggage and change trains to get to a given point. Railroads reach cities, towns and villages. The telephone reaches the individual.

The telephone offers continuous passage for the voice and unbroken connections to the uttermost places because it is a united System co-ordinated to the single idea of serving the entire people of this country.

It has been a powerful factor, along with the transportation systems, in the magnificent achievements of the United States—helping to prepare the way where latent possibilities of mines, forests and farms were to be developed

The continued growth of our national prosperity depends in a great measure upon the maintenance and continued growth of the utilities which furnish the means of intercourse and interchange. They are the indispensable servants of the individual, the community and the entire nation.

MR. PURINTON'S EFFICIENCY QUESTION BOX

388. Earnest Reader. "I am a university student, and must devote much of my time to outside work, in order to defray expenses. I find that my studies suffer, presumably from lack of time, brute force and awkward methods. Any suggestion you can offer I shall greatly welcome."

Stop worrying over your scholastic reputation—you are gaining a broader, sounder education than most of the brilliant youths with higher grades. In our opinion, a grade of 75 is worth more to a student who works his way thru college than a grade of 95 to a bookworm who loafs on his father's money.

Suggestions: Do your studying early in the morning, when your mind and body are most alert; physical effort can wait, without much loss from afternoon-fatigue. Explain your situation to each professor, ask him how you may study more effectively in the short time available. Typewrite a statement of all the money-making things you can do that might be desired—then leave application with Y. M. C. A. officials, professors or their wives, boarding and fraternity houses. Investigate financial opportunities for students advertised in popular magazines, doubtless on file in your college library.

---

389. Mrs. H. V. S., Illinois. "I have read the statement of a German doctor, that the remarkable efficiency of the German army is due largely to the systematic health training and teaching given German youths from babyhood. (a) How do you regard this statement? (b) How can we profit by it? As a loyal American mother of three boys, I would like to do my share in a health preparedness program. Will you please name a few comprehensive works on health, hygiene, food, exercize, etc., particularly adapted to the home circle?"

(a) The German doctor is right. No other country in the world so fully and continually oversees the health of its native citizens. One health magazine in Germany has a million circulation—larger than all the health periodicals of the United States put together. If you read German, ask the Editor, *Der Hausdoktor*, Butler, New Jersey, for a list of good books in the original.

(b) Among the recent compendiums are the following: "Physical Educator," by Eustace Miles, the famous English athlete and author ($3); "Natural Methods of Healing," by F. E. Bilz, director and founder of one of the largest health resorts in Germany (two volumes, $10); "Encyclopedia of Physical Culture," by Bernarr Macfadden, one of the most widely known hygienists in America (five volumes, $22.50). Any of these may be had from Efficiency Publishing Company, Woolworth Building, New York.

---

390. A Minister from California. "The Independent Efficiency articles have been very stimulating to my wife and myself. I have been a public official for ten years along social service lines and am again in the ministry. (a) Where can I find good literature on efficiency in church work? (b) What do you suggest to improve the memory? Inability to remember people and names has been my most humiliating weakness, and I want to overcome it."

(a) Write for lists of publications to Laymen's Efficiency League, 49 East Twenty-fifth street; to Laymen's Missionary Movement, 1 Madison avenue; to Federal Council of the Churches of Christ in America, 105 East Twenty-second street; to Federation of Churches, 200 Fifth avenue; to American Institute of Social Service, Bible House; to Church Periodical Club, 281 Fourth avenue; to Church and School Social Service Bureau, 80 Fifth avenue; all of New York; and to International Sunday School Association, Mallers Building, Chicago. also to publication society, national headquarters, of your denomination.

(b) William Walker Atkinson's book "Memory; How to Develop, Train and Use It" ($1) may be had from Efficiency Publishing Company, Woolworth Building, New York.

391. Prof. W. C., Virginia. "The Independent is a grand paper. Your department has interested me very much. I am persuaded that you can help me to gain my ends. I am a college graduate three times, have taught for sixteen years, principally in high schools. I want a broader field, such as that of a female college. Have not been successful thru agencies. Do not know how to talk to a Board of Education, or to apply effectively in writing. Please advise me how to secure the position I want."

First, *prepare* for it. We don't believe you have done this. A high school and a woman's college are two very different propositions. Do you know the training, qualifications and equipment you will need in your "broader field"—and are you ready? Don't be so anxious about a position, learn how to render a great service; put your mind and heart on the problems of the real education for women, solve these, and offer *their solution*, not your application, to the powers in charge of girls' schools. Why not get an introduction to a college president nearby, and ask him for counsel and criticism?

You would probably be helped by these books, in making application: "How to Get a Position," by S. Roland Hall (price 50 cents), Funk & Wagnalls; "How to Write a Business Letter," (price $1.00) by Charles R. Wiers, West Delavan Avenue. Buffalo, New York.

---

392. Mrs. G. A. V., North Dakota. "We have just had our house wired for electricity. I would like to know (a) the most efficient bulbs to use; and (b) the function and location of the duplex bulb, mentioned in one of your efficiency articles."

(a) The "Mazda" bulb is considered one of the best for regular use; obtain particulars from General Electric Company, Schenectady, New York.

(b) The "Hy-lo" bulb is a popular duplex; it enables you to save current by dimming the light when the full current is not needed—in effect you "turn down the electricity" as you would turn down the gas. Write for this bulb and other electrical equipment to any large supply house, such as Manhattan Electrical Supply Company, 17 Park Place; or Stanley and Patterson, 23 Murray Street; or E. B. Latham & Company, 4 Murray Street; or Metropolitan Electrical Supply Company, 76 West Thirty-sixth Street, all of New York.

---

393. A Reader from Ohio. "I have been greatly helped in reading your articles, and ask if you have them in book or pamphlet form, also price of same. Four years ago I was deserted by my husband, left penniless, broken in body, mind and soul, with two little girls to support. These four years have been a revelation to me. and articles like yours make me want to search deeper into things, find the possibilities within myself, and attain my best daily development for the sake of my little girls."

In the face of what you have gone thru, any suggestions by efficiency counselors would seem trivial and presumptuous. A record of triumph such as yours means a wonderful knowledge of spiritual force; and that is as far above so-called "efficiency" as light is above the eye that sees, or the hand that works by its help.

We are very glad tho, to be able to lend you a hand along the way. You would probably take special interest in my book "Efficient Living," and my booklet "Daily Guide to Efficiency." These publications (price $1.35, and 25 cents, respectively) may be had, with others, from Efficiency Publishing Company, Woolworth Building, New York.

---

394. Mrs. H. E. B., Washington, D. C. "Your fine article on *The Efficient Housewife* mentioned a dish washer. I suppose, then, there is one that is really worth buying. Will you please tell me where I can find out about it? Your efficiency helps are really worth while."

Queries on household equipment should be referred to such expert counsels as Good Housekeeping Institute, 128 East Twenty-third Street, New York; Housewives League, 25 West Forty-fifth Street, New York; Household Editor, *The Ladies World*, McClure Building, New York; *Journal of Home Economics*, Baltimore, Maryland; Household Experiment Station of Mrs. Mary Pattison, Colonia, New Jersey.

We do not often advise a mechanical dishwasher except for a large family. Any large electrical supply company, or local firm of electrical engineers or contractors, should be able to furnish and install a dish-washing appliance. If not, write to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pennsylvania; or to Western Electric Company, 463 West Street, New York; or to Ohio Electric Works, Cleveland, Ohio.

Self-Poisoning—the Mother of Maladies

IS THERE a *single* source—one sole cause—from which a majority of all human ills and diseases spring and develop?

Are we harboring, right within our bodies, a veritable "mother" of maladies, a poison distillery which Nature fights desperately but unsuccessfully to destroy.

An answer to this very interesting question was sought by the Royal Society of Medicine of London at a recent conference and the subject of Colon poisoning and its effects was discussed by fifty-seven eminent physicians of the kingdom.

Startling indeed were some of the new truths established in this great clearing house of medical knowledge and experience. For example, it was shown that no less than thirty-six poisons, many of them virulent, are generated in accumulations of the body's waste matter retained in the Colon.

Already this new discovery has had a far-reaching effect and those physicians who keep abreast of every advance in scientific knowledge are revolutionizing their methods for diagnosing and treating such disorders and maladies as headaches, backaches, vertigo, lassitude, indigestion, and their attendant complications—neurasthenia, mental and physical exhaustion, high blood pressure, kidney and liver disorders, skin troubles and many more serious diseases.

Again and again, in its earnest and often enthusiastic quest for cures, medical science has drifted far afield, only to discover that the simple, fundamental laws of physiology could neither be changed or ignored. For as in every age, the simplest truths continue today the most difficult to recognize and to master.

The importance of dental cleanliness as a safeguard to health and protection against disease was understood by the ancient Egyptians. Strangely, it has remained for the present generation to find out that dental hygiene is no less essential to bodily health than is intestinal cleanliness. The perils presented by a clogged Colon, and the true character of auto-intoxication resulting from chronic constipation, are at last understood.

Auto-Intoxication (self-poisoning) is not a disorder of the stomach, as many have supposed, nor even of the smaller intestine. It is a condition that has its origin in the lower (large) intestine, the Colon, where processes of decay in its content of waste matter accumulations proceed rapidly. The poisons formed by this process are then absorbed through the mucous membrane into the blood.

Fortunately, in order to grasp and clearly understand the importance of this new scientific knowledge, a thorough knowledge of anatomy and physiology is not required.

Everyone knows how poisons in the blood act upon and affect all the organs and tissues of the body. Indeed, it may be said that disease, debility, nervous exhaustion and most minor disorders cannot exist and develop without these poisons to feed them, whereas Nature's work of repair is interrupted and stopped when such toxins multiply in the blood.

And anyone who has ever observed and inspected decayed articles of food outside the body, can readily understand how quickly the same process is set up and continued in a clogged Colon.

Professor Verchow, several years ago, in the course of hundreds of post-mortem examinations of the Colon, discovered that intestinal congestion prevailed universally, regardless of the immediate cause of death. Metchnikoff carried his investigations further and was first to declare that old age and dissolution, and finally death, are consequences of chronic constipation.

Constipation is not a new affliction of the human race, though its victims increase each year. The discovery of its true and sinister character, however, is new and no sufferer from ill-health can fail to be interested in a full report of the facts now established, which can be had for the asking.

Proper, natural functioning of the digestive organs, and particularly of the Colon, has always, by Nature's intent, depended upon muscular strength of the intestines. But the habits of life of present day men and women with their sedentary occupations, afford no exercise for the muscles of the abdomen. The business man and the housewife cannot spare time from daily duties for physical recreation. Compression of the bowels with corsets and belts all but paralyzes the Colon muscles. The habit of carelessness grows on us and we pay the price in sickness and often diseases that destroy health and efficiency. As a result most of us are half sick most of the time and wholly unfitted for our best efforts.

Exercise in the open air, long daily walks and the manual labor by which our grandparents easily induced normal, natural elimination of the

body's waste matter by the Colon—these are impossible for us. The pressing necessity for some other means for stimulating the bowels and relieving Constipation had led us into habits hardly less pernicious and dangerous than Constipation itself. The active agents on physics, laxatives, purges and other irritants, misnamed stimulants, are themselves virulent poisons readily absorbed into the blood through the numerous membranes of the alimentary canal and are universally condemned by medical practitioners except for emergency use. There is no such thing as a harmless physic.

A new method for restoring normal functioning power to the Colon has recently been perfected—a mechanical massage motor for vitalizing and stimulating the Colon muscles and giving immediate relief and permanent benefit. This new invention has been named the Kolon Motor.

The Kolon Motor is strictly scientific in its principle and is designed to give invigorating massage treatments directly to the Colon. Having for its face a plate or disc, curved and shaped to follow the course of the Colon in the abdomen, it is operated by two revolving handles. When the motor is suspended from a wall the patient's abdomen is placed against the plate which, by the turning of the handles, is given an oscillating motion that imparts to the intestine either a gentle or a vigorous massage as may be required. The effect is to stimulate the Colon to instant activity while also exercising and strengthening it and this local treatment is found even more effective than walking and other forms of bodily exercise. With Constipation overcome, Auto-Intoxication and its symptoms disappear.

A most valuable and interesting booklet, entitled Colon Cleanliness, has been published for free distribution by the Martin's Method, Incorporated, Dept. 52, 38 East Thirty-first Street, New York. No sufferer from chronic or intermittent Constipation should fail to read this booklet which contains much new information on the subject of Constipation, Auto-Intoxication and their effect on the system and general health. A copy of the booklet together with a complete description of the Kolon Motor and the simple directions for its use will be sent free and postpaid to anyone who will write for it, or simply mail the coupon below before the edition set aside for free distribution is exhausted.

MARTIN'S METHOD, INCORPORATED,
Dept. 52, 38 East 31st St., New York.

Without any obligation on my part you may send me a copy of the book "Colon Cleanliness."

The Market Place

STOCKS AND THE WAR

After many days of comparative dullness, the market for securities, on the New York Stock Exchange, was severely shaken on Thursday, the 1st, by a sharp downward movement, due to the publication in the morning of Germany's note, announcing her intention to use her submarines lawlessly and without restraint. In the full days of the preceding week the average daily transactions had been only 477,000 shares, and the market had not broadened in the three subsequent days before the note appeared. The total for the month of January was only 16,410,000 shares, following 32,700,000 in December and 34,000,000 in November. But on this Thursday the business done rose suddenly to 1,916,550 shares. On the week's first day there was a small average loss. Traders were guessing about the Steel Corporation's net earnings for the last quarter of 1916, which were to be made known on the 30th. All expected that they would exceed the preceding quarter's great profits, above $96,000,000. But the price of the company's shares, 130,000 of which changed hands, was lower by one point at the end of the day's session. On Tuesday the price average suffered little change. The weakness of New Haven Railroad stock gave rise to rumors that a receivership might be impending, owing to the fact that $45,000,000 of the company's notes would fall due two or three months hence. But there were authoritative denials, with assurances that the obligations would be met. The amount of the Steel Corporation's earnings was not known before the day's trading was finished.

An upward movement was expected by many on Wednesday, because the Steel Corporation's directors had not only reported that the quarter's net earnings were $105,968,000, but had also ordered an extra dividend of 1¾ per cent on the $508,000,000 of common stock, in addition to the regular payment of 1¼ per cent. But there was an average loss, and even the price of these steel shares—188,000 of which were bought, or one-fifth of the entire number that changed hands during the day—was reduced by nearly one point.

The fall of prices on Thursday, the 1st, was greater than that which followed, on December 21, the publication of President Wilson's peace note and the remark of Secretary Lansing that we had been on the verge of war. In

If You Knew What Foods?

If you knew the quantity of nourishment in different foods, you wouldn't need worry over the high cost of living. For—you would then know how to get all the nourishment you need *at very small cost.* If you also knew how to combine foods—that is, what foods eaten together "set well," you need never have indigestion, constipation or any of the headachy, stomachachy ills they lead to. A little knowledge—easy to get—would protect your health and pocketbook. This knowledge is in a book called "The New Cookery," written by Miss Lenna Frances Cooper, B. S.—graduate of the School of Dietetics at Columbia University and now Principal of the School of Home Economics. In "The New Cookery," Miss Cooper tells you what to eat for proper nourishment—for health and for economy. She also gives you 750 recipes for delicious home dishes with the scientific quantity of nourishment under each recipe. More than 400 pages, with numerous illustrations and all substantially bound for home and kitchen use. Price only $2. Send for the book today. You take no risk. For—if you are not entirely pleased and satisfied, you may return the book within five days and we will promptly refund your money. Thus, we allow you to be the judge. This book is *worth its weight in gold* to the housewife who wishes to feed her family for health—and economically. Order "The New Cookery" today—direct, or thru your regular bookseller, from—

GOOD HEALTH PUBLISHING CO.

FOR GIRLS

GREENWICH - - CONN.

The Ely Junior School

(Distinct from Upper School)

FOR GIRLS UNDER FIFTEEN

the first fifteen minutes after the opening there were declines of from 5 to 15 points. Industrials showed the largest reductions. Among them, in this first quarter of an hour, were the following: American Locomotive, 8; American Smelting, 7; General Motors, 11; Bethlehem Steel, 26; Republic Iron and Steel, 16; Steel Corporation, 13. At the beginning, 3,500 shares of Steel Corporation were sold ranging downward from 105 to 99, the closing price on the preceding day having been 112⅛. In the first two hours the transactions were 1,200,000 shares. Occasional rallies were succeeded by renewed exhibitions of weakness. While the expected effect of ruthless submarine warfare upon our export trade exerted a depressing influence, many were thinking that the United States might soon be drawn into the war. Bonds of the Anglo-French loan showed a loss of 1¼. In the outside market there was demoralization, and declines of from 20 to 100 in the shares of Standard Oil companies were seen. Prices of these shares had been rising. In the Stock Exchange list the net losses of railroad stocks were from 2 to 5 points, while those of industrials were much larger. Nearly one-third of the business was done in Steel stock, which closed at 102¾. This may be compared with 129¾ reached not long ago. On Friday, the 2d, a total of 1,249,000 shares showed continued activity, with further reduction of prices. Recovery early in the day gave way to a decline, due partly to rumors that submarines had sunk an American steamship. Steel shares fell to 100⅜.

At no other time since the exchange was reopened, a little more than two years ago, has the market been subjected to so severe a strain. Owing to declines and continued liquidation since the publication of a peace report in October last by a prominent banker, there has been a growth of strength. Weak holders have withdrawn or been forced out, on account of their losses, and recently there have been many sellers for a decline. Completion of their contracts by purchases, to "cover," has tended to prevent panic conditions.

WHEAT AND COTTON

Germany's note about her course hercafter in submarine warfare caused excitement and a fall of prices in the grain and cotton markets as well as on the Stock Exchange. The ruling price of wheat at Chicago had been about $1.75 a bushel, but sales for May delivery were made at $1.71 on the day before the note was published. On the 1st, when stock prices were going down in New York, the price of May wheat in Chicago was quickly reduced by 15 cents a bushel, but subsequent recovery made the net loss 8 cents. On the following day 2 cents more were cut off. Exports from this country and Canada for the preceding week had been 6,603,000 bushels, and the record shows a weekly average of 7,000,000 since the beginning of the year. Shipments may be prevented by the submarines. Other grains and provisions went down in

price with wheat. If ocean conditions had not been changed, prices probably would have advanced, for exports have been made at a rate that promised to exhaust the surplus of wheat before the harvesting of a new crop.

There was much excitement in the New York Cotton Exchange, where in ten minutes the price for May delivery fell from 17⅔ to 12½ cents a pound. On the second day there was a little improvement, to 14⅛ cents at the close. Here again there was fear that the export movement would be checked, and it was known that war risk insurance rates had been greatly increased. The Cotton Exchange in Augusta was closed and the members of it adopted a resolution asking the Exchanges in New York and New Orleans to take similar action. But they decided to keep on doing business.

THE STEEL MILLS

Convincing evidence of great prosperity in the steel industry can be found in the net earnings of the Steel Corporation, which were $105,968,000 in the last quarter of 1916, having risen to that sum from $85,817,000 in the third quarter, and $81,126,000 in the second. For the entire year the total was $333,624,000, which may be compared with $130,000,000 for 1915, and $71,000,000 for 1914. When the earnings were made known, on the 30th ult., the directors declared an extra dividend of 1¾ per cent, making 3 per cent for the quarter. It is predicted that the earnings for the quarter ending with March next will be even greater, because profits are now affected by higher prices. The Bethlehem Steel Company's net earnings last year were 286 per cent on its common stock of about $15,000,000, and on the year's last day its unfilled orders on hand amounted to $193,000,000. It has declared a stock dividend of 200 per cent and has also offered $15,000,000 of stock to shareholders at par. This company shows remarkable growth, its earnings have risen from less than 7 per cent in 1912 to 112 per cent in 1915, and 283 per cent last year. The market price of its shares advanced from less than 50 two years and a half ago to 700 at one time last year, but has since declined to 370.

Recent reports say that Germany's submarine note has not affected the steel mills unfavorably. Products are sold far ahead, and the demand from buyers in this country is steadily increasing. Deliveries are delayed by a shortage of railway cars. It is estimated that at the end of the present year new construction will have increased the steel-making capacity of the industry by 8,720,000 tons of annual output, or by 21 per cent. Ship plates are among the products sought here by builders in all parts of the world, for destruction of nearly one-tenth of the world's merchant ship tonnage has given much work to shipyards here and in foreign countries.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25c on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson, and scores of others.

Get My Big, New Catalogue

My new catalog, sent free for the asking, tells you **how to save 50 to 90 per cent on thousands of books.** It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—**and sell them for less money**—than any other man in America. Every book new and fresh, and **guaranteed** to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

The following dividend is announced:

The Pacific Gas & Electric Company, quarterly, first preferred and original preferred, $1.50 per share, payable February 15.

Insurance

Conducted by

W. E. UNDERWOOD

BIG LIFE FIGURES

The Prudential placed, during 1916, more than $591,000,000 of new insurance and ended the year with 15,000,000 policies in force for an aggregate of $3,000,000,000, a gain in the latter item of $283,000,000 for the year. Much the largest portion of this business is on the industrial plan and the figures quoted indicate not only the vastness of the company's operations but the wonderful efficiency with which it is operated.

The paid-for new business written by the New York Life last year totaled $263,048,300. The insurance in force at the end of 1916 was $2,511,607,274. The assets were $866,988,841, a gain of over $44,000,000. During the year it paid policyholders $81,377,641. In point of assets and total payments to policyholders the New York Life leads the way for all the world.

B. G. H., Indianapolis, Ind.—I concur in any advice which, if followed, would substitute an old line policy for a certificate in an assessment company. You will buy your protection at a lower cost in the end by abandoning the $2000 assessment certificate for an old line policy.

W. S. L., Muskogee, Okla.—So far as my knowledge goes, nothing has happened thru the transformation of the Bankers Life of Des Moines and the Merchants Life of Burlington, Iowa, from assessment associations to old line companies to strengthen the assessment business of either. Only new business and such assessment certificates as are exchanged for reserve policies may be regarded as secure under a level premium arrangement. All the outstanding assessment business of both remains as it was.

J. A. T., Philadelphia, Pa.—The Reserve Loan Life Insurance Company of Indianapolis incorporated as an assessment association in 1897, reincorporated as an old line mutual in 1901, abandoning that for the joint-stock form in 1909 with $100,000 capital. At the beginning of this year its assets were $3,717,985 and its net surplus $140,779. It has $26,170,858 insurance in force. The company's actuarial methods are sound and its money is invested in good securities yielding about five per cent. Only nonparticipating insurance is now written. The management is of average quality.

J. G. G., Kern Branch, Cal.—You say your father's certificate in Class A., Supreme Tribe of Ben Hur, will be fully paid-up in five years and nine months; also, that the cost of his assessments is increasing $6, $7 and $8 per month. The two statements are inconsistent. There can be no reserve back of the certificate to support it as a paid-up contract of life insurance. In fact, Class A certificates are wholly dependent on the collection of assessments from members in that class. Rates in Class B are higher, but not adequate to provide a mathematical reserve; and in time the assessments in that class will increase either in amount or number. The funds of each class are kept separate and each is responsible for its own debts. As between the two classes, a certificate in Class B is to be preferred, which means that the trouble is postponed to a more distant day. To the extent of their ability, I think the management of the Order has acted fairly—the fault lies in the quality of their ability.

NEW ENGLAND MUTUAL LIFE INSURANCE COMPANY

87 Milk Street, Boston, Massachusetts

Abstract from the Seventy-third Annual Report

THE NEW YORK CENTRAL RAILROAD COMPANY

New York, January 30, 1917.

To the Stockholders of
THE NEW YORK CENTRAL
RAILROAD COMPANY:

The time within which subscriptions may be made to $25,000,000 of additional stock of The New York Central Railroad Company under and on the terms of the warrants dated January 2, 1917, evidencing the right to subscribe, is hereby extended to February 13, 1917; and the time within which payment of such subscriptions shall be made is hereby extended to **February 16, 1917.**

This extension is made because the Supreme Court of Ohio, on Clarence H. Venner's appeal from the order of the Ohio Public Utilities Commission entered on January 5, 1917, granting the Company's application to issue stock, has postponed the effective date of that order until after the decision of the appeal, the argument of which is set for January 31, 1917.

THE NEW YORK CENTRAL
RAILROAD COMPANY,
By A. H. SMITH, President.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

MY uncle was driving me thru a beautiful and prosperous region in central New York State when he stopt to talk to a man who was leaning over his garden gate.

"I see there's an Italian family moving into the old house in the hollow," said my uncle.

"That so?" responded the man by the gate. "I'll have to go over and see about that. They've got to understand that no Italian can buy land in this district."

"Why do you object to Italians?" I inquired.

"They have too many children," he answered.

"Why do you object to children?" I pursued.

"I'm a school trustee," he explained. "We have only two children in the district now and we pay their tuition in the next district. But if we get two more the state law would require us to open up the old school house. We used to have fifty children in this district and a big Sunday School in the church. Now there isn't any Sunday School and the schoolhouse has been boarded up for a long time. We're not going to the expense of hiring a school teacher if we can help ourselves, you bet. Anybody who would rent a farm or a house to a family with children or to a young married couple would find himself mighty unpopular in this district."

* *

"But suppose a family does move in; how do you get rid of them?"

"By persuasion—of one sort or another," he answered with a grin. "Sometimes we buy them off. Last year an Italian with four children did have the cheek to move in and rent the old house down the road. I went to him quiet and said: 'You must move out.' He said: 'I don't want to move.' 'You've got to leave before fall,' says I. 'What for?' says he. 'We won't stand for it to hire a teacher for those kids of yours,' says I. 'I wanta stay; this old house, nobody living here. I raise vegetables for the town,' says he. 'Will you move over into the next district for five dollars?' says I. He said 'Yes,' so I sent him to the treasurer of the school board and he got the money and left."

"You certainly managed that very adroitly," I observed; "but can you keep it up?"

"I guess so," the school trustee replied. "The district was never in better shape. There is only one young couple in the community, and from all I can learn, they are not going to have children. We haven't got many young people and those we have don't get married, anyway not here. I calculate we are safe from school taxes for at least five years if the school board looks after the interest of the district as it ought to."

It was an interesting and instructive conversation to me, for it explained many things that I had seen that day and had not understood. I should like to have listened longer, but my uncle remarked it was late and drove on home.

* *

As I thought it over I was reminded of another school trustee whom I had overheard discussing the same question from a different point of view some years before. I never saw the speaker, for I was lying on my back and a man had his left hand on my throat and was brandishing a razor in his right over my face. I had confidence in him, for it was Frank Rice, the best barber in Laramie, Wyoming, but I thought it best not to turn my head around to see who was the man who came in and shouted a "hello!" at the Next in the chair behind me.

"What are you in town for?" asked one voice.

"I came in to get a school-ma'am," answered a second voice.

"What do you want of a school-ma'am? You haven't got a kid anywhere in your country."

"You bet we have. A man and his wife and three kids moved into the shack at the head of the canyon two weeks ago. Soon as I heard about it I went around to all the ranches and said: 'See here, boys, we've got some kids, and it's up to us to see that they get some schooling.' They all said 'Sure,' and so I came in to see the county superintendent about it."

"But it will take a year to build a school house, so what's your hurry on the teacher?"

"We can't wait for a school house. The State of Wyoming isn't going to let a bunch of kids run wild all winter. We are going to fix up that old bunkhouse. I got some loose lumber and I can fix it up myself if the school treasurer won't stand for it."

"Where the school-ma'am going to board? Your house is the closest and that's a dozen miles away. No school-ma'am's going to ride a dozen miles when it's forty below, anyhow not a tenderfoot teacher from down East like they would have to get."

"That's all right. She can board in the family. Then she'll always be there even when a blizzard's blowing. What she pays for board will help the folks stock their ranch. If we can't get a teacher at the legal salary we'll all chip in enough extra. We've got to have a school opened this winter somehow."

I think he got it, for his voice was that of a man who puts things thru. But I never saw him, for he had gone after his school-ma'am before I was able to sit up. Perhaps she was Molly Wood, for she was bound for Owen Wister's country.

* *

Where the water pipes are raised to pass over Broadway while the subway is being excavated there is a sign, "Headroom 14 feet." This is a good notion. Why do not housewives adopt it? A portiere pole should have a pendent notice: "Headroom 6 feet," or if not that, a fringe of tasseled cords should be hung on either side of it, as is done for bridges over railroad tracks. These hanging electric lamp shades are terrors to a tall man. If they were duly labeled with "Headroom 5 feet, 6"—neatly done in painting or embroidery, of course—it would save many a man his headache and a hostess her temper.

* *

In these times many a fashionable young man is finding it hard to make both week-ends meet.

* *

In comparing American and foreign systems of education the difference in the names of schools often causes confusion. It is necessary to remember that the German gymnasium is really a college and an American college is really a gymnasium.

* *

Great Britain has two objects: to secure a permanent peace for herself and to punish Germany. When it comes to the conference at The Hague the first thing the British representatives lay upon the table will doubtless be a demand that Germany annex Ireland.

* *

I heard a New Yorker, speaking at a banquet in reproof of the provincialism of the East, express himself in this amusing fashion: "We do not sufficiently think of the great West behind us." Behind us? Well, so it is—when we are looking toward Europe.

* *

A movie palace in my district displays the inconsistent sign:

WHERE ARE MY CHILDREN?
CHILDREN NOT ADMITTED

* *

What troubles me about the proposal of Lloyd George to put England under prohibition is that we can't have any more Jacobs' stories.

* *

Some kindhearted Englishmen, thinking that the poor soldiers at the front needed cheering up, sent a theatrical company over to France. After the first Shakespeare evening one Tommy was heard to remark: "I've been in the war ever since Mons but I never seen such 'orrors as this Macbeth."

* *

The war, which has made so many of the necessities of life into luxuries, has raised journalism and history from the rank of luxuries to that of necessities.

* *

By exposing one nigger with sufficient publicity you can conceal six others in the same wood-pile.

The girl who uses Resinol Soap is proud of her fresh, clear skin

Resinol Soap not only is exceptionally cleansing and refreshing, but its regular use reduces the tendency to pimples, relieves clogged and irritated pores, and gives *nature* the chance she needs to make red, rough skins white and soft.

Bathe your face for several minutes with Resinol Soap and warm water, working the creamy lather into the skin gently with the finger-tips. Then wash off with more Resinol Soap and warm water. Finish with a dash of clear, cold water to close the pores.

Do this once or twice a day, and you will be astonished how quickly the healing Resinol medication soothes and cleanses the pores and makes the complexion clearer, fresher and more velvety.

If the skin is in bad condition through neglect or improper care, apply a little Resinol Ointment and let it remain on for ten minutes before the final washing with Resinol Soap.

Used for the shampoo, Resinol Soap helps to keep the hair rich, glossy and free from dandruff, while its extreme purity, its freedom from harsh, drying alkali, and its soothing medication adapt it peculiarly to the care of a baby's delicate skin.

Resinol Soap is not artificially colored, its rich brown being entirely due to the Resinol medication it contains. Sold by all druggists and dealers in toilet goods. For a free sample cake and trial of Resinol Ointment, write to Dept. 14-F, Resinol, Baltimore, Md.

INDEPENDENT LESSON PLANS

Based on the Contents of This Number

TO THE TEACHER: Assign one or more of the questions pertaining to the subject taught by you to every member of your class, making the assignments in such a way that some reports will be made at every recitation during the week. The work will be done to best advantage if the reports are made in writing, and if the students bring their copies of The Independent to each recitation

ENGLISH: LITERATURE, COMPOSITION AND WORD STUDY

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Meadow Balm. By Winifred Welles.

1. Why is it good for a person to walk in beautiful and quiet places?
2. Show in what way the title of the poem is appropriate.
3. What is "the comfort of tall grasses?"
4. Explain the differences between the first stanza and the last stanza.
5. Point out the most beautiful stanza. Give your reasons for considering it the most beautiful.
6. Show how the poem has been made musical and beautiful in expression.
7. Write a composition in which you show the value of public parks or pleasant streets.
8. Read Wordsworth's "The Daffodils." Compare it with this poem.

SECTION II. COMPOSITION.

On "Interesting" Children. By the Bachelor Maid.

1. Write your own opinion of the problem presented in the article.
2. Write your own opinion of the sentence: "The present tendency of our schools is to train the body in general, and the hand in particular, at the shocking expense of the mind."
3. Write a clear explanation of the last sentence.
4. By what methods has the article been made interesting?
5. What courses would you include, and what method of teaching would you wish if you were to plan a school that would be most helpful to you?

What Makes a Factory Great? By Edward Earle Purinton.

1. By what means has the author made the article clear?
2. Point out the means by which emphasis has been given.
3. Write a short composition on "What Makes a Good Baseball Team?" Imitate the method of this article.

Mobilization.

1. Write an explanation of what Admiral Fiske means by "strategy."
2. Write an argument for or against the militia system.
3. Write a single paragraph in which you explain Rear Admiral Peary's views as presented here.
4. Tell why you approve or disapprove of "What the Army Needs."
5. Explain clearly what is meant by "mobilizing" industries.
6. Write a paragraph on the advisability of organizing women for war work.
7. Suggest any changes you think necessary in the proposed classification of women's occupations.
8. Make six constructive suggestions for the work women's auxiliary to the Council for National Defense.

Henry Ford: Master of Efficiency.

1. Write a clear explanation of the sentence: "He is efficient primarily because he is an idealist."
2. Explain the allusion to "Don Quixote."
3. Tell what you would do for your country in case of war.

Ready for What Comes.

1. Show how the article is both fair-minded and patriotic.

A National Council.

1. Write your opinion of the suggestions made here.
2. Write an editorial article for your school paper, showing how a somewhat similar plan might be employed for the General Organization of your school.

If We Must Enter the War.

1. State the main thesis of this editorial and suggest other points in support of the argument or objections that occur to you.

SECTION III. WORD STUDY.

1. Give the meaning of the following words in the editorial on "A National Council": affiliation, Duma, extra-constitutional, fanatical. Explain the phrase "Minister without portfolio."

Daylight Saving.

1. Write a brief for debate on both sides of the question of putting the clock forward for part of the year. (See "Story of the Week" for further information on the subject.)
2. Write a short narrative or description of the first trial of this plan in a small town.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL, JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The United States and the Great War—"To German-Americans," "Our Scrap of Paper," "'Cause' and 'Occasion'," "Senate Backs Wilson."

1. Explain the significance of the sentence: "The present conflict is one that transcends nationality; it is a world-wide Civil War," etc.
2. "We have had more quarrels with England." What were some of these quarrels about?
3. ". . . we regard . . . the German-American as one of the best elements of our citizenship." What have the German-Americans done to justify this statement?
4. Explain the allusion in the title: "Our Scrap of Paper."
5. What rule of international law is acknowledged in the quoted article of our treaty with Prussia?

II. Preparation for Possible War—"Mobilization," "Rallying Round the Flag."

1. Pick out the key sentence in the article: "The Navy Needs Strategy." How does the author prove his point?
2. Give a brief sketch of the history of Prussia during the past 125 years. Does this sketch prove that the author is correct in his statements about Prussia?
3. Note the sentence in italics on page 302. What is the basis for this statement?
4. What are the five points in Henry Wise Wood's program of military preparation? Which of these, in your judgment, is the most important?

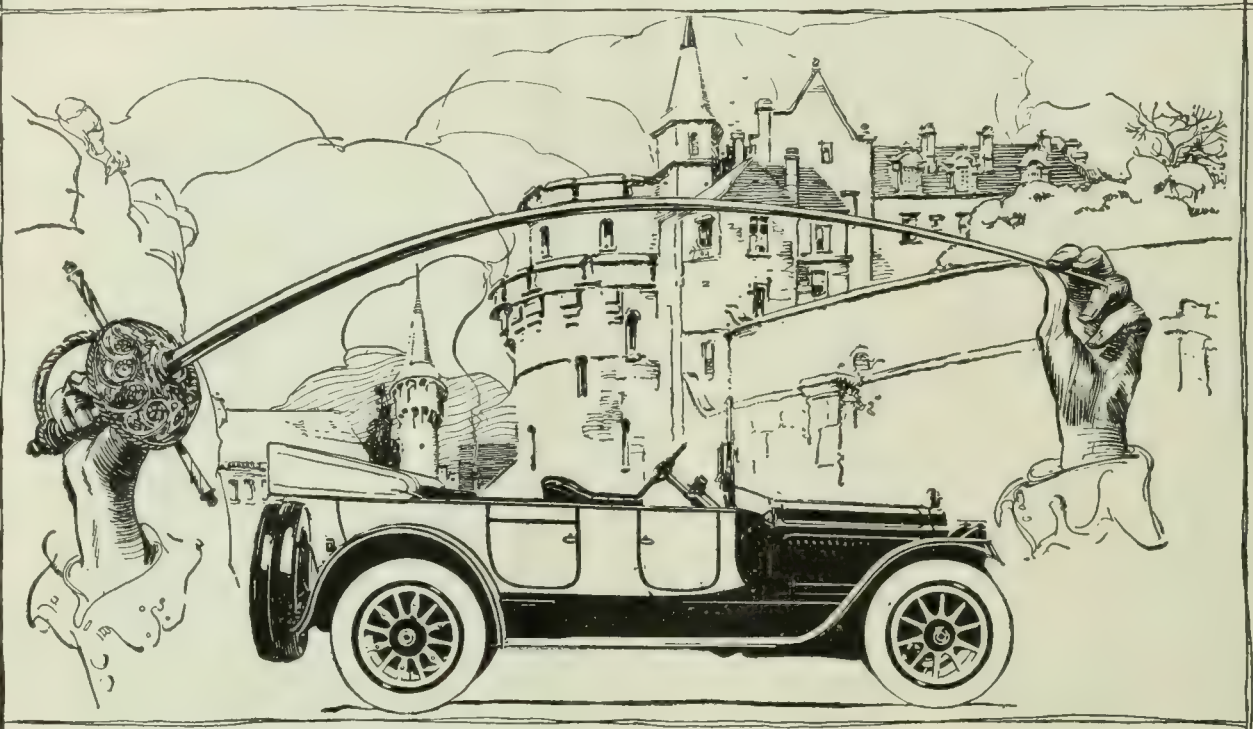
III. Our National Government—"A National Council."

1. What is the normal process of organizing the executive department of our national government? What are the constitutional provisions and the historical precedents upon which this process is based?
2. "The cabinet is an extra-constitutional creation," etc. Explain this statement.
3. It used to be said that the executive and legislative departments of our government were separate. What change in this respect has taken place in the last few years?
4. What would each of the men named in the last paragraph of the above editorial contribute to the strength of our national government?

IV. Problems of State Government—"Florida to Drain Everglades."

1. The chief topic of this news item is a discussion of a part of our national program of conservation. Is your state engaged in any conservation work similar to that proposed by Governor Catts?
2. Tabulate the other points emphasized by the Governor under these headings: (a) political reforms, (b) economic reforms, (c) social reforms.
3. Discuss one or more of the following topics: (a) Initiative, referendum and recall, (b) regulation of railroads, (c) establishment of industrial schools, (d) the prohibition movement.
4. Which of these topics are under active discussion in your state? Which of them have been the subject of legislation within the past five or ten years?

V. The Government of Great Britain—"An Invasion by Democracy." (P. 327.)



1. Look up in The Independent of December 18, 1916, the story of the change in government by which Lloyd George became Prime Minister. See also the reference to the change in the editorial, "A National Council," in the present issue.
2. "The new prime minister, who has worked a revolution in Cabinet Government," etc. What is the traditional form of cabinet government in Great Britain as described in your text book? How has that traditional form been modified?

VI. American Business Organization—"What Makes a Factory Great?"

1. On the basis of the first two or three paragraphs in this article, distinguish between (a) the business function of the employer and (b) the profession of being an employer. Can you give examples from your own experience which will serve to make this distinction clear?
2. The first sentence of the fifth paragraph of the above article is a summary of so-called efficiency engineering. What do you know about this subject?

VII. Increasing Industrial Efficiency—"Daylight Saving."

1. Explain the system of standard time as it exists in the United States at present.
2. Explain the system of "daylight saving" described in this article. Show how this system is designed to increase industrial efficiency.

Quick blade and a strong one—an agile car and a powerful one—insurance both for the owner's *safety* and unquestioned prestige

Again—the old armorer's splendid tradition of exquisite production lives.

Jeweled rapiers from Damascus, combined matchless service with unmatched beauty.

The spirit of the old painstaking craftsmanship survives in Packard production.

Distinction for the stateliest occasions—grace of line, refinement of finish, the assurance of correctness that ever marks the equipment of discriminating folk.

Added, all, to the balanced strength of a chassis as flawless as a Damascus sword, and the economical power of the Twin-six motor, quick and mighty to meet any crisis of the city street or the country highway.

Spring's coming—and there are many Packard styles to select from. Guard against disappointment—now.

Ask the man who owns one

Twenty distinctive styles of Twin-six motor carriages. Prices, open cars, $3050 and $3500, at Detroit. Packard dealers in all important cities.

Packard Motor Car Company—Detroit

Packard TWIN-6

IF WE MUST ENTER THE WAR

ONLY Germany can keep us out of the Great War. If Germany actually carries out in deed the ruthless threat which has already cost her the diplomatic friendship of the United States, we shall have no choice but to fight.

If that dread event comes, why shall we be fighting and for what end? We shall have entered the war in order to maintain our inalienable right to live at peace and unmolested in the sisterhood of nations. There have been many provocations in two years and a half. Germany's latest act of desperation is the last straw. The German note is a declaration that no nation's rights will be respected when they conflict with what the German government considers its necessities. When the German proposal to hold a peace conference was first made the neutral world hastened to give Germany the benefit of the doubt; it assumed the good faith and fair purpose of the act. The Allied nations replied frankly, leaving the door open for further negotiations. But Germany did nothing more. In the meantime the United States asked the belligerents to declare the purposes for which they fought. The Allies gave a detailed and candid statement of their claims. Germany, on the contrary, refused to offer specifications, and merely proposed a peace conference on neutral ground, tho the British premier had already made it certain that England would never "put her head in such a noose." If Germany had been sincere in wanting a world peace, then was the time to match the Allied terms with terms of her own. Instead the Kaiser declared, "The mask is off," and called on God to avenge his enemies. A swift reply to the statement of the Allies' terms of peace came in the German declaration of unrestricted and relentless war against all shipping in the waters about the Allied countries. The Germany declaration tears up the last vestige of international law guaranteeing the freedom of the seas; and dashes the fragments in the face of every neutral nation.

It is under these conditions that the United States will have entered the war. What end must this country have in view as the final decision is taken?

The United States must fight, if fight it must, for no thought of revenge, no isolated right, no circumscribed purpose. One great result should spring out of the Great War; it should be the part of the United States to make certain that that result is really achieved. The war must end, not merely in the cessation of conflict, but in a durable and guaranteed peace. The world, as it puts the greatest war of all time behind it, must face the future with the assurance that the like cannot happen again.

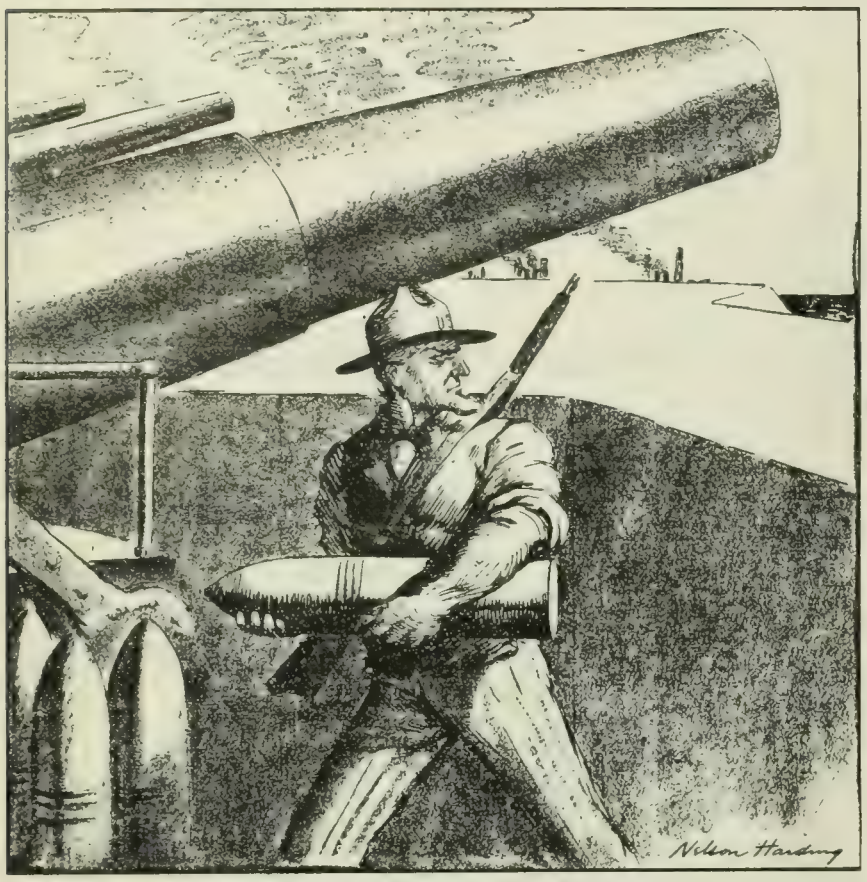
The Allies have signed a treaty among themselves by the terms of which each agrees not to make peace until all are ready. If the United States finds itself fighting shoulder to shoulder with them on the high seas and on the soil of Europe, it will be of vital importance for us to discover whether they and we are spending blood and treasure for the same end. We should immediately discuss with Great Britain, France and their associates the purpose which must be accomplished before the war can be permitted to end. If they shall agree with us that only a guarantee of perpetual and universal peace can satisfy the enemies of the German autocracy, we should add our signature to their compact not to sheathe the sword until the Central Powers are compelled to make peace upon these terms.

The bases of a durable peace would include these propositions:

1. That the nations establish among themselves a League to Enforce Peace, dedicated to the peaceful settlement of international disputes under the ultimate sanction of force;

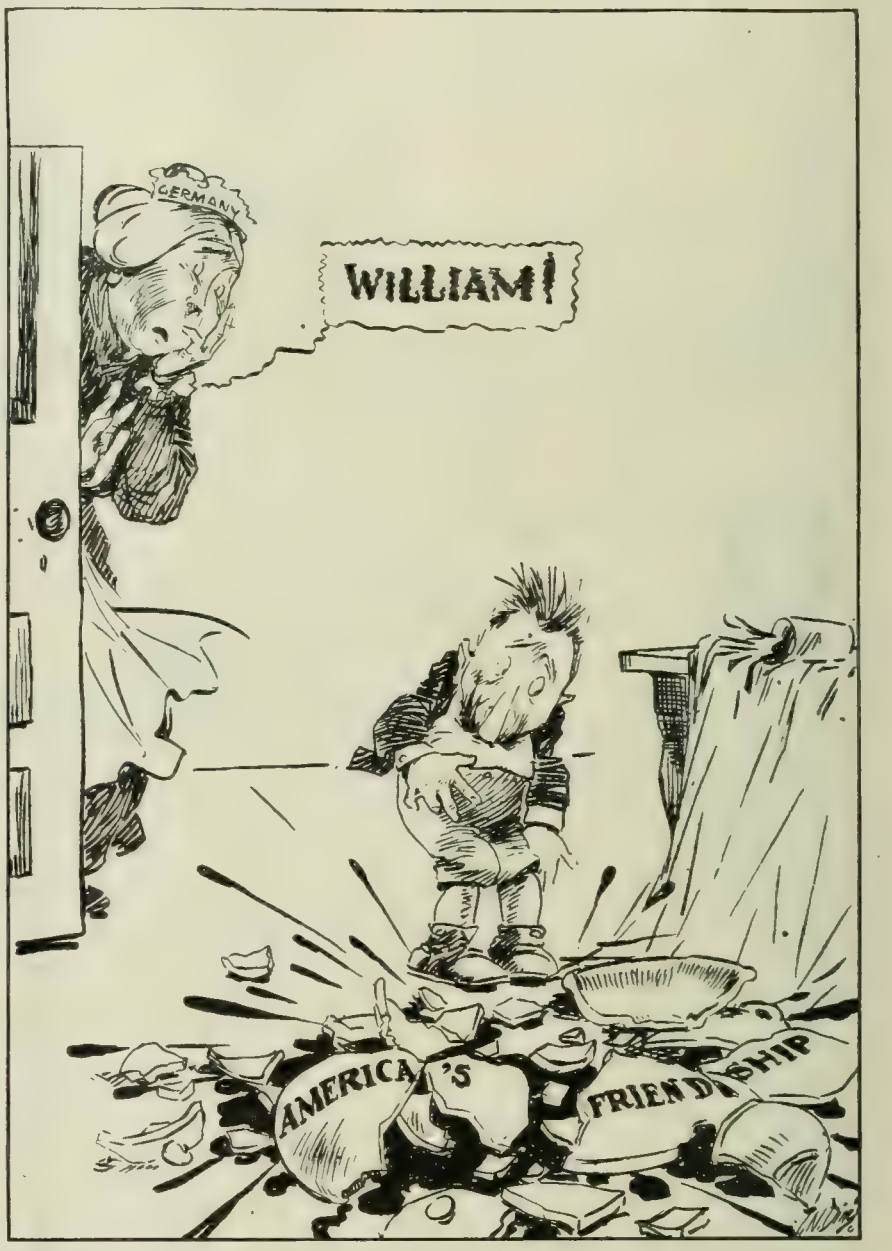
2. That they agree to the limitation of armaments within bounds determined by the necessities of such a League;

3. That the disputed questions involved in the Great War be submitted to an appropriate tribunal for adjudication;



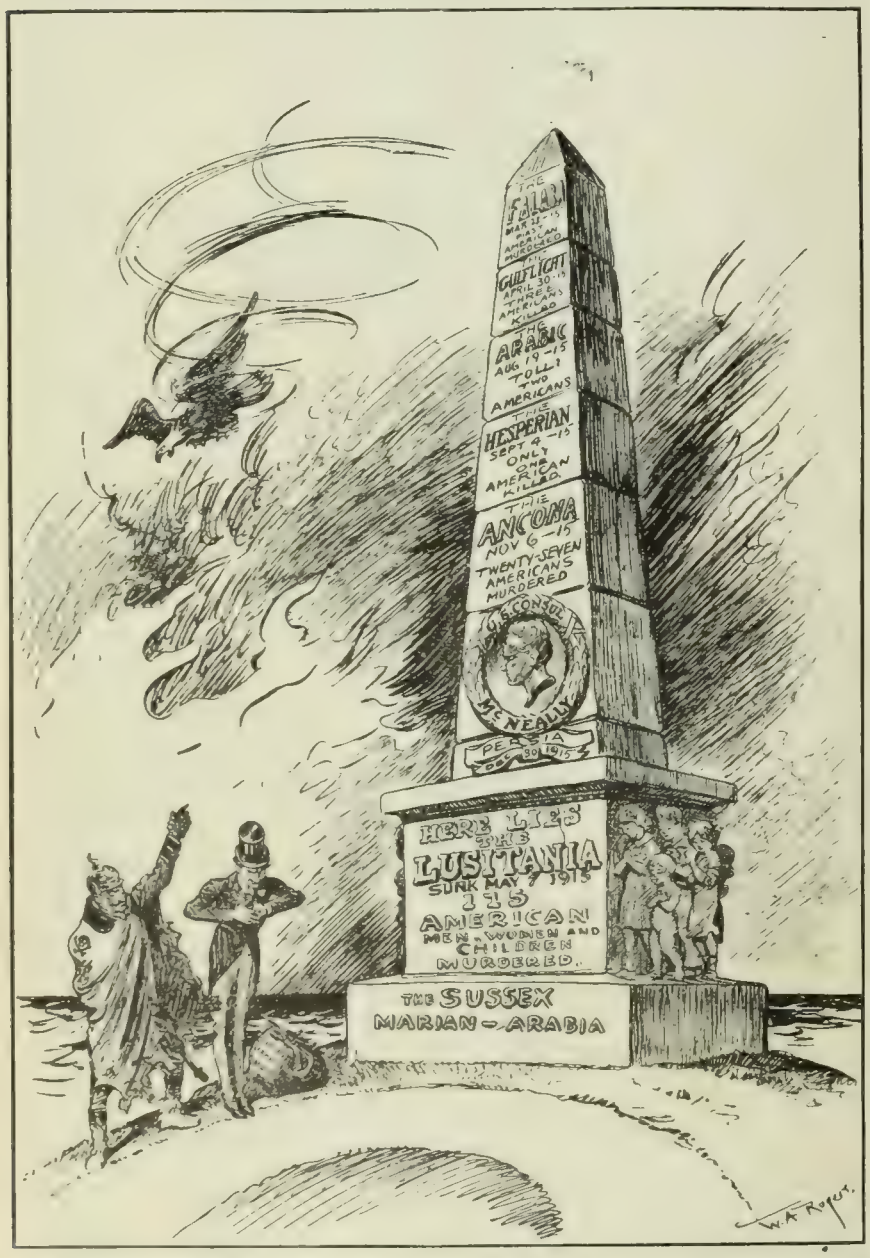
4. That the Central Powers be invited to join the League, and even if they refuse, be compelled to join in the limitation of armaments.

There is no doubt that the Allies are ready to become part of a League to Enforce Peace when the war is over. They have said so unequivocally in their reply to President Wilson's interrogation. On the other three propositions they have not yet been heard. Their disinclination to agree to them need not be assumed. In any case the United States should exert to the fullest extent of its power, if it enters the war to fight side by side with them, its influence to secure their adherence to such a program. That way lies the hope of permanent peace.



As a great English philosopher once said, "The first duty of mankind is peace, the second duty is to fight to get it." The United States must not enter this war except in execution of this lofty duty. We must fight only to get peace, universal, durable, guaranteed.

CARTOON COMMENT



WHAT WE THINK OF GERMANY

"Hope for the Best, Prepare for the Worst" — probably most thoughtful Americans would agree with the spirit of Nelson Harding's interpretation of Uncle Sam's attitude, published in the *Brooklyn Daily Eagle*

The *New York Tribune* sugarcoats its moral with a humorous sketch of a naughty-boy Kaiser who has "Nobody but Himself to Blame" for a bad break. Ding has somewhat the F. P. A. attitude toward current events

A monument to the patience of the United States and an effective presentation of German offenses, drawn by W. A. Rogers for the *New York Herald*, and titled, "Well Count, We Did Our Best!" At the right a view of the Kaiser that is being indorsed by more and more nations. Drawn by Rollin Kirby for the *New York World*

A NATIONAL COUNCIL

A YEAR and a half ago we suggested that it might be desirable in such critical times as the present to follow the example of the belligerent nations and call into the Government the ablest men of the country without regard to political affiliation, and we asked our readers to send in their nominations. From the results of this Independent primary we published an "all-star cabinet" in our issue of September 13, 1915.

The question which then was regarded as merely an interesting pastime may soon become a matter of serious concern. If we enter the war we shall probably find it necessary to do as all the other countries have done, that is, to declare a Party Peace and to combine the leaders of all factions for unified national effort. The war is a great peacemaker in politics. The Kaiser is hand in glove with the Social Democrats whom before the war he had thought not fit to live. The Czar has been working with the Duma and the Zemstvos. In Belgium, Emile Vandervelde, Socialist and most dreaded foe of the Crown, was at once given a seat in the Belgian Cabinet. The French ministry contains the former premiers and prominent men of all parties, even including the most orthodox of Socialists, M. Guesde. The English Cabinet has likewise been enlarged and has drawn in business men, educators and labor leaders. Of course, a cabinet as large as the French or the English is better adapted for counsel than for action, so the actual management of the war is in the hands of an inner circle of a few men. In England this War Council is composed of Lloyd George, Earl Curzon, Bonar Law, Arthur Henderson and Lord Milner, three Unionists, one Liberal and one Laborite, altho Parliament is Liberal.

Fortunately our administrative machinery is flexible enough to be adapted as we like. The Constitution places the sole responsibility for all presidential decisions upon Woodrow Wilson. He can neither shift nor share it. But he can get advice from whom he chooses, whether in the Cabinet or out of it. The Cabinet is an extra-constitutional creation which in this country as in others has grown out of an informal group of councillors to the executive.

In time of war or in delicate situations like the present vital decisions may have to be suddenly and secretly made, and the most important facts have often to be kept from the public because they have to be kept from the enemy. But such secret diplomacy is dangerous to democracy unless the executive is kept closely in touch with a representative group of leading men. As it is now the President consults informally with the chairmen of the chief committees of the Senate and House and with other prominent members of Congress on any important question. These might well be called on occasion to meet with the Cabinet and with certain prominent citizens chosen by the President in a sort of national council to consider in executive session questions of national concern. It is customary in foreign countries to appoint to the cabinet as "ministers without portfolio" men whose advice and support are needed. Such ministers do not act as heads of any particular departments and do not usually receive any salary. In the present administration Colonel House might be regarded as a "minister without portfolio" and President Wilson is quite within his rights in consulting him, even in preference to his official advisers.

We are not distrusting any members of the present Cabinet nor questioning the competency of the Democratic party to furnish brains enough to run the Government. But in times like these a strictly party government is out of place, and it is easy to think of individuals not in the party or even in politics who would greatly strengthen the Government if called into its service or into confidential consultation on special occasions. We should say, for instance, that our two ex-Presidents were entitled to such selection, and we have no doubt that they would both give loyal aid to President Wilson in this emergency. Mr. Roosevelt would be just the man to be put at the job of recruiting a new army. He would rouse as much enthusiasm for national service as Kitchener did in England, and he could raise as big a force that would match "Kitchener's army," and probably be nicknamed as the "TRmy." Henry Ford, who has been sneered at as a fanatical pacifist, has set an example of patriotism by placing his fortune and his factory at the disposal of the Government without remuneration. The offer should be accepted if needed and his organizing genius enlisted in the national service. Charles Proteus Steinmetz is another man we ought to have at the head of affairs. Pacifist, Socialist and German tho he be, yet we believe that he would work as loyally and efficiently as Chief Electrician of the United States as he has for the General Electric Company. Colonel Goethals, of Panama, is of course already at the command of the Government. As representative of labor John Mitchell ought to be in the national council. The statesmanship of Elihu Root must not be lost to the country because he happens to belong to the Republican party. Such are some of the men whom we should like to see advising and aiding the American Government in such a crisis as the present.

THE COMMON ENEMY OF CIVILIZATION

THE Prussian autocracy is the common enemy of civilization. It is so knowingly, willingly, of malice aforethought. It is so in fulfilment of a purpose long ago made. There has been no hour since the present Kaiser came to the throne when it has not been his intention to extend his empire over Central Europe from Antwerp to the Persian Gulf and so dominate the world. There has been no day in which his general staff has not worked on plans for the fulfilment of the imperial intent. There has been no week in which the controlled press of Prussia has not proclaimed the coming substitution of *Kultur* for the civilization inherited by western Europe and by America from Greece and Rome and Galilee. There has been no month in which German philosophers have not vauntingly described *Kultur* which seemed to the world the culture of Hell, and gloried in its superiority over the culture of a Christianized civilization. There has been no year in which William Hohenzollern has not publicly blasphemed Almighty God by imputing to Him an intent to uphold and abet the Hohenzollerns' infernal designs.

The German state began a world war expressly and deliberately to accomplish these designs. It announced at the outset that it would be bound by no law, principle, promise, faith or morality but military necessity interpreted by the will and intellect of absolutism. This one promise the German state has kept; the only prom-

ise it has kept since William placed upon his own head his crown of iniquitous power. From the rape of Belgium to the sinking of the "Lusitania"; from the perfidious promises to the United States to the impudent notice to us that our ocean commerce will henceforth be supervised from Berlin on the bread-ticket plan, the German state has added brutality to brutality, ruthlessness to ruthlessness, insanity to insanity. Now it dares the world to get in the way or to disobey orders.

It is a dare to be thankful for. Like a flash of lightning it reveals the world crisis in stark and unmistakable outlines. There have been considerate men and women who have hesitated to believe in the utter depravity of the German state. There have been men and women whose eyes have been holden that they should not see the truth. There have been cowards who have not dared to speak the truth. There have been creatures who have been unwilling that the truth should be known lest Mammon should be leashed. For none of these does the slightest excuse remain. Every human being outside of an idiot asylum now knows the truth. How can any American fail to regard the German autocracy as his enemy, because the enemy of a Christian civilization?

The world will take the German state at its own moral valuation of itself. For that part of the German people which is guiltless of the intents and the acts of the German state, the world has and can have no enmity. We believe that there are millions of men and women in Germany that are helpless subjects of the German state, and other millions that are misguided. These are innocent. But for the German state itself, the German state of this present hour, the world can have no attitude but relentless enmity. That German state must be destroyed.

DO IT NOW

WAR'S burdens fall heaviest on women. A truism, but none the less true. Every war since civilization began has proved it.

The Great War has demonstrated something else. The women of a nation are one of its most valuable assets—not in any sentimental sense, but in an intensely practical one. Women make munitions, and drive motor cars, and run trains, and till the soil, that men may be released to take the field. Their countrymen should make haste to break down any dark-age barriers that keep women out of their fullest and freest development.

It would be an act of cold, calculating wisdom for the men of America, as they enter the Great War, to give the women of America equal part in the government of the nation. Women should be given, here and now, the vote, not as a bribe—thank God, they need no such incentive to effort and sacrifice—but as an aid to enlarged usefulness.

"CAUSE" AND "OCCASION"

PRESIDENT WILSON has decided that only the actual murder of American citizens on the high seas shall be the condition of war. But the fact that the issues of peace and war depend upon a single hostile act on the part of Germany should not mislead us into thinking that the occasion of the war is the cause of it.

The United States would not, like Austria, murder a million men to avenge the murder of one. The right of vengeance belongs to a higher tribunal than that of man, and if we could be assured beyond the shadow of a doubt that Germany would now turn from her present evil course the United States would sheathe the sword no matter how many crimes may have blotted the recent pages of German history.

If we go to war it will be not to avenge the death of individuals by the sacrifice of countless other lives, but to withstand a policy of terrorism which casts its shadow over the future and to vindicate the public law of the world.

We fight, if fight we must, not for yesterday's wrongs, but for tomorrow's right.

TO GERMAN-AMERICANS

IF the present issue were one between Germany and England we would expect you to sympathize with your Fatherland; if it were one between the United States and Germany we would expect you to support your adopted country, but with reluctance and perhaps misgiving. But do not look at it in that light. The present conflict is one that transcends nationality; it is a world-wide Civil War between the last strongholds of Feudalism and the rising tide of Democracy. There is no nation, considered as a nation, which Americans of every descent love more than Germany. We have had more quarrels with England, and even with France, than with Germany; our universities have drawn more inspiration from Germany than from any other land; we regard, and rightly regard, the German-American as one of the best elements of our citizenship. We hope that a liberal Germany may in the future become one of the most prosperous and powerful of the nations of the earth. The enemies of your adopted country are the military caste and the military machine that have ruined and disgraced your native country. Down with the Kaiser! Long live the German people!

DAYLIGHT SAVING

THERE are two very different schemes advocated under the same name of "daylight saving" which is unfortunate because one of them is an absurdity and the other is feasible. It is an absurdity to turn the clock ahead an hour all the year round. If the California legislature moves that state from the Pacific to the Mountain zone as it is asked to do, the Colorado legislature will doubtless follow suit and move that state into the Central zone. Then the Central States will move into the Eastern zone and the Eastern states into the Atlantic. So the movement will go on around the world, each trying to get ahead of the other by pretending that it is ahead, until finally, after twelve such changes, the clocks will be all right again. The institution of standard time by which a time meridian is established every fifteen degrees was a very great triumph of human ingenuity for it secured uniformity over large regions without putting the clocks of any place more than half an hour wrong. But when a city like Cleveland or Detroit or a state like California takes the liberty of changing its time standard the symmetry and simplicity of the system is destroyed. If that is to be done then we had better throw over the system and abandon the attempt to establish zones of uniform time. Then the whole world could adopt Greenwich time and each locality settle its hours of rising and retiring to suit itself.

The fact is that when a legislature or municipal council orders the clock set ahead permanently it is playing the same sort of a trick on the state or city as a housewife when she secretly sets the alarm ahead. Sooner or later, depending upon their intelligence, people find out the trick and make allowance for it. It is like saying "everybody come early and avoid the rush." The theory of it is simply that folks ought to get up earlier than they want to and that you can get them up earlier by making them think that they are getting up later than they are.

The other scheme that goes by the name of "daylight saving" is more sensible. As embodied in the Borland bill now before Congress it retains our admirable system of standard time meridians and abolishes, so far as interstate commerce is concerned, such local exceptions as Cleveland, Detroit and California. It proposes to set the clocks ahead one hour at 2 a. m. on the last Sunday in April and back at the same hour on the first Sunday in September. It may be objected that this is as much juggling with the clock as the other, and so it is, but it has more reason. In the first place, most people are so used to following the clock blindly that they will not discover that they are being tricked into becoming healthy and wealthy and wise until the five months are up. In the second place the summer does give an opportunity for an ante-meridian shift without burning the candle at the other end. Of course anybody who wants to take advantage of this can do it now without waiting for legislation by simply getting up earlier and those who do not may lie abed. The proposed change would merely throw the extra hour after the day's work instead of before it. Noon comes nearly in the middle of the daylight day and those who want to get the maximum of daylight must make noon the middle of their working day. That's all there is to the problem.

Not every individual is able to shift his working day forward in the summer time, but any factory, business house or industry could do it now without legislation if it were desired by the employees and employers. If other establishments did not follow their example so much the better, for it would relieve the peak load on restaurants and cars caused by our unfortunate uniformity of hours of travel and eating. The economy effected by introducing diversity of hours might easily prove greater than the gain thru a uniform shift.

How much of a gain there would be by setting the clock ahead in summer is questionable. The commission appointed by the British Government to determine the effects of it as tried last summer has not yet made its report but is said to be in favor of continuing the practise next summer. The saving of fuel, which was one of the chief objects of the measure, was, however, found to be less than was anticipated. One British gas company reported an increase of eleven per cent in the amount of gas consumed owing chiefly to the longer use of fuel gas in the munition works. The lengthened afternoons gave opportunity for a more extensive employment of motor cars and the authorities had to interfere to prevent a gasoline famine.

Germany was the first to adopt the plan of setting the clock ahead one hour on May 1 and twelve other European countries followed her example. If they continue it after the stress of war is over it will be good proof of its advantages at least for those latitudes. It must be remembered, however, that it is largely a question of latitude and that Europe lies mostly to the north of the United States. The sun rises three hours earlier at the summer solstice than at the winter solstice in the latitude of Boston but only two hours earlier in the latitude of Charleston. But Boston is about on a level with Rome, and Charleston with Alexandria. South of Charleston a daylight saving law would be of less use. North of Boston it is less needed. The summer days are all too long in high latitudes to get a good night's sleep in darkness. Calgary, Canada, which tried the daylight saving plan last summer, voted against its continuance by 3162 to 1257.

But for the greater part of the United States a shift of the working day an hour back would have some undeniable advantages and doubtless the promoters of the plan are right in thinking that it will be easier to get people to do it by law than by persuasion.

HENRY FORD: MASTER OF EFFICIENCY

HENRY FORD is likely to smash a great many preconceived ideas as to what a pacifist is. Ever since the much ridiculed voyage of the Ford peace ship, he has been looked upon as the arch-pacifist. Now, as we stand on the threshold of war, he offers himself and his wealth to his country with a completeness that even the most thoroly militant spirit will find it hard to equal.

"If anybody attacks the United States," says Henry Ford, "believe me, I'm going to fight—and fight hard." This is no bluster; he backs it up. In the next breath he declares that in the event of war his factory, employing more than forty thousand working people, will work for the Government without a cent of profit to himself. He is prepared to manufacture 3000 motor cars a day; and any one who knows how the Ford car has made good in the ambulance service behind the lines in Europe will realize what an asset to the American army such an output would be. He has a plan for turning out a thousand baby submarines a day as well, of a type that he believes would be admirably adapted for defense.

But Henry Ford's promised contributions to the nation's war efforts do not end with manufacturing without profit. Many other manufacturers have offered to do that; and Henry Ford is seldom satisfied with doing as much as the next fellow.

He proposes to lend his entire available financial resources to the Government—without interest. It will certainly amount to many millions of dollars—some say a hundred million. Quite a windfall for a nation entering a great war.

When the Ford peace ship sailed, we described Henry Ford as "quixotic." Precisely. For in the heart of the gaunt old Don burned a clear flame of idealism; and Henry Ford is above everything else an idealist. Before the shadow of war as in the white light of peace he proves himself quixotic—following his ideal with all the fervor and the energy of his intense personality.

No one who knows what Henry Ford has accomplished, not only in making the automobile the common servant of the people of America, but in proving, by the simple expedient of doing it, that the workingman can be made a full sharer in an industry's prosperity, would deny to him high rank in the world of efficiency. He is efficient primarily because he is an idealist.

THE STORY OF THE WEEK

Getting the Nation Ready

The renewal of unrestricted submarine war against merchant ships entering the war zone around the coasts of the Entente Allies has changed the question of national preparedness for war from merely an important issue to an urgent one. The Council of National Defense has been in session to plan for the mobilization of the industrial resources of the country and to consider the many voluntary offers of manufacturers who have placed the productive capacity of their plants at the disposal of the Government. The Naval Consulting Board under the presidency of Thomas A. Edison, is considering new methods of meeting the menace of the submarine. Navy recruiting agents have been instructed to enlist 25,000 new recruits.

President Wilson and his Cabinet are planning increased military and naval appropriations, but Congress seems less imprest with the urgency of the situation. It seems that the preparedness measures now before Congress with the moral support of the Administration behind them will be delayed if not reduced before their final passage. But the so-called "pork" measures, such as the rivers and harbors appropriations, are in greater danger of failure owing to the pressure of business and the approaching end of the present session. The Republican members of the Senate Commerce Committee have refused to approve the rivers and harbors appropriations and will carry their fight to the floor of the Senate. The emergency taxation authorized by the House of Representatives to meet the danger of a deficit has been approved by the Democratic caucus in the Senate, which voted down an alternative plan for raising all the needed revenue with a $500,000,000 bond issue.

The War on Land

The desperate attempts of the Germans to crush British commerce and the possibility that America may become involved have diverted attention from continental battlefields, and indeed there is nothing of importance to report in most places. The weather is extremely cold in Russia and Rumania and neither side cares to risk its men on futile skirmishing. In the swamps about Riga the Germans have been making strong efforts to recover the ground lost in the recent Russian attacks. In Galicia there has of late been an increase of activity about the fortified city of Stanislav, but no decided successes are claimed. The Russian attack on the German lines in the extreme south of Bukovina has made no progress during the week. In Rumania the Russians remain securely entrenched behind the Sereth River. A small body of Bulgars made their way across the Sereth but were promptly thrown back or captured. The Berlin despatches claim that more than 400 steamers and 2700 tugs with barges are engaged in carrying grain, wood, leather and other needed products up the Danube from Rumania to Germany and Austria-Hungary, and also that the river is being used extensively for the transportation of troops, tho the despatches neglect to say which way the troops are being transported.

But the weather which has checked the fighting in the east has permitted its renewal in the west. The ground, which has been too soft and muddy for military operations in France and Belgium, is now frozen and the British have made decided inroads on the German lines at several points. The Canadian troops in particular have distinguished themselves during the winter by daring raids in small parties on the German front trenches, bombing the dugouts, destroying the guns, seizing what prisoners they could and returning to their own lines before the Germans could bring up their reserves or direct their fire upon the place attacked. Now, however, the British seem to be making systematic efforts to gain new ground, and they have taken advance positions at several points in the sector north of the Somme, for instance, on both sides of Ancre Creek, beyond the village of Sailly-Saillisel and southeast of the wood of Neuville St. Vaast. The attempts of the Germans to dislodge them from their new positions have been unsuccessful.

ON GUARD

Military protection was spread over New York City at the first news of possible war with Germany. Bridges, docks and water supply stations are guarded with extra precaution

The Austrians on the night of February 9 launched an attack against the Italian lines east of Gorizia and succeeded in taking some trenches and 675 prisoners.

Villa Takes Our Place

General Pershing's punitive expedition has at last left Mexico. On February 7 the general took command at El Paso. He reported that 3749 refugees had followed the American columns across the border, including more than two thousand native Mexicans and a number of Chinese who have been admitted to this country temporarily in spite of the immigration laws. Secretary of War Baker has written to General Pershing in high commendation of the work of the army on the border and in Mexico, mentioning particularly "the restraint imposed by both officers and men upon themselves in their consideration for the people of Mexico with whom they came in contact and the public authorities of that country."

The man whom the American expedition was sent to catch or kill is occupying the districts now left unguarded by the American withdrawal. Villa's army is estimated at no less than twenty-five thousand men, equipt with an adequate number of cannon and machine guns. On February 9 a force of two hundred Villistas under José Salazar destroyed the small garrison of Guzman, a town seventy-five miles to the south of Juarez. The eight or ten thousand Villistas in the State of Chihuahua are carrying on a systematic campaign for the destruction of all bridges and railroad lines likely to be useful to the troops of the de facto government. Proclamations signed by Villa warn all persons against traveling on railroad lines in Northern Mexico and urge foreigners to keep out of that part of the country altogether. Dr. Vasquez Gomez, a sometime member of President Madero's cabinet, is fomenting a new movement against the present Mexican Government on the ground that the new constitution, which is the work of Carranza and his fellow partizans, has no legality He favors the restoration of the constitution of 1857.

Some slight compensation for the ending of our diplomatic relations with Germany may be found in the resumption of our long interrupted diplomatic relations with Mexico. Ambassador Henry P. Fletcher has left the United States to present his credentials to the authorities of the de facto government of Mexico at Queretaro, the seat of the constitutional convention. A reception committee and a special guard has been arranged to meet him at the border and to secure the safety of his railroad trip thru the war-torn country.

TRYING OUT WAR INVENTIONS

The telephoto camera is the latest equipment of an air scout. It will photograph accurately at an altitude of 5000 feet and a speed of ninety miles an hour. The official aerial photographer of the U. S. Flying Corps, Sergeant J. S. Frewer, is using it here. The newest aid to trench warfare is the periscope rifle, named for its inventor, J. H. Eradus. With it the sniper can aim accurately without endangering his own head

Attitude of Neutrals

Our State Department in forwarding to the American representatives in neutral countries the announcement of the severance of diplomatic relations with Germany added these instructions:

> Say also that the President is reluctant to believe Germany actually will carry out her threat against neutral commerce, but if it be done the President will ask Congress to authorize use of the national power to protect American citizens engaged in their peaceful and lawful errands on the seas.
>
> He believes it will make for the peace of the world if other neutral powers can find it possible to take similar action.

So far none of the countries concerned has followed the example of the United States in breaking with Germany, but most of them will, it is expected, send strong notes of protest.

Holland and Denmark, tho hard hit by the extension of the war area, are loth to offend Germany both because they would lose the German trade of which they are now the chief channels and because they might easily be invaded and perhaps conquered by the German troops on their frontiers. To the west of the Netherlands the danger zones as described by Great Britain and by Germany cover in part the same waters, and taken together restrict Dutch shipping to a narrow coastal strip. The Dutch Government is trying to persuade both these countries to contract their danger zones so as to have a clear passage for ships between them.

Spain has made an energetic protest against the violation of neutral rights by Germany and she regards the threatened destruction of her shipping as especially unwarranted, since it has never been used for carrying munitions. But Spain has charge of the interests of Americans and of the nationals of most of the Allies in Germany and is therefore desirous to maintain a channel of intercourse with the Central Powers as long as possible.

Sweden, Norway and Denmark are, in accordance with the compact arranged early in the war, consulting and acting together and will send a joint note to Germany protesting against her illegal submarine blockade.

It cannot be expected that Switzerland will take any action that will lead to war, nor is it to be desired, for she would add little to the strength of the Allies, while by entering she would open a way for a German army to invade France thru Swiss territory as formerly thru Belgium. Such an opening would be so advantageous to Germany that she is suspected of harboring the design of breaking thru Switzerland in the spring without any excuse.

Of the South American republics Brazil seems to sympathize most nearly with the American attitude. A note has been despatched to Berlin objecting to the new naval policy of Germany as an unwarranted extension of an inadmissible blockade and a violation both of international law and of the treaties between Brazil and Germany. The note declares the intention of Brazil to protect its shipping and to hold Germany responsible for any injury to it. Peru has filed a claim against Germany for the destruction of the sailing ship "Lorton," sunk by a submarine off the coast of Spain. Chile, Uruguay, Bolivia, Panama and Cuba have either refused to recognize the German blockade or in some way exprest their displeasure at the measure.

THE GREAT WAR

February 5—President forbids transfer of American ships to foreign registry. Five ships sunk.

February 6—British attack German lines on Somme. Fourteen ships sunk.

February 7—British take Grandcourt. Thirteen ships sunk.

February 8—Irish party demand Home Rule. Ten ships sunk.

February 9—European neutrals decline to break with Germany. Most of the American republics protest against German submarine warfare. Six ships sunk.

February 10—Steel net prepared to close New York harbor at night. Seven ships sunk.

February 11—American Ambassador Gerard leaves Germany for Switzerland. Two ships sunk, making the total tonnage destroyed since February 1, 178,113.

The "California"

The first passenger steamer of importance to fall a victim to the new German blockade about the British Isles was the "California," of the Anchor Line. This was a British vessel, and in accordance with the Admiralty rules was armed with a 4.7 inch gun on the stern. As she was on her way from New York to Glasgow, at nine o'clock Wednesday morning, February 7, the captain on the bridge saw oil bubbles on the sea about three hundred yards away. Suspecting from this the presence of a submerged submarine, he ordered the gunner to aim at the oily spot, but before he could fire the vessel was struck by a torpedo on her port quarter. A second torpedo was launched, but missed its mark by a few yards. The explosion killed five persons and tore a great hole in the side of the vessel, which sank in nine minutes. Owing to the slant of the ship it was difficult to lower the boats or get into them, and thirty-six persons were drowned, among them three women and two children. The captain and other officers remained on the bridge and went down with the ship but were rescued. The "California" carried a crew of 171 and 23 passengers. According to reports, 13 of the passengers and 28 of the crew were killed. There was one American in the

crew, but he was saved. The S O S signals brought speedy aid and fortunately the sea was smooth, so the survivors were able to reach the Irish coast, tho in a distressing state, some of them wounded and many with little clothing. The submarine did not appear above the water during the whole time altho her periscope was seen. The "California" was carrying contraband, shells and food for the British army, but this does not excuse her sinking without warning and without providing for the safety of those on board.

Senate Backs Wilson

On February 7, the United States Senate passed a resolution by seventy-eight votes to five approving "the action taken by the President as set forth in his address delivered before the joint session of the Congress" on February 3. The five votes in the negative were those of Senators Kirby of Arkansas, Vardaman of Mississippi, Gronna of North Dakota, Works of California, and La Follette of Wisconsin. The first two mentioned are Democrats; the three others Republicans. Party lines disappeared entirely during the debate and the President found his warmest supporter in Senator Lodge of Massachusetts, until recently one of the most formidable opponents and critics of the foreign policy of the administration. The resolution was fathered by Chairman Stone of the Senate Foreign Relations Committee and probably exprest the wish of President Wilson for a formal endorsement of his momentous diplomatic step in breaking off relations with the German Government.

The moral effect of the Senate's vote of confidence was slightly weakened by the tenor of the discussion. Not only did the minority opposing the resolution fight it as "a preliminary declaration of war" but some of the Senators who favored it exprest their fears and misgivings. Senator Borah and not a few others dreaded that American resistance to Germany, however justified in itself, might involve the country in the political rivalries of the Old World. But the majority of the Senate is evidently determined to support the foreign policy of the administration, even to a declaration of war should President Wilson deem it necessary.

Protests Against War

Altho the nation as a whole is apparently willing to support President Wilson in his stand on the submarine issue, there are many ardent pacifists who still believe that war with Germany can be averted by the action of this country. An emergency Peace Federation has been organized with George W. Kirchwey as its chairman and George F. Peabody as treasurer. The proposals of the Peace Federation, which are in harmony with the suggestions of William Jennings Bryan, favor keeping Americans out of the war zone, deferring demands for reparation till the end of the war, and submitting the question of peace or war to a popular referendum. The American Union Against Militarism in the meantime is organizing a post-card referendum of its own, requesting one hundred thousand men and women to give their opinion on maintaining American rights at sea by war and also asking them if they favor a nation-wide referendum before Congress declares war.

The National German-American Alliance, speaking thru Charles J. Hexamer, its president, favors the suggested national referendum and mass meetings of German-Americans have also endorsed the plan. The executive committee of the American Union Against Militarism has telegraphed to Washington urging upon the Government the principle of the referendum.

The majority of individuals and organizations now working for peace have exprest their willingness to support the Government in case of war. A more militant opposition is that of the Women's Peace Party, many members of which have criticized Mrs. Carrie Chapman Catt for pledging the aid of the suffrage organizations to the President if war should be declared. A mass meeting of four thousand Socialists, labor unionists and other radical pacifists met at Carnegie Hall in New York to protest against the possibility of war. Morris Hillquit, the Socialist leader and publicist, declared that never in history was war waged with less justification or on a more frivolous pretext than the threatened war between the United States and Germany.

OUR OWN CENSOR

The Navy Department has not waited for war to appoint Lieut.-Commander Charles Belknap, Jr., as Official Censor. His chief duty as yet is to guide the daily conversations of Secretary Daniels with the newspaper men

Bain

IT MIGHT HAVE BEEN

The only American aboard was saved. But if more Americans had happened to be on the British passenger ship "California," bound for Glasgow, and torpedoed without warning off the Irish coast, the United States would probably have judged the sinking an "actual overt act" and sufficient cause for a declaration of war with Germany

Rallying Round the Flag

While Congress is considering new appropriations for the army and navy in addition to the costly preparedness measures already enacted, the efforts of the Government to mobilize the industrial resources of the United States are seconded by manufacturers thruout the country. Secretary of the Navy Daniels has made public a list of ninety firms which have offered to put their resources at the disposal of the Government. Among them are such important concerns as the United States Steel Corporation, the Goodrich Rubber Company and Henry Ford. Mr. Ford has been one of the most ardent exponents of pacifist sentiment in this country and his offer to run his manufacturing plant at full capacity in case of war without asking a cent of personal profit created a profound sensation. He believes that his automobile factory could without difficulty be made into a factory for small submarines and other engines of war.

Americans who were born in Germany or in Austria-Hungary are, as a class, emphatic in expressing their determination to uphold the hands of the American Government. The German-American National Alliance, at a meeting of delegates from twenty-eight states in Philadelphia, adopted resolutions pledging loyalty to the Government in peace and war. Many Germans and other aliens who have been resident in this country for years without applying for citizenship have in the last few days secured naturalization. In some instances naturalization officials have been compelled to turn away applicants or greatly to increase their clerical force to handle the crowds seeking naturalization.

The response to the nation's crisis is equally marked in every section of the

population. Samuel Gompers, speaking for American labor, has promised that the members and officials of the American Federation of Labor will be united in support of the Government. Woman suffrage organizations have offered their services in any field where the authorities might find them useful in war time. Several colleges and universities have pledged themselves to the service of the nation and a few Eastern universities are developing aeronautic squadrons of trained student volunteers.

Our Ally, the Philippines The Philippine Senate has adopted a bill introduced by Manuel L. Quezon, President of the Senate, authorizing the organization of a Philippine army division of twenty-five thousand men in accordance with the National Defense act and authorizing the Governor to call out all the military forces of the Philippine Islands at the request of the President of the United States.

One reason for this mobilization of our island colonies is the fact that German ships in our colonial ports have been secretly damaged to reduce their value in case the American Government should take them over for its own purposes. In Manila Bay the German crews were removed from seventeen merchant ships. Customs officers and naval experts examined the ships and found that all of them had been extensively damaged. Nine German merchant vessels tied up in Hawaiian harbors had their engines and boilers disabled by their crews.

Literacy Test Triumphs President Wilson's veto of the immigration bill containing the literacy test was frustrated by the action of the Senate on February 5. The bill had already passed over the President's veto in the House of Representatives, but its opponents hoped that it would be unable to secure the necessary two-thirds vote in the Senate. But the affirmative vote of sixty-two to nineteen was more than was needed to override the veto and is striking evidence of the strong sentiment in Congress for the restriction of immigration. The literacy provision excludes from the United States all aliens over sixteen years of age and physically capable of reading who cannot read the English language or some other language or dialect. Any admissible alien, however, can bring in or send for a father or grandfather over fifty-five years of age, his wife, mother, grandmother, or unmarried or widowed daughter, if otherwise admissible, regardless of whether such relatives can read or not.

Altho it has rarely happened in recent years that Congress should override a President's veto, President Wilson cannot construe the action of Congress as a defeat for the national administration since the immigration bill was not a party issue. Of the sixty-two Senators who favored the measure, thirty-four were Democrats and twenty-eight Republicans; its opponents included eleven Democrats and eight Republicans. In the debate Senator Reed of Missouri and other opponents of the bill emphasized two points, that the literacy test is unjust since it does not test personal capacity and character and that the present was not the time for endangering our relations with Japan by enacting immigration laws affecting Asiatics. In rebuttal Senators pointed out that the phraseology of the new law was carefully chosen not to affect any existing treaty or agreement with Japan, and that, while the ability to read and write was not in every individual case a test of fitness for immigration to this country, it was desirable to limit the amount of immigration and this was the least objectionable way of reaching the desired result.

Prohibition Victories The last few days have been crowded with triumphs for the enemies of the saloon. On February 2, Oregon's new law, absolutely prohibiting the importation of liquor for beverage purposes, was approved by the Governor. On the same day a similar bill was signed by the Governor of Tennessee. Arkansas has adopted a prohibition law which not only prevents shipments of intoxicating liquor into the state, but from one part of Arkansas to another or storage of such liquor in any part of the State. All of these laws are designed to take advantage of the Supreme Court's recent decision upholding the constitutionality of the federal law which prohibits the shipment of intoxicating liquors into states that have laws forbidding such importation.

The statewide prohibition bill, which had passed the lower branch of the Indiana Legislature, passed the State Senate on February 2, by a vote of 38 to 11. The bill now goes back to the lower house for the consideration of amendments adopted in the Senate. A prohibition bill providing for the appointment of a commissioner to see that there are no violations of the law has passed the Utah Legislature almost unanimously. Governor Kendrick, of Wyoming, has signed a bill submitting a constitutional amendment for state prohibition to the voters in 1918. The rigid prohibition bill for the territory of Alaska, which had already passed the United States Senate, has been equally successful in the House of Representatives.

Putting the Clock Forward The meeting of the National Daylight Saving Convention in New York has given new impetus to a movement already widely advocated by public men. The plan is to set all clocks forward one hour during the summer months. The theory upon which it is based is that people in our modern industrial civilization do not regulate their habits by the sun but by the arbitrary time scheme of clocks and watches and factory whistles. Therefore a universal agreement to call what had been seven o'clock eight o'clock would start everyone's day an hour earlier. This, it is alleged, would save millions of dollars now wasted in artificial illumination and promote good habits among the people. The idea is a comparatively new one in this country and it would probably be regarded as outside practical politics but for the fact that the system has been largely adopted thruout Europe since the beginning of the Great War. Representative Borland has introduced a bill into Congress providing for standard time thruout the United States and for moving all clocks forward one hour during the summer. The United States Chamber of Commerce and the Associated Chamber of Commerce of the Pacific

THE ARMY HEADS

A word from the War Department and military mobilization in the United States will proceed under the direction of these four generals, each in charge of a geographical division. From left to right they are Gen. Barry, in command of the Central Division; Gen. Wood, of the Eastern Division; Gen. Franklin Bell, of the Western Division; and Gen. Funston, of the Southern Division

Coast have both indorsed the movement and President Wilson sent a favorable letter to one of the leaders of the Daylight Saving Convention.

The Negro and the New South At the twenty-sixth annual convention of negro farmers held at Tuskegee, Alabama, the main topic of discussion was the economic opportunity for the negro farmer in the southern states. The convention adopted a declaration expressing confidence in the future of the South as a field for the activities of the negro race, pointing out that more than ninety per cent of the farms owned by American negroes were in the South and asserting that the present lack of adequate protection under the law for negroes in the southern states would soon be replaced by better conditions. Dr. Robert R. Moton, the successor of Booker Washington as head of Tuskegee, presided over the convention. Another negro meeting for the celebration of Emancipation Day at Raleigh, North Carolina, emphasized the same point. The orator of the occasion, the Rev. W. R. Gullins, of Durham, declared that in his opinion it was not wise for negroes to leave the South for other sections of the country, since the opportunities in the South were so great. Resolutions adopted by the Raleigh meeting favored the encouragement of state education, the establishment of a negro weekly paper in the city, the fullest use of savings banks to encourage thrift, and political activity on the part of all negroes allowed to vote. An association has been formed in the county to see that all qualified negroes are on the registration books. The association is nonpartizan and encourages independent voting. A session of the Mississippi Episcopal Church (negro), recently held at Jackson, made a strong plea for better schools and better criminal justice in order to check the negro exodus.

Revolution in Costa Rica Alfredo Gonzales, President of Costa Rica, has been ousted from office by an unexpected revolt of the military forces of the capital, supported by a popular insurrection. The administrative power was conferred upon Federico Tinoco, minister of war in President Gonzales' cabinet. The new administration will call a convention, to be chosen by popular election, which will meet on April first for the election of a president. The deposed President found a refuge at the United States legation. Not a single life has thus far been lost during the revolution.

For a number of years Costa Rica has been honorably distinguished among Central American republics for relative freedom from revolutions and civil wars. But the Gonzales administration aroused so much discontent among a large part of the population that the President was not suffered to serve to the end of his term of office. His opponents allege that he was conspiring to retain his office for another term in spite of the prohibition of reëlection contained in the Costa Rica constitution. The revolutionists found another grievance in a new system of taxation planned by the President. If there are no disorders consequent upon the successful revolution of January 28 the United States will not intervene.

Florida to Drain Everglades Florida may be solicitous of appropriations from the Federal Government for local improvements, but the State is willing to undertake improvements at its own expense as well. Governor Sidney J. Catts, in his inaugural address, declared that the most important problem facing Florida today was the conversion of the Everglades into usable land. The great obstacle to this improvement had been the opposition of voters in other parts of the State to the great expense which the reclamation of the swamp lands would involve, and the Governor promised a campaign of education to awaken the voters to the necessity of the work. The cost of the undertaking will be met by two bond issues of $3,000,000 each.

Other points emphasized by the Governor in his address were the regulation and taxation of railroads, the simplification of the primary law, the introduction of the initiative, referendum and recall "from constable to the highest officers of the State," the establishment of industrial schools, and the taxation of church property.

OUR SCRAP OF PAPER

Article XII in the treaty of 1785 between the United States and Prussia, embodied in the treaty of 1828, and still binding.

If one of the contracting parties should be engaged in war with any other power, the free intercourse and commerce of the subjects as citizens of the party remaining neuter with the belligerent power shall not be interrupted. On the contrary, in that case, as in full peace, the vessels of the neutral party may navigate freely to and from the ports and on the coasts of the belligerent parties, free vessels making free goods, insomuch that all things shall be adjudged free which shall be on board any vessel belonging to the neutral party, altho such things belong to the enemy of the other; and the same freedom shall be extended to persons who shall be on board a free vessel, altho they should be enemies to the other party, unless they be soldiers in actual service of such enemy.

B. FRANKLIN
TH. JEFFERSON
JOHN ADAMS
F. G. DE THULEMEIER

The Cost of the Great War

We are frequently asked to give the amount of the monetary losses and expenditures of the various belligerents, but it is impossible to comply with these requests in the fullest sense. No valid calculation can be made of the property destroyed in the regions traversed by the armies; still less can one estimate the value of the lives lost or the permanent injury done to the commerce and industries of the world. Even the actual expenditures by the several governments are not known in some cases, as for instance Russia and Austria-Hungary, and it is impossible in any case to draw a sharp line between the ordinary expenses of running the government and the new expenditures necessitated by the war. The best that can be done is to put down the known appropriations voted and loans made and supplement these by estimates of other expenditures. The financial section of the *New York Times* for December 31 makes from such data as are available a careful calculation and arrives at the totals given below:

Country	Total Cost to Dec. 31, 1916	Present Average Cost per Day
Great Britain:		
United Kingdom..	$14,374,000,000	$23,500,000
Canada	400,000,000	900,000
Other colonies	600,000,000	600,000
Total Great Britain.	$15,374,000,000	$25,000,000
France	$12,200,000,000	$18,000,000
Russia	8,500,000,000	16,000,000
Italy	4,000,000,000	7,000,000
Belgium	490,000,000	1,000,000
Serbia	330,000,000	1,000,000
Rumania	250,000,000	2,000,000
Entente Allies	$41,144,000,000	$70,000,000
Germany	$14,600,000,000	$21,000,000
Germany	$14,600,000,000	$21,000,000
Austria	5,000,000,000	11,000,000
Turkey	650,000,000	1,500,000
Bulgaria	375,000,000	1,500,000
Central Allies	$20,625,000,000	$35,000,000
Grand Total...	$61,769,000,000	$105,000,000

The aggregate direct cost of the twenty greatest wars in the century and a quarter preceding the outbreak of the present struggle was not in excess of $22,000,000,000.

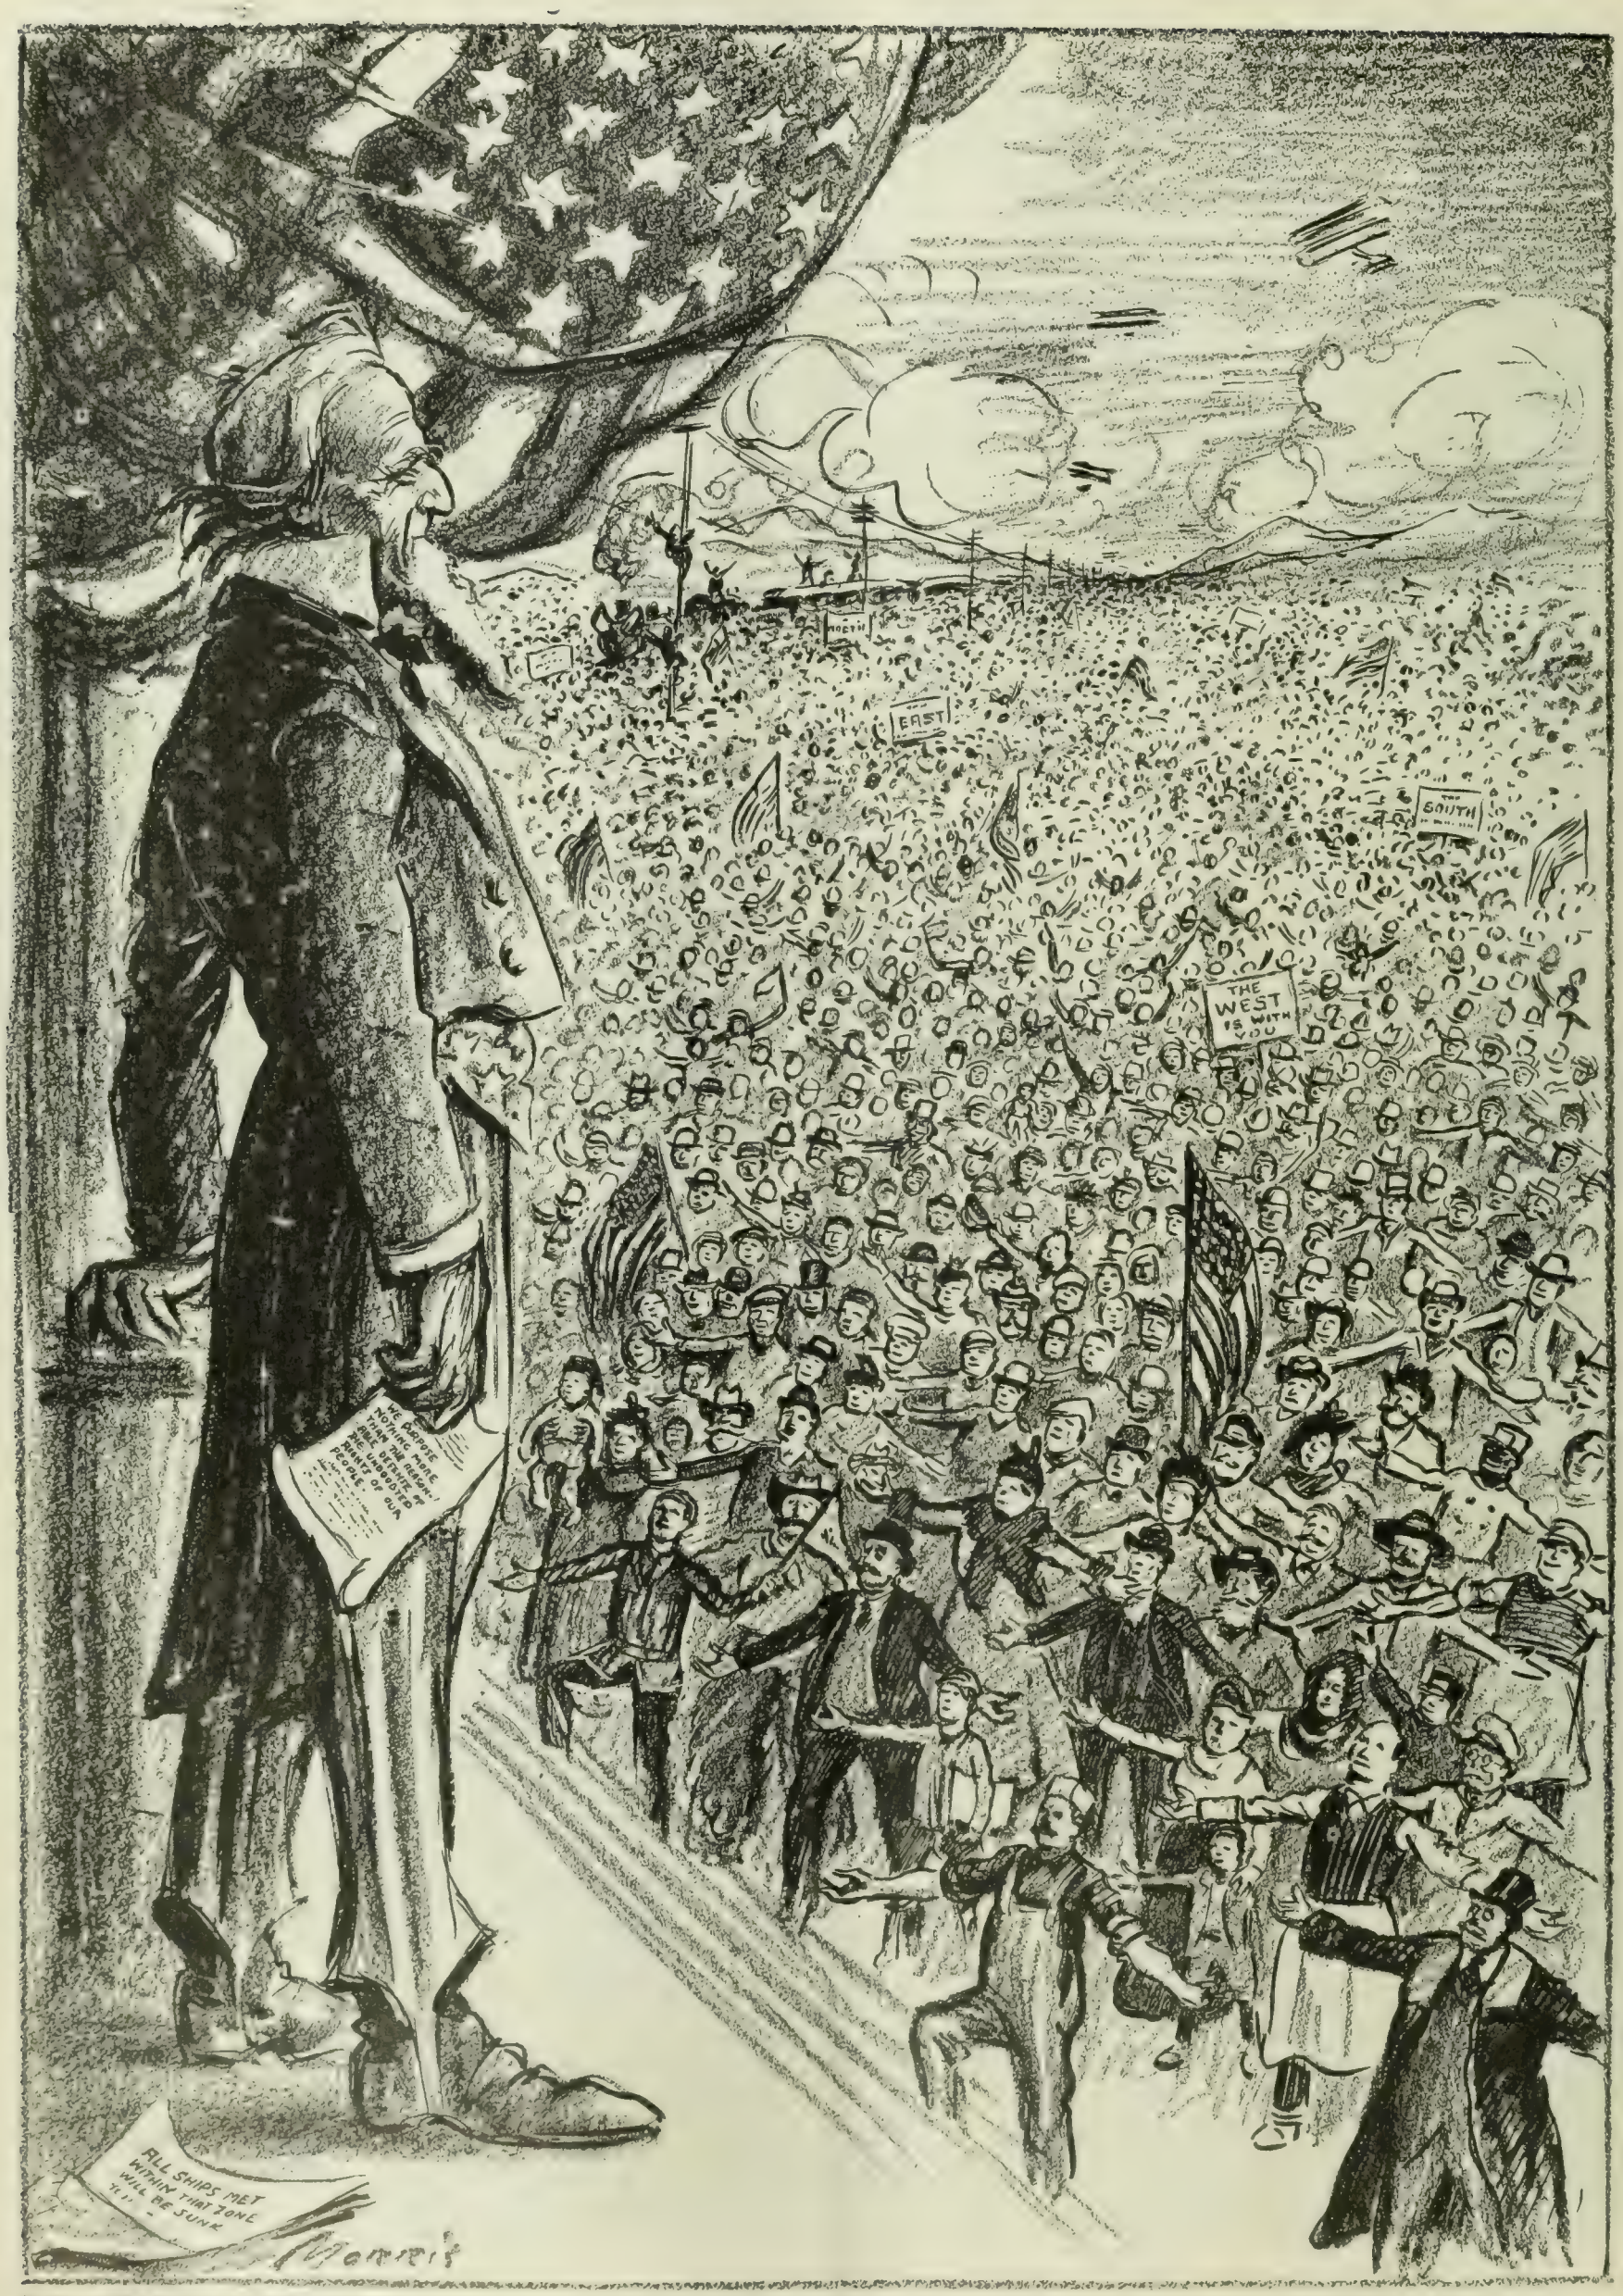
These sums are raised partly by taxation and internal loans and partly by external loans from other belligerents and neutral nations. The financial support of Austria, Turkey and Bulgaria comes largely from Germany, and on the other side Great Britain has advanced over $4,000,000,000 to her less wealthy allies. The sums so loaned reappear in the table among the expenditure of the minor belligerents. Whether they are to be counted as lost depends upon the outcome of the war and the financial soundness of the debtor country after the war.

Increase of National Debts

According to the estimates of the Federal Reserve Board the national debts of the five leading belligerents have been increased by $49,455,000,000 up to the latter part of 1916. Of this twenty-nine billions have been added to the debts of Great Britain, France and Russia, and twenty billions to the debts of Germany and Austria-Hungary. In March, 1914, the British national debt was $3,449,813,150 and in November, 1916, it amounted to $15,163,750,000. More than three billions have been loaned by Great Britain to her allies and dominions. France has loaned about a third of a billion to her allies, and her national debt has been increased by eight billion. Russia, which owed about five billion dollars before the war, now owes more than thirteen billion. Germany has added more than fifteen and a quarter billions to her indebtedness, and her daily expenditure on the war is now estimated by the Federal Reserve Board to be about $17,500,000. Austria has incurred additional indebtedness to the amount of $3,716,200,000 and Hungary, $1,214,000,000.

It was formerly the common opinion of experts that the financial system of Europe could not stand the strain of a general war. For instance, the British Foreign Minister, Sir Edward Grey, told the Austro-Hungarian Ambassador, in London, a week before the war broke out, that

> The possible consequences of the present situation were terrible. If as many as four great powers of Europe—let us say Austria, France, Russia and Germany—were engaged in war, it seemed to me that it must involve the expenditure of so vast a sum of money, and such an interference with trade, that a war would be accompanied or followed by a complete collapse of European credit and industry.



These forebodings fortunately have so far not been fulfilled. Not four, but fourteen nations are now involved in the conflict, and it has already lasted two years and a half, longer probably than even Sir Edward Grey anticipated, yet the credit system of the world shows no signs of breaking down. But the figures given above justify the warning recently given by the Federal Reserve Board to the banks of America not to put out too much in unsecured loans to the belligerent nations.

THE NAVY NEEDS STRATEGY

BY REAR ADMIRAL BRADLEY A. FISKE

PRESIDENT OF THE UNITED STATES NAVAL INSTITUTE

IN the present situation the main thing for us to realize is that the crisis has become a military one, and that history shows that the most dangerous thing a country can do in a military crisis is to underestimate the gravity of the situation.

The fashion in this country has been to take it for granted that, in the present conflict, the Allies will surely win. At its outbreak, the great majority of our people thought that the war would soon be over with the advantage on the Allies' side, and there were many highly influential men who thought the war would not last more than ninety days.

Army and Navy officers had no such illusion. We realized that the most perfect and enormous fighting machine that the world had ever seen had been set in motion; and we noted, after about a month of war, that it was working with all the vigor and effectiveness that its most pronounced admirers had expected. The people of the United States had not been trained along military and naval lines, and they were very much impressed with the superiority of the material resources of the Allies in comparison of those of their antagonists. We of the Army and Navy said to them, "You do not appreciate the advantages that wise strategy confers; you do not remember how quickly Austria and France were conquered by Prussia in 1866 and 1870." The people replied, "We do realize the advantages of what you call strategy, but in the present war those advantages have been utilized already in bringing about the superior state of preparedness which the Central Powers enjoyed. The Allies will soon get into the same state of preparedness, and then the decisive factors will be material resources, of which the Allies have the preponderance." We answered that the effects of strategy do not disappear immediately after the beginning of a war; that the causes which make one side more prepared than the other at the beginning

© *Harris and Ewing*

REAR ADMIRAL FISKE

of a war make that side more prepared at the middle of the war also; because the causes are fundamentally intellectual and moral, and have their roots in the characters of the peoples themselves.

The cause of the present preparedness of the Central Powers is the system that has been in use in Prussia since 1640, when the Great Elector, impressed at the age of 20 by the deplorable condition of Brandenburg, started to reform it. His first step, and his continuing policy thereafter, were to insist that the head of every department should be a trained expert, and that he should labor unremittingly to improve his department. In other words, he applied military ideas to civil offices. His system was continued by his son, though somewhat less effectively. It was continued, however, and even more effectively by his grandson, who made Prussia, which Brandenburg had then become, the most efficient Government in Europe, and who established an army incomparably better than any other. This army he bequeathed to his son, by means of which his son made himself Frederick the Great and made Prussia the most efficiently governed country in the world. The same system has continued, without pause, and is now in operation at full speed. The German Army and Navy are efficient because the German Government is efficient; and the German Government is efficient because it is operated in accordance with army and navy principles.

For these reasons, the officers of our Army and Navy are intensely interested in watching the present combat between superior material resources and normal efficiency on one side, and inferior material resources and super-efficiency on the other side.

These considerations show that in order to be wisely prudent, our people should realize that it is not sure that the Central Powers will be prostrated by the present war; because, if they are not prostrated, if they have estimated the present situation with the accuracy with which they have estimated scores of other situations during many years, it is possible that they may bring the war to such a pass that, when the terms of peace are finally agreed upon, we may find ourselves suddenly deprived of the protection of the British fleet, and confonted with the most dangerous situation that we have ever been confronted with. It is exposing no official secret, and stating nothing that I have not stated twice to Congress, to declare that the German Navy is a very much more effective Navy than ours; and that, in case war between us and Germany should unfortunately occur,

Germany could send a fleet across the ocean which, if not hampered by the fleet of any other Power, could easily bring about an issue deplorable for us.

So, we must prepare, not only with energy, but with strategical insight and invention. The conduct of war and the conduct of preparation for war are controlled by three agencies, strategy, logistics and invention. In the United States we have become accustomed to thinking that war is fought with men, guns, ships, etc., only. It is true that war is fought with them; but they are simply the tools which strategy uses; they are comprised under the heading of "logistics." The governing agency is strategy, in which the Germans are so great and we so weak.

We are weak in strategy, because we have paid little attention to it. We have few competent strategists, even in the Army and Navy. The competent strategist is a man so versed in the values of the various factors that are used in war, so familiar with the causes of success and failure (as taught by the lessons of history and the game board), so clearly cognizant of the military and naval ideas and ambitions of foreign countries, so well aware of their points of strength and weakness, so thoroughly in touch with the military, naval and industrial conditions in his own country, so keenly alive as to what his country's interests demand that she should do, and so well posted as to the difficulties in the way and the means by which the difficulties can best be met, that he can estimate correctly each military situation, as it arises, and come promptly to a wise decision as to what steps should be taken. He employs invention and logistics to assist him; invention for devising plans and methods and logistics for providing the men, guns and mechanism that his plans and methods need for execution. He plays the same part in conducting his work that the railroad president or captain of industry plays in conducting his work. His work differs from theirs in that he handles the complicated methods, plans, and instruments of war, while they handle the simpler methods, plans and instruments of commerce. The requirements as to specialized skill and knowledge apply equally to all.

A French proverb says that without imagination a man cannot be a great general. The American people have great imagination, great inventiveness and great powers to operate in all matters of logistics. In these ways we compare favorably with any possible antagonist; but we are weak, pitifully weak in the factor that dominates war, in strategy. Our statesmen are untrained in the analysis of military situations, and therefore have little conception of strategy. The proof of this statement is the fact that the United States has been committed for many years to the greatest strategical folly imaginable, that of supporting militia organizations in forty-eight separate states on the theory that they could constitute an army. The Great Elector of Brandenburg, a youth of twenty, in 1640, saw that an army must be, not an aggregation of parts, but a *unit* composed of parts.

Since 1640 two hundred and seventy-seven years have gone by. Germany has been preparing for two hundred and seventy-seven years.

New York City

DEFENSE IS IN THE AIR

BY REAR ADMIRAL ROBERT E. PEARY

CHAIRMAN OF THE NATIONAL AERIAL COAST PATROL COMMISSION

ON Monday, the fifth of February, the National Aerial Coast Patrol Commission had the honor to present to the President of the United States the memorandum that is here reproduced. I am glad to have it printed in this issue of The Independent, which is to be so largely devoted to the activities of mobilization in the departments of the Navy, the Army, Industrial Organization, the Air, and that department in which women are supreme.

Dear Sir:

The National Aerial Coast Patrol Commission is with you to the finish, and is entirely at your command.

The potentiality of air power has been driven home during the past two years with startling accentuation. Its vital importance grows with each day.

Today command of the land and command of the sea are worthless—are in fact impossible—without command of the air.

Leaders abroad are now saying officially in carefully considered words: First: That the time is near when the air service of a country will be more vital to its safety than its army and navy combined.

Second: That the decision in the present war may come in the air.

Third: That every country will be obliged to have a separate independent air service by that sheer necessity which knows no law, regards no precedent, fears no government.

The recent British Cabinet crisis is said to have hinged largely on matters of air policy.

© Doubleday, Page & Co.

REAR ADMIRAL PEARY

Germany is understood today to have some 10,000 aeroplanes in service. The numerical strength of the French and British air personnel is astonishing.

Canada is to expend $80,000,000 this present year in putting a great air fleet in commission.

It is not only possible, but entirely probable that air strength because of its comparative speed of materialization and relative cheapness, may be a most important and perhaps deciding factor of our national defense.

1,000 hydroaeroplanes along our Atlantic Coast will double the efficiency of our naval defense and increase the value of our coast protection 200 to 300 per cent.

The present key to our preparedness in this line is a numerous *flying* personnel—thousands and thousands and thousands of courageous wiry young men capable of handling aeroplanes as the expert chauffeur handles his car. We can not have too many of these too soon.

If the above be accepted, then we have no time to lose, but should throw all available strength into aerial preparedness with unsparing energy.

Present practise abroad is to give some strong broad executive full and undivided control in this field.

If this can be done here and the training of 2500 aviators within six months and 5000 within a year made *mandatory*, it will be of the greatest value.

In conclusion the following is submitted for your consideration:

To give the United States proper air power we need in their order the following:

First. A separate, independent Department of Aeronautics with a place in the President's Cabinet.

Second. An aviation class of thousands and thousands of young men thruout the country.

Third. A comprehensive aero coast defense system, along the broad general lines which this commission has indicated and urged.

Fourth. Some powerful interest, which can combine and develop existing conflicting interests and struggling concerns into a great air industry.

Fifth. A great central aeronautic plant, located in the interior of the country, where it can be protected to the last ditch.

Very respectfully,
(*Signed*) CHARLES F. JOHNSON.
MORRIS SHEPPARD.
JULIUS KAHN.
R. E. PEARY, *Chairman.*

Vital lessons are being taught us by the European war, and the broadest material lesson for the United States is this:

Command of the Sea, and Command of the Land are worthless without Command of the Air.

To put it in slightly different form, our military forces both navy and army will be useless without a superior and commanding air service. No attack can be driven home today on the European battle fronts without the assistance of the air service. The Jutland sea fight was dominated by the eyes of a dirigible.

What conception have we here (outside of a few) of the astonishing numerical strength of the air services, and the advances in utilization of the air in foreign countries?

With half a dozen nations having between 2,000 and 10,000 aeroplanes each, and hundreds of kite balloons and dirigibles, the official reports of the aerial operations of one day would fill a fair sized book.

And yet the western battle front in Europe in a straight line from one end to the other is no longer than the distance from New York to Pittsburg, or the southern boundary of Dakota or Montana or one side of half a dozen of our other states.

At the present time four foreign powers, probably six, have the men, the machines, the experience and expert knowledge, that would enable any one of them by issuing an order today, to destroy Washington or any other of our great coastal cities from the air in a single night two weeks from now.

We have neither aeroplanes nor dirigibles, nor aviators, nor anti-aircraft guns, nor any other means of preventing such destruction. We should be as absolutely helpless as were the inhabitants of London when those terrible machines arrived from Mars in Wells' story, "The War of Worlds."

© Underwood & Underwood

MR. WISE WOOD

Only recently Lord Montagu presented a plan for the air defense of Great Britain after the conclusion of the present war, which contemplated twenty thousand aeroplanes. Compare the coast line of the British Isles with ours.

And yet our coast lines give us this advantage, they furnish us a base from which it will be possible to send out such a cloud of aeroplanes as would not only completely overwhelm and destroy any air equipment that could be brought against us by a hostile fleet, but could even destroy the fleet itself.

Do not, however, get the erroneous idea that I wish to substitute aerial equipment in place of the Navy. Nothing is farther from my thought. I am urging a great air fleet and aero coast defense, *in addition to the Navy.*

What about cost? Less than a month of present war cost to Great Britain alone, less than a month of war cost to this country if we are antagonized by a first class power or combination of powers, will inaugurate these vital things.

A bond issue is the solution of the cost problem. If we are to have a real defense we must begin developing our aerial strength *now* and push it with unsparing energy. We shall not have started on a proper pace of development of this vital arm until we are spending not less than $50,000,000 a year on the building of our air service.

The millions expended on our Navy and Army will be wasted, the millions devoted to the Panama Canal thrown away, the billions of value in our great cities jeopardized, and the existence of the nation endangered, unless we have such an air fleet as will give the United States unquestioned command of the air for the Continent of North America.

Washington, D. C.

WHAT THE ARMY NEEDS

BY HENRY A. WISE WOOD

CHAIRMAN OF THE CONFERENCE COMMITTEE ON NATIONAL PREPAREDNESS

I HAVE been asked by the Editor of The Independent to state what in my opinion are the immediate needs of the Army. My contact with experienced men in the service leads me to believe that the following steps should be taken at once:

1. Action should be begun looking toward universal military training, and such organization of our people and resources as will convince other nations that we are a united people prepared to make sacrifices for our country.

2. There should be issued a call of the National Guard, with orders to recruit up to the maximum strength, and to form depot battalions.

3. There should be issued a call for 500,000 volunteer troops, these to be so organized and trained as to become dependable troops in six months.

4. There should be applied Section 120 of the National Defense Act, so as to enforce precedence of all orders given manufacturers for military equipment for the United States.

5. An emergency appropriation of $250,000,000 should be made at once for the purchase or manufacture of arms, ammunition, and equipment, especially the following: Artillery, especially heavy, mobile artillery of long range, and large stores of ammunition for the same; machine guns, especially of the light portable type, and ammunition; aeroplanes in large numbers, and other aeronautical equipment: anti-aircraft guns, and ammunition; small arms, and ammunition; portable searchlights; field telephones, and other equipments for communication; radio pack sets; motor tractors for artillery, and motor trucks for transportation; animals for mounted troops and animal transportation; entrenching tools, and material for obstacles; clothing, food, tentage, and individual equipments; high explosives; armored cars, and land "dreadnaughts," and a full equipment and manning of our harbor defenses, with such automobile torpedoes and mines and other appliances needed for coast defense.

It is the opinion of all of the military and naval authorities with whom I have consulted, as well as of the most thoughtful of our citizens, that all young men, when they reach the age of

nineteen, should be given a thoro military or naval training, under practical conditions. This, it is generally believed, will give us a healthier and far more efficient male citizenry, will lessen crime, and make for a more orderly community, and will provide the nation with an enormous reservoir of trained military material which, because it can be quickly mobilized, will make our country too formidable a foe to be trifled with.

Said Light Horse Harry Lee, an officer of the Revolution, "A Government is the murderer of its citizens, which sends them to the field uninformed and untaught, where they are to meet men of the same age and strength, mechanized by education and discipline for battle." This, and Washington's dictum, that "To be prepared for war is one of the most effectual means of preserving peace" are two lessons that we seem never to have learned. If the present emergency compels us to apply both it will not have arisen in vain.

New York City

MOBILIZING OUR INDUSTRIES

BY HOWARD EARLE COFFIN

CHAIRMAN OF THE COMMITTEE ON INDUSTRIAL PREPAREDNESS

IF there should be an open break between the United States and a first-class foreign power, taking form in a declaration of war and calling for the raising of an adequate military and naval force, back of the federal machinery of the War and Navy Departments there must be a quick mobilization of the industries of the Nation to meet the increased demands for munitions and other supplies for the fighting forces. The survey of the industries of the country has been made, manufacturers are anxious and ready to coöperate in meeting the governmental needs, but the great and immediate step must be to show them how to proceed. This must be a process of education and it can not be a quick process. It takes time to convert a factory used for the manufacture of products of peace into an ammunition plant. The plants may be had in a hurry—many have been offered in advance of an open break—but the great task of mobilization will be to get them running in new grooves.

A close observation of the experience in foreign countries has shown us the vital necessity for a peace time prearrangement for conversion in all industries. Wars, as now waged, involve every human and material resource of a belligerent nation. Every factory and every man, woman and child is affected. Every sinew of industry, of transportation and of finance must be harnessed in the country's service. In England two years and a half ago there were three government arsenals. Today thousands of England's industrial plants are being operated as Government factories, for the production of war materials, and many other thousands of plants, still under private control, are centering their energies in this same direction. The teaching of the munition making art to these thousands of manufacturers and to millions of industrial workers, both men and women, has called for a work in industrial organization and education such as the world has never seen before.

We have here in the United States vast resources in manufacturing and producing equipment, but they are unorganized and uneducated for the national service. Our observations of the European war have taught us that it is upon organized industry that we must base every plan of military defense. In

Paul Thompson

MR. COFFIN

the event of trouble with any one of the several first-class powers, between eighty and ninety per cent of our industrial activity would, of necessity, be centered upon the making of supplies for the Government We have learned also that from one to two years of time and of conscientious effort are needed to permit any large manufacturing establishment to change over from its usual peace time commercial line to the quantity production of war materials, for which it has had no previous training.

We have had no experience in the kind of warfare now being waged abroad, and yet this is exactly the sort of thing for which we must prepare, or immediately enter upon if war should now be declared, or it is worse than useless that we prepare at all. We have the investments in plants, in tools and in machinery, and more important still are our resources in skilled workers. But it is only thru the most careful methods of organization and education in time of peace that we may make all these resources available in time in emergency.

Each manufacturing plant must be taught now to make that particular part or thing for which its equipment is best suited. It may be that that education must start at once to meet actual and present pressing demands, but in any event, annual educational orders, of such small size as not to interfere with commercial products, must be delivered each year under Government inspection. Skilled labor in every line must be so enrolled as to ensure against its loss to industry thru enlistment in the fighting forces. There exists no other means of harnessing industry in the defensive service of the Government.

We must nationalize the munitions industry politically. Each community and each political district will have its share of government responsibility and expenditure in this work. To each community will be brought home the part it must play in the event of national emergency. We have known that we must nationalize geographically the munition making art and that to leave it centered near our east coast would be suicidal.

There is no mystery in the job of preparing the country for defense. Thru too much secrecy, we deceive, and can deceive, the American people only. Manufacturers should have been looking their part in the national scheme of things military squarely in the face months ago. Their vital interests both commercial and national require that each shall know how to do his "bit" in time of need. If in the present situation any manufacturer can have the idea that he may sit in security with folded hands because Congress has voted battleships and a meagre increase in the standing army, he needs to consult a brain specialist. There are in war, as in peace, three Graces, and their names are "Army, Navy, and Industry"—and the greatest of these is Industry. The European war is, in its last analysis, a war of munitions—a war of factories, of producing powers and of skilled workers.

I have referred to the survey or inventory of the country's manufacturing and producing industries. It has been practically completed with a showing of twenty-seven thousand separate inventories. This is encouraging, but the task of war will be to whip the necessary percentage of these twenty-seven thousand plants into going Government

plants, not Government-owned plants, but plants working intelligently to supply the Government's war needs. The ability to swing quickly from the commodities of peaceful commerce to the production of the emergency materials of war will constitute the greatest insurance against government control, against disruption of organization and against months of community chaos thru unemployment.

The Government, thru the work of the Committee on Industrial Preparedness of the Naval Consulting Board and its departments, especially created to get such information, knows just what these other industries are, where they are located and their possibilities for use. Much of this general information is brought together in the last pages of the report of the Colonal Kernan Board, so called, dealing with the Government Manufacture of Arms, Munitions and Equipment, submitted to Congress and printed as a Government document (No. 664). The advance work has thus been done. The test, now, is to set in motion under direction of the Council of National Defense, the educational work to insure practical results. The first mobilization of industry, even with an early declaration of war, will be the mobilization of industrial instructors. The manufacturers are ready to be taught. With the known capacity of American manufacturers for learning, and their ability at quick execution, it ought not to be impossible to even exceed other warring countries in effecting the real mobilization of industry, which means the setting in motion of their wheels in Government work. While the Army and Navy machinery may be exerting its utmost powers in the building of ships and toward the mobilization of hundreds of thousands of men, there must go forward this other tremendous undertaking, the mobilization of industry, the power behind them both.

Washington, D. C.

THE WOMAN POWER OF THE NATION

BY GRACE PARKER

NATIONAL COMMANDANT OF THE NATIONAL LEAGUE FOR WOMAN'S SERVICE

THE question which women all over America are asking themselves at the present moment is—"How can I be of service if our country is forced into war?"

We in this country have the wonderful advantage of being able to benefit by the two and a half years of experience of the women in Europe, and to profit by their mistakes, as well as by the magnificent work which they have accomplished.

It has been my privilege to spend two months in England, from where I have just returned, studying "How the Resources of Women Are Being Used in England's Calamity" I was enabled not only to see the gigantic work which is being done for the sick and wounded in hospitals, and in the hospital workrooms and supply depots, but also the splendid work of many organizations along social and welfare lines: including social clubs in the districts where military training camps are located; industrial canteens; organizations providing motor drivers for the army; teachers for army cooking schools; cooks for hospitals; and organizations utilizing the services of girls and women in business, executives, stenographers, filing clerks, record clerks, telegraph operators, switchboard operators, etc., anxious to "do their bit" of war work outside of business hours; also organizations, both governmental and private, dealing with the tremendous industrial and agricultural needs of the country.

After two years of experience, during which time many, many different organizations have been working along many lines of service for the country, the leaders of these organizations have come to realize the vital importance of a woman's power board under the Government to supervise and control the woman power of England, both paid and unpaid, and to provide a clearing house regarding woman's work. Such a board has been recommended under the Treasury Department, and was under

MISS PARKER

favorable consideration when I left England—late in December.

One of the great handicaps which has complicated the intelligent use of the woman power of England was the lack of any registry of women and women's resources when war was declared. Such a registry has been made since, but meantime there has been much maladjustment of women's labor and women's resources.

Based upon the experiences of England and the needs of our own country, a program for coördinating the work and developing the resources of the woman power of America was presented at the Congress for Constructive Patriotism, held in Washington, D. C., January 25, 26 and 27. This program was endorsed by the Congress. A woman's session was held at which over five hundred women from all sections of the United States were present, representing many national, state and local organizations. At this session a resolution was passed, endorsing the program and authorizing the chairman of the session, Miss Maude Wetmore, to appoint an organization committee of not less than fifteen members, this committee to be national in representation, and to formulate plans for an organization to promote the program for woman's work in America. Thus the National League for Woman's Service came into being in Washington, D. C., on January 27, 1917.

The object of the organization, as stated in its constitution, is: "To coordinate and standardize the work of women of America along lines of constructive patriotism; to develop the resources and to promote the efficiency of women in meeting their every-day responsibilities to home, to state, to nation and to humanity; to provide organized, trained groups in every community prepared to coöperate with the Red Cross Society and other agencies in dealing with any calamity—fire, flood, famine, economic disorder, etc., and in time of war to supplement the work of the Red Cross, the army and navy, and to deal with questions of women's work and women's welfare."

The program on which its work is based is: first, to develop a clearing house of information regarding women's organizations working along lines of constructive patriotism; second, to coördinate the work of women's organizations and to develop the resources of women thru a standardized, nationalized program of activities; third, to recommend to the proper governmental agency: (a) a registry of the woman power of America; (b) a woman's bu-

reau under the Federal Government to deal with women's work and welfare.

The standardized program of activities for coördinating the work and developing the resources of the women of America divides the responsibilities and interests of women into eleven national divisions: Home economics, social and welfare, health, civics, agricultural, industrial, medical and nursing, motor driving, signaling and map reading, general service, camps.

The plan further provides that any already existing organization of women may organize within its own membership detachments of the National League for Woman's Service without giving up its own work or losing its own identity. To develop and get into working order this plan of organization would require at least six months. Five days after the National League for Woman's Service came into existence the nation was confronted with a crisis in its affairs with Germany and the possibility of an immediate emergency. An emergency program has been developed by the league under which women thruout the country are at present organizing. An information blank has been sent out to organizations thruout the country to attempt to discover what the immediately available organized resources of women are; a registration blank for volunteers has been prepared, on which the immediately available unorganized resources of women may be based. Temporary state chairmen and temporary local chairmen are being appointed thruout the country, and detachments are at present being formed under the following divisions:

Social and Welfare: including (a) social clubs, (b) industrial canteens—housing, (c) railroad station canteens, (d) welfare of industrial workers, (e) coöperation with militia men's families.

Commissariat: including (a) cooking, hospitals, canteens; (b) purchasing for hospitals and canteens.

Motor Driving: (a) for communication service.

General Service: including (a) executives for organizations or industries, (b) stenographers, (c) file clerks, (d) record clerks, (e) telegraph operators, (f) telephone switchboard operators.

The National League for Woman's Service has been invited by the Council for National Defense to appoint three of its members to meet with the council to consult regarding the woman power of the country in its relation to national defense. The league is working in close coöperation with the Red Cross Society.

The national headquarters of the National League for Woman's Service are at 105 West Fortieth Street, New York City, from which complete information may be secured.

New York City

READY FOR WHAT COMES

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE world crisis now upon us drives home a keener challenge of responsibility than we have had to face in a hundred years. We must answer, clearly and swiftly, a double question. How can we as individuals prepare for war—yet how as individuals prevent war? The right union of *individual* prevention and preparation is your problem and mine. What the Kaiser does, what Mr. Wilson does, is not our affair. What *we* do—say—think—feel—plan—want—work for, is the test of our sanity, efficiency, patriotism, while war threatens.

We can each help to prevent, or mitigate, war.

We can think peace, talk peace, cultivate peace in our own hearts.

We can follow the injunction of the President, to avoid any word or act that might be considered questionable.

We can believe, with him, that the essential fairness and kindliness of the German people must finally prevail, and that no submarine commander even now would purposely or willingly take the lives of Americans.

We can earnestly desire justice done by us more than for us.

We can resolve never to fight our German brothers, but only to fight, if need be, the incarnate demons of militarism, egotism and barbarism that have obsessed the German rulers.

We can thus keep thinking right—and God knows, if we do not, how great a force right thought is.

We can ask ourselves now, definitely, what we would give our country—whether time, or money, or talent, or toil, or blood.

We can learn to live on half what we spend, cutting down the national waste of ten billion dollars a year, and preventing the famine that war entails.

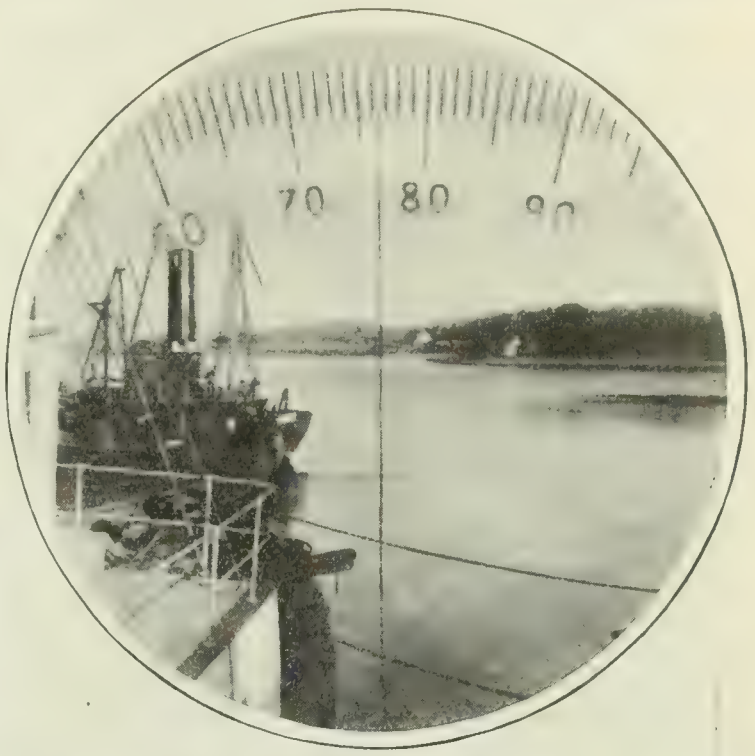
We can mobilize our personal resources—physical, mental, financial, industrial, moral, and find where we would stand in a great emergency.

We can cultivate loyalty, bravery and devotion, as the moral bulwarks of defense that a nation must always rear as ultimate support for its army.

We can be ready for war as we are steady for peace.

Germany has taught us that martial industrial and political efficiency are well-nigh invincible and indispensable. We may have to teach Germany that moral efficiency is even greater and more to be desired. We can do it only by remaining impersonal, neutral in sympathies, not pro-English, not even pro-American. The safety of Americans at sea is *not* the great issue, but the right of any subject of any nation to go about his lawful business in peace.

We must take as high ground as we took in the Revolutionary War, to make our stand effective. We battled then for national freedom and justice; we may have to battle now for international freedom and justice, not merely under the stars and stripes, but under the broader banner of eternal principle and universal brotherhood. The clarion call of the hour is that every citizen be a statesman, every American speedily grow into a world patriot—then make himself in *body and brain* a match for the Kaiser! The way to conquer a foe is to hurl his own weapons at him from a greater moral hight.



Every grave national problem is fundamentally a problem in personal efficiency. We are as a nation only what we are as individuals. We are as Americans guilty of a disgraceful number of weaknesses and follies—carelessness, thoughtlessness, haste, waste, worry, pride, indulgence, impatience, extravagance, conceit, irresponsibility, inefficiency. Not assaults from without, but failures from within are most to be feared. A nation always crumbles first from within. War, like disease, merely shows up and drains off the internal corruption already there. Hence the scientific way to prevent both disease and war is to be gloriously healthy in mind, heart and body, to overcome in advance of war the racial and personal weaknesses that would undermine us in the event of war.

We may not have to fight personally with our weapons, but we shall have to fight with our wits. Every big nation is already clutching at our industrial throat. No matter what our work may be, you and I must soon feel the pinch. The only way to win the business war ahead is to raise our efficiency defense, and do it now. Every one of us needs more power—physical, mental, social, industrial, financial, political, moral. To study how to gain this personal power is to be ready for either peace or war, and ultimately to benefit ourselves while serving our industry, our family, our community, our country.

Fight? Yes. Fight what? Our own stupidity, folly, weakness, laziness, narrowness, littleness, poverty of mind, soul and purse. The valor we need is the virtue that underlies efficiency. A master workman is a moral soldier, made heroic by the rigors of his task. The world-summons now is for a nation of moral soldiers. Our best answer is for each of us to resolve to make himself in his own line a master workman.

MEADOW BALM

BY WINIFRED WELLES

The day has been so long, the tasks have been so many,
I am house-weary, sick of little, windowed rooms,
Of tidiness and meals and busy women.
I'm going forth to breathe among the shadows and the glooms.

I shall go dreamily across the darkening meadows,
Where the silences are widest and the dusk most sweet,
With the comfort of tall grasses on my shoulder,
And the shapeless twilight creatures rustling past my feet.

The path's end holds a seat beneath still branches,
A shining, white, memorial stone that hallows all the place,
A white stone for a white soul so sweetly named Serena,
Serena, a name as soft as starlight on my face.

Bright feet go up the sky, the white moth wanders lonely,
The drooping reeds are sad with dew—I must no longer roam
Down these pale solitudes, but make a glad returning
To the candles and the kindliness of home.

ON "INTERESTING" CHILDREN

BY THE BACHELOR MAID

The Bachelor Maid has been for some years a frequent contributor to The Independent, mostly on subjects of feminine interest and on pedagogy. "The Classic Education of Richard," published August 7, 1913, and "The School-Ma'am," published August 31, 1914, are two of her best-known essays. Here she combines her experiences as a teacher and as Richard's aunt in an entertaining argument for the good old-fashioned education so much criticized today. — THE EDITOR.

THE child is distinctly "It" in these modern days. Young Mrs. B., in the rooms next to mine in our boarding-house, has a greater array of cooking utensils and other kitchen implements to prepare the daily menu of her year-old baby according to the baby-specialist's directions than her own mother began housekeeping with; and it is so all along the stages of youthful progress from lovely infancy up to "the awkward age." Not alone does the frivolous parent buy an expensive kodak to preserve every pose and costume, or lack of one, and the one more seriously inclined keep a conscientious record of weight, length, lung-power and symptoms of budding intellect (if all children were like my one nephew, Richard, there might be excuse enough for it); but the child-specialist and the child-psychologist have hit upon the most respected and remunerative professions now practised in civilized society. There is still such a thing as "the poor little neglected child," I suppose, but not in our first circles. Do not think that I would have it otherwise. It contributes no little to the gaiety of life. By all means, let young parents keep on with their kodak collections, and their baby books, and their infantile-diet schedules, et cetera, et cetera, especially as it furnishes occupation for sundry young married women who otherwise do not offer much visible excuse for living.

Let us even go farther and suppress the disagreeable persons who complain of the degenerate manners of the modern child; his disposition to be ever in evidence, his disrespect to his elders, and all the rest. Such grumblers fill me with indignation, tempered by a complacency induced by the contrast between their narrow-mindedness and my own mental breadth. I myself can remember, what they seem to forget, that the children of my time were all "spoiled," too; more than that, I not only dare swear that my great-grandmother was upbraided by her contemporaries for the bad manners of her offspring, but I observe that Horace had remarked as a characteristic of the old gentleman of the Augustan Age (and Deucalion's age, too, very likely), that he was *castigator censorque minorum*, and a praiser of the good old times when he was a boy. Assuredly, then, I shall not be guilty of anything so trite as a dissertation upon the depravity of the modern child, or the fatal effects of a youth spent perpetually in the limelight. Childhood is undoubtedly in the highly illuminated position in the twentieth century, and to that extent does differ in a measure from that of the nineteenth century and prehistoric times generally; but I am far from saying or believing that it is a misfortune.

YET while I am severe enough over turning one's sleeping apartment into a junk shop to accomplish the scientific feeding of infants (so long as it is not my sleeping apartment), and the most of the other interesting idiosyncrasies of the child movement, there is one pronounced development from it which seems to me far more destructive of decency and order than a refrigerator in the Sunday clothes closet and a fireless cooker behind the bed. This is the doctrine which threatens to become fundamental to our educational system: that children should only be asked to study what they like, "what interests them."

"I have two daughters reading Virgil now, Miss H——," said an acquaintance to me lately at a tea. "They'll be entering college next year."

"I hope they'll be reading Latin then, too," I replied.

"Oh, well, I don't know," answered the mother, herself a Master of Arts of no mean ability; "I want them to keep on with Latin in college, but I don't know whether that really interests them as much as some other things." Now I am a mild and amiable person, and a strong disbeliever in corporal punishment, but I said to her that if I thought Latin, or anything else, was a good thing for my children to study, they would study it, or I should break their backs. This vigorous alternative is not, I repeat, suggested by anything abnormally bloodthirsty in my temperament, but by a sane (of course) and settled conviction that to attempt to make the education of any young person under the age of eighteen conform to what seems, at various periods, to "interest" him, is to do him at least as great an injury as to fracture his spine.

For instance, perhaps the most pronounced taste that Richard showed up to the age of two was for kerosene oil. He could not be kept away from the family oil-can and was once discovered happily sucking a cracker which he had sopped in the puddle of oil that he had poured upon the pantry floor. It is true, the last time he was found imbibing the contents of the sewing-machine oil-can, he remarked with a wry face that "it wasn't vewy good; it needed to be cooked"; but this evidence of a change of taste with advancing age only goes to show, I think, what a fatal mistake it would have been had his parents seized upon this early manifestation of a strong "interest" as pointing to the presidency of a Greater Standard Oil Company, and arranged his diet and education accordingly. Most children display abnormal or useless tastes of one sort or another, from the crawling stage up to early collegiate years (provided the parental indulgence of them does not divert them from college doors altogether), and the most of those tastes, if not as startling as Richard's aforesaid, are about equally worthy of cultivation.

Almost every young person has a period of liking to make things. It varies somewhat with sex and environment, and it changes from year to year in the same individual. Every normal child, I think, has an active and acquisitive mind, but, nevertheless, the

mind, if left to itself, acts and acquires along the line of least resistance, and it is entirely to be expected that it will prefer what achieves the most attractive visible result with the least irksome effort. Now I myself cannot discover in this universal mental tendency anything but one of the numerous evidences of human depravity, and yet I fear that I shall live to see all systems of education based upon it. Instead of assuming that the training of the older person lays upon him the duty of directing the child's interest into channels of real mental development, both parent and teacher increasingly incline to wait to see what the child likes to do—and then sit back and let him do it in the name of education! Why not also let him follow all the other promptings of original sin?

WE are told that we cannot get boys interested in staying in school any more unless we give them manual training; that we should perhaps give regular high school courses for girls who care to go to college, but beside them schools of domestic science and domestic art for girls who "want" these "practical" things of life. Will those who tell us this also please tell us how a boy or girl can possibly evince an interest in a culture of which he has never been given even a glimpse? They go about saying, "Only one girl in five hundred goes to college," or, "Only two per cent of our young people complete the high school course," and deduce therefrom the educational principle that in consequence only this small fraction of the coming generation should be college bred. "We must adapt our education to the needs of the growing number who leave school early, with no training for life," is their text.

Of course, young persons have no training for life if they leave school early. But the new education seems to assume that it will have given them some if it has taught them to make something or other in the sixth or seventh grade which they will be interested in carrying home to show to mother. Why assume that the superior enthusiasm for working some clay into a bowl of dubious symmetry to that for working a "sum" in long division is an evidence that the former is a more valuable educational means? A recent caller remarked to me that the thought that manual training was such a splendid thing to put into the schools, because, you know, it had been found that it would interest defective children when they could be reached in absolutely no other way. It is nice, when you come to think about it, to reflect that the brightest child on the planet —that is to say, your child—is being educated upon the only plan that has been discovered to be efficacious with the feebleminded. If I had a child, I should like of all things to have his intellect developed by the same easy stages as an idiot's. Because I know he would be "interested," which, of course, is the only thing really to be sought, for I have heard an eminent man of much longer educational experience than I say so. One of his favorite platform utterances is that the great purpose of education is not to give young persons knowledge, but to inspire them with an interest in acquiring it. To this as an abstract proposition I give an unqualified assent, but when it comes to the concrete illustration of it, I do remember how he used to consume his entire class periods with the recital of intensely interesting things expected to inspire his students with an absorbing desire for research along his special line, while they improved the opportunity thus providentially given to make up sleep.

Nevertheless, his method with college students is one enjoying no little popularity in primary and secondary schools, and producing about the same educational results, altho their manifestations in more tender youth may assume a different form. The child really is often interested enough to permit an entertaining story to be poured into him without resorting in course of it to the projection of paper wads or to the examination of the scenery adjacent to the schoolhouse; but he forms thus an almost incurable affection for the pouring-in variety of instruction. No wonder he "loses interest" when somebody suggests to him to dig it out instead.

IT is with the school pie—and rug—and chair—and garment-making as it is with the reading to school children of interesting stories. The pie and the story may both be the highest type of their respective kinds, but they have been at best but a temporary interest, a passing entertainment; and even if they had aroused any real appetite for farther acquisition, they have not developed any brain power, or any capacity for close and continued application. And nothing is education, dear friends, or training for life, which has failed to develop those two things. Enthusiasm is a pleasant thing—in moderation—but it does not count for a feather's weight in the balance against intelligent determination. And I do not know whence the child is to hope for that quality if parent and teacher do not conspire to give it to him.

This means that he should be taught from A B C to A B, that it is his business, whether he fancies that he "likes" it or not, to study the things which long educational experience has proved most productive of discipline to mind and will. I am not here saying specifically what those studies are—altho I think I know! It does not seem to me personally that they include mooning around after birds and bugs, or the other popular devices for "getting children close to nature," but I am not just now singling out for discussion any one form of what I consider educational foolishness. Much less am I meaning to say that the child's hand and body should go untrained; infinitely less yet do I mean to belittle the importance of the study of real science.

But I do believe that the present tendency of our schools is to train the body in general, and the hand in particular, at the shocking expense of the mind, and the most prevalent excuse for it seems to be that it is the only way to interest the children, especially the boys, and to hold on to them even as far as the door of the high school. As a single lady, I always feel a great delicacy in suggesting to parents how I should manage my offspring, but it does seem to me that if I were capable of controlling a child of mine in any respect, I should be capable of keeping him in school. And for the absolute uncontrollable there is an institution provided by the state! As to "interest," every normally intelligent child becomes interested when he really begins to learn something. The smaller proportion of interest in the purely mental processes is by no means always a true reflection of the irksomeness of the mental process in itself or of the tastes of the child, but it is a fairly trustworthy indication that the teacher ought to be looking for some other sort of job.

I remember classes in arithmetic and spelling which were actually the most interesting things in life to all the children in them. But instead of vigorously directing to other occupations the teachers who cannot arouse such interest, we are trying as a remedy for their inefficiency "a change of course," and the atrocity of "electives" for children planning their high school course and future life in the last weeks of the eighth grade. And parents let these babes "elect"! Where such insane indulgence comes, as it very often does, from parenthood quite as ignorant as childhood, surely the professional educator's plain duty is to block the way of parental folly, not to open wide the gates to "courses" combined in any pattern whatsoever, provided only they will add up to the requisite number of "credits."

FEW things in my reading have impressed me more than this passage from a distinguished Syrian's reminiscences of his childhood in his Oriental home: "As I reflect on those days now, I realize most clearly how limited, how meagerly inventive is love without culture. How almost helpless is sympathy without knowledge . . . without knowledge, acquired knowledge—real culture—love is like a skilled workman without his tools, a mariner without his chart and compass." Thus an educated Syrian looks back upon his uneducated, and therefore barren, childhood. We educated Americans, with all our concentration upon the welfare of the child, are being swept along with the current of a strong movement to take out of our children's lives what this man would gladly put into his own vanished childhood, a taste for—thru a taste of—the intellectual life. With the lessening of that taste I cannot but believe must come not only the gradual disappearance of anything that can be called American scholarship, but of all that is best in American character.

WHAT MAKES A FACTORY GREAT?

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

BUSINESS America today has a huge need, unrecognized and unfilled. The man whose position calls for most training gets none. I refer to the *employer*. And he may be the owner of the business, or the manager, or the department head, or the foreman, or the supervisor.

The work of any employer is both a business and a profession. He learns the business largely by experience, having come up slowly thru various departments with a fund of technical knowledge acquired from each. The *business* function of the employer could not be learned outside his own trade or industry, as the peculiar details of any field of labor must be confined to that field.

But a great, unrecognized fact of industrial progress is that the *profession* of being an employer cannot be learned from the inside! You cannot make a good employer by promoting even the best employee—you must give him outside training in the art of handling men. This knowledge would form a library in itself. And no employer in the country, so far as I am aware, possesses a complete knowledge of the requirements and rewards of his profession.

You can learn from trade schools, technical laboratories and colleges, correspondence courses and scientific organizations, how to be any one of a thousand kinds of employee. But you cannot learn anywhere how to be the right kind of employer. And as no man ever learned this without long, systematic study, the chronic dearth of good employers thruout the United States demands a keen study by efficiency engineers.

We should have a national training school for employers. We should license a man to be an employer, as we license him to be a doctor, lawyer, clergyman or policeman. A certificate of graduation from an employers' training school should be required of any man who assumes to control other men. Why demand that our chauffeur get a license before he drives our automobile—and permit a strange employer to drive our sons and daughters without any real knowledge of the human organism, a thousand times more complex and valuable than a motor car? In all enterprize the great problem is that of the *human* machine.

A business concern today is judged efficient according to the number of standardized motions, methods and machines of its employees. I predict that a business concern tomorrow will be judged efficient according to the number of standardized purposes, principles and policies of its employers. How do I reach this conclusion? By comparative study of the leading corporations of America, the dozen or so whose financial rating puts their stock into the gilt edged class. Whether these concerns produce oil, steel, pianos or automobiles, they *all produce men* as their first and most effective output. They have all made the profession of employer the keynote of industrial supremacy. Each has founded its own school for employers, and educates in that school the officials being trained for the higher posts. Each regards the business of the employer as of less moment than the profession of the employer. The lesson that Big Business could teach little business if little business would only learn, is that all business is a profession first or a failure finally.

The great modern teacher is the great modern business man who is something more than a business man. He teaches best who does most.

I have lately visited the largest factory of its kind in the world, at the request of the president of the corporation, who desired the efficiency ideas that we might have to present. This company could teach every employer a set of business lessons that no mail course ever incorporated and no business college has included. To verify the practicality of these lessons, we may call attention to the magnitude of the company. It has gained a virtual monopoly for its products thruout the world. It employs 10,000 people, in round numbers. The plant consumes in a day 18,000 feet of lumber, 24,000 feet of rope, 130 tons of fuel. The payroll in one of the departments (of which there are scores) is $150,000 a year. The waste material from another department is 1000 tons a year. The plant covers 35 acres of ground. The capacity output is worth over $100,000,000 a year. A million items are inspected, and many millions of operations performed, each working day in the year.

This huge enterprize has grown from a one-room, one-man shop, in the lifetime of the president. No matter how big your concern may be, this concern is doubtless bigger in its own field. And no matter how small your concern may be, this concern was doubtless smaller in the beginning. So you should not feel too proud, or too humble, to heed the lessons I bring you from this world-leader of a corporation. The healthiest sign of your business growth is that you want to learn from the leaders and you find a way to do it.

COURAGE.

The head of the company was past forty years of age when he changed his life work, founded a new business, embarked on a new career. He was comparatively poor. He had a very big idea—and a very little money. (That is a good combination, for any man to succeed with.) He was told by industrial "experts" and financial overlords that his scheme wouldn't work, his product wouldn't sell, there was only ruin ahead. He took a hitch in his belt, and he said: "Gentlemen, I will show you!" The favorite sport of this man is being a minority—and winning out. He had a new idea lately for promoting the sale of his product. He called his officials together, and explained the idea. Promptly and unanimously, they voted the idea foolish and the president visionary. He knew better—he ordered the experiment made, at a cost of $100,000—which he could afford to pay himself, being now a multimillionaire. The plan succeeded just as he figured out, and his $100,000 worth of courage brought in many times that amount of business. He is always trying something new, always opposing history and the majority in making an unpopular move on a principle he knows to be right. The big rewards today are for the man with brains enough to conceive a big idea and with backbone enough to carry it out. Most workers aren't thinkers—most thinkers aren't workers; but success lies in working long, and thinking hard between times, and then putting your thought and work together.

KNOWLEDGE

Knowledge must go with courage, or courage falls in the ditch. The president, whom we will call Mr. B., did *not* leave his former occupation without knowing what the new field offered. He set a torch to his possibilities before he set a match to his possessions. The bigger a risk, the more rational it should be. It isn't the plunger who fails—it is the plunger who did not *think*. Mr. B. looked the world over, and measured the potential market for his product. He learned who needed the manufactured goods, and what they could afford to pay. He put down, by a logical process and mathematical formula, each objection raised by the idiots, laggards, and pessimists who, like the poor, always are with us—and always giving advice. Mr. B. then looked up all his probable rivals and competitors in the United States. He made a study of the patent laws on which every similar product was based, or could be based. He purchased every article that might encroach on his territory, he analyzed it by all the known methods of analysis. He went thru every piece of literature available, that bore on the situation. He satisfied himself positively that he could make the best thing of its kind in the world, could render by it a much needed universal service, and could sell it everywhere at a handsome profit. *Then he went ahead.* You won't go very far on the road to success until you resolve to know about your work everything that *can* be known.

MERIT

Mr. B. maintains that the best is always the cheapest. Nothing angers him so much as compromise in quality. The factory spends $3000 a month on testing raw material and finished prod-

ucts. Recently a new device for improving the work of one department was brought to the notice of Mr. B. The moment conclusive tests were made to establish the superiority of the device, Mr. B. ordered the old machinery carted to the scrap-heap; and it cost $50,000 but a little while before! One of the company's products requires 8000 operations to complete. Every operation must be perfect, or the result will not pass the inspector. Would you have patience and grit enough to develop from nothing a manufactured article combining 8000 jobs in one? Then would you have shrewdness and skill enough to train your man to make each of the 8000 jobs perfect? When I hear a fellow grumbling that he has a hard job, I know that Fate has the fellow's obituary notice already in type, waiting to be used. It takes a hard job to put a man at the head of anything. A hard job is but a hard road to an easy future.

PROFIT

The way to kill competition is to create something too good for competition. Mr. B. set out to do this—and he did it. I could name a dozen corporations in America who have done the same. And they are all the richest, as they are all the best. If you aren't making the most money of anybody in your line, something is wrong with *you*, with your method, your product, your equipment, your management, your force of helpers. There were several years in which Mr. B. lost money on his factory. He didn't lop around with a lower lip like a Zulu savage and mournfully howl, "Business is bad!" No, nothing like that. He said to himself, and to his workers assembled: "We are wrong somehow. The first job ahead is to find each mistake of each man on each bit of work. The next job is to cut out the mistake, and build supreme character into our product." So they did. And the next year the business boomed, and is booming yet. If your work is legitimate, science and conscience together will boom it. A business weak in profit is weak in principle. A man should be ashamed to be poor. Poverty is mental deficiency and material defect. Money liberates, without it we are slaves. We may be slaves to it, but are always slaves without it.

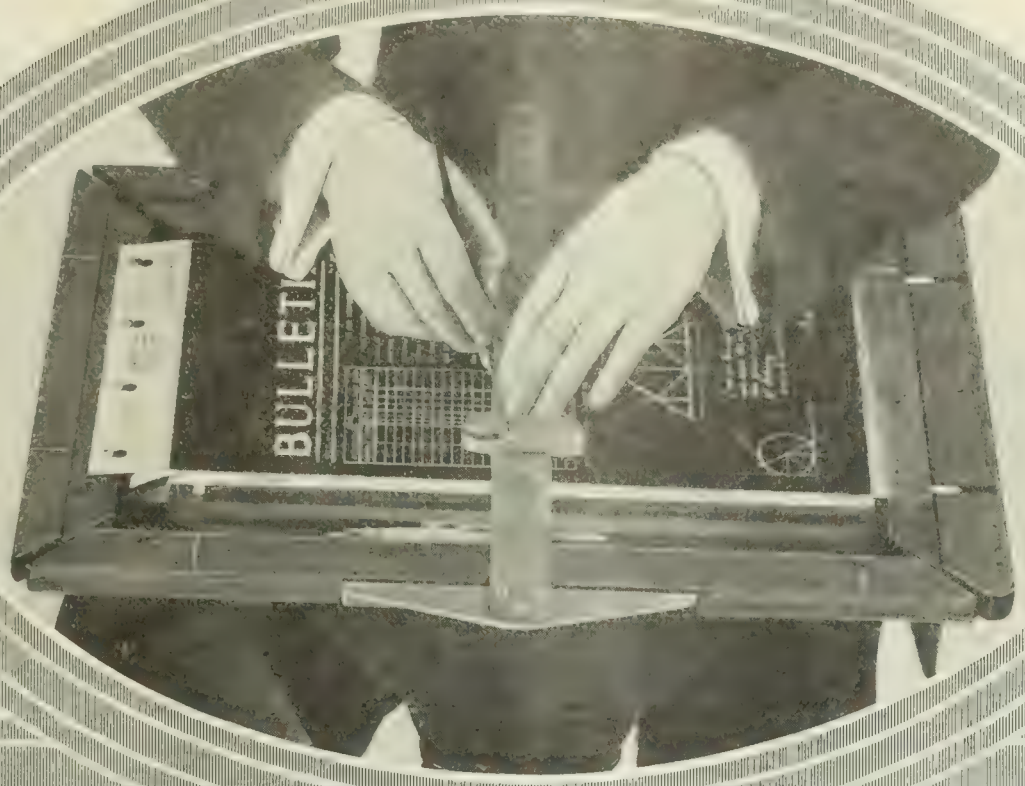
HEALTH

Hundreds of thousands of dollars have been spent by the company to conserve and improve the health of employees. A few of the means utilized: Free distribution of health literature; free health talks by eminent physicians and hygienists; medical examination to prevent illness; daily exercize periods of ten minutes, under expert guidance; regular shower baths on company's time, with free soap and towels; emergency hospital, and home visits of trained nurse; display of health foods in demonstration window; warm, appetitizing lunch at cost, from five to twenty cents; home-grown vegetables out of company gardens; eighty per cent of factory wall space built of glass, to ensure light and air; desks and work benches placed at right angles to windows for scientific lighting; pure distilled water for drinking, analyzed periodically; dustless sweeping, to keep germs away from lungs; roller towels and general drinking cups abolished, to prevent infection; hygienic chairs and foot-rests provided where needed to make work pleasant and safe; athletic field for outdoor games on company grounds.

Every employee has a personal tendency to some hereditary ailment or weakness, and a professional liability to the occupational disease of his peculiar work. How are you safeguarding each employee from these two perils? Have you a Safety First committee supervising all departments? Do you know where to find modern health systems and teachings for the homes of your workers? Health pays the largest dividends of any single factor in labor.

ORGANIZATION

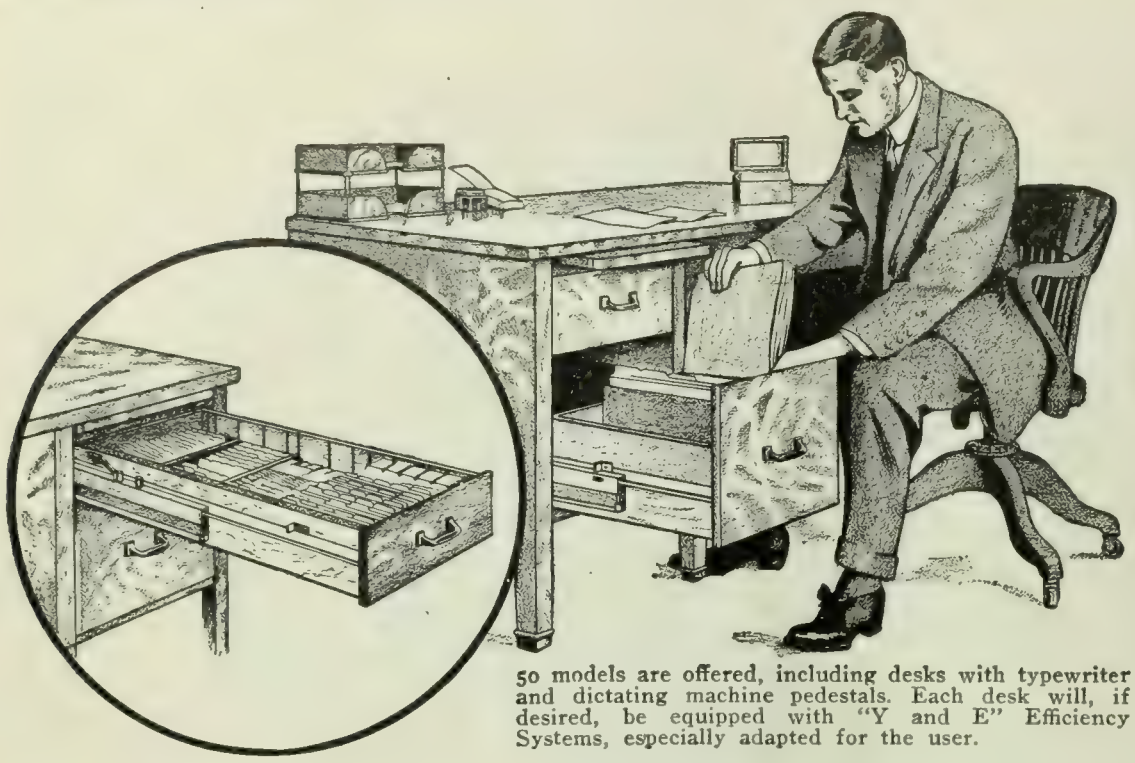
Mr. B. insists that everything done by his 10,000 employees shall be first put down in black and white. If a man does a job wrong, he cannot say he did



EMPLOYER'S EFFICIENCY TEST

BY WHICH ANY MANAGER OR DIRECTOR OF EMPLOYEES MAY DETERMINE HIS OWN PROGRESS

DIRECTIONS. First read Mr. Purinton's article, "What Makes a Factory Great?" Then grade yourself on these questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is partially affirmative, write number less than 4 which seems honest. For your percentage, add numerals. This test is only partial, but reliable for its length. Queries, problems or difficulties when submitted by letter to Mr. Purinton, care Independent Efficiency Service, 119 West Fortieth Street, New York, will be answered by mail or in the Efficiency Question Box appearing twice a month in The Independent.

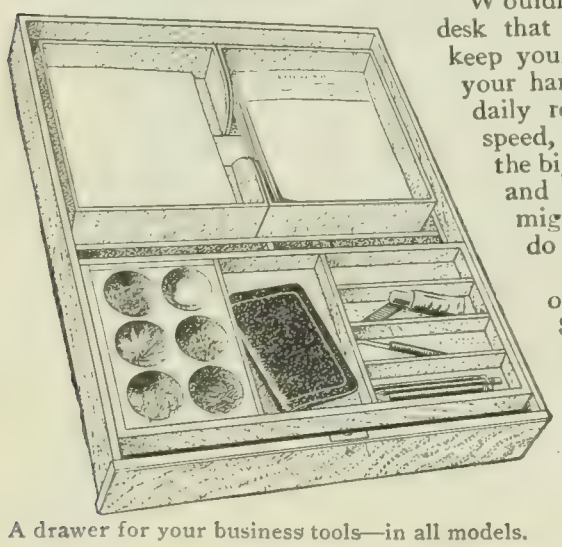


1. Do you like your work the best of any in the world? ....
2. Have you had scientific training for the profession of employer? ....
3. Are you a born leader, a manager by temperament and instinct? ....
4. Do you dare to plunge boldly, yet always think wisely first? ....
5. Have you searched the United States to know all that can be known about your business? ....
6. Do you know that your product is absolutely the best in your field? ....
7. Can you make any employee prefer a hard job to an easy one? ....
8. Are your net profits increasing an average of twenty per cent a year? ....
9. Is your lay-off due to illness of employees decreasing twenty per cent a year? ....
10. Do you provide medical, sanitary and psychological aids to health of employees? ....
11. Have you taught your workers how to eat and how to think? ....
12. Are you yourself working by eight o'clock every morning, or earlier? ....
13. Could you be away for a week at any time, without loss to the business? ....
14. Have you made the understudy system fully operative in each department? ....
15. Is a modern efficiency grade card kept for each employee? ....
16. Has a promotion plan been developed, satisfactory to you and to all employees? ....
17. Do you produce a larger output each year, with less friction, worry, fatigue? ....
18. Is every worker a student—of himself, his job, the business, and your joint future? ....
19. Do eighty per cent of the employees do spare-time reading for efficiency? ....
20. Have you a modern efficiency library, both general and technical, for employees? ....
21. Do you provide wholesome recreation for your people, at little or no cost to them? ....
22. Have you studied the bonus, insurance, health and pension systems of a dozen leading corporations? ....
23. Are all your employees proud of your institution and reputation? ....
24. Is every trouble of or with an employee settled to his satisfaction? ....
25. Do you belong to the National Institute of Efficiency, The National Civic Federation, The National Association of Corporation Schools, The National Chamber of Commerce? ....

Add column of numerals for your approximate grade in professional skill as employer.

Now! Draw it as you want it, and *straightway* mimeograph five thousand copies an hour. Simple! Two moves! (1) Make your stencil design—or tracing—on this illuminated drawing glass, the *mimeoscope.* On the same stencil put typewriting or handwriting, as you please. (2) Put it on the *mimeograph* and reproduce in one operation, without either type or cuts. This new addition to the mimeograph has increased its serviceableness tremendously. You don't know what they can do for you—nor what *excellent* duplicating of typewriting and drawing they do—until you have investigated them—personally. Write A. B. Dick Company, Chicago—and New York—for booklet "E."

MIMEOGRAPH
EDISON-DICK



50 models are offered, including desks with typewriter and dictating machine pedestals. Each desk will, if desired, be equipped with "Y and E" Efficiency Systems, especially adapted for the user.

A Desk and Complete Short-cut Systems for Every Business Man

There is at least one of the fifty "Y and E" Efficiency Desks which will just exactly suit you personally—which will contain all the card record and vertical filing systems that you need in your particular work—and will keep them in the handiest possible place for you to use. It will save you money and enable you to do better work in less time.

"Y and E" Efficiency DESK

Your present systems may be installed in the desk, or we will equip it before delivery with new systems, selected from the thousands of complete "Y and E" Short-cut Systems carried in stock or drawn up specially when necessary. And they will be the most up-to-date and efficacious systems for your particular position, no matter what your needs may be.

A drawer for your business tools—in all models.

Wouldn't it be worth any amount of money to own a desk that would prove a real aid to you, that would keep your often-referred-to data within instant reach of your hand and would help you to plow through the daily routine with the greatest ease and with more speed, allowing you more time for consideration of the bigger and really more vital problems? Write and tell us who you are and what you think you might possibly like to cover by systems and let us do the the rest for you.

Besides Efficiency Desks there are nearly 4,000 other "Y and E" Filing Devices and Office Systems. So uniformly high is the quality that we are glad to have our entire line judged by any one of its 4,000 units.

Order *all* your filing equipment where you know you will get highest possible efficiency and complete satisfaction, at moderate prices.

We aim to make our free System Service for customers as satisfactory as our products. Check and mail the coupon today.

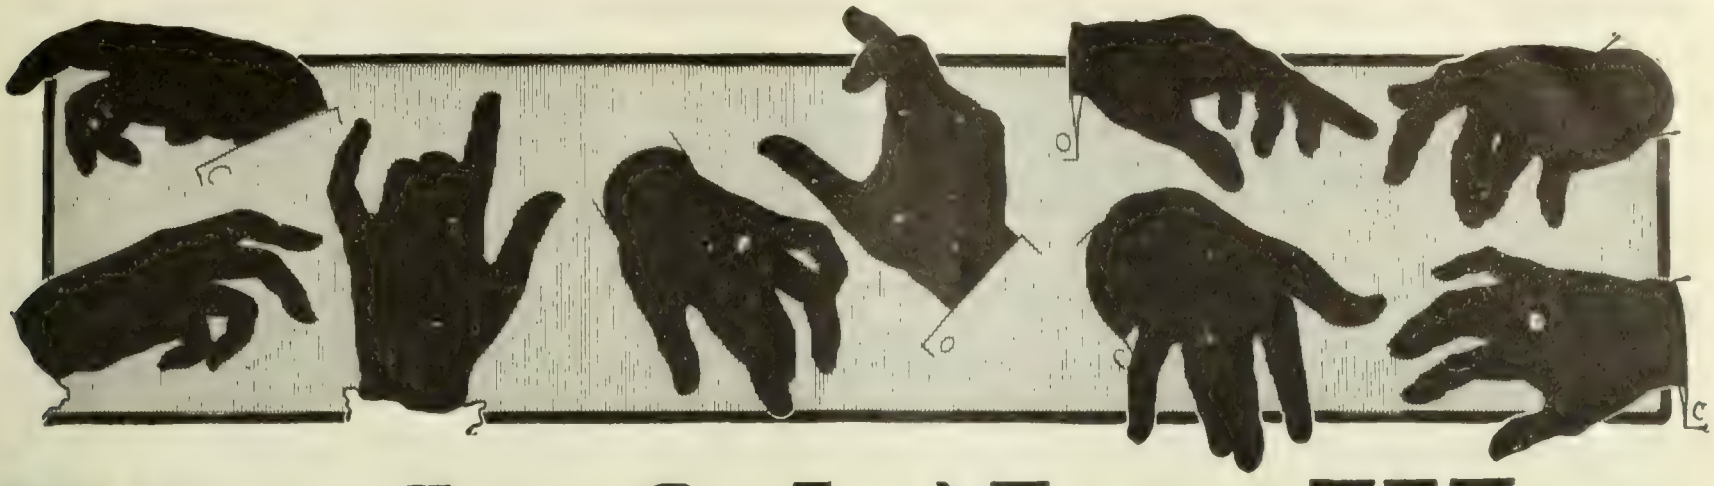
not know better. A novel system of charts and diagrams, covering the whole factory procedure, enables all the foremen and department heads not only to check up the work of their own employees, but as well to correlate and articulate each branch of the company with every other. If any department falls below the efficiency standard, the fact will appear next month in cold type; and if any individual or department raises the standard, this fact also appears, with a reward attached. Publicity is a great power in organized improvement. Mr. B. starts work at 7 a. m., along with his lowest helpers; but the factory is so perfectly geared to emergencies that he can be away for weeks at a time and the business will not suffer. You can take your hands off your work when you have put your mind on it long enough.

PROMOTION



Every new employee is given a choice of the higher department he or she would like to enter when prepared. Free night school classes make preparation easy; and the first vacancy in a department can thus be filled by a candidate who wants the place and is ready for it. We regard this one of the best methods of "Vocational Guidance" thus far developed. Each worker has an efficiency grade card, kept by his department chief, to record progress and afford scientific basis for promotion. The ideal of the company is to train every employee to become an expert. What is your promotion plan for your employees? How do you know it's the right plan? To employ anybody without offering him a chance and training for promotion is a biological blunder, a financial waste and a moral crime.

LEADERSHIP

One thing Mr. B. never tolerates—the suspicion that somebody has beaten or outclassed him! By the nature of the man, he has got to be first. He is so rich money means nothing to him, but he works and thinks as hard as he did thirty years ago when he was financially poor. He is never satisfied—he holds that satisfaction is the starting point of decay. Years ago, the company surpassed all rivals and set a pace none could follow. Now it can merely beat its own last year's record, which it proceeds to do, annually. Are you at the very top of your trade or profession? Do you know just how far from the top you are, who is ahead of you, how he got there, why you let him do it? Plan how to wield a spur for the mind every day until you pass all your rivals and critics.

EDUCATION

All employees of the company are students. Among the sources of instruction are these: A modern library containing thousands of books of interest to workers, with special instructions and helps for efficient reading; scientific plans for educating apprentices, combining shop, high school and continuation school; a digest of new efficiency books, both general and technical, mul-

Wonderful New Way In Typewriting!

80 to 100 Words a Minute *Guaranteed*

A WONDERFUL new method of acquiring skill on the typewriter has been discovered. Almost overnight it has revolutionized the whole typewriting situation. Already thousands of stenographers and other typewriter users who never exceeded thirty to forty words a minute are writing 80 to 100 words with half the effort and with infinitely greater accuracy than ever before and their salaries have been increased in proportion.

And the wonderful thing about it is that *only* 10 *lessons* bring just this kind of ability to *you —to any operator.* You begin to feel results the very first day. You learn with amazing quickness in spare time. There is never the slightest interference with your work.

Trained Fingers

European music teachers, when training their pupils for the piano, invariably give special *gymnastic* finger exercises. This is because untrained fingers are never skilful fingers. The best results simply cannot be obtained—the fingers simply cannot be used correctly and swiftly—unless the student develops and strengthens the proper muscles.

Trained fingers are even more essential to expert typewriting. The reason that so few people can write more than 30 to 40 words a minute is because their fingers are not flexible and nimble enough—have never had the proper *training* to *fit* them for typewriting work. This new easy method overcomes this at once—develops finger strength and flexibility by gymnastic exercises *away from the machine*—trains the fingers *beforehand* for their work on the machine—and the results border on the miraculous. Yet the exercises are so easy, so simple and so fascinating, that many students write, "I can hardly wait for the next lesson."

Earn $25 to $40 a Week

Whether they know it or not, stenographers are paid for the *amount* and *quality* of *finished work* they turn out. It is nothing more than *slow* and *inaccurate typewriting* that keeps their salaries down to $15 *or less* per week. This is proved by the *thousands* of *New Way* operators who typewrite at the amazing speed of 80 to 100 words a minute, and as a result have increased their salaries to $25, $35 and even $40 a week. Anyone can easily learn this remarkable new method. Send in the coupon or a postal for the 48-page free book that explains the secrets in detail.

Easy to Learn—Only 10 Lessons

No matter how low your present speed, no matter how labored your efforts, no matter how weak or clumsy your fingers now seem to be, no matter how little or how much experience you have had, no matter what other courses you have taken, this new method will positively bring you the desired results, as thousands of stenographers have already proven.

The New Way is entirely different from any system of the past. There has never been anything like it before. The special Gymnastic Exercises bring results in *days* that ordinary methods will not produce in *months. Only* 10 *short, simple lessons* and the New Way is yours. Among those who have taken up this system are thousands of graduates of business colleges and special typewriting courses—hundreds were so-called touch writers—yet there has hardly been a single one who hasn't *doubled* or *trebled* his or her speed and accuracy, and their salaries have been increased in proportion.

Free! 32-Page Book

We have prepared a Free Book about the wonderful New Way in Typewriting, explaining the system in detail. It is a big 48-page book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous,* bring them under *perfect control,* make them extremely rapid in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate* and *amazingly speedy*—all this and much more is told in detail. No instruction book ever written, no matter what its cost, ever told so plainly the real WHY and HOW of expert typewriting.

If you are ambitious to get ahead—if you want to make your work easier—if you want to get more money in your pay envelope—don't wait a single moment before sending for this book of information and proof.

This new method is bringing such marvellous results to others—is proving itself to be so sure a means of quickly increasing salaries that you will be doing yourself a big injustice if you fail to write for it *at once.* Tear off the coupon now or write a letter or postal before you turn this page.

Address **The Tulloss School, 3822 College Hill, Springfield, Ohio**

Stenographers! Earn $25 to $40 a week

No matter how rapid you are in shorthand, you can never expect much increase in pay until you get *speed—real speed*—and accuracy on the typewriter. It is the *lack of these* that is keeping your salary down now—that is depriving you of the pay you could otherwise be earning. Below are a few examples of how the New Way quickly results in increased pay. We will gladly send you scores and hundreds of others. What it has done for them, it will do for you. You too can quickly earn $25 to $40 a week.

Salary Increased 40% Then 20% More

"I certainly know that the New Way produces accuracy and speed the two great essentials of good typewriting. Since writing the letter you saw, telling of a 40% increase, I have had another increase of 20%." —C. E. Verrall, care Martin & Hall, Architects, Providence, R. I.

Salary Doubled Claims Justified

"Since studying the New Way Course, I have progressed rapidly and today am filling the position of Chief Clerk to the Department of Parks and Public Property, in this city my salary being exactly double what it was." Anna S. Cubbison, 109 Hoerner St., Harrisburg, Pa.

Brought this Man Speed of 100 Words a Minute

"Formerly I never exceeded 50 words a minute, but since taking up the Tulloss Method have written as high as 100." R. R. Mastin, Norval Bros. Law Office, Seward, Neb.

Results From First Lesson

"From the very first lesson, I noticed improvement in my work, in accuracy, speed and ease of execution. At present, I frequently reach 80 words a minute and my work is far easier than before." (Miss) Alberta Way, Fergus Falls, Minn.

Now Earns $150.00 a Month

"When I began, my average speed was not over 50 words a minute. Now I transcribe common everyday letters at 80 words per minute I was getting $70 per month when I took up the Course. I am now drawing $150.00." A. H. Gardiner, 129 Hawthorne Place, Madison, Wis.

Worth Ten Times the Cost

"Enables me to use all my fingers with perfect ease and write an average of almost 100 words per minute. This course has been worth to me ten times the money I invested." Miss Tillie Lalime, St. Hyacinthe, Quebec, Can.

Writes Over Eighty Words Per Minute

"It brought my speed up to over 80 words per minute and increased my salary by over 25%. The Exercises will benefit the student more than years of ordinary practice." I. G. Hipsley, 1452 West Adams Street, Chicago, Ill.

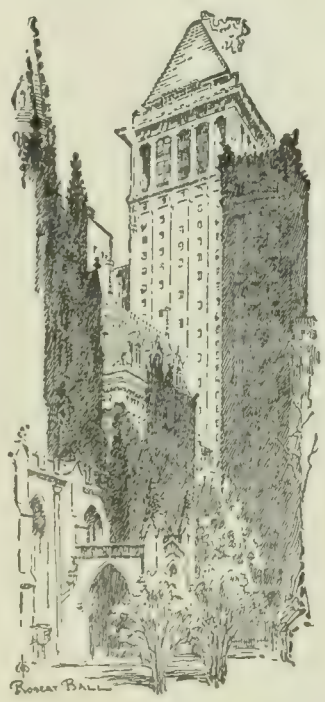
"GUARANTEED EFFICIENCY"

Carbon Remover **VALVSAV** Gasoline Saver



A Wonderful Invention for Motorists

VALVSAV removes the carbon from your engine; saves 15 to 35 per cent. of your gasoline; increases your speed and power; adds 18 to 40 per cent. to your mileage; is guaranteed to last for the life of your car.

This wonderful new invention can be installed in a few minutes and will save you *countless dollars.* When you send only $3.75 for a VALVSAV you not only receive the most popular priced accessory on the market, but you make the first cost the ONLY cost. VALVSAV has saved untold thousands of dollars as a Carbon Remover and Gasoline Saver. Send only $3.75 for a VALVSAV complete and put the dollars you save in the bank and watch your pile grow. Sent prepaid. If not as represented return within 30 days and your money will be cheerfully refunded. If you believe in economy write today.

"Which Trust Company Shall I Appoint?"

IT must be clear by this time to most thinking persons that the trust company offers many advantages over the individual as executor and trustee under will.

The question for you to decide is "Which trust company shall I appoint?" Certainly you cannot do better than to appoint this Company.

Our booklet, "Let's Choose Executors and Talk of Wills," contains much valuable information for will makers.

BANKERS TRUST COMPANY
16 Wall Street New York
Resources over $250,000,000

"TO know that which before us lies in daily life is the prime wisdom."

To know what GOD requires of YOU, before He calls you to give an account, is your greatest need.

You might know the whole will of God concerning you,—if you cared.

This Book Will Tell You:

The Word of the Truth

It is a systematic arrangement of the Words of God (in the N. T.,) by which you are able to grasp at once the Whole Divine Idea, in its original simplicity.

The whole Truth. The way of Life and Peace,—now and forever.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice Manufacturer, 252 North Street, Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

tigraphed or printed for each department; a list of reasons for the company's success, with individual application; a monthly magazine, edited by the employees for their own profit and pleasure; a comparative study of the principles and methods of other national concerns; a display on the factory walls and elsewhere of modern efficiency maxims by the best authorities; a free course of practical talks by efficiency experts from all parts of the world. A high official of the company said to me, regarding education of workers: "We all go to school to the president." One of the first requisities in a good employer is that he should be competent and willing to teach every employee.

COÖPERATION

The factory is a pure democracy. A $10-a-week laborer has a voice here, the same as a millionaire stockholder. The factory committees are jointly composed of employees and officials. Many of the plans for better work have come from the workers themselves. Mind and muscle are equal partners. I met fellows in overalls who seemed prouder of the company than the president was. The children of employees are given flower and vegetable gardens, the boys are taught to make and sell carpentry, and the girls to cook and sew. People in the city, who have no relation with the factory, may join the country club of its members, and enjoy the health and beauty of nature. Complimentary booklets are issued for persons anywhere in the world who may profit by the service of the company, and real efficiency helps offered in advance of a selling campaign. Everywhere you find the spirit of hope, harmony, helpfulness in achievement. The old superstition that labor and capital are enemies produces here a laugh—the notion is so ridiculous! Good work is based on the confidence of the workers.

However, this leading corporation of the world is losing many thousands of dollars a year because of partial inefficiency on the human side of toil and commerce. I am convinced that no corporation has yet reached a percentage grade of more than 60, on the *personal* handling of employees. A future article may discuss the various leaks and defects that we found in this factory, and that exist, I believe, in most business concerns. Please do not, therefore, conclude that your efficiency is perfect, even if all the ideas in this article have been fully worked out in your own organization.

A final suggestion. Would it not pay you to read the article again, for specific items of improvement? Leave a pencil check on the margin opposite every plan you have not tried out, every point you think worth considering, every maxim you would like your employees to learn or apply. Then call in a few of your head men, to discuss means of putting into effect the modern business lessons from the world's greatest factory with a monopoly supreme in its line, both for its goods and for its good will.

Where five great organizations found their presidents

HUGH CHALMERS entered the National Cash Register Company as office boy, and was finally made General Manager. He resigned to become President of what is now the Chalmers Motor Company.

CHARLES M. SCHWAB was a clerk in a grocery store. Ambitious to become a civil engineer, he entered the Edgar Thompson Steel Works, driving stakes at $1 a day. In less than a year he was made assistant to one of the superintendents. Today he is Chairman of the Bethlehem Steel Corporation and director in many other iron and steel corporations.

EARL D. BABST was an attorney, and later Vice-President of the National Biscuit Company. Resigned to become President of the American Sugar Refining Company.

GEORGE B. CORTELYOU was at one time stenographer to President Cleveland. Thru his ability to size up men and grasp business propositions of all kinds, he became Secretary to President McKinley and President Roosevelt. Now President of the Consolidated Gas Company.

HARRY FORD entered the automobile business as Secretary of the Chalmers Motor Company. At the end of a year he was made Advertising Manager. Resigned the following year to organize the Saxon Motor Company, capitalized at $200,000. In two years he had increased the capitalization to $6,000,000.

Five presidents drawn from five different kinds of business, qualified by five different kinds of experience. Specialized training in any one branch of business did not carry these men up to the Presidencies of the great organizations which they now represent. They won the highest success in their respective fields of business because they knew the great fundamental principles which underlie all business.

The whole broad field of business was theirs. When the opportunity came they were prepared to seize it, even tho it lay in a widely different field.

It is just this grasp of the whole broad scope of business that the Alexander Hamilton Institute is giving to over 50,000 men in America today.

The Modern Business Course and Service of the Institute is based on the experience of thousands of successful business men, with the mistakes and blunders left out.

It gives you knowledge that could otherwise be obtained *only* by years of bitter experience—if at all.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, the statistician and economist.

THE NEW BOOKS

THE STAGE

Arthur Edwin Krows, in his *Play Production in America,* takes the would-be playwright and the general public "back stage" and tells them pleasant anecdotes about the plays they've seen during the last ten years. Furthermore, he gives broadminded opinions on the various kinds of theaters and acoustics; the art of such modern decorators as Bakst and Joseph Urban; costumes; lighting devices; scene-shifting (with numerous interesting pictures here as everywhere thruout the book's 400 pages); the reading of manuscripts (acceptances of some three per cent); contracts with authors, actors and theater owners; advertising and various tricks to "put a play over"; opinions on prices, on cut-rate tickets, metropolitan and back-country "runs"; and a hundred other things only accessible to one "in on the know." The book is surprizingly entertaining—not merely to sate curiosity on such things, either. The author is "late of the staff of Winthrop Ames at the Little Theater, New York, and one-time assistant editor of the New York *Dramatic Mirror.*" One especially interesting topic is his opinion on the folly of expecting best results from prize play competitions, and "Children of Earth" is mentioned.

Play Production in America, by Arthur Edwin Krows. Henry Holt and Co. $2.

PUBLICISTS ON THE WAR

In *Understanding Germany,* Max Eastman contends that the Germans are, in their elemental instincts and emotions, no different from other peoples, and instances the action of European Socialists generally at the outbreak of war for proof of it. Socialists elsewhere than in the nations so threatened had hoped their comrades would make a determined stand against war, but their socialistic principles were swept aside in waves of national patriotism. With few individual exceptions all succumbed. He holds, therefore, that patriotism is founded so deep in human nature that it cannot be eradicated, and only by developing national patriotism into universal patriotism will civilization be delivered from the curse of war. The argument in this respect is very skilfully handled.

Having gathered this view of war from a leading Socialist, we come to *The Possible Peace,* by Roland Hugins. Mr. Hugins announces himself as a pacifist and strictly neutral. So is Mr. Eastman, but beyond that the two authors ride to their propaganda work in separate political automobiles. Mr. Hugins, taking no account of Mr. Eastman's theory that we are all elementally and patriotically militarists, proceeds to show that war is contrived by groups or castes of militarists, of which the German brand is the worst. During the last ten years, however, English Toryism, French chauvinism, and Russian medievalism have all cultivated militarism, hence the present war. Further, now in the saddle they are likely to plan other wars. With this outlook, Mr. Hugins believes the United States is the only nation capable of "building up an unassailable reputation for pacific intentions and fair play," supporting such with a second-to-none navy and a reasonable military establishment for protection solely.

It is shortly evident that Dr. Beck, author of *The War and Humanity,* does not preside over either the Eastman or the Hugins political classes. He is neither pacific nor neutral. He is for the Entente Allies heart and fist—both fists. He spreads before us the vision of a Great Britain-France-United States democratic union and as indicating what the future may have in store for us, he quotes from an article by the Russian General Skugarewski, that for the next war, following close on the heels of this one, Russia must provide an army of 40,000,000 men. The general believes that the coming war will be upon such a scale of gigantic operations and frightfulness that the present one will resemble child's play. Consequently Dr. Beck sounds a trumpet call for nation-wide war organization.

Doubtless there are readers who disagree vigorously with the late Professor Munsterberg, but this should not blind them to the fact that much of what he said in *Tomorrow* possesses a foundation of common sense logic. It would be useless to deny, for example, that the ties of kinship and tradition are stronger between the British and German peoples than are anywhere present to unite the British and Russian peoples, or for that matter the Germans and Russians. This, of course, excludes the strange political affinities of the governing classes, a point which may or may not have escaped Dr. Munsterberg's notice. It has been stated again and again that the British soldier does not hate "Fritzie" personally, and that when "Fritzie" gets the chance for an uncoerced second thought he gives up singing his Hymn of Hate for a more fraternal note. Therefore when Dr. Munsterberg pleads at the end of the war for an alliance between Germany, Great Britain, and the United States, there is at least no basic reason why the peoples of those countries should not dwell upon this planet in progressive concord. But it is when he comes to the political settlement that the war clouds settle down blacker than ever, for the best of Dr. Munsterberg's plans would seem to be but the foundation of future wars.

Finally, as if to hurl into oblivion all Dr. Munsterberg's pacific hopes, Count

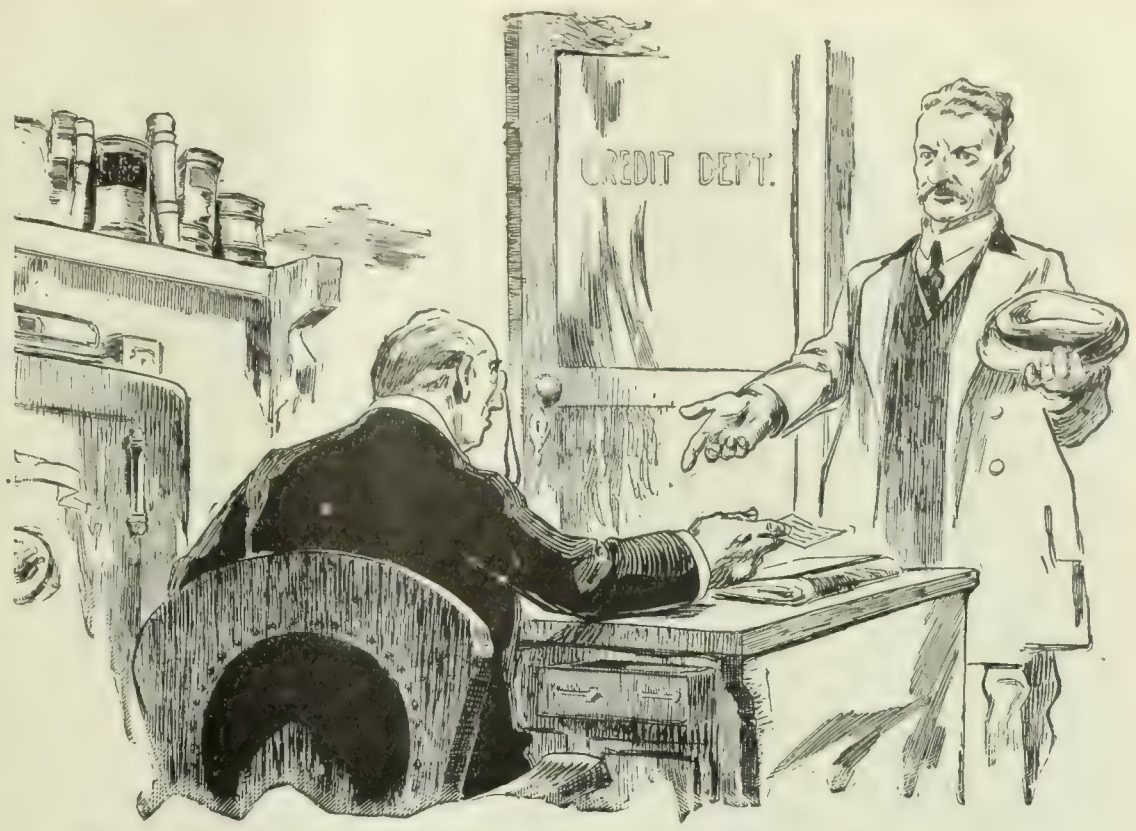
E. zu Reventlow thunders every form of anathema upon England. His *Vampire of the Continent* displays England as a worse villain than even Dr. Beck paints Germany. According to Count Reventlow, thru the centuries since England took to the trade of piracy combined with petty grocery diplomatic tricks, all Europe, especially unsophisticated Germany, has been the victim of intriguing British statesmen. But with so much persistent wickedness, such a thickening of dark political plots, the reader grows incredulous and is at last inclined to smile at the fire-eating Count's grotesquely overdrawn characterization of England.

Understanding Germany, by Max Eastman. Mitchell Kennerly. $1.25. *The Possible Peace,* by Roland Hugins. The Century Company. $1.25. *The War and Humanity,* by James M. Beck. G. P. Putnam's Sons. $1.50. *Tomorrow,* by Hugo Munsterberg. Daniel Appleton & Co. $1. *The Vampire of the Continent,* by Count E. zu Reventlow. Jackson Press. $1.25.

FOLK-MUSIC

Kentucky folksongs must have borrowed from overseas something more than a mere fondness for many verses. It is interesting to trace the variations of some of the songs in *Lonesome Tunes,* collected by Loraine Wyman and Howard Brockway, from those in Cecil Sharp's *One Hundred English Folksongs.* Poor "Barbara Ellen" is just as pathetic as "Baraba Allen"; "Billie Boy" just as boastful of the talents of his wife as "My Boy Willie." In both collections there are songs of rare quaintness and humor, but the melodies cast in dis-used scales are sometimes a little difficult to follow, in spite of their apparent simplicity.

Lonesome Tunes, by Loraine Wyman and Howard Brockway. The H. W. Gray Co. Paper, $1; cloth, $1.50. *One Hundred English Folksongs,* by Cecil J. Sharp. Oliver Ditson Co. Paper, $1.50; cloth, $2.50.



THE EARLY WORLD

The new edition of Professor Myers' *Ancient History* has been thoroly revised thruout and a wholly new chapter on the Aegean civilization has been added. The changes and additions bring this standard school book up to the present level of advanced study and investigation. (Ginn & Co., $1.50.)

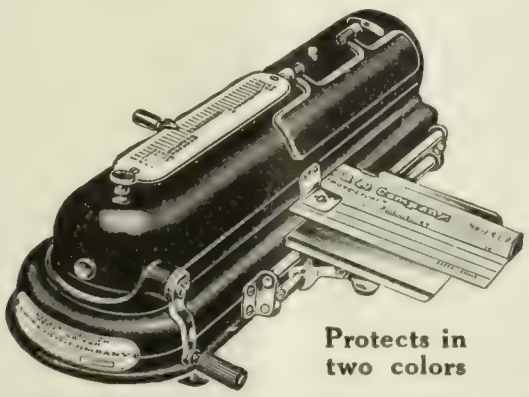
Frank Hamel has done a prodigious amount of research in traditions and records, both of folk-lore and occultism, for his interesting book, *Human Animals.* This is a study of the curious belief that certain men and women can accomplish animal-metamorphosis and having become wild animals, take on added strength, agility and ferocity. (F. A. Stokes Co., $2.40.)

Loomis Havemeyer, in *The Drama of Savage Peoples,* traces drama back to gesture, and the religious basis of sympathetic magic. He shows how animal and plant food ceremonies, initiations, war dances and the pleasure plays of the savages, have influenced the modern drama. What he says of pageantry, the Greek and Japanese plays and the Javanese ceremonials, is all intensely interesting. (Yale University Press, $1.75.)

In *Ancient Times, a History of the Early World,* Prof. James Henry Breasted, the noted Egyptologist, has produced an unusual textbook of ancient history. From the story of the early Cave Men, thru the throbbing life of ancient Egypt, Babylonia and the Sea Kings of Crete, thru Greek and Roman civilization, to the triumph of the Northern barbarians and the establishment of the Moors in Spain, there is not a dull page. (Ginn & Co., $1.60.)

Check Raised—Credit Gone

MERCHANT—Why isn't our credit good?
CREDIT MAN—Well, I've heard of your loss on that raised check—afraid it has crippled you.



Why run THAT risk? A man's credit suffers every time in a check fraud—just as it would suffer if he met with a fire loss and no insurance. Write and protect each check with

THE GENTLE ART OF ORDERING SEEDS

BY F. F. ROCKWELL

IT takes, just at this time of the year, a man of firm principle and iron will, or a woman of unusual determination, to resist the insidious lure of the catalog writer. Just when one's fingers are itching for the touch of the good brown soil again, and one's mouth is positively beginning to water for the taste of something fresh and green "right out of the garden," it is almost beyond human endurance to have stuck under one's nose in true to life sizes and colors, and truer than life descriptions, plump peas that are bursting their pods, lettuce so crisp and brittle that it almost breaks as you look at it. To refrain under such circumstances from ordering wholesale and promiscuously, so that, in one's own garden, all these things can be enjoyed in the flesh, is a great task. As one who has "had experience," I am glad, whenever possible, to hold up a warning hand to the garden enthusiast who is ready to rush in where an old timer would fear to tread.

The first mistake likely to be made in ordering seed is that of not being careful enough about the quantity of seed that will be wanted. If the latter is left to guesswork, one is almost certain to have more than can be possibly used of many things such as cabbage, celery, cucumbers, melons, and tomatoes; while the bulky and expensive things, such as beans, peas, and sweet corn, will be found to "run short" before the season's planting is over—and this year it is going to be a serious matter to run short, particularly on beans and sweet corn, which are so scarce this year that they are likely to be exhausted before the planting season is over. To save both waste and disappointment, you should study this phase of your order carefully *before* you make out your seed list. If you have made a garden plan in detail, which is always the best plan any way, you can tell just how many feet of row of each vegetable you expect to plant. For each *fifty feet* of row to be planted, you will need the following amounts of the various vegetables: Beans, 1 pt.; beans, pole, ¼ pt.; beets, 1 oz.; Brussels sprouts, ¼ oz.; cabbage, ¼ oz.; carrots, ½ oz.; cauliflower, ¼ oz.; celery, ½ oz.; corn, ½ pt.; cucumbers, ¼ oz.; endive, ½ oz.; kohlrabi, ¼ oz.; leek, ¼ oz.; lettuce, ½ oz.; melons, ¼ oz.; onion, ½ oz.; parsley, ½ oz.; parsnips, ¼ oz.; peas, 1 pt.; potatoes, ½ pk.; pumpkin, ¼ oz., ½ oz.; salsify, ¾ oz.; squash, ¼ oz.; Swiss chard, ¾ oz.; tomatoes, 1 pckt.; turnips, ½ oz.

The following vegetables are usually started under glass, or in a seedbed outdoors, to be transplanted later to their permanent position: cabbage, cauliflower, Brussels sprouts, egg plants, peppers, and tomatoes. A packet of seed of any of these will give

Dreer's All-Heart Lettuce

is the most dependable hard-heading lettuce ever introduced. Magnificent large heads with extremely solid heart. Flavor rich and buttery. Slow to run to seed even in hot weather. (Color, beautiful yellowish-green) Packet—10 cents.

Dreer's Garden Book for 1917

is declared by a legion of enthusiastic gardeners to be the most valuable reference book on growing flowers and vegetables ever issued.

A copy sent free if you mention this publication.

several dozens of plants, all that are likely to be wanted for a home garden.

As to *varieties*, part of the interest and excitement in every season's gardening is the trying out of new things, but your real dependence should be placed on those which have been proved by at least a few years of satisfactory service. The following list makes no pretense of being the "best" thing there is in each case. There are others as good, or the same things listed under different names. But you will find it hard to get anything better than these, each of which is a "safe bet." I have grown every one of these varieties myself, most of them several years, and know they are of sterling quality.

Beans (green), Bountiful; beans (wax), Brittle Wax; beans (pole), Old Homestead (green), and Golden Cluster (wax); beans (Dwarf Lima), Burpee Improved; beans (pole Lima), Early Leviathan, and Giant Podded; beets, Early Model, Eclipse, Dark Red (maturing in order named); cabbage, Copenhagen Market, All-head Early, and Succession, and Drumhead Savoy; carrots, Chantenay, Coreless; cauliflower, Snowball, Dry Weather; celery, Golden Self Blanching, Winter Queen, and Emperor; Swiss chard, Giant Lucullus; sweet corn, Golden Bantam and Country Gentleman; cucumbers, Everbearing (for "little pickles"), and Davis Perfect; egg plant, Black Beauty; lettuce, Grand Rapids (loose leaved), Big Boston (head) for spring and fall, and Deacon for summer; melons, Henderson's Bush for small gardens, and Netted Gem (Rockyford) (green fleshed), and Emerald Gem (salmon fleshed); water melons, Fordhook Early, and Halbert Honey; okra, Perkins Long Pod; onions, Silver King (white), Prize Taker (yellow); peas (dwarf), Laxtonian, or Blue Bantam, Little Marvel, British Wonder (late); peas (tall early), Early Morn, or Gradus (Prosperity). Boston Unrivalled (American Champion), an improved Telephone; peppers, Early Neapolitan and Ruby King; potatoes, Irish Cobbler (early), Gold Coin; radishes, Crimson Giant Globe, White Icicle; spinach, Victoria, New Zealand (for continuous cuttings); squash, Fordhook Bush for small gardens, White Scalloped and Giant Crooknecked for summer, Delicata and Delicious for winter; tomato, Bonny Best for early, Matchless for main crop, Dwarf Stone where plants are not to be supported; turnip (early), White Milan and Petrowsky (yellow), (late) Golden Ball, Amber Globe, and White Egg.

When it comes to flowers, strangely enough the gardener who has gone the limit in trying the novelties in vegetables frequently turns around and sticks to the old and the familiar. I feel that there is always a good deal more reason to try the new things in the flower field than in that of the vegetables. It seems to me that there is more to be gained and less to be lost whether the new thing on trial proves very good or not so good. The new flowers are pretty sure to be at least *different* from the varieties one is familiar with, while "new" vegetables in many cases cannot be distinguished from those of similar "type" you already know without a label at the end of the row. Lack of space prevents my going into details, but there are many new types and varieties of flowers, such as "astermums," miniature and red sunflowers, curled or "cactus" zinnias, real early-flowering cosmos, double cornflowers, and baby's breath, the new Cardinal Climber, and many others.

Before or after the Fire when will you learn your lesson?

When *will you* install office equipment that can't burn?

Don't wait until a fire gets you. Walter Maxwell did, and a fire got his wood file that contained his orders and contracts, and put him under. Walter works for his uncle now at $25 per; six months ago he had his own little business and a big chance for the future; then the fire came.

MOTOR PROGRESS

Conducted by John Chapman Hilder

PROGRESSIVE movements have been forced to fight for existence since the beginning of time. There has never been an invention that was not bitterly opposed at its inception. In some cases this opposition has come from the people at large; in others it has been sponsored by law makers. And in the case of the law makers it has frequently been found that they have not been entirely disinterested in their actions.

Just now another battle for existence is on. One side is represented by the owners and the manufacturers of motor trucks. Against them are arrayed the legislative bodies of various States, armed with tax bills that, if passed, will not alone deal the motor truck industry a serious blow, but will impede the growth of business generally.

AS I have said in earlier articles, the motor truck has rapidly been assuming the role of a long distance freight carrier. It has opened up vast possibilities for intrastate and interstate commerce. It has brought the farmer within reach of his market. It has brought the goods of the city store within delivery distance of the country consumer. It has proved its ability to save that which no one can create—time. The motor truck, in short, has entered on a new commercial era. It is the universal freight transporter of the future. And now they are trying to kill it.

"They," at present, are the legislatures of certain states. Unfair taxation is their weapon. There used to be a law providing that a man waving a red flag must walk in advance of a self-propelled vehicle operating on a public highway. In France there used to be a tax on window panes. History abounds with idiocies of this kind. In nearly every instance it can be shown that the thing taxed was something new.

In New York a special committee of the State Senate was appointed to draw up a schedule of truck taxes. Under the old schedule every truck operated in the State paid a flat yearly sum of $5. The new schedule proposes that all commercial vehicles having a combined weight of truck and load of 2 tons or less will have to pay $10—double the old fee.

This $10 fee is the minimum charge. Taxes increase for increases in weight in $5 jumps. For trucks of combined chassis, body and load weights of 14 tons the fee is to be $70. Vehicles with a total weight of more than 14 tons will be required to pay $70 plus $10 for each additional ton. *The $70 fee is fourteen times the amount hitherto levied on trucks.*

Fees for motor busses are also scheduled for a raise. These new fees are based solely on weight and seating capacity. Busses with a seating capacity of five or less are to be taxed $15 a year, up to about $68 for busses accommodating some twenty-seven to thirty passengers.

Baltimore is another hunting ground for legislators. According to figures published in *The Commercial Vehicle*, these different taxation conditions exist, as follows:

1. Solid-tired motor trucks used in the city of Baltimore must pay these taxes, namely:

a. A city tax of $3.

b. A state tax of $8 for the first ton of capacity and $6 for each additional ton.

c. A personal property tax which is equivalent to about 2 per cent. of the truck's assessed valuation.

2. If you are in the bus business and operate solid tired trucks over fixed routes which pass over city streets, you must pay two taxes:

a. A city tax of $3.

b. A special state tax based on the seating capacity and mileages and the weight of the vehicle.

3. If you operate a public freight line of solid-tired motor vehicles over certain fixed routes any of which pass into Baltimore, you must pay two taxes, as follows:

a. A city tax of $3.

b. A special state tax based on ton-miles multiplied by the number of miles run.

THIS burden of double and triple taxation, says *The Commercial Vehicle*, is apparent when each case is considered in a concrete example.

Even the taxes for trucks not engaged in the transportation of passengers or freight over fixed routes for hire are unusually high.

In the first case pneumatic-tired vehicles are charged 50c per horse power, with a minimum of $5. Solid tired trucks are taxed $8 per year for the first ton of carying capacity and $6 for each additional ton. This makes the tax $44 for a 7-ton truck, exclusive of a $3 city tax and a personal property tax of about 2 per cent. of the assessed value.

Trucks used in the public transportation of merchandise or freight must pay a state tax based at so much per ton mile, multiplied by the number of miles it is calculated that the vehicle will cover in a year or the period of time for which the license will run.

Under the law, a 7-ton truck, making a round trip each day of 40 miles with a full load in each direction would make a total of 280-ton miles, which at one-eighth cent each would make the daily tax 35 cents. For a 300-day year this would amount to $105. If the truck ran into Baltimore it would have to pay a $3 city tax, making $108, exclusive of the personal property tax.

It appears that in the early part of 1915 the growth of motor truck use in Maryland and especially at Baltimore was very healthy. When it was found that Baltimoreans were quick to take advantage of the vastly superior service offered by motors as compared with the railroads and trolleys in this particular region, the latter traction interests agitated the severe taxation of these vehicles. Their efforts have resulted in the present unfair and discriminating taxes. They are discriminatory because horse vehicles engaged in freight haulage are not taxed and they are unfair because the taxes are excessively high and designed to throttle the development of the motor truck.

BOSTON has had its troubles too in this regard. There the state legislature, influenced by the Highway Commission and the Committee on Roads and Bridges, attempted to put through a bill levying unreasonable taxes on motor trucks. Fortunately, however, a campaign by truck users and manufacturers, aided largely by the newspapers, smashed the bill in the Senate.

It should not be assumed that truck enthusiasts claim anything for the economic soundness of the existing taxes. They do not object to a revision of the schedule. They realize, more than a great many do, the necessity of maintaining and building roads and they know that roads cost a great deal of money.

What they are fighting for is an equitable tax schedule. They urge a scientific study of the situation by expert engineers. And they are within their rights in demanding this scientific study.

The railroads built the United States. No one can honestly or with common sense deny or depreciate the good they have done. But if the motor truck can serve the people more cheaply and no less efficiently, the railroads must sooner or later, to a certain degree, make way for the truck.

Inspired legislation may check the development of the truck, but, unless the latter is giving a false impression of its capabilities, such legislation will avail nothing in the end.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

Hauls Up The Hard Hills

Hills, ruts, mud, sand, poor pavement—all are easy for the powerful FEDERAL Trucks. They will go where other vehicles cannot—

For, undaunted by any road or load conditions anywhere, Federal engineers have planned and built for the extra strain—the unusual load—the hard roads.

That is why the FEDERAL quality has kept abreast of the demand for dependable haulage—why 62% of FEDERAL sales are repeat orders.

That is why *you* can use the FEDERAL for your hardest Jobs—and be certain of the right result—

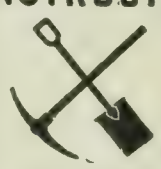
Only $1.00 per M More than the Shoddiest, Puts Your Business Letterheads on Fine

CONSTRUCTION BOND

To win or lose the respect of a single customer means more to you than that $1.00 per M. And respect—good-will—is a delicate thing.



You may lose a man's respect by writing him on a known-to-be-cheap paper. Certainly you do not flatter him with your estimate of his standing. But to write on good, substantial Construction Bond evidences your respect for him—and wins his respect for you.

Today only $1.00 per M letterheads is the difference between Construction Bond and the shoddiest. Only 1-10 of a cent per letter puts your business messages on the important looking, impressive feeling paper of recognized quality.

Write us now for latest letterhead suggestions on Construction Bond and the names of those printers and lithographers in your locality who carry Construction Bond in stock and produce fine stationery upon it.

Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.

What 15c Will Bring You from the Nation's Capital

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published **at the Nation's Center,** for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new Friends. **The Pathfinder, Box 39, Washington, D. C.**

PEBBLES

"She has such an air of refinement."
"Yes; her father's in Standard Oil."—*Princeton Tiger.*

She—You had no business to kiss me.
He—It wasn't business, it was pleasure.—*The Orange Peel.*

Elliott—Do you like bow legs?
Phyllis—Yes, they give a man such an arch look.—*Princeton Tiger.*

Laundry prices have risen. Still, the thrifty customer need not let the laundress get up his choler.—*Passing Show.*

Excited Tourist—Information given out here?
Tired Attendant—It has.—*Illustrated World.*

At the last meeting of the Chinese Parliament, inkpots were thrown about. Then, as things looked rather black, the house adjourned.—*London Opinion.*

Banks—Is young Featherly a responsible sort of person?
Brokes—Yes, he's responsible for most of the mistakes in our department.—*Awgwan.*

"Dearest, I ordered to be sent home today a most beautiful hat for only $30. It's a perfect love!"
"My darling, your love will be returned."—*Princeton Tiger.*

The theory that teetotalers make the best soldiers may be all right, but when England really wanted to make some gains she had to call on her tanks.—*Southern Lumberman.*

He—Do you remember Horatius at the bridge?
She—I don't think I ever met him. You know, we invite so few men to our card parties.—*Life.*

"I was awfully sorry to hear of your being wounded."
"Oh, it was nothing—I hope to live thru a lot worse."
"Indeed, I hope you'll do nothing of the sort!"—*Sydney Bulletin.*

"What's the matter with the efficiency expert?"
"Sad blow. He wanted a 4-cent stamp, but the man only had two twos. Of course he had to waste energy licking twice the space."—*Chicago Herald.*

Willie (reading the Bible)—Pa, it tells here about the evil spirits entering into the swine.
Father—Well, my son?
Willie—Was that how they got the first deviled ham?—*New York Times.*

The valor and candid simplicity of our Indian Babu is proverbial. A story goes of one anent the German East campaign, who, in the words of a contemporary, was about the most laconic, competent, deadly earnest station master and marksman combined that ever lived. A regiment of men like him would end the war, for this is the wire he sent:

"One hundred Germans attacking station. Send immediately one rifle and 100 rounds ammunition."—*Nairobi Leader.*

"The average individual," said a Scotland Yard official, "can't give a detective simple, plain, straightforward information. Questioned by a detective, he becomes as involved and difficult as the office boy."

A detective asked an office boy if it was Mr. Jones or his partner who reached the office first as a rule.

"'Well,' said the boy, turning very red, 'Mr. Jones at first was always last, but later he began to get earlier, till at last he was first, tho before he had always been behind. He soon got later again, tho of late he has been sooner, and at last he got behind as before. But I expect he'll be getting earlier sooner or later.'"—*London Opinion.*

AN INVASION BY DEMOCRACY

The spirit of the times is causing many upheavals of long established precedents among European governments. Nowhere is this more apparent than in England and the following extract is an interesting side light on changes wrought by England's new and democratic prime minister, in the atmosphere of staid old Downing Street.

It was written by Robert Donald, editor of that leading organ of English Liberalism, *The London Daily Chronicle*, and a close personal friend of Lloyd George:

The new Prime Minister, who has worked a revolution in Cabinet government, has also upset all the cherished traditions of Downing Street. No. 10, the official residence of the Prime Minister and the meeting place of the Cabinet, is a sombre, gloomy building. Formerly the atmosphere inside was solemn, severe and formal. The Prime Minister hedged himself with a bodyguard of messengers, melancholy figures looking as if they had grown old with the place. The former Prime Minister had a horror of the press at close quarters. If editors or reporters called the hall porter admitted them with some misgivings. The messenger regarded them with suspicion, but guided them along the corridor, where another bearded patriarch introduced them to the private secretary. That gentleman was extremely amiable and as stately and uncommunicative. A request to see the Prime Minister would have shocked him as an outrage on convention.

Mr. Asquith discovered to his cost that the press has a destructive power, but he always minimized its importance as a factor in public life. So far as I am aware he never saw newspaper men. I once asked to see him on some important matter, and, altho I was the editor of the Liberal newspaper with the largest sale and not the least influence, his secretary wrote requesting me to state my business as if I had been a suppliant for a post or a favor.

There is no such exclusiveness about the new Prime Minister. No. 10 Downing Street has undergone a revolution. The atmosphere is charged with electricity, there is hustling, activity, and almost Jeffersonian simplicity about the place. Mr. Lloyd George does not stand on ceremony; there is nothing solemn or austere at No. 10 now. Shadows of Baliol College, Oxford, which in the past have haunted the official residence, have been swept away. The restless little Welshman never entered a college, except to receive an honorary degree of Doctor of Laws. He is the first to break this tradition.

The new Prime Minister has magnified the importance of his position. Other Prime Ministers got along with a private secretary and one or two assistants. Lloyd George has three private secretaries—a Welshman, a Scotchman and a lady who is half French and half Scotch. He has four or five secretaries, chosen for their knowledge of public affairs who form connecting links between the Prime Minister and the Government departments which are not represented in the Cabinet. For Lloyd George has again broken new ground by having Ministers who have not seats in Parliament. Then he has official secretaries of the Cabinet itself. No record had hitherto been made of Cabinet proceedings, only a few notes having been taken by the Prime Minister. Lloyd George has combined a Cabinet, a War Council, and the Committee of Imperial Defense is one body, and a record is kept of its proceedings.

The new Administration does not lack driving power at the top, and everything tends to show it will prove itself an efficient working machine. Lloyd George will keep in touch with all phases of public opinion and in this respect more resembles the President of the United States than any of his predecessors.

Comptometer Section, Nash Motors Co., Kenosha, Wis.

Centralizing the Figure Work of Accounting

How They Cut the Expense of Cost Finding in the Jeffery Car Plant

By bringing all Cost Calculations, figuring of Payroll, Bills of Material, and the Proving of Incoming Invoices together into a central Comptometer Section, the Nash Motors Co. of Kenosha, Wisconsin, struck a body blow at the High Cost of Accounting.

In these days of shifting values, casual Cost Estimates are dangerous. Safety lies in a Cost Finding System comprehensive and flexible enough to get the facts—and keep them up-to-date. That is what they have in this office.

But as Mr. McCandless, Head of the Statistical Department observed:

> "Valuable as our Cost System is, it would be economically impractical if we had to handle the calculations mentally. It would cost too much—more than double what it does now.
> "There's the Payroll, too—instead of having it worked up in the various Shop Departments by higher priced help, it is all turned in to the Comptometers for extending and footing at a marked reduction in cost—to say nothing of how much more accurate the machine figures are."

This fairly illustrates what centralized Comptometer Service is doing for Accounting in a host of offices representing practically all lines of business.

Its benefits are not confined to the large concern—it is just as practical in the one-machine office as where a whole battery is employed.

Figure work of any kind—Proving Postings; Adding Trial Balance; Calculating Costs; Figuring Payroll, Bills, Estimates, Inventory—all can be turned over to the Comptometer with a sure saving of labor and expense and a comforting assurance of accuracy.

Invite a Comptometer man to show you what the centering of all figure work on the Controlled-key Comptometer would mean in your case. That service is at your command without obligation.

Copy of "Better Methods of Accounting" sent free on request.

Adding and Calculating Machine

What is Nervousness?

Very few people realize that nervousness is "a symptom" *not a disease.* Your nervousness may be due to one or more of several causes. The way to find out is to read what Dr. Kellogg tells you in his new book "Neurasthenia." This book tells all about nervousness and its causes—just what nervousness comes from. It is the result of more than forty years' experience, during which Dr. Kellogg has observed and prescribed for thousands of cases of nervousness—some of them very serious. By reading his book, you can learn how to get rid of the causes of nervousness by natural means. Dr. Kellogg tells you just what to do. No drugs. Some restrictions of diet but nothing burdensome. A little exercise but no tiresome regime. Careful division of hours for work, rest and sleep. These subjects are carefully covered in Dr. Kellogg's book which is of invaluable service to any nervous sufferer. Order it today. You take no risk. For—if you are not entirely satisfied, after 5 days' examination of the book, you may return it and we will promptly refund every penny of your money. Thus, we take all the risk. Order today and rid yourself forever of nervous suffering. You can do it if you follow the teachings in Dr. Kellogg's book "Neurasthenia."

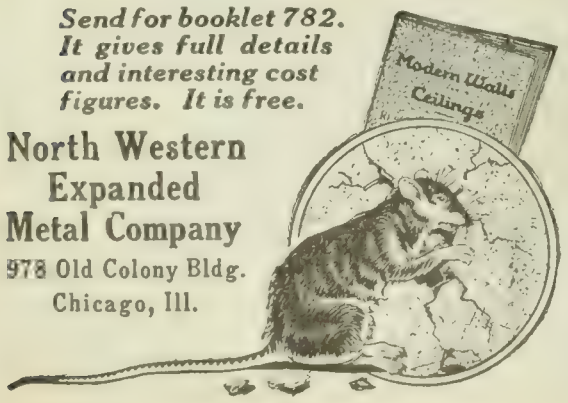
Kno-Burn

(Trade Mark Registered U. S. P. O.)



Expanded Metal Lath

It's a discouraged rat that finds the fine, impenetrable mesh of "Kno-Burn" barring his further progress—no choice for him but to move to a house of poorer wall construction.

Rat proof and *rot* proof—a barrier to fire—a fabric that absolutely prevents the unsightly cracks that you've come to associate with plaster and stucco—those are a *few* of the many qualifications that have established Kno-Burn Expanded Metal Lath as the *standard* wall base.

The cost of a house lathed with "Kno-Burn" is so little more than that of houses lathed with the cheapest types of wall base that it is not an item to anyone who is building for permanence or resale value.

Send for booklet 782. It gives full details and interesting cost figures. It is free.

Chicago, Ill.

THE MARKET PLACE

THE STOCK MARKET

In the market for securities on the New York Stock Exchange, the activity shown on the 1st, after weeks of dullness, when prices were sharply depressed by Germany's submarine note, was sustained in the following week. On the 2d the downward movement continued, but on Saturday, the 3d, when nearly 1,000,000 shares were sold in the short business day of two hours, there was a vigorous advance, owing to our Government's dismissal of Ambassador von Bernstorff. Prices began to fall at the beginning of the session, but when the news came, half an hour later, they moved upward, and the day's average net gains were almost equal to the losses on the 2d. Nearly one-fifth of the business was done in Steel, which rose to 104. Official reports of great earnings had not prevented a decline to 99 two days earlier. There was a further advance on the 5th, in a broad market. Steel Corporation shares were again the leaders, with a net addition of 3 points, and sales of Bethlehem Steel, which had fallen to 363, were made at 415. Notable strength was shown by American Woolen. The company has $40,000,000 worth of unfilled orders, and traders were saying that if the United States should be drawn into a war with Germany our Government would have to buy large quantities of clothing and woolen blankets.

On the following day there were gains, but they were comparatively small. Prices of railroad shares were reduced. It was said that if war should come the companies could not increase freight rates and would be obliged to pay more for cars, locomotives and rails. There has been no final settlement of the wages controversy by court decision or otherwise, and the fate of legislative propositions at Washington is in doubt. Owing to the international complications, however, the employees have decided to refrain from action that could cause disturbance. Shares of the New Haven Railroad Company were sold at 38½, the lowest price on record.

There was a change on the 7th, when transactions of the day showed a decline. This was due in part to reports that foreign holders were selling securities. Engagements of gold to be exported to South America were regarded as indications that German funds were being taken from this country, altho the balance of trade against us accounts for such export shipments. The market narrowed to 650,000 shares on the 8th, with an additional net loss for the day. All were waiting for news from Washington and Europe. Rumors about the sinking of American ships, and reports concerning the treatment of Ambassador Gerard by the German Government pointed to the danger that an "overt act" might, within a few days, compel a declaration of hostility. And the number of those who could see industrial advantage in war was greatly reduced.

Some thought was given also to the effect of the submarine warfare upon our exports, those shipped to Europe last year having amounted to $3,813,000,000, out of a total of $5,481,000,000. It became known that the Union Pacific Railroad Company has declared an extra dividend of ½ of 1 per cent, and this raised the price of shares by 2 points, but only half of the addition was retained. This increase of dividend, it was thought, indicated the directors' purpose to put the stock on a 10 per cent basis. The extra allowance of 2 per cent in December did not prevent a decline at that time of 5 points, but the entire market was affected then by the President's peace note and Secretary Lansing's remark about the country having been on the verge of war.

FOREIGN LOANS

There were so many applications for the 5½ per cent notes of the new British loan of $250,000,000 that the subscription books were closed several days before the specified date until which they might have remained open. They were offered at a price which would yield 6 per cent, are convertible into twenty-year 5½ per cent internal bonds of Great Britain, and are secured by $300,000,000 collateral deposited in New York, one-half consisting of bonds of cities and railways here and in Canada, and the other half including bonds of South American countries, Australia, New Zealand and British railways.

J. P. Morgan & Co. were assisted in this transaction by leading bankers and trust companies in New York and several Western cities. Great Britain has now borrowed $1,000,000,000 in this country.

A new French credit of $50,000,000 has been offered to the public. The notes, which are obligations of seventy-four French industrial companies, are secured by the bonds of France and neutral nations. They yield 5½ per cent, and the money is to be used in buying American goods.

The following dividends are announced:

Pacific Gas and Electric Company, quarterly, first preferred and original preferred, $1.50 per share, payable February 15.

United States Steamship Company, 1 per cent, extra, one-half of one per cent, payable March 1.

Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable March 1, 1917.

General Development Company, $2 per share, payable March 1.

American Cotton Oil Company, common, quarterly, one per cent, payable March 1.

DIVIDENDS

NILES-BEMENT-POND COMPANY
PREFERRED DIVIDEND NO. 70.
New York, February 7, 1917.

REMARKABLE REMARKS

MARY PICKFORD—Success too often means loneliness.

WOODROW WILSON—It bores me to have men waste my time.

CONGRESSMAN C. H. RANDALL—This is a canned Congress.

CONGRESSMAN GARDNER—The brains are on our side of the House.

SECRETARY DANIELS—Most of the navy's officers come from the interior.

SENATOR WILLIAM J. STONE—I am getting tired of monkeying with Mexico.

MRS. VINCENT ASTOR—We need a neighborhood spirit in New York City.

PROF. WALTER DILL SCOTT—Once people were driven—now they are inspired.

ED. HOWE—If I want information about the church I will not look to a bishop.

ALEXANDER MACGREGOR—The department store is the life blood of the press.

MAX EASTMAN—Journalism is the unique literary achievement of this age.

PRESIDENT M. WOOLSEY STRYKER—I think a college is, first, a place to study.

ANNA PAVLOWA—The dancers of the various nations reflect the soul of those nations.

THEODORE ROOSEVELT—President Wilson has earned for this nation the curse of Meroz.

LORD BRYCE—The Turks have never been of any use for any purpose except fighting.

PROF. L. C. VAN NOPPEN—We must not censor Milton too much for his self-evident plagiarisms.

PRESIDENT C. H. THWING—The man who said "My country, right or wrong," was in error.

EMPEROR WILLIAM — Our submarines have secured for my navy glory and admiration forever.

PROF. VIDA D. SCUDDER—The world has never been so conscious of Christ as in these days of horror.

DR. GEORGE E. VINCENT—A society for the suppression of the obvious remark would soon fill a city block.

JOHN COWPER POWYS—The real art of criticism only begins when we begin to shake ourselves free of all books.

FRANK YEIGH—When I showed a Canadian picture in Pittsburgh showing coal at $1 per ton, the audience groaned.

DR. CHRISTINE MANN—Of the girls working in department stores 65 per cent should have their teeth attended to.

ALLEN DALE—Parents nowadays are extremely precocious, so unlike the nice, early Victorian parents of our childhood.

DR. ELEANOR BERTINE—Study any group of debutantes and you will see they are not well and strong as women should be.

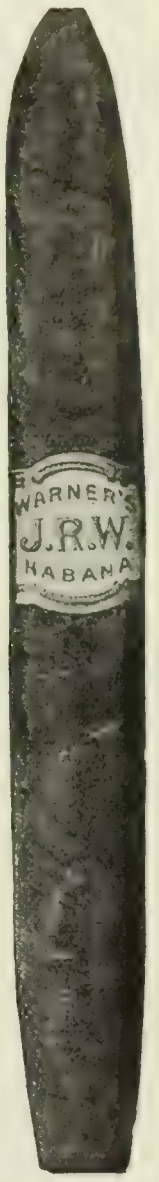
GEORGE HAVEN PUTNAM—If the Lord is working thru William of Prussia it is the Scandinavian god Thor returned to power.

EDWARD BOK—Husbands and wives will accept the marriage covenant that they are one in almost everything except the family income.

DR. CARL E. SMITH—In New York City last year 67,000 children failed to be promoted to higher grades because of defective teeth.

HENRY A. WISE WOOD—I consider the movement represented by the American Union Against Militarism, as damnably treasonable.

SENATOR CHAMBERLAIN — Unless we wake up, a first class power some day will put a handful of soldiers in this country and control us.



MRS. MARGARET SANGER—Colonel Roosevelt goes about the country telling people to have large families, and he is neither arrested nor molested.

GOVERNOR CAPPER, of Kansas—We have relied too much upon the Bird of Freedom, the Star Spangled Banner, political windjamming and campaign buncombe.

A Real 10c Cigar for 5 Cents

You men who have been accustomed to smoking ten cent straights and two-for-a-quarter cigars will find my J. R. W. cigar a most delightful smoke.

The rare leaf I use in my cigar is selected for me from the choicest tobacco raised in the Vuelta district in Cuba. In my 40 years experience as a smoker I have never found a cigar with the smooth, mellow, delightful taste of my J. R. W. cigar.

Real Tobacco Value

When you buy my J. R. W. cigar you are paying for straight tobacco goodness — nothing else. My cigar goes direct from me to you. You pay no salesmen's expenses, no store up-keep, no dealers' profits.

And besides, J. R. W. cigars are always fresh. No standing on shelves or in show cases until they lose that smooth, fresh taste like in cigar stores. I make only enough to fill immediate orders.

Try Five Free

I don't want you to buy a box of these cigars until you are sure you will like them. Send me your name on your business card or letterhead together with 10c. to partially cover packing, postage and revenue and I will send you these cigars to try free.

Smoke five of them. If you like them send me $2.60 for the full box of fifty. Write me today and try this really delightful cigar.

Insurance

Conducted by

W. E. UNDERWOOD

COMPARATIVE MERITS

One communication which is representative of many received by this department embodies the following inquiries:

1. Is a benefit certificate of the Modern Woodmen of America good insurance?
2. Is a benefit certificate in the Maccabees good insurance?
3. Tell me how to judge the merits of an insurance company from a policyholder's viewpoint.

Other inquiries of like nature received have included the names of about all the fraternal orders and assessment associations doing business.

At the outset, it becomes necessary to impress on the minds of all who would provide themselves with life insurance that its permanency depends primarily on the accumulation of a mathematically ascertained reserve sufficiently adequate to provide against the constantly growing cost due to increasing age. No scheme of life insurance that has ever been devised which fails to make that provision—and there have been and are many of them—will achieve permanency. The inventors of substitutes for reserve life insurance have aimed at but one result—cheapness. Their task is hopeless; and it will remain so as long as mankind die in greater numbers as age increases. These dreamers on the one hand and mountebanks on the other need first to discover the fountain of youth and arrest the destroying influences of times. It is as impossible to construct a plan of life insurance that will meet every requirement of permanency and security without due regard for all the mathematical laws involved, as it would be to construct a great bridge or a skyscraper in the same way.

Therefore, answering the two questions asked above: if the amount of money collected per year from every member of the orders named, each contributing his proper share, based on age, as indicated by some reliable table of mortality, does not include a sum which invested at interest will, under the requirements of that Mortality Table, annually offset the increasing cost due to advancing age, then it is not good life insurance. As neither the Modern Woodmen nor the Maccabees maintain a reserve of that character, I cannot regard their insurance as possessing the essentials of permanency and security.

Naming four life companies from which he desires to make a choice, my correspondent asks how he is to proceed in arriving at a judgment of their respective merits. All of the companies listed are organized and conducted on the most approved principles, and are

LE PAGE'S GLUE 10c
WILL MEND THAT VASE

scrupulously observant of all the scientific requirements which should govern all their operations. The funds of each are abundant for all purposes, and are properly invested and protected. Up to this point there is no choice: all are equally meritorious.

Now consider the matter of policy provisions: while one may not differ widely from another, there are minor variations; and the applicant may and should choose that combination best suited to the purpose he has in view in taking life insurance. One company may offer a combination of privileges and benefits more nearly approximating the thing desired than another.

The management of every good life insurance company should consist of capable financiers; underwriters of ripe experience and matured judgment; executive officers skilled in the art of economy—in securing for every dollar expended a dollar's worth of service, or other value; all of them should be men of character, guided in their work by the moral, not less than by the statute, laws. In this respect companies differ; and "Ye shall know them by their fruits." Not the least valuable asset of a life insurance company is its record. Scrutinize that; compare it with the records of other companies.

Finally, we come to the factor of cost. Life insurance is an expense. There is a minimum below which it is impossible to reduce it. Those companies which, during a period of twenty or more years, most closely approximate that minimum net cost, at the same time maintaining their operations at an efficient and progressive standard, prove by their results to policyholders their superior qualities. It is, therefore, desirable that the factor of net cost be made a matter of comparison; not in a hypercritical spirit, but in a broad and liberal way and in connection with all the merits a company possesses. In a very limited space I have here tried to indicate to all policyholders how they may proceed in ascertaining the comparative merits of various companies.

C. C. M., Greensburg, Ind.—You will find information about the Postal Life in this department of The Independent, issue of January 29, 1917. The Equitable of Iowa was organized in 1867 with $50,000 capital, which was increased to $100,000 in 1881, and to $300,000 in 1907. It has been excellently managed, and its net cost to policyholders is very low. To me, the increase in capital stock seems as unwarranted as it certainly was unnecessary. The company also writes both participating and non-participating policies.

W. H. R., Vineyard Haven, Mass.—Your statement of facts is briefly: a man will surrender a certain amount of existing life insurance, taking its paid-up value; and then secure a new lot of insurance equal in amount to that he is now carrying; and that, then, he will add to the amount of his protection and reduce the net cost. I cannot see it. He will certainly have to pay a larger premium on the new lot, the net cost of which must be greater than that he has carried for years. Why not keep the present insurance, if it is in the right companies, and take another policy equal in amount to the value of the paid-up of the insurance he now has? This brings the premium expenditure on the new insurance to a lower figure than it would be on the whole amount now carried.

NEWS OF EFFICIENCY

"TO have every individual of the nation at his highest state of efficiency is to be prepared for peace or for war." Dr. George F. Kunz, a member of the Institute, who made this remark in an address before the recent meeting of the American Association for the Advancement of Science, also put forward a suggestion for securing greater national efficiency that is of particular interest at the present time. The entire population, he urged, should be card-catalogued and the men classified according to their various abilities. An examination should be made periodically, so that those who should know the collective resources of the nation could judge whether a man was at 20, 30, 50, or 100 per cent. standard in his particular vocation. Dr. Kunz believes that if properly worked out, a scheme for turning the activities of a citizen army into industrial channels during times of peace would completely alter the class of men who constitute our army and at the same time make for higher efficiency in both peace and war. "Our army of the future should be made a school of productive effort, not of purely tactical training. The manifold activities which modern warfare imposes upon a national army renders it both possible and necessary to give the soldier a training which will prove of value to him when he reënters civil life, and one which will make it possible to give him a much larger, and an adequate remuneration. Thus the profession of arms will grow in favor, entirely apart from any morbid longing for war, and will take its proper place among the different useful and profitable vocations of our citizens."

* * *

Admiral Robert E. Peary and Mr. Henry A. Wise Wood, Governors of the National Institute of Efficiency, took prominent part in the Congress of Constructive Patriotism, held at Washington under the auspices of the National Security League, on January 25th. Mr. Alan R. Hawley, Mr. Henry Woodhouse and Mr. Raymond B. Price, also members of the Board of Governors, were also present at the Congress as delegates of the Institute.

* * *

If traveling men had a knowledge of first aid, the worst cases of injury in railroad accidents would receive attention before, in many cases, the doctors and ambulances could arrive. This seems an efficient idea, and the United Commercial Travelers of America are taking it up vigorously. The Grand Secretary, Mr. J. M. Dresser, in a letter to Mr. J. W. Hamilton, of St. Paul, says: "Here in Minnesota we have eighteen councils of our organization, and in North Dakota six, all of which will receive a tentative program in which first aid training will be set forth as a matter for the attention of our order everywhere. We hope to secure the support of the Supreme Council in commending the subject to all of the 575 councils of the order, which will result in its promulgation thruout the country."

* * *

Admiral Robert E. Peary, Mr. Charles M. Schwab, Mr. Raymond B. Price, Mr. L. M. Boomer and Mr. J. McE. Bowman were appointed delegates of the National Institute of Efficiency to the first Pan-American Aeronautical Exposition, held under the auspices of the Aero Club of America and kindred organizations at the Grand Central Palace, New York, February 8-15.

* * *

Mrs. Vincent Astor has struck a note in the matter of fostering the neighborhood spirit that will be of value to all who are interested in practical Americanism. At her home on Fifth Avenue she recently entertained residents of New York's Yorkville district, which contains 20,000 immigrants of almost every nationality. At luncheon she gave some cogent reasons for bridging the social gulf between First and Fifth Avenues. "We are not interested in this as philanthropy," Mrs. Astor remarked. "We simply want to get the people of this neighborhood together in a spirit of good citizenship to see what practical things we can do to make this a typical American neighborhood. We shall have to begin with the weakest spots first, and make this district the best in literacy, citizenship and the use of the English language. We need, incidentally, a greater use of the school as a social center and playground where we can all meet. Then we want to reduce the crime in our neighborhood and the causes of it, and to help everyone to get the fundamental of an American standard of living. We are striving," she added, "for two things—to make service, not relief and charity, our watchword, and to have on call at all times residents who will render personal service to others in the neighborhood as it is needed."

* * *

Bright, vigorously forward-looking, and packed tight with epigrams that are never merely clever, Mr. Charles M. Schwab's little book on "Succeeding with What You Have" is a contribution to the literature of achievement which thousands will read with profit and enjoyment. Mr. Schwab, who was one of the early members of the National Institute of Efficiency, does not believe in the thing that most people call "genius." "There is not a man in power at our Bethlehem steel works today," he says, "who did not begin at the bottom and work his way up, round by round, simply by using his head and his hands a little more freely and a little more effectively than the man beside him. American industry is spilling over with men who started life even with the leaders, with brains just as big, with hands quite as capable. I have found that when 'stars' drop out, successors are usually at hand to fill their places." Here are a few of Mr. Schwab's neatly told conclusions about the value of efficiency. "If more people got so enthused over their day's work that someone would have to remind them to go out to lunch, there would be more happiness in the world and less indigestion." "Captains of industry are not hunting money. America is heavy with it. They are seeking brains —specialized brains—and faithful, loyal service." "Nothing is so plentiful in America as opportunity. There are more jobs for forceful men than there are forceful men to fill them. Whenever the question of buying new works comes up we never consider whether we can make the works pay. That is a foregone conclusion, if we can get the right man to manage them."

* * *

Charles E. Hughes, a member of the class of 1881 of Brown University, speaking at a dinner of the New England alumni of the institution the other evening, deplored the fact that in American colleges there is so little practical study of American history. "We need efficiency," he said, "an efficiency in citizenship based upon wide and accurate knowledge of our history and our government."

* * *

The experiment of the New York police "diet squad" which came to a close a few days ago demonstrates conclusively, in the opinion of Dr. Mary S. Rose, nutrition expert of the Life Extension Institute, under whose auspices the test was conducted, that twelve healthy men can live happily and normally on a diet which the average hard-working citizen can secure for himself at about 25 cents a day. "Now that experts have shown how it is done," she writes in the New York *Sun*, "there are many useful lessons to be derived from the test of the last three weeks. It is evident that the average dweller in New York can, when economy is necessary, live on even less than the sum mentioned. Applying the same standards, he could subsist on 18 cents. The probationary policemen who underwent this experience were doing several hours of gymnasium work a day, and their requirements therefore were considerably more than that of the average man of our city, whose daily routine does not include heavy manual labor." It is interesting to note that the Life Extension Institute intends publishing an analysis of the results.

INDEPENDENT LESSON PLANS

Based on the Contents of This Number

TO THE TEACHER: Assign one or more of the questions pertaining to the subject taught by you to every member of your class, making the assignments in such a way that some reports will be made at every recitation during the week. The work will be done to best advantage if the reports are made in writing, and if the students bring their copies of The Independent to each recitation.

ENGLISH: LITERATURE, COMPOSITION AND WORD STUDY

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Her Gift. By Helen Emery Smith.

1. Show in what way the thought of the poem is somewhat like the thought of "Silas Marner."
2. Point out different ways by which the poem has been made graceful and charming.

The New Books.

1. The following expressions are used in various book reviews. Give the meaning of every expression. "The same thesis;" "epic;" "contemporary writers;" "Romance literatures;" "stilted verse;" "anthology;" "sectional poet;" "conventional verse;" "genuine pathos;" "homely tenderness;" "psychological studies;" "buoyancy and fervor;" "calculated crudities;" "poignant;" "dramatic monologs."
2. Use each of the above expressions in sentences concerning the books you have studied in school.

Canada's Half Million. By Dorothy McIlwraith.

1. Show in what ways the content and the spirit of this article are a realization of what Burke said in his speech on "Conciliation."
2. Discuss the economic effect of the following: (a) "More men means more destitute families," etc. (b) "More men means more vacant positions at home," etc. (c) "More men means more returned soldiers," etc. (d) "More men means more socks, tooth-brushes," etc. (e) "More men means more taxes," etc.
3. From the writer's point of view is the gain to Canada greater than the loss?

SECTION II. WORD STUDY.

Independent Opinions.

1. Give the derivation and the meaning of every one of the following words: wrested; lamentable; resentment; annexation; restive; referendum; indemnity; involved; political identity; espoused.

SECTION III. GRAMMAR.

Of the True America Breed.

1. Give the syntax of every subordinate clause; every phrase, and every proper noun in the article.

SECTION IV. COMPOSITION.

Americans and German-Americans. By George A. Plimpton and Kuno Francke.

1. Write a paragraph on "The American Spirit," basing the work on these two articles.

The Governor and the Mob. By Thomas Randolph.

1. Write an exposition based on the sentence: "Reverence for law and order marks the one difference between savage and civilized communities."
2. Write a paragraph on "Heroism in Public Life."
3. By what means has this article been made effective?
4. Write a comparison between some of the events mentioned in this article and some of the events in "A Tale of Two Cities."

Wages vs. Crops. By Bolton Hall.

1. Show by what means this article has been made clear.
2. Write a paragraph on "What Can Be Done With a Door-yard."

Atoms for Defense. By L. H. Baekeland.

1. Show in what ways this article illustrates the principles of writing technical articles for general reading.

A Sculptor of Democracy. By Milton Bronner.

1. What is the effect of direct quotation in this article?
2. Make a plan of the article. Point out the effectiveness of the plan.

What It Costs to Live. By William B. Wilson.

1. Show how this statistical article has been made interesting, clear and emphatic.
2. Write a short statistical article concerning your school.

Editorial Articles and the Story of the Week.

1. Which editorial article do you consider best written? Give your reasons in full.
2. Write a paragraph of detail on "The German Treaty Proposals."
3. Write a short narrative paragraph on the recent troubles in Cuba.
4. Write a full expression of your own opinion on "Neutral Protests."
5. Write an explanation of the importance of the sinking of the "Law."
6. Write an exposition on the topic: "Many steps are being taken for national defense."
7. Write an exposition on "Important National Measures not Connected with the War."
8. Write a short explanation concerning the present relations of the United States and Mexico.
9. Write a short newspaper item concerning the advance of Woman Suffrage.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL, JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. Race Elements in the American Population—"Americans and German-Americans."

1. What was the nationality of the original settlers of the region in which you live? What was the nationality of the ancestors of the members of your class? How far do these justify the first paragraph of Mr. Plimpton's article?
2. Write a brief narrative describing (a) the European conditions under which your ancestors lived. (b) the reasons why they migrated to America.
3. Give the facts which prove each of the following statements: (a) "A large number of our German population came to this country to escape the very institutions for which Germany now predominantly stands," etc. (b) ". . . the major part of our German population is not of recent immigration," etc.

II. Cuba and the United States—"Civil War in Cuba."

1. Discuss: (a) "The condition of internal anarchy which brought on the Spanish-American War." (b) United States intervention in Cuban affairs.
2. Investigate the conditions in Cuba which led to revolutions previous to 1898. Compare these conditions with those existing at present.
3. What is the "Platt Amendment?"
4. It is frequently said that if the United States intervenes in Cuba again, intervention will lead to annexation. What do you think?

III. Germany and the United States—"The Question of the German Snips." "German Treaty Proposals," "Article XXIII."

1. In general, who has the right to make treaties in the United States? Describe the method by which such treaties are usually negotiated.
2. How do you account for the three dates, 1785, 1799, 1828, mentioned in connection with the treaty with Prussia.
3. "In fact the United States refused to sign the Declaration of Paris," etc. What was this declaration? The Declaration of London?
4. What action, if any, should the United States take in reference to the subject under discussion?

IV. Causes and Results of the Great War—"Independent Opinions."

1. Look up the history of Alsace-Lorraine as Professor Petersen suggests. Is he correct in his conclusion "that France's desire to get it back is merely greed for power?"
2. Look up the history of Schleswig-Holstein. If "the Schleswig-Holstein question is insoluble from a legal and historical point of view," is there any possible solution for the question?
3. Note the questions in the letter of T. R. Robinson. Have the editors answered his questions to your satisfaction?

V. Rising Prices and the Standard of Living—"Wages vs. Crops," "What It Costs to Live."

1. In the books on economics, the distinction is frequently made between "nominal wages" and "real wages." In the light of the above articles explain the difference between the two.
2. What remedy for the present scarcity of food does Bolton Hall suggest? Compare this remedy with the one indicated in your text book under the discussion of the "Law of Diminishing Returns."
3. "Not only food but all wealth comes from the land by labor," etc. Do you agree with this statement?
4. On the basis of the facts presented in Secretary Wilson's article, discuss one or more of the following: (a) the family budget of an average workingman's family; (b) the food consumption of a normal family; (c) income and expenditure in various types of families; (d) food prices and their relation to standards of living.
5. Check up Secretary Wilson's conclusions as far as you can by studying the conditions which exist in your own family.

VI. The World's Industrial Development—"Atoms For Defense."

1. The world's industrial progress has frequently been described under the following titles (a) the pastoral stage, (b) the agricultural stage, (c) the age of iron, (d) the age of steel, (e) the age of electricity. Explain these titles.
2. This article seems to imply that the coming age may properly be called "the age of chemistry." Give the facts which justify this statement.
3. Investigate one or more of the industries referred to in the article. Some other chemical industry with which you are familiar.
4. Explain the significance of the title of the article. Compare the program of mobilization described in the last paragraphs with the ideal program outlined on pages 304-305 of last week's Independent.

After Meals—*Billiards!*

Of all the hours in the day the "Billiard Hour" is best. Then fathers and mothers gather with their happy brood around the Brunswick Carom or Pocket Table, now the life of thousands of homes.

Dull care vanishes when Billiards starts, and sport is King till bed time comes.

For parties, holidays and leisure hours—for health and happiness—*your home needs billiards!*

BRUNSWICK
HOME BILLIARD TABLES

Live cushions, true angles, fast ever-level bed—on Brunswick Tables your skill will triumph most.

A Size for Every Home

"Quick Demountables" can be set up easily anywhere and folded away in a closet when not in use.

"Baby Grand" and "Regulation Grand" for homes with space to spare for a table.

Beautifully built of mahogany and oak. Cues, Balls, Markers, etc.—complete playing outfit included *free*!

Write for Color-Catalog

Low prices, easy terms and home trial offer all explained in our handsome billiard book and catalog—"Billiards—The Home Magnet."

Get this book by return mail free. Send today.

THE COLOMBIAN TREATY

THE INDEPENDENT has always favored a liberal treatment of Colombia. In 1911 we published a complete and first hand study of the issue between the two countries. This was accompanied by eminent Republican, Democratic and non-partizan expressions of opinion in favor of a new treaty and a payment of $25,000,000 to Colombia for her loss of Panama.

After the Panama revolution and the subsequent agreement with Panama for the building of the Canal, Colombia repeatedly made attempts to get the issue before The Hague. She said she would waive all claims as to the restoration of Panama, but she thought she was entitled to damages, and was willing to refer the question to arbitration both as to the fact and if proven, as to the amount. The Roosevelt administration, however, declined the proposal and refused to discuss the matter further.

When Mr. Taft became President he said he would favor giving Colombia $25,000,000 if she would sign a quit claim deed for any further damages. But it was not until the Wilson administration that a treaty was actually negotiated to this end.

The treaty has now been signed by the ministers of the United States and Colombia. It was ratified by the Colombian Congress, June 9, 1914. It is expected to come up shortly before our Senate for ratification.

Without raising the moral or legal questions involved in our taking the Isthmus—concerning which the American people will doubtless always differ—it is a fact that Colombia was a heavy loser thereby and the United States a considerable gainer.

It would be therefore a splendid act of generosity and a fine example of far-sighted statesmanship to recognize Colombia's loss and our gain by such a payment as is provided for in the pending treaty. We can afford to be generous. We would be wise to be more than just. The friendship and gratitude of Colombia would be worth much to the United States—especially in the event of hostile designs upon the Canal by any foreign power. The harbors of Colombia are nearer to the Canal Zone than even our nearest possession, the former Danish West Indies. Such an act of overflowing friendliness to Colombia could not but have a valuable effect upon Spanish-American sentiment toward us, now by no means so friendly as could be desired.

It has been proposed that instead of paying Colombia $25,000,000 in gold, we should arrange to provide the same amount in harbor improvements, sanitation, and other public works, undertaken directly by the United States Government thru the expert services of its army engineers. If Colombia would accept such an arrangement, the profit to that country would almost surely be greater than would spring from a lump payment in cash.

THE QUESTION OF THE GERMAN SHIPS

THE possibility that Germany and the United States will soon be at war has raised the question of our right to seize the German merchant vessels now in our ports. Such seizures have been customary in the present war, and indeed constituted the first acts of hostility. Italy and Portugal seized the German ships in their harbors some time before declaring war with Germany.

But the United States and Germany are bound not merely by the general principles of international law to refrain from such acts, but are specifically prohibited by the treaties which have existed between them from the earliest times. The treaty of 1785 with Prussia signed by Benjamin Franklin, John Adams and Thomas Jefferson was in part carried over to the treaty of 1799 signed by John Quincy Adams, and this again to the treaty of 1828 signed by Henry Clay. This was held by the Supreme Court as late as 1908 to be still in force, and when the "William P. Frye" was sunk the German Government, in its note of April 5, 1915, cited the treaty "as a matter of course binding on the German prize court." The American Government, in its reply of April 28, 1915, also affirmed the obligations of the "existing treaty stipulations between the United States and Prussia."

The clause bearing on the point is Article XXIII of the treaty of 1799, reaffirmed in the treaty of 1828, and quoted in full in our Story of the Week. This states that:

> If war should arise between the two contracting parties, the merchants of either country then residing in the other shall be allowed nine months to collect their debts and settle their affairs, and may depart freely, carrying off all their effects without molestation or hindrance.

Some of the newspapers are now arguing that in case of war a treaty ceases to be binding. Evidently those who would repudiate the provision on this ground have not read the next succeeding article, which says:

> And it is declared that neither the pretence that war dissolves all treaties, nor any other whatever, shall be considered as annulling or suspending this and the next preceding article; but, on the contrary, that the state of war is precisely that for which they are provided, and during which they are to be as sacredly observed as the most acknowledged articles in the law of nature and nations.

Other treaty stipulations may automatically terminate at the beginning of a war; this goes into effect only at the beginning of a war.

The United States and Germany, or at least Prussia, are then under mutual obligation not to confiscate property or to intern the persons of the other party's nationals of either sex or any occupation for nine months after a declaration of war. This, however, would not prevent us from imprisoning Germans who acted as spies, conspirators or enemies, and it would not prevent us from commandeering their ships or other property for military purposes. In fact, Article XXIII, from which we have quoted, provides for this contingency in its closing clause:

> But if anything is necessary to be taken from them for the use of such armed force the same shall be paid for at a reasonable price.

That is to say, if we needed the ships for our navy our Government could take them over on the same conditions as it could the property of any citizen or neutral. The Government would then be under obligation to pay the owners of the vessels, but as a matter of fact such a claim would be thrown in with all the others to be settled at the end of the war by the defeated party.

It is common to allude to the German merchant vessels in our harbors as "interned." This is not correct. They are rather in a haven of refuge. It is not the American navy but the British that keeps them in. They are free to leave any time—if they dare and if they have not smashed up their engines.

A FLAW IN THE PARALLEL

LINCOLN DAY was remembered in England this year as well as in the United States. The English press, which when Lincoln was alive called him all kinds of scurrilous names, is now much given to citing his example and quoting his words in support of the policy of the British Government. Lloyd George is frequently compared to Lincoln and the Premier himself has hinted at such a similarity.

We are glad to see that the English take a fairer view of Lincoln's character than they did when he was first elected President, and we believe that they are in large measure justified in comparing their war against Prussianism with our war against slavery. The comparison of their great war Premier with our great war President is also an apt one and a compliment to both men. Lloyd George, like Lincoln, is a man of humble birth, called because of his unique ability to lead the nation in its hour of peril. He, like Lincoln, is a representative of the people, thinking with them and laboring for their advancement. Like Lincoln, he is endowed with a common sense amounting to genius, and with a homely eloquence that carries conviction. Lloyd George quotes Lincoln in support of his refusal of foreign intervention, and this may be justified, altho there is a difference between the intervention of a friendly power in an international war and of a hostile power in a civil war.

But the closer the parallel is drawn the more conspicuous appears one point of difference. Lincoln was always ready to confer with his enemies with a view to peace. Lloyd George persistently refuses such a conference, even when offered by his enemies.

In 1864 the President gave a letter to one of the leading pacifists, F. P. Blair, to go thru the lines for the purpose of arranging a peace conference, and declared his willingness at any time to receive agents of the Confederacy informally with a view to bringing about an agreement. When Alexander Stephens, the Confederate Vice-President, with two other members of that government, appeared at the front, Lincoln went in person with Secretary Seward and on a steamer in Hampton Roads held a friendly discussion in which Lincoln urged Stephens to get the southern states to abolish slavery as the first step toward reconciliation. One of the Confederate commissioners tried to convince Lincoln that the Confederacy should be regarded as a foreign power, not as rebellious states, and supported his plea with a long historic argument on the precedent established by Charles I in recognition of subjects in arms against his authority. This argument Lincoln met as usual with a nonchalant but pertinent answer:

> I do not profess to be posted in history. On all such matters I will turn you over to Seward. All I distinctly recollect about the case of Charles was that he lost his head.

The Hampton Roads conference came to nought, for the Southerners were not yet ready to give up their cherished institution. But Lincoln, by condescending to meet with his foes, lost nothing, not even his hopes of abolishing slavery peaceably. It was by that time evident that the North was bound to win in the long run, but on the very day after his return from the conference he proposed a plan of offering $400,000,000 to the southern states as compensation for the loss of their slaves. He calculated that continuing the war for two hundred days longer would cost the North this amount, and he was greatly disappointed when his plan failed to receive support from his Cabinet.

That was Lincoln's way. Now if Lloyd George is willing to give some pacifist like Bertrand Russell or E. D. Morel a personal pass to Berlin and if he will consent to go to The Hague to talk over terms of peace informally with Chancellor von Bethmann-Holweg, then we will acknowledge that he has a right to be placed on a par with our Lincoln.

THE COUNT AND THE PROFESSOR

"MEMBERS of faculty split over the Tolstoy discussion" is the startling headline in the *New York Times*. This is, as Mark Twain said about the report of his death, a great exaggeration. No members of the Columbia faculty have split any farther than the ordinary opening of the jaws and not many of them have gone so far as that. The facts of the matter are simply these: The International Club, a cosmopolitan association of students meeting in one of the university halls, invited Count Ilya Tolstoy to address them, but Professor Prince, head of the Slavonic department, interposed a veto on the ground that Tolstoy's opinions were calculated to weaken the spirit of patriotism. The Count countered by retorting that the Professor talked Russian badly. We are not able to substantiate or to disprove either allegation. We have never heard Professor Prince speak Russian, and should not know, if we did,

Drawn for The Independent by W. C. Morris

HOPE FOR THE BEST, PREPARE FOR THE WORST

whether he spoke it well or badly. We have heard Count Tolstoy speak English, and found him innocuous and dull.

The lecture he was to give at Columbia on the life and works of his father has been given without objection at Petrograd and Princeton, both of which places are supposed to be stricter than Columbia. Obviously this is not a case of restriction of academic freedom. On the contrary, a Columbia professor has too much freedom when he can without consultation or authorization debar from the campus anybody he does not like. This is the *liberum veto* that brought about the downfall of Poland by enabling any noble to annul any legislation. We do not believe that university halls should be opened to everybody who comes along and wants to talk, but the question of who should be allowed the privilege is a matter requiring discretion, and not every professor is discreet. Such a rule is bound to work badly, for it puts it in the power of any professor to embarrass the university by presenting it in a light that quite belies the spirit of the institution.

INTERN THIS ENEMY

IF we enter the Great War, we should learn by the experience of others. The nations of Europe have found that drink and efficiency in war are not compatible terms. So they have abolished—or greatly restricted—the drink.

We should follow their example without a moment's delay. There is a simple way to do it. Let Congress raise the tariff and internal revenue tax rates on liquor to a prohibitive hight.

If we are to fight, we must omit no word or deed to make our fighting effective. Drink does nothing to make men good fighters, or good workers, or good citizens.

The liquor traffic ought to be interned for the duration of the war.

And afterward? Wait and see.

TEMPERANCE DRINKS

ONE of the most encouraging signs of progress in temperance is that some of the leading breweries are putting out brands of non-alcoholic beer and advertising them lavishly. Whether they will become popular or not remains in question, for it depends upon whether people drink beer for any other reason than the alcohol it contains. Leaving out the alcohol, beer becomes a cheap, harmless, refreshing, slightly nutritious, and to some tastes, palatable beverage. That it is quite possible to prepare and preserve such non-alcoholic beer has been demonstrated in other countries as well as in the United States. The British Government is encouraging the sale of a new brand of it, tho without much success, it seems, for the old topers do not take to the "Lloyd-George beer." In Canada, owing to the extension of prohibition territory, the brewers are putting out various temperance beers that are with few exceptions sufficiently free of alcohol. The Canadian Government has established 3.5 per cent by volume of proof spirit as the highest limit for temperance beer, but some of the provinces make 2.5 per cent the maximum. Of 129 samples of temperance beer analyzed by the Inland Revenue Department at Ottawa, 114 were within the 3.5 limit and 84 below the 2.5 limit. Only one sample was found to contain over 5.5 per cent, which is the lowest limit for lager beer.

Most of the samples of unfermented grape juice analyzed contained no alcohol or merely traces, and only eight out of 193 ran over the 3 per cent limit. Of 73 samples of sweet cider, 33 contained no alcohol, 21 others less than 2 per cent, and only two contained more than 3 per cent. Of other soft drinks, 150 were analyzed, most of them being found practically free from alcohol, tho three samples of ginger beer ran over the 3.5 per cent limit. On the whole, then, the temperance drinks of Canada are sufficiently true to name. Dr. McGill, the chief analyst of the Canadian Government, regards the 3.5 per cent as a satisfactory maximum for temperance beverages, and believes that most of the oversteppings are accidental. A variation of two-tenths of one per cent from the standard is allowable, because the error of analysis amounts to as much as this, and because it is impossible to regulate fermentation within such narrow limits. Alcohol is often to be found in ripe fruit, preserves and foods, even in yeast bread, and in small quantities its presence is altogether unobjectionable.

The growing popularity of temperance drinks in variety to suit all tastes, is, as we say, encouraging, but too much must not be expected of it. No non-alcoholic beverage, no matter how delectable its flavor, can ever hope to rival the alcoholic beverages in popularity. Beer, whisky, and even the rarest wines, are not drunk for their bouquet, but simply and solely for the alcohol they contain. Any imitation of these drinks, even tho indistinguishable by the taste, would not displace them if it lacked the alcohol. Alcoholic drinks increase thirst; other drinks quench thirst. We have seen on soda water fountains the sign "all you want to drink for five cents." No saloon keeper would dare put up such a notice. Thus we can never expect any temperance beverage to be so largely drunk as the alcoholic beverages have been, nor is it desirable that they should be, no matter how harmless they may be. Excessive drinking of anything is intemperance, and the advantage of the temperance drinks is that, however pleasant they may taste, there is little temptation to intemperance in their use.

OF THE TRUE AMERICAN BREED

THE most American people in America are the folk of the Tennessee mountains. They take their descent direct from the pioneers who settled in that rugged region before the Revolution. Their strain is pure Colonial, with no admixture of blood from the veins of more recent comers to the New World.

Their later history is a minor tragedy of American life. Bitter poverty and illiteracy are their present lot. They are a fine, upstanding, stalwart people; but generations of poverty and ignorance have robbed them of every chance at self-development and growth.

It was in this splendid mountain country that perhaps the most interesting of the many celebrations of Lincoln's Birthday took place last week. Lincoln Memorial University, situated in the land of the mountaineers at Cumberland Gap, celebrated its twentieth anniversary. The late General O. O. Howard, a warm friend of the President, was the founder of the university, and in its creation he had acted on a suggestion of President Lin-

coln's that he hoped some day there might be founded in the mountain country of Tennessee an institution of learning for the especial benefit of the boys and girls of that section.

To Cumberland Gap, whence one looks over the three states of Tennessee, Kentucky and Virginia, and where is located the university, there went in special trains from New York, Washington and Chicago, distinguished visitors from many states, including governors, United States senators and representatives, mayors of great cities, men and women all possest of intense interest in Lincoln, to see with their own eyes and to come into intimate touch with the institution that, bearing the name of Lincoln, is engaged in the education of the youth of the southern hill country.

The celebration lasted three days. The program included a hundred brief addresses from the prominent men who had come to take part in the rededication of this great educational work among the people from whom Lincoln sprang. The central figures of the sessions were Dr. George A. Hubbell who, as president of the university since the death of its founder, has borne the burden and heat of the day, and Dr. John Wesley Hill, the university's newly elected chancellor. It was a splendid tribute to the worth of this American institution working without sound of trumpet among these fine Americans of the pure breed.

The spirit of the university and of those mountain youth who come to it is well exprest in some sentences printed on the program of the celebration:

Do you realize there is a college to which young men and women walk scores of miles, some with their "baggage" tied in a handkerchief, some even hatless, to beg for a chance to earn an education?

Do you know a university where self-help is the moving principle; the great fundamental of all its teaching?

Where character-building and the dissemination of knowledge are side by side in the curriculum?

Are you aware that there is a university, the influence of which is uplifting a whole race of *illiterate Americans?*

That these same Americans are descended from men and women who settled in this country before the Revolution?

Do you know that there are thousands of young men of the same stock as Lincoln, Polk, Johnson, Farragut, Sam Houston, Campbell—living today who will *never know how to read or write* because they have had no chance?

Surely no more admirable work is being done in America for more worthy young Americans.

WHAT SHALL WE CALL THEM?

UNCLE SAM has now to choose a name for the triplets that have come to him. They never have had a real name of their own but have been called for convenience the Danish West Indies. This, however, is merely a title of ownership, and since they are neither Danish, nor West nor Indies, it would be absurd to continue the title. The Danish period of administration covers only a part of their four centuries and a quarter of history, and one might almost as well call them the Spanish, Dutch, British, or Maltese Islands, as the Danish Islands.

To call them the "American West Indies," as some propose, would be worse, for it would confuse them with the three West Indian islands that we now possess and with others that we hope to acquire in the future. The inhabitants of our new West Indies would dislike exceedingly to be brought under the same administration or the same designation as the former American West Indies, Porto Rico, Culebra and Vieques.

The suggestion that they be called the Dewey Islands arises simply from the accidental coincidence of Admiral Dewey's death with our acquisition of the islands. If we had had to change the name of the Philippines we might well have called them the Dewey Islands, but the name has no appropriateness to the islands we obtain from Denmark, for their acquisition was quite independent of the chain of events which brought us the Philippines, Guam and Porto Rico.

Columbus was the first man who had the job of naming them. Nobody, unless it was Adam or Linnæus, has ever been put to more embarrassment for new names than the man who discovered the Caribbean islands. He began by calling them after the saints, but he soon saw that there were not enough saints in the calendar to go around, and not having a set of the Bollandists on board, he feared that he would have to come down to secular names. When on his second voyage he ran into that thick cluster of little islands in the northeast corner of the archipelago he sent out a caravel to count them. The caravel scout soon returned and reported that there were more than fifty of them. Now an ordinary man with no more knowledge of hagiography than Columbus would have been stumped, having to supply more than fifty saints at a time. But Columbus was no ordinary man and he hit upon the only possible solution to the problem. He said, "Let's call them all the Virgin Islands after Saint Ursula and her eleven thousand maiden martyrs." St. Ursula was a British princess who went on a pilgrimage and was slain at Cologne by the Huns—the genuine original Huns. The legend says she took with her ten companions each a thousand maid servants. This is a suspiciously large retinue even for a princess, and the higher critics have suggested that the legend grew out of a typographical error, that there were really only eleven martyrs, or perhaps only two, Ursula and a girl named Undecimilla. But these questions did not bother Columbus and he died happy thinking that he had got names enough to go around the Caribbean Sea no matter how many islands there turned out to be.

Now the Virgin Islands would be a pretty and appropriate name for the islands we get from Denmark, but unfortunately the name includes not only St. Thomas, St. Croix and St. John, but also the Isla de Vieques and Culebra, which we got from Spain with Porto Rico, and half a dozen British islands.

On the whole we can think of no better name than the Lincoln Islands, since Lincoln just before his assassination started the negotiations with Denmark that have now come to fruition. The natives celebrate Lincoln's birthday now as well as their own Emancipation Day, and they would no doubt be proud to bear the name of one who did so much for their race. Altho Lincoln is not a saint in the ecclesiastical sense, he has virtually been canonized in the calendar of American patriotism.

If for any reason Lincoln is not thought a good name, we would suggest Seward, who visited the islands and carried on the negotiations after Lincoln's death with great persistence tho without success. The Seward Islands would have the advantage of riming with the Leeward Islands—if we use the salt sea pronunciation. The name Leeward Islands is now applied to the Virgin Islands belonging to Great Britain, and to call the two groups, the Seward and the Leeward Islands, would at once connect them and distinguish them.

THE STORY OF THE WEEK

German Treaty Proposals

The most important legal point in our controversy with Germany is our old treaty with Prussia, for it is the chief documentary support to our claim for free passage for our ships on all seas. As we explained last week, the treaty negotiated in 1785 by Franklin, Jefferson and Adams went further in the way of protecting neutral rights than even The Hague conventions. In fact the United States refused to sign the Declaration of Paris in 1856 because it was a step backward, and even the recent Declaration of London did not come up to the stand taken by the United States and Prussia more than a century before. According to these treaties Germany has no right to prevent our ships from going to England, or even to search them if they are duly certificated as not carrying contraband or are under convoy of our warships.

In an editorial of this issue we discuss the bearing of Article XXIII of the Prussian-American treaty on the German ships in our harbors. When Ambassador Gerard was recalled from Berlin the German Government brought strong pressure upon him to induce him to sign a protocol for the elucidation and expansion of Article XXIII, but Mr. Gerard refused on the ground that having been recalled he had no authority to negotiate any treaty.

The aim of the German proposals was to establish that:

> As a general rule German property in the United States and American property in Germany shall not be subject to sequestration or liquidation or other compulsory alienation under other conditions than neutral property.

It provides that patents and contracts shall not be invalidated; that Germans in America and Americans in Germany shall not be interned in concentration camps, but shall be allowed to continue their business even beyond the nine months stated in the existing treaty, and that merchant vessels be treated according to The Hague rules and not forced to depart except under safe conduct.

After diplomatic relations had been severed the German Government tried to reopen negotiations on these questions thru the Swiss Minister at Washington, but President Wilson refused to listen unless Germany would first rescind her war zone order.

Article XXIII

As we explain in our editorial of this week the American treaty with Prussia consists of two parts; one applies when either party is at war with a third party and the other applies when Prussia and the United States are at war with one another. The first state of affairs exists now and we quoted last week Article XII providing for freedom of navigation for neutral vessels. But if we go to war with Germany then the second part of the treaty comes into effect of which the chief section is Article XXIII, so we quote it entire:

ARTICLE XXIII

> If war should arise between the two contracting parties, the merchants of either country then residing in the other shall be allowed to remain nine months to collect their debts and settle their affairs, and may depart freely, carrying off all their effects without molestation or hindrance; and all women and children, scholars of every faculty, cultivators of the earth, artizans, manufacturers, and fishermen, unarmed and inhabiting unfortified towns, villages or places, and in general all others whose occupations are for the common subsistence and benefit of mankind, shall be allowed to continue their respective employments, and shall not be molested in their persons, nor shall their houses or goods be burnt or otherwise destroyed, nor their fields wasted by the armed force of the enemy, into whose power by the events of war they may happen to fall; but if anything is necessary to be taken from them for the use of such armed force, the same shall be paid for at a reasonable price.

The next section, Article XXIV, also deals with the state of war, and gives detailed directions as to the humane treatment of prisoners of war. Since the treatment prescribed is that now universally recognized as proper, tho it has not been always observed in the present war, we need not quote it. It concludes with the remarkable sentence that we quote in our editorial stipulating that Articles XXIII and XXIV shall not be annulled by war or under any other pretense.

THE GREAT WAR

February 12—Parliament asked for $2,750,000,000 more to carry on the war. Wilson refuses to consider German offer to reopen negotiation. Five ships sunk.

February 13—Bernstorff sails for Halifax. Four ships sunk.

February 14—Scandinavian nations protest against German sea warfare. Five ships sunk.

February 15—British capture 2000 Turks at Kut-el-Amara. Germans attack in the Champagne. Six ships sunk.

February 16—England reduces danger zone in North Sea. Seven ships sunk.

February 17—British gain on Ancre Creek. Four ships sunk.

February 18—Germany warns United States that armed American ships are liable to be attacked without warning. Three ships sunk.

The U-Boats

The British expect to have the German submarines under control in six weeks. The Germans expect to have Great Britain practically starved out in six weeks. It remains to be seen which is right, if either, for it is difficult to interpret the meager reports received. From the British reports which we print in our diary of "The Great War" it will be seen that the past week compared with the preceding week shows a great falling off in the number of ships sunk. The highest record of the U-boat war, February 6, was 14 ships of an aggregate tonnage of 44,457, but on February 17 this had dropt to four ships of 7485 tons. From February 1, when the German submarines began their new operations, to February 18 they had sunk, according to British figures, 240,000 tons of shipping, of which 180,000 was British, an average of about 10,000 tons a day.

German reports reach this country but rarely now, but when they do they are considerably larger than the British. For instance, on the 12th the Germans claimed to have sunk seven steamers and three sailing vessels with a tonnage of 22,000, while the British admit the loss of only five vessels of 8361 tons altogether. But the two

DIPLOMATS WITH DOUBLE DUTIES

The Swiss Ambassador in Washington, Dr. Paul Ritter, is now in charge of Germany's diplomatic interests here. And in Berlin United States affairs are taken care of by Senor de Bernabe, the Ambassador to Germany from Spain

statements may not be so contradictory as they appear, for the vessels lost are not always reported on the day they are sunk.

The Germans calculated that if they could sink 33,000 tons a day they would win. But they did not come up to this mark except on February 6 and 7, so on this estimation their U-boat campaign is so far a failure. The crucial question is whether they have yet put forward their maximum effort. An English paper suggests that they are holding off until Bernstorff is safely thru the British lines. Others suggest that the Germans are waiting until their land campaign begins in the spring. It is also possible that the fewness of their victims is due to the scarcity of shipping in the war zone. During the past week most of the ships sunk were British, whereas in the first days of February neutrals figured largely in the list. This would indicate that neutral shipping was not venturing out much, and we know that such was the case in America. This would for the time being have the same effect as sinking them in achieving the German purpose of cutting off food supplies from England.

The chief factor in the problem is unknown, that is how many German submarines the British have sunk or caught in their big steel nets. The British admiralty has from the first pursued a policy of silence on this point, probably thinking that it would have a more depressing effect upon the German mind to send out submarine after submarine and never hear from them, than if their fate was known. Doubtless many of them have been lost at sea thru some accident without the knowledge of either party. It is rumored, however, that the British have captured or sunk more than a hundred submarines. The German navy yards are supposed to be turning out submarines at the rate of one a week or faster. Prince von Bülow recently said that the German and Austrian submarines numbered 220. On the other hand a French naval officer, Admiral Degouy, estimates that they have 150. How many of these have been engaged in the German war zone during February and how many have been lost are questions upon which the public is in absolute ignorance.

IN THE MINES OF BELGIUM

Women and girls, under German direction, are taking the places of many of the Belgian men deported to work in Germany. In the mines particularly work is being pushed to capacity

We are not much better informed as to the extent of the injury done to British shipping. Admiral Lord Beresford stated to Parliament that "we have lost since the beginning of the war four million tons of shipping. Three million tons which have been lost have been more or less adequately filled." But the *Glasgow Herald* states that shipbuilding in the United Kingdom amounted to 650,000 tons in 1915 and 582,000 tons in 1916. The total tonnage of English shipping is twelve or fifteen million.

The Sinking of the "Law" An American four-masted schooner, the "Lyman W. Law," was overhauled by a submarine in the Mediterranean on February 12 and set fire by a bomb. The crew of nine went off in two boats and landed safely at Cagliari, Sardinia. The schooner was chartered by an Italian firm in New York and was carrying a cargo of box shooks for making lemon crates. She had left Stockton Springs, Maine, on January 9 for Palermo. The cargo was valued at $31,200 and insured.

The "Law" case is of more importance than would appear from the comparatively slight loss for it may be the "overt act" on which President Wilson threatened strong measures. It is a debatable question how far our responsibility holds for Americans who embark upon a belligerent vessel carrying munitions or other contraband, but the "Lyman W. Law" was American-built and manned by Yankee sailors, with the exception of a negro cook from Jamaica. The cargo of their lumber, tho billed to a belligerent port, could not in any sense be called contraband. On the other hand the President's threat was addressed to Germany and the submarine, tho flying no flag, is said to have been Austrian. There has been little complaint hitherto about Austrian methods of warfare, and in this case the crew appear to have been given opportunity to escape. The schooner seems to have been attacked near tho not in the free lane prescribed by the German-Austrian note for ships bound for Greece, but this would not matter much since the United States does not recognize the legality of the danger zones designated.

SNOWBOUND: A MODERN VERSION

Ten inches of snow and the strongest west wind in several years combined to make trouble recently for sixty miles of railroad in Wyoming. Each passenger train had to be convoyed by a rotary plow to dig out the track, sometimes accomplished after an hour's delay—in one case a four-day job. The rotary in this photograph looks dead, but it is scattering the snow 200 feet to windward

Neutral Protests Norway, Sweden and Denmark, acting together in accordance with their agreement at the beginning of the war, have despatched a joint note to Germany protesting against the proposed submarine warfare as contrary to international law and an infringement of the rights of neutral commerce. The note points out that a belligerent has no right to prohibit peaceful navigation in zones distant from the enemy's coast, or to sink a neutral ship unless it offers resistance or tries to escape. The Scandinavian countries reserve freedom of action in case of loss of life or property.

The Chinese Republic has gone far-

ther than any of the other neutrals in following the example of the United States, and has likewise threatened to break off diplomatic relations. The Chinese note reads in part as follows:

China, therefore, protests energetically to Germany against the measures proclaimed on February 1 and sincerely hopes that the rights of neutral states will be respected and that the said measures will not be carried out. If contrary to expectation this protest is ineffective China will be constrained, to its profound regret, to sever diplomatic relations. It is unnecessary to add that China's action is dictated by a desire for further peace and the maintenance of international law.

The Swiss Government complains that nearly all the ports thru which Switzerland can receive food and raw materials are covered by the blockade proclaimed by Germany. The note continues:

The maritime blockade by the Government of the German Empire follows a series of measures taken during the war by both parties of belligerents in opposition to the law of nations and international agreement, by which our liberty of action in economic matters is already restricted and against which we have vainly raised our voice. In such circumstances this blockade is all the more pressing and more weighty with consequences.

In compliance or at least in accordance with the protest of Holland the British Admiralty has curtailed the "dangerous area" which it defined on January 25. (See map on page 253 of our issue of February 12.) The long triangle stretching from the Danish coast clear across the North Sea to the English coast has been cut off so as to leave a free lane between the British and the German war-zones thru which ships may pass southward to Holland. The British blockade in front of the German coast remains, but the coasts of Holland and Denmark are left open.

Congress and the Crisis

Senator La Follette, of Wisconsin, has introduced a resolution to prohibit the arming of American merchant vessels. La Follette is perhaps the most outspoken of a small group of extreme pacifists in the Senate who hope by this means to avoid war with Germany. Other Senators insist that since Germany has not promised to spare unarmed merchant ships their only chance for safety is to arm. Several brief and informal but very bitter debates on the international crisis have occurred in the House of Representatives. Representative Gardner, of Massachusetts, has borne the brunt of the battle on behalf of the war party, while Representative Moore, of Pennsylvania, and the Republican floor leader, Mr. Mann, of Illinois, have been the most active champions of the pacifists. On one occasion the dispute waxed so fierce that the House voted to strike from the record charges leveled by Representative Bailey, of Pennsylvania, against Representative Gardner.

The so-called neutrality laws which the Senate now has under discussion have encountered sharp criticism by Senator Cummins, of Iowa, on the ground that the stringent prohibitions against the revelation of military secrets would prevent any public discussion of national unpreparedness. Other Senators pointed out that the provisions against espionage were so sweeping as to endanger the liberty of innocent people who might unwittingly enter a prohibited area. An executive order, which has already been approved by President Wilson, gives the Governor of the Panama Canal Zone authority to exclude or expel any person whose presence is considered dangerous to the safety of the Canal.

Rogers in New York Herald

THE NEW RECRUIT

On February 13, the "Frederik VIII" left Hoboken with Count Johann von Bernstorff and his suite. A large and friendly crowd thronged the water front to bid the ex-ambassador good speed. Some two hundred German consuls and diplomatic attachés sailed by the same ship.

The "peace leak" investigation of the advance information alleged to have been secured by certain financiers of President Wilson's peace overtures has dragged on for several weeks without any very significant result, altho it appears established that the gossip of official Washington managed to reach the ears of certain speculators. But the public interest in the investigation has rapidly waned in the presence of the new submarine crisis. Those who take an interest in the uncovering of "conspiracies" have a new peace leak to occupy their attention. Dr. George Barthelme, a correspondent of the *Cologne Gazette*, desired to send to his paper a message conveying the wish of the United States to avoid war. Dr. George Kirchway, former dean of the Columbia Law School, interested himself in the matter and secured for Dr. Barthelme an interview with Secretary of the Navy Daniels. Secretary Daniels, who has general charge of the censorship of wireless messages, passed the dispatch and permitted its transmission to Germany. Before the message was sent several passages were eliminated, but one that remained assured the German people "from high sources, whose identity cannot be disclosed" that the President's recent message to Congress did not mean that the American government desired war with Germany. Mr. William Jennings Bryan knew of the dispatch and helped secure for it the consideration of Secretary Daniels.

MEXICO'S NEW AMBASSADOR

Ignacio Binollas, who was one of Carranza's representatives on the Mexican-American joint commission, is to present his credentials at Washington next week as United States Ambassador from Mexico. When he is officially received by our Government the formalities of restored relationship between Mexico and the United States will be complete, since our Ambassador, Henry P. Fletcher, has already been sent to Mexico and our troops have been withdrawn
